Attention is invited to my letter of the 18th instant, relative to the Panglima on the island of Tandubas refusing to allow Mr. Clark to land, and threatening him if he made an effort to do so. Since that date a Chino named Dee Tao from Tandubas has come to me with a complaint that he has been robbed, all the goods in his store having been taken. His story is that a Moro named Hattmanlun owed him \$23.50 Mexican; that he made a business trip to Jolo; that on his return to Tandubas he found the Moro dead, and that he went to the man's widow and told her of the debt. She denied the debt and claimed that on the contrary the Chino owed her husband more than the amount and demanded payment. That the Chino refused to do. The Chino claims that on or about March 24 three Moros, by name, Ladig, Nihepan, and Siduan, all residents of the town of Tandubas, and known to him, came to his store and seized all his goods, valued at about \$1,000 Mexican, and carried them away. These goods, he says, or what is left of them now, are in the hands of the woman above referred to. This Chino claims that there are about 400 guns on Tandubas; that every man has a gun, and that some have two.

*Report of Moro affairs in the Tawi Tawi group for the month of June, dated Bongao, Tawi Tawi, P. I., June 26, 1903.—Capt. Kensie W. Walker, Fifteenth Cavalry.*

[Extract.]

On June 4 Dato Tantong reports to me that word has been brought to him of fighting on the island of Sikabong; that the fighting was started by Dato Jamaseleh because of an assault with attempt to rape by one Janel on a girl named Asan, a daughter of Tantong, and that the arrest and punishment of Janel was requested. He said that Janel was a bad character, and a man with no following.

Information from all sources showed the condition at Sikabong to be as follows:

Dato Jamaseleh (a son-in-law of Tantong) and Dato Raginda (a son of Tantong) were the leaders of one party and probably the stronger party. The chief of the opposition party was Dato Barra. To this party belonged Janel, who is a "Salip"

and a man of considerable influence. While Jamaseleh was probably the stronger, Barra had relatives and friends in the neighboring island of Obian, who could join him. I also learned that Jamaseleh was considered a dangerous man; that he had killed a great many people, and that he had one time been arrested by the commanding officer at Bongao for some offense. I told Tantong that he must send word to all parties that the fighting must stop, and that Jamaseleh and Janel should report to me at Bongao. Up to this time one man has been shot, namely, Janel's father.

As a preliminary to the settling of the disputes, I made an unsuccessful effort to get an unprejudiced Moro court for the trial of Janel. Only one man could be found that neither side objected to, and he declined to become mixed up in the affair. Both sides wanted me to hear the testimony and settle the case, and this finally I agreed to do. The only real witness was the girl Asan herself. She said that Janel made no attempt to rape her, that she passed him in the street in daylight, where all could see, and that when he passed her he took hold of her arm, but said nothing to her. He did not try to force her to go with him, and she went on into her house.

Janel denied having even touched her, and I was inclined to believe him, as it is hardly probable that he would do anything (even take hold of her arm) to the girl in broad daylight and in the open street, where all could see, and as this was all the evidence that could be produced, I decided in favor of Janel. The decision seemed to be accepted by Tantong and Jamaseleh.

I then made an effort to find out who actually shot the woman, but was unable to do so. I have no reason, however, to doubt the escaped slave's story. And, by the way, I gave her her freedom and the usual paper to that effect.

\* \* \* \* \*

So long as the dispute is confined to any one community and its people the chiefs can settle it and that will end the matter. However, when people of another community are implicated, there is no way, at least no regular way, that the dispute can be settled, except by resorting to arms. The Sultan absolutely fails to establish courts in that group for the trial of questions between Moro and Moro.

*Major, Fourteenth Cavalry, Governor.*

*The humble petition of the residents, traders, and natives of Bongao, Tawi Tawi.*

OCTOBER 1, 1903.

The CIVIL GOVERNOR,  
*Jolo, Jolo Island, P. I.*

Most humbly and respectfully sheweth:

That your petitioners most humbly and respectfully beg through the medium of these few lines to approach your excellency and lay the following matters, and beg that your excellency would be kind enough to take their poor circumstances into your excellency's kind and benign consideration.

1. That your petitioners having heard that this post is to be abandoned shortly your petitioners feel sorely grieved, as your petitioners (residents and traders) have a lot of property here amounting to, more or less, \$13,000 Mexican currency, and should this post be abandoned your petitioners (residents and traders) are sure to lose a considerable sum of money, as the Moros of Tawi Tawi group would be sure to come and rob everything that they may have. In order to prevent them your petitioners (residents and traders) are quite sure there would be bloodshed amongst the innocent people, as this matter occurred when the Spanish left here before the Americans came.

2. That your petitioners (natives who were formerly slaves, and who have had their liberties from the American and Spanish governments) feel sorely distressed, as your petitioners are quite certain that they and their families would be recaptured again by their former owners and be sold again as slaves, like sheep, and be treated like dogs, and possibly be killed for having escaped before, and also they would be separated from their families as before the Americans came here. When the Spanish left they were treated in this manner, and up to the present time some of your petitioners (natives) have not seen or heard of their families, as they were sold to some distant places as slaves, and your petitioners (natives) may perhaps never see them again during their lifetime.

3. That your petitioners (natives) are situated in very poor circumstances, and getting their daily bread by fishing and cultivating only, and should this post be

abandoned they would not have any place to go to at all to earn their living in order to feed and clothe their families, and would surely die of starvation.

4. That your petitioners have to thank the American Government for the kind protection which they have received during the past four years, and that your petitioners therefore, now, one and all, with joint hearts, crave most piteously that the same protection be given them forever, and for which, as in duty bound, we will ever pray.

Here follow 72 signatures of Chinamen, Filipinos, and Moros.

A true copy.

H. L. Scott,  
Major, Fourteenth Cavalry, Governor.

*Letter from Maj. O. J. Sweet, Twenty-third Infantry, to the Sultan of Jolo, Jolo, November 23, 1900.*

[Extract.]

I have the honor to submit to you the following brief account of a piratical act committed near Bun Bun, island of Jolo:

Two Chinamen and four Moros (or Filipinos in Moro garb) left Jolo, P. I., in a banca on October 28 with a cargo of goods, valued at about \$2,000, for Zamboanga. They were attacked by a vinta near Bun Bun, the entire crew and two Chinamen murdered, with the exception of one moro, who escaped.

Upon investigation it appears that Dato Sabudin, of the island of Lapinigan, had been visiting Jolo, and had watched the Chinamen purchasing their goods; he followed them up, attacked them when the opportunity offered, and took the larger portion of their goods and returned to Lapinigan. The banca is now at Bun Bun.

It is my desire to capture and bring to trial the offenders in this case, and I write to you to ask the assistance of Your Highness and datos.

Article VIII of the agreement states: "Piracy must be suppressed, and the Sultan and his datos agree to heartily cooperate with the United States authorities to that end and to make every possible effort to arrest and bring to justice all persons engaged in piracy."

If you can succeed in taking those men and turning them over to us, we will feel that you are as anxious as ourselves to put a stop to that bad practice.

A true copy.

H. L. Scott,  
Major, Fourteenth Cavalry, Governor.

JOLO, JOLO ISLAND, November 25, 1900.

*To His Highness the Sultan of Jolo, from his brother, the governor of Tiangi, greetings:*

In my last mail from Bongao, I received the Moro letter you wrote the governor there, for translation. Some months ago I wrote to Maibung at the request of the military governor of Bongao, asking that all Moro letters be sent here for translation before going to Bongao, as it would save lots of time. Please do this in future. You can see the delay this has caused. How about Maharajah Towasil? According to the agreement, the governor of Bongao had jurisdiction, as it was an offense of the Maharajah against the governor of Bongao in resisting arrest and search of his house when he, the governor, was searching for Selungun, who was said to be a pirate and was wanted in Maibung. Whether Selungun was a pirate or not has no bearing on the present offense of the Maharajah. Captain Cloman tried the case, and as a part of his punishment he was banished from the Tawi-tawi group of islands. This was perfectly legal under Article IX of the agreement. I approved his sentence. In September I heard that Towasil was going to Tawi-tawi with your party, so I wrote a letter to you September 13, 1900, telling of his sentence and that trouble would ensue if Towasil went to that group. I also wrote a letter to Towasil the same day, forbidding him to go without my permission, which I had a right to do under the agreement, Article IX. Notwithstanding these two letters Towasil went to Tawi-tawi with a letter from you to the chiefs in Simonol and Tongoson, Panglimas Aukassa, Abdurahim, Hussin, and Mualam, stating that you were sending Maharajah Towasil to them and wished them to contribute in order to make up the losses he had sustained. Towasil was arrested on Simonol by the military governor at Bongao and sentenced to six months' confinement at Jolo for a violation of his

order in returning to Tawi-tawi Islands. His son was sentenced to three months' confinement for the same offense, which sentence I approve. They are now held in confinement at Jolo. Did you not realize that in sending Towasil to Tawi-tawi after the letter of September 13, 1900, was written to you that you were placing yourself in direct defiance of the legal orders of the Government of the United States, and that it would be so looked on by the authorities in Manila, where this act on your part will have to be reported? If you have any explanation with reference to your actions in this case, I wish you would send them to me so they can be forwarded to the Governor-General at Manila for consideration in connection with this case. I am in hopes your action was caused by a misunderstanding on your part. If it was, it was a very expensive one for Maharajah Towasil.

Very respectfully,

O. J. SWEET,  
*Major, Twenty-third Infantry, Military Governor.*

A true copy.

H. L. SCOTT,  
*Major, Fourteenth Cavalry, Governor.*

---

*Sultan's letter.*

This, my seal, comes to all the chiefs of Simonol and Tongosong, Panglima Aukassa, Panglima Abdurahim, Panglima Hussin, Panglima Mualam, and their followers, friends, and relations:

I am sending Maharajah Towasil to you. He was punished (unjustly) by the Americans and lost all his goods while in your care. His friends and I, myself, depended on you to take care of him, but you did not do so well enough. Therefore, I wish you to consider his losses as well as his bail, and if you love and pity the Maharajah the same as I do, help me to recover his goods (losses). Anybody getting into trouble while under your charge, even if otherwise, it is right on your part to help. You will know how much each of your followers should contribute, and how much you yourselves, and turn it over to him.

Written this 5th day of the moon Rabi Alachir, in the year 1318. (2d of August, 1900.)

JOLO, JOLO ISLAND, November 26, 1900.

*To His Highness the Sultan of Jolo, from his brother, the governor of Tiangi, greetings:*

Some months ago while the question of the burning of Conawai and receiving money from Chinese was under consideration, the Rajah Muda wrote a letter, August 18, 1900 (21st day of Rabi Alachir), in which he stated: "I leave my father to judge the matter, and if you think we have done wrong and that the money should be returned, I will do so." This letter was forwarded with the report of Major James to the military governor at Zamboanga, who approved my decision, "That after considering everything this money should be refunded." On September 28, I wrote you, notifying you of my decision and requested that the money be turned over to me to be returned to the Parang Chinese. No reply having been received from either yourself or the Dato Rajah Muda on the subject, the papers were referred to the military governor at Zamboanga, who directed that the money, \$131, be withheld from the salary of the Dato Rajah Muda. The Dato Rajah Muda was in Jolo and had a long talk with me, after his letter was sent to me; he said nothing with reference to this affair but drew two months' pay and left.

Very respectfully,

O. J. SWEET,  
*Major, Twenty-third Infantry, Military Governor.*

A true copy.

H. L. SCOTT,  
*Major, Fourteenth Cavalry, Governor.*

JOLO, JOLO ISLAND, *October 11, 1901.*

*To His Highness the Sultan of Jolo, from his brother, Maj. C. A. Williams, military governor, greetings:*

The military governor at Siassi telegraphs me that Maharajah Sarapuddin and Maharajah Indanan, with force of 70 rifles, are at Lugus stealing cattle and disturbing the people of Dato Amilhusin and followers of Panglima Sasapan. These maharajahs are the Sultan's followers, and their conduct shows that the Sultan's orders, which the Sultan gave when I sent him word on September 28, are not obeyed by Sarapuddin. These maharajahs are committing crimes and offenses which the Sultan is expected to punish, for the people of Amilhussin have not committed crimes and offenses for which they should be punished under article 9 of the agreement.

It seems as if the government of the Sultan can not stop these chiefs from injuring the people, who are not allowed to live in peace and attend to their homes and work.

This will reach my brother to-night, and to-morrow his orders should reach Lugus and this bad work be stopped.

I can now talk with the governor of Siassi; and if Sarapuddin and Indanan do not stop at once and for always, as told by the Sultan and also by the governor, the governor of Siassi will be ordered to take soldiers again to Lugus to stop Sarapuddin and Indanan, for the people of Lugus can not be punished for obeying their leaders who kept them out of the late war by order of the governor, Colonel Sweet.

Sarapuddin has also stolen the wife of one of the dato's men.

Failure to stop these things makes it look as if the government of the Sultan is only in name. I hope to be able to let the governor-general in Manila know that this is not the case.

Let me know by this messenger what your highness does about it, so that I can telegraph the governor of Siassi if it is necessary for soldiers to go again.

Your brother will be glad to see the Sultan when the Sultan is well, and hopes he may soon have good health again.

Very respectfully,

C. A. WILLIAMS,  
*Major, Seventeenth Infantry, Military Governor.*

JOLO, JOLO ISLAND, *March 21, 1902.*

*To His Highness the Sultan of Jolo from his brother the governor of Jolo, Colonel Wallace, Greetings:*

Yesterday a number of houses were burned and looted within plain view of Jolo, and it has been reported to me that this has been done by Maharajah Indanan's men. I do not know why these depredations have been committed, but I hear that it is in connection with a fight going on between Dato Joakanain and Hegasan, though I can not understand what Maharajah Indanan has to do with this matter. I request the Sultan, who is the head of his people, to settle this trouble and stop the fighting, which is destroying life and property, impoverishing the country more and more, and preventing the poor people from cultivating the land and providing for their needs. I can not permit that houses are burnt in the near vicinity of Tiange, and I wish the Sultan to notify the chiefs of this.

Very respectfully,

W. M. WALLACE,  
*Colonel Fifteenth Cavalry, Military Governor.*

(Hegasan has since been assassinated.)

JOLO, JOLO ISLAND, March 27, 1902.

*To His Highness the Sultan of Jolo from his brother the governor of Jolo, Colonel Wallace, Greetings:*

I felt very sorry to learn from your prime minister Hadji Butu that the arrival of the cavalry at Maibun on Sunday had so frightened your mother, the Sultana, and the women and children generally. This was not my intention and I most sincerely regret it. But I must say that the burning of the hut on the Maibun road immediately after my letter to you concerning the burning of the houses near Jolo surprised me, so that I did not know what to think.

I hope that such misunderstandings will not rise again, and am pleased to learn that my order has been obeyed and peace been reestablished on the island. I wish your people to avoid in future all cause for trouble and strife and hope the Sultan will exert his influence to this end, so that peace may reign on the island and the people be happy, prosperous, and contented.

Very respectfully,

W. M. WALLACE,  
Colonel Fifteenth Cavalry, Military Governor.

A true copy.

H. L. SCOTT,  
Major, Fourteenth Cavalry, Governor.

JOLO, JOLO ISLAND, April 12, 1902.

*To my son His Highness the Sultan of Jolo from his father the governor of Jolo, Colonel Wallace, Greetings:*

The bearer, Paradji, son of Panglima Hadji Tahir, of Parang, has come to me and complained that four of his father's horses were stolen two weeks ago and were later seen in Sakatie's possession, who is a brother of Maharajah Indanan and lives about 8 miles from Jolo. The bay mare with white eyes was given to Paradji's father by Panglima Dammang, of Parang, about four years ago; the other three were born on his father's place and have not yet been ridden.

Paradji's horse was also taken about three weeks ago by Abdul Ahab, Islasi, Laja Muddin, and Alamia, followers of Habib Awab, who lives a little to the west from Indanan. They took the horses in broad daylight in front of the house and were recognized by several persons present. Paradji had received this horse and \$4 in payment of a debt only two days before it was taken.

I request my son the Sultan to take this matter in hand and be sure to have these horses returned to their rightful owner. I have received so many bad reports about Maharajah Indanan that I must believe he is not a good man.

Very respectfully,

W. M. WALLACE,

*To Dato Joakanain, from his father the governor of Jolo, Col. W. M. Wallace, greetings:*

I am informed that recently, while some people from Look in company of Maharajah Tahang slept at the house of Imam Muallam Mohamad Ali, 3 horses were stolen there, 2 of them belonging to the Look people and 1 to Maharajah Tahang. Huyidim, the son of Imam Muallam, looked for them and found them with your and Schuck's people, who said that these horses were taken from thieves, and asked 10 pesos for the recovery and return of the horses. Now, the allegation of Huyidim having said that your people had stolen these horses, that you had kept Maharajah Tahang's horse and that 20 pesos had been paid for the return of the other 2 horses, I understand to be false. Since said horses have all been returned to the owners I should consider the case settled. But if there remains any doubt about it, let Mr. Schuck investigate and try the case; your men can go to him if they have any complaint against his people and I have no doubt but they will find justice.

Very respectfully,

W. M. WALLACE,  
Colonel Fifteenth Cavalry, Commanding.

Major, Fourteenth Cavalry, Governor.

*Letter from Panglima Hassan to the civil governor at Jolo, dated September 25, 1903.*

This letter of trust from Panglima Hassan to his brother the civil governor of Jolo. His desire to see the governor is as yet small. The reason he can not come is because he is very much surprised as to his agreement with the general in Manila, the general in Zamboanga, and the governor of Jolo, that if his slaves should come here (Jolo) they would be returned. Now, twice has he sent for them, but they were not returned,

although the white man is a man of his word. And as to his slaves who have come here (Jolo), there were at first 6 and after that 6; Arassain, Jamil, Lahia, with her children, and Insia, with her children. Now, if it is really true that the white man is a man of his word, send his slaves back by these messengers, 12 in number.

He wants this letter to be answered and to be forwarded by these messengers.

To finish this letter I send greetings and best wishes to my brother the governor.

GOVERNMENT OF THE SULU DISTRICT OF THE MORO PROVINCE,  
OFFICE OF THE GOVERNOR,  
Jolo, P. I., October 1, 1903.

*To Maharajah Hajerol, at Nunukan, in Parang, Jolo, from the governor of the Sulu district, greetings:*

Some nights ago the store of a Chinaman living in Tullai was burglarized and money, pearls, and a large quantity of goods were stolen, part of which only have been recovered. Palud has been recognized as one of the robbers. Baunbang is strongly suspected of being implicated in the burglary. It is thought that both men have returned to your part of the country. I therefore order you to arrest Palud and Baunbang and bring them to me with all the money, pearls, or goods found in their possession. Do not delay this matter, but arrest these two men at once if they are in your country. I have also written about this matter to Bantalla Tiblani, and I think it best if you assist each other in arresting these men.

Very respectfully,

H. L. SCOTT,  
*Major, Fourteenth Cavalry, Governor.*

No result. October 18, 1903.

*Copy of a letter from the Sultan of Jolo to the Governor of Jolo, dated February 2, 1900.*

When you were at Maibun I told you that Dato Joakanain had some of my horses; I now beg to inform you that since then some more have been stolen by him; he holds now 9 of my horses. I leave the matter to you. I beg you to see that he returns them to me. I have nothing that belongs to him, why should he take that which belongs to me. As for me I don't want trouble and disturbances.

*Major, Fourteenth Cavalry, Governor.*

[Copy.]

*Letter from the Sultan of Jolo to the Governor of Jolo, dated August 13, 1900.*

On my return from Singapore I inquired of my chiefs as to their carrying on during my absence. They informed me that there was a great deal of disturbance and that my people had been fighting in Jolo as well as on the islands, and that the cause of all the disturbance was my brothers Dato Kalbi and Joakanain. These two did not even come to meet me.

In the first instance they looted the houses of innocent hadjis and robbed them of all their belongings, including their families. If you had not assisted them they would have been killed, like they did with the Patah people, and sold their wives and families into slavery.

Secondly, my slave escaped and went to them for protection. I demanded the delivery of this slave, which they refused. Afterwards this slave ran away to Look to Panglima Hassan. They demanded this slave from Panglima Hassan, saying that

they would fight him if he did not surrender the slave. Panglima Hassan, who did not want to have any disturbance during my absence, surrendered the slave, who was immediately killed by them.

Third. It has been proved to me that they are keeping Puding in hiding.

Fourth. They are the cause of a fight between my subjects. They demand pearls that don't belong to them. When the owner of the pearl district asked the finders for the pearls, they were no longer in his possession but in theirs. Then they ordered the rightful owner to be killed. They took 6 pearls which belonged to others who had committed no offense. This happened during my absence.

Fifth. Other people's property that may come to them, slaves, horses or cattle, even if it belongs to me, they keep, and refuse to return them if asked to do so.

Sixth. They killed 8 innocent Patah men.

How can I keep order among my subjects if they oppose me in everything I do? When I want to do what is just and right they tell the people that I have adopted the customs of the white people and am not following up the laws and customs of our forefathers. They are the stumbling block to civilization here in the Jolo Archipelago. Therefore I declare that they are bad people.

Major, Fourteenth Cavalry, Governor.

*This letter from your son, His Highness the Sultan Hadji Mohamad Jamalul Kiram, to my father, Major Sweet, governor of Jolo:*

Your letter reached me, and I understand its contents. You ask me whether I have leased out the Palawans. It is true; I have leased them to an American by the name of Andre Poniatoski for the term of fifty years. When he is in the Palawans he will inform the people there of it, and when he comes to an agreement with the people living on the land he wishes to cultivate, they will ask the American Government to witness the agreement, and I also. As yet he has not gone to Palawan, and that is the reason I have not informed you about the lease. The treaty says in article 4 that after buyers and sellers have come to an agreement, they will let the American Government witness the transaction, if there be Americans in the country which has been leased.

Greetings and best wishes to you.

*Copy of a letter from the Sultan of Jolo to Major Sweet, Twenty-third Infantry (no date).*

I beg to inform you that the people of Bud kanjagun are flying the American flag. I wish to inquire if they asked your permission, or if you ordered them to do so. Because if they did, so long as they don't fight and keep neutral and not side with Joakanain, but follow you and don't deceive my men, it will be good. I would like to know at once, because Joakanain's men have gone out and are making fortifications on the roads near Maibun.

The American mauser which was demanded from Panglima Hassan is in Joakanain's possession. Panglima Hassan said he gave it to Joakanain because he demanded it.

*This letter from your son, His Highness the Sultan Hadji Mohamad Jamalul Kiram, to my father, the governor of Jolo, Colonel Wallace.*

I beg you to help me to tell Dato Amilhussin to discontinue creating trouble among my people in Lugus. He took 4 head of cattle and 1 Colt's rifle from Maharajah Sarapuddin. I did not make any fuss about it, because he is my grandfather; but I asked him not to do it again, to take things without cause. But it appears he won't listen to me. He is now claiming an old man called Habi, a follower of Maharajah Sarapuddin, without cause.

The reason I inform you of this is because he may have a quarrel with the person he unjustly claims, so you may not be surprised. I wish you will let the governor of Siassi know about this. Greetings and best wishes and may your life be long and happy.

*This letter from your son, His Highness the Sultan Hadji Mohamad Jamalul Kiram, to my father, the governor of Jolo, Colonel Wallace.*

I beg to inform you that your letter has reached me, and that I understand its contents. The reason why my brother Joakanain can not come to Maibun is because he is sick. Even if it was not so, it is now such a long time since my father ordered them to come to Maibun to meet me, but they have not done so. Notwithstanding this, if they return me my property which they have—slaves and cattle—I shall not be angry with them, but we would be brothers as formerly. But if they do not return me my property, even if they come and see me, we will never come to an agreement, and there would be only trouble afterwards. During this moon, while I was absent in Look, some more of my property was taken over to them—3 rifles, 1 Mauser, 4 Remingtons, 2 horses, and 2 buffaloes.

*Letter from certain Moros to Maj. O. J. Sweet, military governor, dated October 26, 1900.*

[Extract copy.]

That the individual named Janlula, the brother of Farilah and uncle to Amin, wife of Teh Chiok, did most unjustly and mercilessly, about two months ago, abducted and illtreated the girl named Eah, the daughter of Parilah and sister to Amin, who was under our protection and parental roof at Tulaye.

The said Janlula, the uncle of the girl Eah, had on several occasions demanded the girl to be given to him in marriage, but it being against the laws of nature and entire abhorrence of this man to Eah, we jointly declined to accept his wicked proposal. \* \* \* Stealthily entrapped Eah and forcibly carried her away to Mayambong and most treacherously sold her to His Highness the Sultan of Jolo, for the sum of \$30, Mexican, and a buffalo to the bargain. Subsequently learning the fate of Eah and with the greatest anxiety of redeeming her from the hands of the Sultan we had dispatched Hadje Tayer and Buyong with the sum of \$75, Mexican, and begged them to pay the same to His Highness, Sultan of Jolo, and obtain freedom for our child Eah, but to our great misfortune and distressed state of circumstances, His Highness the Sultan, declined to accept the \$75, and demanded the sum of \$200 to set free Eah from bondage. And the Sultan further threatens to take our whole family as slaves, although we are finally free of any debts to the Sultan or his followers, etc.

---

On the 26th of June 1903, Birod, a Moro from Parang, with five or six followers killed another Moro at Mr. Charles Schuck's place, Jolo, and carried off a slave girl.

Upon being asked about it by Indanan, he replied that he had killed the man because he was his slave and there are more there he intended to kill at Jolo.

Colonel Wallace, on June 27, called upon Indanan for the surrender of Birod and the slave girl. On the 11th of July, Major Jackson, Eleventh Infantry, commanding in Colonel Wallace's place, called upon the Rajah Muda, the heir apparent (the Sultan was in Singapore), Hadji Butu, prime minister, and Hadji Taib, minister of war, for information as to the action taken in Birod's case; reply was made July 20, that nothing had been done.

On the 26th of August a demand was made at Maibun by Major-General Wood, governor of Moro Province, on the Rajah Muda, to arrest Birod and others implicated with him and produce them in Jolo within five days under a guarantee that they would be tried by Moro law by Moros. Hadji Taib went to Parang to arrest these men and came back September 4, 1903, saying he could not do it. The Sultan asked another opportunity and he induced Indanan to go to Parang with from 300 to 500 men to arrest them. He got one of the companions of Birod and the slave girl, turned them over to the Sultan, who delivered them to the district governor at Jolo September 16, 1903. The companion of Birod was returned to the Sultan for trial by the Moros and the girl was freed and given to her father by the governor of Jolo. It was reported that Birod, Panglima Tahir, and about 40 men are fortified on a hill near Silankan, in Parang. Indanan looted all the houses in that section and was ordered by the governor to return the loot, which has been reported accomplished, but Indanan abandoned the siege on that account.

The Sultan has asked another opportunity to capture these men on the hill, which capture remains unaccomplished to date.

OCTOBER 2, 1903.

It is believed that the Sultan is honest in his efforts to make the capture, but has not the power to do it, and Maharajah Indanan is playing him false, having between 300 and 500 men against 40 on the hill.

JOLO, P. I., June 27, 1903.

*To Maharaja Indanan, Parang, Greetings:*

I look to you who command the Sultan's men to arrest Birod, Sankola, and Padjing and those who were with them, all of them followers of Hadji Panglima Tahir. They went last night to the house of Amlin, near Mr. Schuck's house at Anuling, and killed Amlin and carried off a girl named Sabdia. I expect you to bring the girl and murderers to me before to-morrow night. When the Sultan left here, he asked me to act for him in matters of this kind. Therefore obey this order.

*Conversation between the civil governor, Maj. H. L. Scott, Fourteenth Cavalry, and Hadji Butu, the Sultan's prime minister.*

JOLO, P. I., September 11, 1903.

Q. Any news?—A. The Sultan has returned to Maibun. He has told all of his people that whoever wants to help him to uphold his authority must assist to capture Birod. The chiefs of Parang—Panglima Dammang, Maharajah Indanan, and Hatib Awab—told the Sultan that they would not like that chiefs from other parts should come and help. I went to Look to get Panglima Hassan to help in the capture. When he came he said it is well to let the Parang chiefs try to get Birod, to see what they could do. He said not only the governor, but himself thought Birod should be punished. If the Parang chiefs can not capture Birod, Hassan will come with all his men. If the Parang chiefs play false to the Sultan, Hassan will help to punish the Parang chiefs. About 500 Moros are fighting Panglima Hadji Tahir; it is said that Panglima Dammang is not helping to fight him. It was at first said that there were about 200 people with Panglima Hadji Tahir on the hill. Hadji Taid called out to them that all those who had nothing to do with the case should leave. Many left, among them Paradji, the son of Panglima Hadji Tahir. This was yesterday. Paradji came to Hadji Taib. The Sultan has said to the people that if Panglima Hadji delivers Birod, the Panglima would be free, otherwise he will be taken also.

Q. How many people are on the hill now?—A. There were about 200 people in the beginning, up to yesterday about 100, now only about 40.

Q. Do you think they will get them?—A. There is only one road on the hill; escape is not probable; there is no water on the hill; they have about five to six days' supply of food and water.

Q. Hadji Tahir has said they had food and water for three months?—A. The people up there were many in the beginning and all of them brought food along; but when they left they took the food away with them.

Q. How many of them have rifles?—A. Every man has a rifle.

Q. How much ammunition?—A. About 40 or 50 rounds each.

Q. Have they any cannon?—A. It is rumored that they have one small iron cannon; it is no good because it can not be trained downhill, it has no carriage.

Q. Is the place fortified?—A. No; but it is a precipice.

Q. What are they doing at the foot of the hill?—A. Waiting for those that have nothing to do with the case to leave; some of them are not blood relation of Panglima Hadji Tahir, and it is expected that they will leave him.

Q. How high is the hill?—A. About 500 feet.

Q. Is it a strong place?—A. Yes; it has no soil, only rock.

Q. How if the troops go to drive them out?—A. Those on the hill would not stand it long.

Q. Are you confident that you can get them yourselves?—A. If the chiefs really mean it, certainly.

Q. Where is the girl?—A. It is said she is also on the hill.

Q. Why did they take her up there?—A. They took a lot of slaves with them to the hill; some are still there, some have run away.

Q. I want you to keep me posted about the affair.

Q. Dato Dakolah had an American horse; he said he was going to give it to Panglima Hassan.—A. Panglima Hassan said in Maibun the other day that he was going to send for it and return it.

Q. What is he waiting for?—A. He has been to Maibun.

Q. What authority has he over the Taglibi people?—A. He has relations over there and power there.

Q. Has he power over those men whom I want there?—A. He can get his relations if they are wanted, but others only by force.

Q. Do the Parang people know that the general has promised that they shall be tried by Moro court?—A. Yes; that is the reason that the people are wild with them, that they will not believe it.

Q. It is easy for me to go there and kill them if I want to?—A. They have been told so, also that if they go into a hole or on a hill nevertheless the Americans will get them. The Sultan told them that the general had pledged his word they should be tried by Moros.

Q. By resisting they expose themselves to get killed.—A. The Sultan has told them so.

Q. It is their own fault if they get killed now.—A. They understand that; their own relations have told them so.

Q. Tell them to surrender, but don't let them escape.

Q. Have you heard who killed the women in Tullai?—A. I heard only that a woman had been killed. Every man tries to hide his bad deeds.

Q. I wish you would come and talk to me so that we get better acquainted with each other.—A. I thank you very much for your encouragement; I like to learn. My family is living in Tullai. I brought them there when the Sultan left for Singapore. I think they are safest there. I would like Moros and Americans to understand each other. I have told the Moro chiefs that the Americans are not only our friends, but our father and mother.

Q. I want you to come to me every day if possible and report the situation. I thank you very much for your coming.—A. I am not a fighting man; more a politician. I try to advise the people, but do not like to mix up in fighting. Whatever you want me to do for you I will do it if you let me know.

Q. I thank you very much.

---

[Copy.]

The Sultan sends Hadji Taib, Hadji Butu, Habib Mura, and Hadji Tahil to the district governor to say that he, the Sultan, can not get Hadji Panglima Tahir and the other men who are wanted, because the men the Sultan sends to get them have to return the loot, and the men wanted are on the hill.

Hadji Tahil says the agreement provides that if the Sultan is unable to get criminals wanted by the United States the American Government will assist him. Governor answers in such cases he needs no Moros to help; the troops alone can arrest the people wanted or kill them if they resist. But if arrested by the Americans it will be worse for them than if they gave themselves up.

Sultan complains through Hadji Tahil that the following will not assist him: Dato Joakanain, Jolo Island; Dato Kalbi, Jolo Island; Dato Puyo, Siassi Island; Dato Amil Hussin, Lugus Island; Salib Sakib, Jolo Island.

Received September 25, 1903.

A true copy.

H. L. SCOTT,  
*Major Fourteenth Cavalry, Governor.*

*Conversation between the district governor, Major Scott, and the Sultan of Jolo, at the governor's office.*

SEPTEMBER 30, 1903.

Present: The district governor, the Sultan, Hadji Taib, Hadji Butu, Hadji Mohamed, Habib Mura, Hadji Tahil.

Q. Any change this morning?—A. My intention was to come back directly, but then I did not want to come back without something sure. My heart is with the Americans; there may be a change in governors, but there will never be a change in my sentiments. If it depended only upon myself there would never be bad relations between us; but others are causing the trouble.

Q. How are the people in the country feeling?—A. They feel more assured about you, and that the soldiers do not go out to do them harm.

Q. You seem to have something on your mind?—A. Yes; about my brother Attick. [Sultan shows the governor a letter bearing Sultan's seal and signature.] This seal was stolen from me, and the signature is forged.

Q. What is the meaning of the letter?—A. When Attick came back from Singapore he knew that I had some money outstanding with Maharaja Sarapuddin, of Lugus Island—1,600 pesos. Attick sent this letter, with my seal and forged signature, and got the money from Sarapuddin. [Sultan shows another letter bearing his seal and signature.] This letter is also forged; it was sent by Dato Attick to Katz Brothers, in Singapore. Its purport is to borrow from them 1,200 pesos, but he did not get the money because the firm was suspicious.

Q. Where is Dato Attick now?—A. At Maibun. I am afraid he has made other bad use of my seal.

Q. What use?—A. About Palawan. I have heard that it was said that the Sultan of Brunei has a document from me regarding the sale of Palawan. A messenger from the Sultan of Brunei came to me in Singapore and said that part of Palawan belonged to the Sultan of Brunei, but the Sultan of Brunei would buy my share of that island; somebody wanted to buy the whole island for 4,000,000 pesos. I told the messenger that I did not want to have anything to do with this matter. I heard that the messenger then went to Dato Attick, and I do not know the result. Since I returned to Jolo, and have seen Dato Attick's forgeries, I have suspicions. I told Dato Attick in Singapore not to have anything to do with the messenger of the Sultan of Brunei.

Q. Did Attick steal the seals?—A. Yes.

Q. Where are the seals now?—A. I have them. He got the seals secretly and stamped blank paper with them.

Q. Has he any more of that paper?—A. I don't know; but I am afraid that he gave a document to the messenger of the Sultan of Brunei. I have spoken to Dato Attick about it; he swore he had no more.

Q. If he got your money from Sarapuddin on a forged letter, you can punish him. As to the Palawan affair, if there is anything in it, it will probably reach the governor at Manila, then come to the governor at Zamboanga, and then to me. I will then let you know about it.—A. As to punishment, I can do nothing against my own brother. Our religion does not permit it (called "sumbang").

Q. I understand that Attick confessed to you?—A. No; but the Raja Muda told me.

Q. That Datto Attick wrote these two letters and also to the Sultan of Brunei?—A. Attick told him.

Q. That he has written to the Sultan of Brunei?—A. No; but I suspect him. When Attick returned to Jolo he spoke bad of me. When I returned he got frightened. He had told the people that I would never return.

H. L. SCOTT,  
*Major Fourteenth Cavalry, Governor.*

*Continuation of conversation between the district governor and the Sultan of Jolo.*

SEPTEMBER 30, 1903.

Q. How about getting Birod?—A. Did not Panglima Ambutong tell you about it yesterday?

Q. He told me something.—A. They have had a conference about getting him; did not Ambutong tell you?

Q. No.—A. Panglima Hassan comes on Sunday. I have done my best. I have sent the Raja Muda to Hadji Panglima with a letter. The Raja Muda even offered to stay with Hadji Panglima Tahir's people as a hostage until the return of the Panglima from Jolo; but the Panglima did not want it. He did not allow the Raja Muda to get to them on the top of the hill. Then I sent Panglima Ambutong to Hassan. Hassan said that they had had a conference to go on Sunday, so it was no use to go now. He told Ambutong to tell me that they would surely get him on Sunday. That is why I sent Ambutong to you to tell you of this arrangement.

Q. Did you see Hassan?—A. When he arrived at Maibun; but when I returned to Maibun he had left.

Q. Why did not Hassan come when I sent for him?—A. When did you send for him?

Q. Lately.—A. Panglima Hassan has sent a letter to you.

Q. Why did he not come himself?—A. I don't know.

Q. If you see him tell him he is doing something very dangerous by not coming when I send for him.—A. He will surely come on Sunday, if he gets Birod.

Q. If I send for any chief I want him to come; otherwise I may take two or three troops of cavalry and get him.—A. Whenever I see any chief I tell him to go and see you.

HADJI BUTU. It is Moro custom, though a bad one, even when the Sultan sends for any chief; they take their own time about coming.

Q. You better tell Hassan when you see him on Sunday to come to me.—A. I am not sure whether he will stop at Maibun or go right through. It has been a very bad custom in this country that chiefs come or stay away, as they like.

Q. That will be changed now.—A. I am lenient with my people. If I am not I would have no subjects left. If I am angry with them, they leave me. Even Colonel Wallace has seen that he can do more with kindness.

Q. Tell Hassan to come and say what he has on his mind.—A. Panglima Hassan is no child; he knows enough without my telling him.

Q. Will they get Birod?—A. Yes; Panglima Hassan, Panglima Dammang, Panglima Ambutong, and Maharaja Indanan have taken it upon themselves. I am not like the governor; I do not have three or four hundred soldiers at my disposal; I have to depend upon my chiefs. While I was away my brother, the Dato Raja Muda, had a bad time of it. My only soldier is Hadji Taib. Everybody knows that I have only a few men at Maibun under my immediate control. The mountain people say even now, "Why you do not pay us for this."

Q. Tell the people that they can do no looting.—A. I will do so.

H. L. SCOTT,  
Major Fourteenth Cavalry, Governor.

*Conference between Governor Scott and Panglima Hassan.*

[This conference was badly reported and is therefore unsigned.]

JOLO, JOLO, P. I., October 6, 1903.

Q. I am glad to see you.—A. It was not my fault that I did not come earlier. I am away from home for several days and have seen all the chiefs.

Q. How are you getting along at your place? Have you finished the rice? Is there enough of it? I just want to know whether anybody goes hungry.—A. We have not finished the rice, but we have enough and nobody is hungry.

Q. I am glad to hear it. Where do you come from just now?—A. From home; I went first to Indanan, then to Maibun, then to Tiangi to see you. I am at Sali's (Mr. Charles Schuck's) place.

Q. So you have not been to Parang? I heard you had a message from the Sultan.—A. I was not to Parang. I did not say that I was going to get Birod. Birod has given me his defense, so I went away from there, first to find out how things stood.

Q. So you did not bring Birod?—A. I did not say that I would. Birod has not come to see me; he sent word; he said that he was in the right, but, even so, he would subject himself to any trial.

Q. Why has he not come in here, then?—A. He will stand any trial, but he has been ill treated.

Q. How has he been ill treated?—A. Birod says he has been ill treated, because when he lost the slaves he went to Indanan, then to Dammang, and to the Sultan, and finally to the governor; the first did not give him any satisfaction and the latter told him to go and get them. He heard they were on Sali's plantation, and went to ask him. He said to go and get them. Birod did not like this, because if he would take them away himself they may have a grudge against him; so he waited for some time and when he went then to Sali's farm they were gone. Later, he heard they were near that place and went there. As soon as the man saw him he made preparations to fight him and to kill him; so Birod shot him because he did not want to get killed by his own slave.

Q. That is not the point at all. Birod has been told to come in and to explain, but he did not come. He has to come or I have to go and get him myself. If he comes in it is time enough to talk about his innocence. I gave my promise; the general gave the promise that he should be tried by Moro court. One of the men that were mixed up in the matter was sent to the Sultan, who promised to try him, and, if he was guilty, to punish him. The girl was turned over to her father. I will not discuss now the question whether Birod is guilty or not. I should think, if he is so innocent, he would come in, or had come long ago. The main point is that he has to come in and to stand right there. I will do all I promised. You always will find, as long as you deal with me, that I keep my promises. When I send for anybody, I don't care who he is, he has to come; that is what I am governor for. If you want to get him, all right; but I think I have to get him myself. Indanan went there with 300 men. I think he was afraid; anyway, he did not get him.—A. What is the reason you want him here?

Q. Because I sent for him.—A. You will excuse me, but nowadays there are so many stories of different kinds in the country.

Q. I don't know about any, and I don't care for stories either.—A. They don't come to you with stories?

Q. No; they don't get to me.—A. The story went that, if Birod would come in you would put him in jail without a trial.

Q. That is not true.—A. It is as you say; you only want Birod here.

Q. I know he said so to Indanan; at least Indanan said so; but I think Indanan was afraid to get him; there are 40 men on the hill; Indanan had 300; he told me himself he was afraid, and did not want to die right off. He did not go after Birod at all; he went around stealing from innocent people until I stopped him. He went there only to steal, not to get those people.—A. I don't know that; I was not there.

Q. Well, the fact remains that he went there with 300 people and failed to get him. I want Birod and that Panglima Hadji who is protecting him and those 5 men, that had to do with that killing. One man was here already, and has been turned over to the Sultan; I don't want him any more.—A. I would like to hear what you think about if Birod should come.

Q. I can say nothing about it; I want him right there, no matter how he gets there, and if I have to get him. If I go over there and he fights me, I will kill him.—

A. What do you think of this? Panglima Dammang and Indanan are at Sali's place; everything you tell me now is for them, too; let them hear it.

Q. I don't care about them; I am talking to you now, and I don't think you care anything about them, either.—A. But I just now got them together again; that fighting ruins the country.

Q. I am glad to see you to get them together.—A. My idea was to bring the datos and the Sultan together; they were on constant warpath.

Q. We have to have peace here, and I am going to see to it. If Indanan or Dammang resist it will be the worst for them.—A. The other chiefs were jealous of me, and wonder why I could come in with 70 men and they should come only with a few.

Q. It had been promised to you by General Davis; we hold promises. It would have those other chiefs here, too, but everybody on the streets is nervous; it is just like playing with fire around powder. If they had 1,000 people here in the town they could not be easily controlled.—A. I could take the responsibility.

Q. But I would not take any; you know your people; I don't. If there are only a few people around here we can talk nicely, but when they are scattered all over town we don't know what could happen. Only a short time ago we had a juramentado here; he cut a soldier across the back and we killed him. They looked at his clothes and said he came from Look.—A. There was nobody missed in Look.

Q. People from Taglibi say he was from Look.—A. It was the wish of the Taglibi people to put me in bad odor.

Q. Well, what shall I do now, go after Birod? Are all the Moro chiefs afraid of him?—A. I came to hear from you about this.

Q. Sometime ago General Wood sent for him; he gave Rajah Muda five days to get him; before that, in June, Colonel Wallace sent for him. Now we have October. The Sultan promised to get him, if we turn him over to him for trial; that runs now two or three months. About August 28, Rajah Muda promised to get him; Hadji Taib here heard him promise it. The Sultan sent Indanan after him. Indanan did not do anything but steal off innocent people and came back without Birod. I will get him myself.—A. Did the Sultan give it up?

Q. I am getting tired of waiting. I heard that you want to bring him, or do you want me to get him?—A. Is the case absolutely bad?

Q. The case is very bad, as he don't come in. I take some soldiers and a few cannon and get him. A few days I may wait yet; I have some little business here. When I am good and ready I will go out. Yet, if he wants to give up, and will put up a little white flag, I promise not to kill him; if he don't resist or does not run away, I will not hurt him.—A. I am told it is a stronghold.

Q. I don't care about that. We batter it down with a cannon.—A. Does that still hold good, that you would turn him over to Moro justice?

Q. Yes, I promised it, and I am going to keep it.—A. I would stay at Sali's place and send for him, but I can not promise that he comes.

Q. Never mind, then, I get him myself. I am now waiting since June.—A. I think if I would send for him he could come to-night.

Q. If he comes here before I start out, all right. I want those others, too. When I go there, I get them alive or dead. I don't like to kill anybody, but my orders have to be obeyed.—A. I would like to talk to you about something else. Two generals have told me that when slaves run away they would be returned.

Q. I think you are mistaken about that. I was there myself with General Wood. The United States don't recognize slavery. Who was it? General Davis? You certainly are mistaken. In our country we had much trouble ourselves about the slaves; we fought big battles in which more people were killed in one battle than there are in Jolo together. One time we have been savages; we know better now. Russia, England, people that own half of the world and have more than half of all the money and power, have no slaves. They have determined that there be no slaves. I don't recognize slaves; no man can be the property of another, like a horse or cattle. I don't believe that the general promised you to return slaves. My Government would not allow to return a slave.—A. Somebody comes to you to give up his person for a debt. What are you going to do, lose your money, take nothing?

Q. If he has no money to pay, I take his horse or dog. \* \* \* I am careful whom I lend money.—A. In that case I would be ashamed to come here to Jolo and to meet a man that owes me and run away.

Q. I can not see that; they ought to be ashamed of him.

*Record of a conversation between the district governor, Major Scott, and the representatives of the Sultan of Jolo, viz, Hadji Butu (prime minister) and Hadji Taib (minister of war), at the governor's office at Jolo.*

JOLO, P. I., October 7, 1903.

HADJI BUTU. I received a letter from the Sultan and he wishes that I tell the governor all about it.

GOVERNOR. What is it?

HADJI BUTU. Panglima Hassan came from Look to see the Sultan. The Sultan asked him why he had come. Hassan said, we have agreed to get Birod. After Hassan, they all came to Maibun, Panglima Dammang, Panglima Ambutong, and Maharajah Indanan, with their followers. The Sultan asked them, what have you agreed upon and why do you come with so many followers; I asked you to get Birod, that was why you had a conference; now, have you got him? The chiefs answered, the Sultan should not interfere, they would look after it themselves. They said our thoughts are not bad but good; we want to bring peace in the country, then the Sultan can live in peace also. The Sultan replied, that is all right as long as you do good work, but bad work I don't allow. Then Hassan said that he was going to bring Birod. The Sultan asked, why do you go with so many followers, why don't the chiefs go alone; if there are so many men there is likely to be trouble. If you go with such a large number to the governor, he has still more men than you have; if you want to show your greatness, the Americans are greater than you; if you want to show your courage, the Americans are braver than you; if you want to show your

wisdom, the Americans are wiser than you. The chiefs answered, we will think over it, but don't you interfere. When they left, the Sultan told Hadji Taib to go along and see if they did bring Birod to Jolo.

GOVERNOR (to Hadji Taib). Did you see him here?

HADJI TAIB. No; that proves to the Sultan that the chiefs do not keep their word.

GOVERNOR. I am sorry that the Sultan can not get Birod; so I have to go and get him myself.

HADJI BUTU. We are more sorry about it than you are.

GOVERNOR. I think Maharajah Indanan don't want anybody to succeed getting Birod, and that he feels bad that Panglima Hassan should go there for that purpose. I told Hassan that I would give the Moros the chance to do it, but I now find out that they can not do it, so I am going to get him myself. I have no hard feeling toward the Sultan, and I believe he would get Birod if he could, but it is beyond his power.

HADJI BUTU. The Sultan depended upon Hassan's promise; he did not for a moment think that Hassan would break his word.

GOVERNOR. I think Hassan, Indanan, Ambutong, and Dammang don't want to get Birod. Is there anybody else left to do it—I mean of the chiefs?

HADJI BUTU. No; Hassan is the most powerful chief of Look. There are none left in Jolo. Dammang and Indanan are the chiefs in Parang, all other chiefs there follow them.

GOVERNOR. There are only Datos Joakanain and Kalbi left, and they would not go to Parang?

HADJI BUTU. Yes, no one else.

GOVERNOR. Then you acknowledge that the Moros can not get Birod?

HADJI BUTU. It looks like it.

GOVERNOR. Can you suggest anybody else to do it?

HADJI BUTU. No.

GOVERNOR. Then don't talk about it any more.

HADJI BUTU. There are none but the Samals left to do it, and they can not do what the Moros can not.

GOVERNOR. Well, it is my business now to get him. But I want you to give me information where he is. If you have no power to take him, you are able to give me information. I expect every day information from you where he is.

HADJI BUTU. We will do that.

GOVERNOR. I know you can inform me; I am not angry with you that you can not take him, but I shall be angry with you if you do not give me this information.

HADJI BUTU. We will do so if we know.

GOVERNOR. You have to find out.

HADJI BUTU. Habib Mura will send out to-morrow to find out.

HADJI TAIB. As soon as I know where he is I'll tell you about it, and I'll go along with you to get him.

GOVERNOR. I need nobody to go along to get him, but he can go along to show me the road and the place. I have men and cannon enough. You can go and tell him to surrender, that's all. I am going to take all that are aiding and protecting him, and those men who were with him at the murder, and Panglima Hadji Tahir. Everybody who wants to help and aid Panglima Hadji Tahir against me can go there now, I don't care how many there are. But tell the people who do not want to help him to get out of the way, especially women and children; our guns shoot a long way. I don't want to hurt anybody. If I come and they want to surrender, they can hoist a white flag and stop shooting. Don't put up a white flag and shoot afterwards, that ends badly.

Mr. Schuck tells that Panglima Hassan said to him when he left Schuck's place, that he was going straight back to look.

A true copy.

H. L. SCOTT,  
Major, Fourteenth Cavalry, Governor.

---

*Case of Panglima Dammang and Panglima Ambutong.*

Neither a proper investigation nor a trial of justice took place in the following case of Panglima Dammang and Panglima Ambutong: Two carabaos of Dammang strayed to the field of Ambutong and were tied up. Dammang sent some men for his carabaos, and they fired upon Ambutong's men, who defended themselves. The Rajah

Muda sent Hadji Taib and Maharajah Indanan to stop the fighting. Both Panglimas were fined for fighting during the absence of the Sultan, and the fines were confiscated.

*Colonel Scott's talk with the Rajah Muda at the latter's house, July 26, 1903.*

Q. Now don't tell me about anything, only that which I ask of you, and don't interrupt.—A. I thank you for coming to see me.

Q. I heard that you were sick.—A. I am sick, my hip is all sore.

Q. I came down here with the general and governor of all these islands of Mindanao. The governor wants to see you. This man [interpreter] told me that Hadji Taib told him that you had boils and could not come up if the governor did send for you. Is that true?—A. I have a boil.

Q. Where is it? Let me see it. [Makes examination.] This is all nonsense, you have to get up and come with me. We have no idea of hurting you, but when the governor sends for you you have got to come, and we won't have any nonsense about it at all.—A. The general sent for me twice. I have great respect for him, but was waiting for Hadji Butu.

Q. When the governor sends for you you must come and come right away. You must not send lies to him.—A. Hadji Butu told me the general wanted to see me.

Q. And you did not come, but sent word that you had a boil, when you haven't a boil at all. Now get up and come. Bring some of your men with you, if you want, but come, or I shall have to take you, and I don't want to have to do that.—A. I will go with you. [He calls to a slave to help him.] I will go with you, but I have been very sick.

Q. Come along.—A. If I did not want to pay this respect, it would be very difficult for me to go.

Q. I am glad you have that respect. We have no idea of hurting you at all.—A. If it was not for the respect I have for you, it would be very difficult for me to go, for I am sick. My intention was to go, but I was waiting for Hadji Butu. I thank you for coming to see me. My arms are sore, too. I have the measles.

Q. Measles?—A. Yes, and my bones, too.

Q. Now interpreter, I want you to make this plain to him, that we are not going to hurt him, but that I want him to get up and come with me quickly and quietly. I told you, when I came here, I did not want anybody to break in on me; stop it. Assure him that I have no desire to hurt him, but he must come with me quietly, and tell him it will be very disastrous if he tries to run away.—A. I never had such intention.

Q. I am glad you haven't.—A. I will go.

Q. That's good. Have some of his people get him ready. I only want you to understand the situation.—A. It is not fear at all, and I will visit you also.

Q. Glad of it?—A. It is true that I am sick. I don't make this an excuse for not coming. I was waiting for Hadji Butu, but if it was not you I would not go.

Q. When the governor calls, you must obey at any cost. If the governor tells me to do anything I do it at once, and everybody must do the same. Come without fear; you need have no apprehension.—A. If it was only the Moros who wanted to see me, I would not go, but as it is you and the governor, I will go. I have no reason to be afraid; I have done nothing wrong.

Q. Only that you do not obey the governor.—A. I wanted to go, but I was waiting for Hadji Butu.

Q. Hadji Butu has been there and gone; but there is no use talking any more, let's go. Wait a minute; I want to say something more to you. There are seven men who have been sent for; they have killed a man, the uncle of the girl now in the hands of your people. Interpreter, tell him the whole story. [Interpreter goes over the matter.] Explain to him that the governor is going to allow him to try these men according to the Moro laws. And that if the girl wants to go back to the people where she formerly was she may, or if she wants to stay with the Moros she may stay with them. She can do as she likes.

Here is one of our doctors; let him examine you. Doctor, see if the Rajah Muda has boils. [Doctor's examination revealed nothing but a scarred, skinny hip.] Now we'll go. [Party started, and Marquez, the interpreter from Siassi, cautioned that it would be well to be very careful, indicating that the Rajah Muda's men were on the edge.]

#### TALK AT THE CAMP WHEN THE PARRY ARRIVED.

Q. Now, in regard to the demand of \$1,000 from Ambutong. After he [Rajah Muda's representative, Habib Mura] was told that he (Ambutong) did not have \$1,000, he demanded \$100. This amount was paid. Ambutong thinks he has been

cheated, and has asked the protection of the United States. What do you say, Rajah Muda?—A. Dammang's two carabaos ran over to Ambutong's field, and Ambutong's man, Abdula, tied them up. When Dammang met Abdula he told him that one of the carabaos belonged to him, and that that other buffalo belonged to Hadji Agrul. Abdula said, if one belongs to Agrul we will have to have a talk about this. Then Dammang's man, Kalikan, shot at Abdula's son and two others.

Q. Tell him to give everything in detail.—A. After that the fighting commenced. While they were fighting I sent Hadji Taib and Maharajah Indanan to stop it. I was in Jolo at the time, but these men had stopped the fight when I returned. Hadji Taib told Ambutong to put up security to come in for trial. When the bail had been put up, Hadji Taib told them to come in on Saturday. On Saturday Dammang came in. Ambutong sent only a message. Then Dammang said it is difficult to have trial when only one party is present. It is customary that when a person writes a letter he is answered by a letter, and so a letter was sent back to him telling him to come back next day; Indanan was told the same thing. Indanan came in next day according to agreement, and then the Rajah Muda sent for Hadji Taib to have a conference to determine what kind of a sentence they should give Ambutong. They did not decide the matter that night. Then Indanan went home and the matter was put into Hadji Taib's hands to settle. Then Indanan said that they all agreed that he and Ambutong should be punished for fighting during the absence of the Sultan, and they were punished for this. It is an ancient custom, that when the Sultan tells his people not to fight that they shall obey him; thus Ambutong was sentenced to pay 1,000 pesos for violating the Sultan's law. Then Rajah Muda sent Bahora, Moral, and Joji to Ambutong and informed him he was fined 1,000 pesos, and Ambutong submitted to the judgment; they (the messengers) returned and stated Ambutong submitted. It is not a new custom that when the Sultan leaves his country he gives orders that no one shall fight during his absence. This order was disobeyed. It is customary to punish them with a fine of 1,000 pesos when they disobey this order. Ambutong was not punished for fighting, but was sentenced because he disobeyed the Sultan's order. When the Sultan sent to Ambutong to collect this fine Ambutong named a day when he would pay it. He told them to come back in a week, and when the week was over Rajah Muda sent Habib Mura to Ambutong. Ambutong told Habib Mura that he would bring in the money on Thursday, but only 500 pesos. Thursday he did not come, nor did he send the money. Rajah Muda then sent Pakeni out as his representative to Ambutong, and when Pakeni arrived at Ambutong's place he did not get any money. [Correction—Mahari also went with Pakeni to get the money.]

**MAHARI TELLS HIS STORY ABOUT WHAT HAPPENED WHEN HE GOT TO AMBUTONG'S PLACE.**

Ambutong told him that it had been agreed that he was to pay his fine by giving up his bail (the chattels already delivered). Then Mahari returned to the Rajah Muda and told him that Ambutong said the bail was to satisfy the fine. Dato Pakeni returned to Ambutong and told him the bail would not satisfy the fine, and Ambutong asked how much more would be necessary, besides the security already up, to satisfy the fine. The Rajah Muda then said that he told Pakeni the former agreement was that Ambutong was to pay the 1,000 pesos, and that he was trying to prevent a fight, but that it appeared that Ambutong wanted a fight. Pakeni said, if that is the case I will go back and ask him again if he will pay the 1,000 pesos. Then Ambutong asked Pakeni if the bail would be returned if he paid the fine; that Doctor Saleeby had told him it would be. Dato Pakeni went back and told the Rajah Muda about it, and up to this time the Rajah Muda is waiting for his 1,000 pesos, and I don't know what arrangement has been made since about it.

The Rajah Muda said he had not been paid even a cent of the fine; that he has heard that Hadji Taib told Ambutong, however, that the fine would be satisfied by the bail.

Q. What was the bail, did you say?—A. One gun, 2 horses, and 1 cannon; I did not even get a cent of money. I have been waiting for him to pay the 1,000 pesos. Ambutong changed his judge; he changed to Hadji Taib, so now the case is in Hadji Taib's hands, and if Ambutong pays the 1,000 pesos the bail will be returned to him. Doctor Saleeby told Ambutong that the bail had been divided up between different parties; that is, the 1 gun, 2 horses, and 1 cannon. The reason the case has not been settled is because Hadji Taib has said the bail would be accepted for the fine.

Q. What Ambutong told about paying the security, etc., is it not true?—A. I don't know any more about the case, for I only heard about it yesterday.

Q. When did this occur?—A. Last moon.

Q. I don't understand this custom, about one man trying a case and then another

man trying it—a change of judges. Who had a right to try Ambutong?—A. When the Sultan is not here, Rajah Muda is the judge; Hadji Taib has the right to be present.

Q. What rights has Hadji Taib to change a sentence imposed by your representative?—A. Hadji Taib did not change the sentence, but Ambutong paid the bail over to him.

Q. What were these articles of bail?—A. [Contradiction.] Four gongs, 5 horses, 2 guns, 1 native cannon, 1 boat, another small cannon, named "Itum."

Q. How does it differ from a lantaka? Where are these things now? Have you got them all?—A. Some Indanan has. Indanan has them in Sandakan. If the bail had been turned over to me I would have returned everything. The bail is not in my hands.

Q. That does not answer my question, I want to know where all this stuff is.—A. Hadji Taib has 1 gun. Indanan has 2 gongs, 1 gun, 1 lantaka, and 1 boat.

Q. Account for it all.—A. The cannon called "Itum" is still with Ambutong.

Q. There are one or two points I want to clear up. I understand sentence was passed by Hadji Taib.—A. Indanan and Hadji Taib pronounced sentence.

Q. What investigation did they make into it?—A. They knew all about it.

Q. That does not answer my question. What investigation did they make? I want to know how they tried the case.—A. They knew that there was a fight, and that there was blame on both sides.

Q. How did they know there had been fighting?—A. There had been shooting; some men had been killed and some wounded.

Q. Be careful what you say, I want to get at the bottom of this. How did you know they were fighting, that there was shooting; did you make a regular trial of it?—A. They have been tried, for it is customary if they disobey the Sultan's order, they shall be punished for disobeying.

Q. By his own statement Dammang's man shot Abdula's son. Both these men can not be in the wrong; one is in the wrong and the other right.—A. The Sultan had issued an order that they must not fight during his absence, and they did fight, but for this they have not been fined; it was because they disobeyed the Sultan's order.

Q. When there is a fight made against a man, if he is not in the wrong, he can not stand and be shot—he has got to fight back. What do you do then? Do you fine them both?—A. Ambutong says that Dammang began the shooting, and Dammang says that Ambutong began it, so we fine them both.

Q. When what you have said is written out and will be official and I shall ask Ambutong about it when he comes to Jolo.—A. Dato, according to you, the man who fires the first shot should be punished, but the man who in return to this shot defends himself should not be punished. Is that it?

Q. Ask Hadji Taib, who has heard all that has been said here, if it is true or not true.—A. What the dato said is true, answered Taib.

Q. I won't detain you any more to-night. I thank you very much for coming up here, and hope you will feel better to-morrow.—A. I thank you for treating me like your son.

Q. I think we are going to live very well together.—A. I think so, too, only you do not accept me as your son.

Q. I feel very well toward you.—A. My love for you is greater than your love for me.

Q. I want you to look upon me as a father, and I want the good will of all the Moros.—A. If you really love me like a father, as you are now governor of Jolo, if I do anything wrong you will tell me?

Q. That is just what I am doing to-night. Ambutong told me his story. I did not accept his story as a fact. I came here to hear your side of it. I want to know the truth of it, and the longer you deal with us the more you will know that we only want what is just and right. You will find when we say we will do a thing we will do it, no matter who stands in the way, and all we want is the truth.—A. What I have said is true, God willing.

Q. I believe you have told the truth, so far as you are concerned. I believe the more we know each other the better we will get along. When you come to Jolo I want you to come to see me, and when you get into trouble I want you to come to me. He must only tell me what is true; lies will not do at all. We must talk straight to each other. Whenever there is trouble, tell him to come to me; he will get well quicker that way.

The Sultan, September 2, 1903, stated that he had given instructions to cause the bail to be returned to Ambutong and his fine remitted.

H. L. Scott,  
Major, Fourteenth Cavalry, Governor.

*Investigation in connection with suspicion of stealing slaves from Mindanao, the apprehension of Selungan, and return of certain people stolen from Mindanao.*

Two Moros, Pablo and Sampang, came to me and stated that they were stolen by Selungan and Tuan Akir at Cotabato, and were sold with 5 others to Tuan Akir, who lives at Wuolo, near Maibun. They escaped, and left Kauia, Tabuan, Inug, Dalidai, a girl, and Kapungpung, also a girl, with Tuan Akir at Wuolo. They were brought to Jolo in two boats (22 persons in all) when the present rice crop was about 2 inches high (i. e., May or June). Twelve of the 22 were stolen from Cotabato; the rest from other places. They stated there was another man named Kauia, who escaped and was with the soldiers at Siassi. I understand he is with Hadji Usman, the interpreter at Siassi.

A girl named Isnai is on the island of Siassi.

A girl named Rambuna is on the island of Tapul.

A girl named Ongnai is at Buol, in Look.

Pangna Muttu and Lansagar are in Look.

The others are scattered about.

\* \* \* \* \*

Akir was arrested but denied the theft of these people, stating these men lied, and that he never heard of the people mentioned by them as living with him; that he bought Pablo, Sampang, and the Kauia, who escaped over a year ago.

On investigation by the commanding officer (Major James), Tuan Akir was released. This will destroy all chance of recovering the 5 people said to be at his house, as on his return home they will be sent away from there. Enough evidence can be obtained against him for his illegal acts in Mindanao from Pablo, Sampang, Kauia, at Siassi, and the girl Rambuna in Tapul, who, I understand, is married to a Chinaman.

September 24, 1901.

H. L. SCOTT,  
*Major, Fourteenth Cavalry.*

*Examination of Pablo, a Moro boy, by Major James, Twenty-third Infantry, at Jolo, September 24, 1901.*

Q. What is your name?—A. Pablo.

Q. Who brought you to this island?—A. Selungan.

Q. Where from? State all the circumstances.—A. From Cotabato. Cotabato is my home. I was walking about in a jungle very close to Cotabato, some one called out to me to wait; I waited; three men came up and caught hold of me and tied my hands behind my back and took me to a small boat, and I was then taken to a large boat that brought me to Jolo Island. Eleven besides myself were brought to this island as slaves—3 women and 3 children (females), 6 males (2 boys and 4 grown men), all were brought from near Cotabato; we were so brought a long time ago; I don't know how long; when we came the rice was very small (note by interpreter: This must have been about end of May or beginning of June last). We landed at Parang; when we landed at Parang we were at once bought by Akir, who took us to Wuolo—12 in all. We came from Cotabato and landed at Patotol, where 8 were sold; from Patotol we left for Parang; Selungan met Akir and asked him to sell the slaves; there were 12 slaves then; we were all taken to Wuolo by Akir, who sold some of them, 6 (3 women and 1 girl child, 1 man, and 1 boy). One woman was sold in Tapul; 1 girl child was sold in Siassi; 1 woman, 1 man, and 1 boy were sold in Look; 1 young girl was sold at Buol. One grown-up boy escaped over to the town of Siassi (we landed in the town of Siassi, and this boy escaped there).

Q. Did you and this man with you escape together?—A. Yes.

Q. When?—A. Does not know when; there were 3 of them who escaped; it was five nights ago; we have been at this place for five nights.

Q. How many slaves were brought to this island on the boat with you?—A. Twenty-three; some slaves, 4 in number (2 men and 2 small girls), were sold in Basilan.

Q. Do you know where any of the slaves sold in this island are; if so, where, giving number?—A. Umpung bought 1 small girl and 3 men in Patotol; Albi, of Patotol, bought 4 men; Zambano, a woman, was sold to a Chinaman in Tapul, she is living

with him as his wife; Tin Kun, of Siassi, bought Isinia, a small girl; Lansagan, a woman, Muttun, a boy, and Upangua, a man, were sold in Look; Ongai, a young girl, was sold in Bual, I do not know who bought her; Kauaiag, a grown-up boy, is now in the custody of the Americans at Siassi, nothing more; Dalidai, a young woman, Kapungpung, a girl child, and Inug, a man, and Tabauan, a boy, and Kauaiag, a boy (called Untung, because there are two of this name), these are in Wuolo, near Maibun. This is all I know.

Q. Do you think you could find these persons at Wuolo if I send you with some soldiers to find them to-morrow?—A. Yes; if they hide them I won't be able to find them.

*Note.*—Chinaman mentioned in Tapul is named Paah.

*Second examination of Pablo, by Major James, Twenty-third Infantry, at Jolo, September 24, 1901.*

AKIR, having been arrested in Tullai, being present.

Q. Do you recognize this man [pointing at Akir]?—A. Yes.

Q. Is he the man that brought you from Mindanao to this island?—A. Yes.

Q. When?—A. I arrived in Jolo about six months ago.

Q. What did Akir do with you when you arrived?—A. I was taken to his house and I was told to work in his house.

Q. Did Akir steal you from Mindanao?—A. Yes.

Q. This man Akir also took Sampang from Mindanao at the same time he took you?—A. Yes.

Q. Was Selungan with this man Akir at the time he brought you from Mindanao?—A. Selungan came first; they did not come together; Selungan returned first, but Akir returned afterwards.

Q. Did you escape from this man Akir when you escaped and came here?—A. Yes.

Q. He, Akir, did not buy you as a slave from your owner?—A. No.

Q. Then he stole you?—A. Yes.

Q. He, Akir, did not buy Sampang from his owner?—A. No.

Q. Then he stole him?—A. Yes.

Q. He, Akir, had Sampang as a slave at his house?—A. Yes.

Q. Did Akir bring Sampang to Jolo Island from Mindanao at the same time he brought you?—A. Yes; in one boat.

*Memoranda in regard to this examination.*—Of boy Pablo, on September 25, 1901, Mr. Charles Schuck, interpreter, told me on this day, September 25, 1901, at about the time I released Tuan Akir, that Pablo said at first that the occurrence of his being brought down from near Cotabato was three months ago, then he said it was six months ago, then he said it was a year ago, then he said he did not know when it was.

W. H. W. JAMES,  
Major, Twenty-third Infantry.

*Examination of Akir by Major James on September 24, 1901.*

Q. Was this boy a slave of yours and did he escape from you a few days ago [pointing at Pablo]?—A. Yes.

Q. How did you get him as a slave?—A. He was sold to me in Taluk Sangai in Mindanao.

Q. When?—A. A little under two years ago.

Q. Did you not catch and steal this boy in Mindanao?—A. No, I would not steal a fowl, much less a boy. I had an American flag given me by the governor of Siassi, and besides that I had a letter from the Sultan.

*Examination of the boy Pablo by Capt. W. H. Sage, Twenty-third Infantry.*

Q. What are the names of these people who are in Wuolo?—A. Dalidai, Kapungpung, Inug, Tabauan, and Kauaiag, also called Untung. When Akir left Mindanao he was pursued by the Americans, but escaped. Selungan is related to Akir; so I thought it made no difference when I said I was in Selungan's boat instead of in Akir's.

Q. How long ago was it?—A. We were fifteen days on the voyage; I do not know how long ago.

Q. Was it this year or last year?—A. This year, the rice was still small.

Q. Did you live in Cotabato?—A. Close to the town of Cotabato.

Q. Do you know of soldiers there?—A. Yes.

Q. Do you know the name of any officer?—A. Yes; the name is governor, but I have never been to his house.

Q. Were you there when the Moros fired at some soldiers?—A. No; afterwards. I was there when some of Dato Piang's men fired on the Americans. I ran away with Piang's men.

Q. How many people were taken from Cotabato when you were taken?—A. Twelve.

Q. Who is in Cotabato that knows you?—A. Dato Piang. I am his slave and live close to his house. I was taken while out in the jungle; some others told me they were taken while fishing.

Q. If we write to Dato Piang can he tell us when you were taken?—A. Yes. Before Dalidai was taken she was living with an American at Cotabato as his wife.

*Examination of Sampang by Capt. W. H. Sage, Twenty-third Infantry, on September 24, 1901, at Jolo.*

Q. When you came down how many people were in the boat with you?—A. Twelve, including me.

Q. How many boats came down?—A. Two together.

Q. Was Selungan in one boat?—A. Yes.

Q. What are the names of the people now in Wuolo?—A. Kaniag is one.

Q. Where were you captured?—A. In Cotabato. I knew Pablo there. There were 3 children, 1 young woman, and 1 man who are now at Wuolo.

H. L. SCOTT,  
*Major, Fourteenth Cavalry, Governor.*

GOVERNMENT HOUSE, NORTH BORNEO,  
*Sandakan, August 17, 1903.*

SIR: I have the honor to inclose an order of banishment of 6 persons—Sulus—who are disturbing the peace of this State.

2. Only 4 of these persons are sent by this steamer—the other 2 being uncaptured.

3. One of these men, Habib Muda, is an emissary of the Sultan of Jolo (Sulu). Another, Dato Timbang, is a native chief, who for years has been paid a salary of \$40 per mensem in Sandakan to guard the interests of Sulus, and who has betrayed his trust.

4. It has been amply proved against these persons that they levy a toll on all natives who come to Sandakan, giving the sultan and the governor of North Borneo as their authorities.

5. The timely presence in Sandakan of Mariano—your chief in Cagayan, Sulu—enabled my officers to run these men for inflicting a fine of \$210 for a case tried in Cagayan, for levying poll tax on the occupants of incoming boats and for keeping slaves from Palawan.

6. In these circumstances I banish them, and if they return to this State they will be imprisoned for life.

7. I trust that you will not object to my repatriation of them, and I feel sure that if they are closely watched they will settle down as quiet inhabitants.

8. I have informed Mariano that no taxes or duties are levied on the natives of American possessions trading with this State.

I have the honor to be, sir, your obedient servant,

E. W. BIRCH, *Governor.*

THE MILITARY GOVERNOR OF JOLO, SOUTHERN PHILIPPINES.

U. S. S. ALBAY,  
*Jolo, Jolo Island, P. I., February 14, 1903.*

SIR: I have the honor to submit the following report relative to conditions found in the northeastern part of this island. Upon the arrival at Tulian, Tulian Island, the natives seemed friendly and the Dato Unding called on board and reported everything quiet. He flies the American flag. The natives in Eastern district met us in force and were prepared for preventing a landing. I landed and called a headman to me, and asked him why they were so unfriendly. They replied that they supposed we were Spanish and wanted trouble. The Moros were informed that the *Albay* was American and that we had conquered the Spanish and that they must be friendly. Next morning several shots were fired at the ship; no damage was done, and I went ashore with armed boat's crew and sent for Dato Palawan, the chief of the unfriendly contingent. His son came down with strong force and said, upon being questioned, that the firing was done by some bandits or bad men, and that no more firing would be allowed. I showed them the action of the guns and they seemed much pleased, and granted that it was much better to have peace. As they were told many great forces would be sent against them if they wanted war; from further talks with the dato's brother and chief men, it is hardly probable that any further trouble will be had. The intention of surveying and placing of signals was explained to them and they promised not to molest working parties or signals.

Further particulars will be reported as learned.

Very respectfully,

J. E. WALKER,  
*Lieutenant, U. S. Navy, Commanding.*

The COMMANDING OFFICER, U. S. ARMY,  
*Island of Jolo, P. I.*

H. L. SCOTT,  
*Major, Fourteenth Cavalry, Governor.*

*Letter from H. O. Dunn, lieutenant-commander, U. S. Navy, commanding U. S. S. Frolic, to Col. W. M. Wallace, U. S. Army, dated Jolo, Jolo Island, February 26, 1903.*

[Copy.]

In answer to your letter of February 26 I have the honor to make the following statement regarding the Moro attack upon the *Frolic's* surveying party near Maibun on February 24.

I inclose the statement of Lieutenant Jones, U. S. Navy, who was in charge of the party, which gives a detailed account of the whole affair.

There is no doubt in my mind that the attack was an organized and nearly successful effort to destroy the party in question.

I have on board for safe keeping a Moro witness named Panding, who swears that the following-named Moros are implicated in the matter, the first named being the leader, viz, Abou Bakal (Sultan's brother-in-law), Bariowa, Tassam, and Usam. This witness also swears that Hadji Taib threatened him with death unless he, the said Panding, feigned madness when delivered on board the *Frolic*. This to confirm the story that they were chasing and shooting at him instead of the surveying party.

---

*Letter from H. O. Dunn, U. S. Navy, commanding U. S. S. Frolic, to Col. William M. Wallace, U. S. Army, dated Maibun, Sulu, P. I., March 15, 1903.*

I have the honor to submit for your investigation the case recently withdrawn from Judge Powell's jurisdiction concerning the attack of certain Moros against the survey party of the U. S. S. *Frolic* near Maibun, Sulu, on February 24, 1903.

In addition to the facts set forth at length in my letter of February 26, reporting the matter to you, I have to add the inclosed supplementary statement of Lieutenant Jones, marked "A."

The names of the Moros given in Lieutenant Jones's statement were derived from the erstwhile prisoner Panding. The parties named were without doubt among the attacking mob, but I regret to say that Lieutenant Jones can not identify them, owing to the general similarity of Moros and the distance they were from him in the crowd.

---

*Letter from Lieut. L. B. Jones, U. S. Navy, to the commanding officer, Jolo, dated February 24, 1903.*

I have to report that a surveying party under my command, while on shore carrying on the survey work of this harbor as projected on board this vessel, were attacked by an armed band of natives, variously estimated in number between one and two hundred.

A hill about 2 miles to the north and east of the Sultan's house, on which was located one of the main triangulation signals, was about to be occupied, and the party, consisting of Midshipman Finney, 4 men, and a native boy from Jolo as an interpreter, all armed with revolvers except the interpreter, had ascended nearly to the top of the hill when a commotion was noticed at the foot—men yelling frantically, said by the interpreter to be a "call to arms," and others coming in from various directions.

The men were armed with rifles, spears, and bolos. On account of this hostile demonstration, and the limited number of our party, it was deemed advisable to abandon the station and move in the direction of Maibun.

We had no sooner started than the whole party hastened to cut off our retreat and fired two shots, which passed over our heads. They then started for us in a body, on the run, performing what appeared to be a war dance, waving their arms and spears in the air, and yelling at the tops of their voices. The situation then seemed to be extremely desperate, and I gave the order "double time" before they came within range of our revolvers, and we beat a hasty retreat toward Maibun. They continued the chase about a mile, firing in all four shots.

On our way back to Maibun the country seemed to have been thrown into a state of excitement; men were hurrying from the fields, and the "call to arms" seemed to have passed in all directions. This "call" could be heard faintly from the direction of the hill even when we approached the town.

When we descended the hill another party appeared coming down the hill, and these men must either have lived on the hill or gone up the other side.

The whole affair seemed to be a determination on the part of the leaders that we were not to be allowed in that country.

We passed many natives working in the fields and others on the trails without exciting any commotion until we arrived at the base of the hill, and the "call to arms" was apparently started by one man who afterwards assumed the leadership of the force. I endeavored to get the interpreter to communicate with this man, but he said he was afraid of him.

This became a matter of very serious importance in the prosecution of our work, as it is evidently the intention that we are not to go into certain parts of the coun-

try, unless with a force sufficient to overpower the natives, and I am certain that our party would have been cut to pieces had it not been for our prompt retreat in reaching an escaping trail before they could cut us off.

U. S. S. FROLIC, *Maibun, Jolo.*

A true copy.

H. L. SCOTT,  
*Major, Fourteenth Cavalry, Governor.*

*Letter from L. B. Jones, lieutenant, U. S. Navy, to the commanding officer.*

U. S. S. FROLIC,  
*Maibun, Jolo, P. I., March 14, 1903.*

In connection with my letter of February 24, giving a detailed account of the Moro attack upon the working party under my command on that day, I have the honor to add the following supplementary statement:

From an examination of the Moro prisoner Panding, delivered on board this ship by the Sultan of Jolo, I obtained information which leads me to believe that Panding was a spectator and not a participant in the attack. He stated that he saw the following-named Moros in that attacking party: Abou Bakal, Bariowa, and Tassam, the last two having rifles. He had not lost his wife, children, nor parents by cholera, but that they were alive at the time of his arrest; nor was he chased by anybody, but arrived on the scene after hearing rifle shots. He was told to act crazy while on board the *Frolic* on pain of death.

Owing to the general resemblance of Moros, the large number in the attacking party, and their distance, I am sure that I would not be able to identify any of the above-named men as participants. Panding, whom I understand is one of the Sultan's slaves, from his bearing and manner aboard ship and the statements he made at various times, impresses me with his truthfulness, and I am led to believe that he is a harmless creature on whom the whole affair has been thrown.

*Copy of letter from Second Lieut. C. J. Nelson, Seventeenth Infantry, provost-marshal at Jolo, Jolo Island, P. I., to the adjutant, Jolo, P. I., dated Jolo, Jolo Island, P. I., November 5, 1901.*

\* \* \* The following-named city employees, namely, Saidemon, Jumah, Mohamed, Hamed, Jayman, Hejamang, Tambe, Hematale, Assibe, Jahnani, Yeula, Hekien, Nemahang, have complained that they have been fined \$25 by the Sultan of Jolo for not taking part in his recent war. The men at the time were regularly employed by the city, and state that they had no desire to give up their positions to fight. They also state that they have been notified that if the fine is not paid that property belonging to them and their relatives at Tapul will be seized.

I respectfully request that some action be taken to prevent the payment of the above fine or seizure of property.

A true copy.

H. L. SCOTT,  
Major, Fourteenth Cavalry, Governor.

#### *Hadji Taib's statement.*

The reason why Dato Amilhussin fined Maharajah Sarapuddin is, that somebody told Amilhussin the Sultan had ordered Sarapuddin to kill Amilhussin and had given him his, the Sultan's, barong, "palanchi," for this purpose. Both the Sultan and Sarapuddin say this is not true; yet Amilhussin has fined Sarapuddin 4 head of cattle and 1 Colt's repeating gun. (About April 1.)

Dugusan and Iman Mohamad, Amilhussin's men went to Amilhussin's house; on their return they met Sarapuddin's brother Attang (?) cutting wood, and killed him. This occurred on the 10th of the moon Hadji 1319 (20th March, 1902). It was reported to Amilhussin, who said he would investigate the matter, but has done nothing in the case.

In the beginning of the moon Hadji (before the murder) Hadji Taib went to Lugus and Tapul with the Sultan's order that the people should come to Maibun to work on the road from Maibun to Buolo. The people said that they would come as soon as they had finished their work in the fields. The Tapu people did come. But Dato Amilhussin told his people not to go, and Sarapuddin is afraid to take his people to Maibun on this account.

*Notes.*—The man mentioned to have been killed was not the brother but a distant cousin of Sarapuddin.

Cattle and other property seized by both sides was ordered to be returned and peace enjoined. Persons implicated in the murder were ordered to be brought to Jolo for trial (Moro court).

A true copy.

H. L. SCOTT,  
Major, Fourteenth Cavalry, Governor.

#### *Report of Massin, Captain Chino, Parang (Konawai).*

FEBRUARY 11, 1903.

At 4 a. m., Tuesday, two fire balls were thrown on the top of the roof of Massin's house, on Chinese pier, at Konawai.

Moro Chief Sarabi has a market place. The Chinese rented places in that market and sold their goods there, but Sarabi killed a slave in the market and since then the Moros did not go to that market. For that reason the Chinese left Sarabi's market and went to Panglima Dammang's market. Sarabi warned them three days before the fire that if they did not return to his market he would burn their houses. All Chinese shops were destroyed by fire and 24,000 pesos' worth of goods burned or looted.

Sarabi, Selungun, Powaki, and Dato Namli were leaders of the Moros present at the affair. Thirty-nine Chinamen lived in Parang—8 families.

February 15, 1903, Powaki, Selungun, and Sarabi were surrendered at Jolo and were placed in confinement awaiting trial.

H. L. SCOTT,  
Major, Fourteenth Cavalry, Governor.

*Panglima Amsali's statement.*

Jolo, August 7, 1903.

Dato Tambutong sent Padjinji Limaung, Usub, Asanul, Mohamed, Hadjebun, and Habebun with rifles to collect \$100 from Panglima Amsali, in Pangutaran. They said that the dato ordered them to collect this fine because some of the Moro women in Pandokan married Filipinos in Tullai, which was in violation of his order to the panglima, viz, "not to allow Moro women to marry Filipinos." The panglima says that he forbade all his people to marry Filipinos, but that the women in question escaped to Tullai and got married to Filipinos there. The messengers of the dato threatened to tie up the panglima and loot his house if he refused to pay the fine, so he paid it. The people of Pandokan hold a letter of protection from the United States Government. Many people of Pandokan have deserted their homes because they are afraid of the dato.

Major, Fourteenth Cavalry, Governor.

Jolo, P. I., September 5, 1903.

The Moro Tangoa of Pandukan Island borrowed a gong from a Chino called Batu of Tullai (Jolo) while the latter was staying at Pandukan. Before he returned the gong the Chino left Pandukan. Then the Moro Lisang of Pandukan claimed the gong and wanted to take it away from Tangoa, saying that it was his gong and that he had pawned it to a Chino. Kim, the father of Tangoa, said that they could not give up the gong, as Tangoa had borrowed it from the Chino Batu; that they must inform the latter and that Lisang should come back after three days. Kim sent a messenger to the Chino Batu, who returned with Batu's answer, that if Tangoa gave up the gong he would have to pay him, Batu, 100 pesos. Then Lisang came and tried to take the gong by force. In order to avoid a fight, Kim said: "I shall take the gong to your (Lisang's) house to-night." Kim then went to Nakib Hajim and laid the case before him; the nakib said: "This is not just; I shall see Lisang about it." But Lisang would not obey the nakib, and said that Kim had agreed to give up the gong to him, Lisang. Kim and Tangoa left Pandukan that same night for Tullai and returned the gong to the Chino Batu. The next day Lisang burnt the house of Kim in Pandukan. Kim and Tangoa say that they are afraid to return to Pandukan because Lisang has said that he would kill them.

SEPTEMBER 23, 1903.

Complaint of the Filipino Mauricio Maigui, living in Tullai. His wife is called Veronica, alias Parrang. Nabia is the sister of Veronica. Aki is the husband of Veronica. Aki and his wife Nabia live in the village of Oh, on the island of Pandukan.

Nabia came to Tullai and took her sister Veronica for a visit to Pandukan; her husband, Maigui, gave her 10 gantas of rice and \$5 for expenses. After they had been about half a month with her sister, they took her to Pangutarang under the pretext that she should see some friends there. When her husband, Maigui, came to Pandukan he did not find his wife there and had to follow her to Pangutarang. When he arrived there his wife's relations refused to let her go, saying that the dato had given orders that no Moro women should marry Filipinos. Although Veronica wanted to follow her husband her relations refused to let her go, threatening that they would cut her in halves and send one half with her husband and keep the other half there.

After some talk the sister of Veronica told Maigui "it is customary that whoever marries one of our family has to pay a dowry of \$400, but, as it is you, we will be satisfied with \$200." Maigui refused to pay; then Panglima Amsani came and said that he would settle the case; he told Maigui to pay \$120. Maigui had pity with his wife, so he said he would go back to Jolo and get the money; but after all he could get only \$105 and made up the other \$15 by giving a golden watch chain, which is to be redeemed by him as soon as he has earned enough money.

Mauricio Maigui has a marriage certificate to show that he is legally married to Veronica.

Veronica claims to be born a Moro, but to have grown up in Jolo town, having been sold to Jolo when a very small child. She was baptized by an English priest in Sandakan when she visited that place.

Veronica is now at Jolo with her husband (October 19, 1903).

JOLO, P. I., October 13, 1903.

The Moro Halidain, his wife Ilad, and two other Moro women came to the governor and complained that Oto Basaluddin is going to fine 7 of them 105 pesos each for enticing his slave to run away. Halidain and his wife further state that Hadji Tahir is keeping them at his house because Oto Basaluddin is accusing them of being implicated in the theft of his rings; further that Oto Basaluddin accuses 7 of them to be implicated in this theft.

The governor replied that he would not permit anybody to be punished for matters pertaining to slavery. As to the case of theft, this had been turned over to Hadji Tahir for trial, and if the latter saw fit to detain any or all of them at his house until the case was settled, he could do so.

JOLO, P. I., October 15, 1903.

Habib Mura tells the governor that he wishes to make his home in Matanda, about 2 miles west of Jolo town, on the seashore, so as to be near the Americans. He says he used to live in Maibun; is one of the Sultan's advisors, and has a large house in Maibun; the Rajah Muda and Dato Attick are bad, and even the Sultan. Therefore he wants to get away from Maibun and live under American protection. He requests the governor to give him a letter of protection and promises to do nothing wrong; says if he lives at Matanda many of the hill people will come to him to get away from the chiefs.

He says Hadji Butu also removed from Maibun to Tullai (Jolo) because he feels more safe in the latter place.

JOLO, P. I., *October 18, 1903.*

Mr. Charles Schuck, interpreter, reports:

On October 11 Junaidi and his little son were returning from Liddung (Jolo Island, near Maibun) market. He had five head of cattle with him. When in Karawan, on Bud Mabingkang, he was attacked by a party of thieves—Janjani, Sakili, the son of Kaul and the son of Ahlam, who live near Liddung and are followers of the Dato Rajah Muda. Junaidi received several wounds in standing off the thieves.

Junaidi is the cousin of Angkaia, headman at Tando Patong, near Maibun. The following day Angkaia and his followers, together with followers of Maharajah Indanan, went out to arrest the thieves. They attacked the house and wounded four persons, who then surrendered. Sakili's father put up 105 pesos bail. The real thieves, however, had escaped and gone to the Rajah Muda for protection. The latter has furnished them Mauser rifles to resist Angkaia. Sakili is a notorious thief and robber, but enjoys the protection of the Rajah Muda.

The case is now in the hands of Hadji Taib and Indanan.

### REPORT OF THE MUNICIPAL BOARD OF THE CITY OF MANILA FOR THE FISCAL YEAR ENDING JUNE 30, 1903.

MUNICIPAL BOARD OF MANILA,  
*Manila, P. I., October 1, 1903.*

The CIVIL GOVERNOR,  
*Manila, P. I.*

SIR: In compliance with the provisions of section 14 of act No. 183, Philippine Commission (the Manila charter), the municipal board of the city of Manila hereby submits its report of the operations of the city of Manila for the fiscal year 1903.

With the exception of the enactment of ordinances, letting of contracts for such matters as related particularly to the municipal board, or the cost of which was of such amount as to require consideration by both the municipal and advisory boards, and the settlement of questions which pertained to no particular department of the city government, the work of the board was so closely connected with the various departments that mention thereof will be made under the heads of various departments.

The personnel of the municipal board at the end of the fiscal year 1902, namely: President, Arsenio Cruz Herrera; member, P. G. McDonnell; temporary member, A. L. B. Davies; and acting secretary, Bert Eddy, remained the same until December 29, 1902, when Member Charles H. Sleeper returned from leave of absence in the United States and resumed his duties on the board, relieving Mr. Davies, who resumed his duties as secretary, he in turn relieving Mr. Bert Eddy, who resumed his duties as chief clerk. On March 10, 1903, Mr. A. L. B. Davies resigned the position of secretary of the board to accept appointment as local purchasing agent of the insular government. Mr. O. F. Ricard, clerk municipal board, was appointed acting secretary, and continued in that position until May 1, 1903, when Mr. John M. Tuther, the present incumbent, was appointed secretary.

During the fiscal year the municipal board met daily except Sundays and holidays, as provided by the city charter, and 304 sessions were held, at which 7,380 items of municipal business were considered. For the purpose of presenting the entire work of the administration of the city, this report is submitted under the following subheads: Advisory board, secretary of the municipal board, disbursing officer, department of engineering and public works, department of police, law department, fire department, department of assessments and collections, department of city schools, finances.

As exhibits to these reports are submitted the reports of the heads and subheads of these departments.

#### ADVISORY BOARD.

On August 15, 1902, the United States Philippine Commission amended the Manila charter by increasing the number of city districts to 13 and providing for the representation of the districts of Santa Ana and Pandacan upon the advisory board of the city of Manila. The board held its regular meeting once every two weeks, as prescribed in the charter, until December 31, 1902, on which date the Commission further amended the charter to provide for the holding of meetings once a week. This action was taken upon the recommendation of the municipal board concurred in by the advisory board, and was considered necessary in order to expedite the business and provide for the prompt return of matters referred to the advisory board for its consideration. All ordinances have been passed upon by the advisory board before final action by the municipal board, and all expenditures amounting to \$10,000 and over have been submitted to it for its approval; and, in many cases where smaller amounts were involved, action was deferred until its opinion thereon had been

expressed. In all, 97 items were referred to the advisory board, some of these references being required by the provisions of the charter, while others were forwarded in order that the municipal board might profit by the opinion of an intelligent body of Filipinos acting in closer conjunction with the general public. Many other matters of importance have originated with the advisory board and received the careful attention of the municipal board. In certain matters relating to the sanitation of the city and the ordinances governing the construction of buildings, the municipal board has not fully concurred in the recommendations of the advisory board. From time to time conferences have been held by the two boards and by committees from the boards, and, in general, the result has been beneficial and the conferences have served to clear up matters over which differences of opinion have arisen.

The municipal board wishes to acknowledge the valuable cooperation and assistance which was rendered by the advisory board at the time of the great conflagration in the district of Trozo, where 3,000 nipa dwellings were destroyed at a cost of \$125,000, rendering 15,000 people homeless. The city was obliged to support a large percentage of these homeless people for nearly a month by distributing gratis rice and meat. Members of the advisory board were constantly on the ground and materially assisted the police in the system of distribution.

The members of the advisory board are:

Señor Miguel Velasco (president), San Miguel; Señor Basilio Reglado Mapa, Intramuros; Señor Juan Tuason, Quiapo; Señor José Paterno, Santa Cruz; Señor Tomas Arguelles, Sampaloc; Señor Teodoro R. Yango, Binondo; Señor Rogaciano Rodriguez, San Nicolas; Señor Crispulo Feliciano, Tondo; Señor Antonio Ma. Pabalan, Paco; Señor Vicente N. Somoza, Malate; Señor José R. Ynfante, Ermita; Señor Segundo Rodil, Santa Ana; Señor Francisco Rosario, Pandacan; Señor Vicente Rodriguez, secretary.

#### SECRETARY OF THE MUNICIPAL BOARD.

On March 9, 1903, Mr. A. L. B. Davies resigned the position of secretary of the board to accept the appointment as local purchasing agent for the insular government. Pending the appointment of his successor, Mr. O. F. Ricard, a clerk of the board, was designated as acting secretary and continued in that position until May 1, when the board appointed Mr. John M. Tuther, who has remained at the head of the office since that date. With the increase of the general municipal business the work of this office has been greatly extended, and a detailed report of the work of the year is submitted herewith and marked "Exhibit A."

#### DISBURSING OFFICER.

The disbursing officer of the municipal board, Mr. R. C. Baldwin, has handled during the year something over \$1,500,000 in a most satisfactory manner. All payments have been made promptly, and the salaries of the 4,250 city employees are all paid by the 10th of each month, and nearly all other items of expense, on demand. In addition to the work of disbursing officer, this officer is also, by direction of the board, acting as comptroller of the city, and keeping records which are of value to the board for statistical purposes.

Attention is invited to the complete report in detail of the disbursements marked "Exhibit B."

#### DEPARTMENT OF ENGINEERING AND PUBLIC WORKS.

Aside from an unusually large amount of routine work accomplished by the department of engineering and public works the board is pleased to announce two exceedingly important improvements which will especially mark the fiscal year just ended. These are the granting of franchises for an electric railway and an electric light, heat, and power system in the city of Manila and its suburbs, and the preparation of plans, surveys, and a complete study of a new water system.

On October 20, 1902, the Commission passed an act providing for the granting of a franchise to construct an electric street railway on the streets of Manila and its suburbs, and a franchise to construct, maintain, and operate an electric light, heat, and power system in the city of Manila, after competitive bidding. It is a condition of the franchises that the person to whom they may be originally granted under the provisions of the act shall, before April 1, 1903, form a corporation under the laws of the Philippine Islands hereafter to be passed, or the laws of the United States, or of any State thereof. The bidders were required to deposit, as an evidence of good faith, the sum of \$75,000 in the money of the United States with the treasurer of the Archipelago, and the successful bidder was required to deposit \$175,000 upon the

awarding of the franchise. It is a condition of both franchises that the grantee shall begin the construction of the road within six months from the date of the granting of the franchise, and shall complete the construction of the road and commence the operation of same within twenty months after the expiration of the said period of six months, and shall complete the construction of so much of the electric light, heat, and power system as shall be coextensive with the lines of the street railway to be constructed under the first-mentioned franchise, and to commence the operation of the same within twenty months thereafter.

Due advertisement for competitive bidding for the proposed franchises was made in three newspapers printed in the English language and two printed in the Spanish language in the city of Manila, in two newspapers in the city of New York, in one newspaper in the city of Chicago, and one in the city of Washington, by two insertions per week, for six weeks after the passage of this act, and a single insertion per week for the subsequent six weeks. There was also a weekly insertion for the six weeks following the passage of the act in a leading street railway journal in the United States. The text of the law, upon its passage, was immediately forwarded to the Bureau of Insular Affairs of the War Department, together with a copy of the map of the city showing the projected routes, and this remained on file in that bureau for the information of bidders in the United States. Similar information was kept on file in the office of the municipal board of the city of Manila.

On the 5th day of March, 1903, the municipal board declared the time expired and opened the only bid submitted, which was in the name of Charles M. Swift, as follows:

"JANUARY 12, 1903.

*"To the Municipal Board of the City of Manila.*

"GENTLEMEN: I beg leave to submit the following bid for a franchise to construct an electric street railway on the streets of Manila and its suburbs, and a franchise to construct, maintain, and operate an electric light, heat, and power system in the city of Manila and its suburbs, proposed to be granted by you after competitive bidding under and in accordance with an act of the Philippine Commission enacted October 20, 1902, and entitled 'An act providing for the granting of a franchise to construct an electric street railway on the streets of Manila and its suburbs, and a franchise to construct, maintain, and operate an electric light, heat, and power system in the city of Manila and its suburbs after competitive bidding,' on the following terms:

"I agree that if the franchise is awarded to me I will comply with all the terms and conditions of the franchises set forth in said act, provided—

"1. That the duration of the franchise shall be fifty years.

"2. That the fares to be charged on the street railway shall be as follows: Single fares, first-class cars, 6 cents; second-class cars, 5 cents. First-class ticket fares to be sold under paragraph seventeen, at the rate of 100 for \$5.50, and second-class ticket fares at the rate of 6 tickets for 24 cents.

"3. The percentage of gross receipts to be paid to be 2½ per cent of the fares collected and tickets sold on the street railway, and 2½ per cent of the gross earnings of the electric light, heat, and power plant.

"It is of course understood if my bid is accepted I will cause to be formed a corporation as provided in the act to whom the franchise will be transferred.

"Very truly, yours,

"CHAS. M. SWIFT."

On March 24, 1903, an ordinance was enacted by the municipal board granting both franchises to Charles M. Swift. Soon after this the first engineers appeared on the ground and commenced active work in surveys of the city and in general preparations for construction, and there is every reason to believe that the people of Manila will soon enjoy the most modern and best-equipped electric railroad and electric light and power system.

Owing to its peculiar location and great area covered by the city the question of transportation is one of the most serious that is encountered, and for years the people have been put to great inconvenience and heavy expense in relying upon the antiquated, short horse-car system and the poorly constructed, unsatisfactory, and generally undesirable system of public vehicles. These conditions have very much retarded the growth of the city and have tended to congest the population. The outlying districts in nearly every direction from the crowded centers are more desirable for residence sites by reason of the higher ground, and it is expected that as soon as the railroad is put into operation many of those now paying high rents for small, unhealthy quarters will take advantage of this quick transportation and secure comfortable dwellings in better localities.

The granting of this franchise, with the assurance of all it means, is regarded as one of the most favorable events marking the progress of the United States Government in the Philippines.

On February 1, 1903, Mr. J. F. Case was appointed engineer in charge of the preliminary work of the new water system, and he immediately commenced a study of the present system and the needs of the city. Certain data prepared by the Spanish Government and the engineers of the U. S. Army was placed at his disposal. All possible sources of supply were carefully examined, and the headwaters of the Mariquina River and the adjoining watershed in the province of Rizal were found to constitute the only source giving a sufficient flow of water. The Mariquina River rises in the mountains directly east of Manila and finally, breaking through the first range of mountains nearest to Manila, it flows into the Mariquina Valley. From its source to the town of Montalban its watershed is an almost impenetrable forest, and, with the exception of the site of a small town, the valley is almost uninhabited, but from Montalban to the mouth of the river the valley is densely populated with several large towns along the bank of the river itself.

It has been found necessary to maintain a vigilant quarantine system through the means of the army, prohibiting the inhabitants from bathing in the water and from littering the banks with such refuse and excrement as might endanger its purity.

The report of Mr. Case herewith attached, marked "Exhibit C," does not include the distribution system within the city of Manila, but covers the gathering of the waters into a dam and reservoirs and the introduction of the same into the mains at the city limits. Gaugings taken with a weir during the season of low water give a minimum daily flow of approximately 11,000,000 gallons, and it is considered by Mr. Case that this may be assumed as the minimum flow for the very driest years. Two propositions have been submitted for the location of the dam, one being farther into the valley than the other and at a higher level, and these and other questions of so important a nature will be a subject for final review and recommendations of a board of engineers to be appointed by the municipal board for the purpose of carefully reviewing the submitted project. It is estimated that the entire gravity system can be completed within two years and ten months at a cost of \$1,400,000. When the plans are finally approved they will be forwarded to the Commission for its approval and the necessary authority for the issuance of the bonds provided for this purpose in the act passed during the last session of Congress.

With such a system as this the city will enjoy a magnificent water supply sufficient for all needs and capable of accommodating a rapidly growing population for at least twenty years.

The present water supply has been greatly improved during the last year. The pumping station at Santolan, 6 miles from Manila, has been thoroughly overhauled. New buildings have been erected for the accommodation of employees and the entire plant has been repaired. Many of the old moving parts of the engines which have been in bad condition for months and, in some cases even years, have been removed and replaced with new ones. The road from El Deposito through the pumping station, over which must be hauled all the coal, has been a source of considerable expense, but this year, even in the rainy season, it is in very fair condition. In July, 1902, the dam showed signs of weakness with the high water resulting from the first rains. This dam has been replaced by a new one which promises to last, with ordinary repairs, for several seasons.

The supply system within the city's limits has been carefully overhauled and many new boxes of superior design have been substituted for the old square street boxes, and several of the old hydrants have been replaced by new post hydrants. The superintendent of the water supply has made a study of a special street-sprinkling service and a high-pressure fire service, which is outlined in a detailed report of the work of the Engineer Department, marked "Exhibit D".

The Board has approved the purchase of \$50,000 worth of pipe for extensions, and this is of such dimensions and will be laid in such manner as to be readily included in the new water system.

Three large and valuable sections of the city have been included in a general scheme of street extension, and the plans submitted herewith have been approved by the board. This will open up to building desirable sections of residence property in Ermita and Malate, and business and residence property, largely inhabited by Filipinos, in Trozo. The system provides wide streets, admitting of sidewalks and a small space for trees or parking. Sidewalks in Manila are almost unknown, and the advantages to be gained from trees in a tropical country can not be overestimated, and yet, with a very few exceptions, this seems to have been overlooked by the Spanish Government. As a rule, the new streets have been planned with a width of 15 meters, and a boulevard with a width of 30 meters has been approved, to run

from near the intersection of Calle Concepción and Paseo de Bagumbayan in front of the site of the new city hall building, through Ermita and Malate to the city limits. At the present time there is no avenue by which the people of these two districts can reach the center of town, and traffic is very much hampered in its struggles through the narrow streets of Real and Nueva on one side and Nozaleda on the other.

The pavement of the city consists of granite blocks, wood blocks, and macadam. The torrential rains and the extreme heat of the sun rapidly destroy almost any class of pavement, and the work done by the department covers almost every street of the city, many of which have been resurfaced, curbed, and provided with gutters and drains. The broad Bagumbayan drive has been completely resurfaced. One thousand three hundred and eighty-two meters of fine driveway, forming a loop along the Pasig River, and around the church of Santa Ana, and 307 meters from the bridge of Las Damas into the town of Santa Ana, have been constructed, leaving a parking space in the center of the district of Santa Ana. This point lies at a considerable distance from the centre of Manila and contains many fine residences, and the improvement of the road, which is now really a narrow boulevard, has been very much appreciated. The widening of the Santo Domingo gate, commenced during the last fiscal year, has been completed, and the advantages of a broad entrance to the walled city are so great that many of those having business in the Government buildings, or attending the numerous churches, prefer to drive some distance in order to avoid the inconvenience of being delayed at the narrow entrances.

Thirty prisoners from Bilibid were placed at work on the north wall of the city along the Pasig River, and several of the casemates have been demolished, the stone taken therefrom being used in building operations and at the city stables and crematory, while the earth and filling has been valuable in street work. These prisoners have been guarded by a detail from the police department, and returned to the prison each night. The board has approved an increase in the number of prisoners to be so employed, and anticipates using 200 in its quarries at Talim Island.

The Bridge of Spain has been completely repaved with Australian wood blocks, laid on a bed of concrete. The wood has given good service during the short period of use, though it is too slippery to be satisfactory on the approaches, which must be constantly sprinkled with gravel in order to give a foothold. Plans were prepared for the removal of the two main spans of the Bridge of Spain and the substitution therefore of a lift bridge. Two types of lift bridge were submitted, at an estimated cost of approximately \$140,000. Between the Bridge of Spain and the Santa Cruz Bridge on the south side of the river there are 700 feet of ground which could be readily made available for dock purposes, and on the north side there are 1,000 feet, but only a small portion of the north side would be available for water traffic under present conditions, as the buildings extend to the river bank for almost the entire distance. Should the Bridge of Spain be remodeled, permitting the passage of deep-water vessels, these additional docking advantages could be enjoyed. The board has not yet adopted these plans. The low spans of the Bridge of Spain are a serious hindrance to traffic even at the present time, and some measures must be taken to facilitate water traffic, even though not so extensive as indicated above. The numerous accidents to the Ayala Bridge have caused the board to consider the question of removing the section under which launches and their tows pass, viz, that portion between the Isla de las Convalencias and the Germinal tobacco factory, and the substitution therefor of a modern single-span bridge. This would remove a barrier from the river and leave a clear way for the passage of water craft to a section of undeveloped country, lying along the south bank of the Pasig River, which is well suited for go-downs and wholesale establishments, and which is being rapidly improved.

The board has directed the study of a scheme for providing boulevards on both sides of the river lying along the bay shore. At the present time there are practically no convenient driveways except those leading to the Luneta, and these are constantly crowded. With the introduction of the street railway, and its obstruction to driving, some of these few driveways will be rendered more or less undesirable and the need of other avenues will be steadily more noticeable. The parks of the city have been very much improved and beautified. The zoological section of the botanical gardens has more than doubled during the year and now boasts a very fair collection of birds and animals. Its popularity is steadily increasing, especially with the Filipinos. Plans have been considered for a new propagation station and arboretum. The board renews its recommendation for the allotment of more ground for parks and public playgrounds and athletic fields. The city has been ready to improve the Bagumbayan field and make it a most attractive public ground, but this and other large tracts of desirable land are claimed, to a certain extent, by the military

authorities, and until these questions can be settled the expenditure of the city's money thereon is not deemed expedient.

During the last few years the cemeteries have become crowded to the last degree. This is partly due to the heavy death rate from cholera and the plague. The board is negotiating for the purchase of 50 hectares in the vicinity of La Loma and about 30 hectares near Santa Ana for cemetery purposes, and an appropriation covering the cost has been included in the estimate for the first half of the fiscal year.

The organization of the department of street cleaning and parks has been brought to a high standard of efficiency. A regular scale of promotion has been adopted and all advances are made from the ranks, and the men seem to be satisfied with their wages, in spite of the several labor agitations which have affected the business community. Handcarts have been introduced for street cleaning, and patrol gangs have been organized to walk the beaches and banks of the river and esteros for the purpose of removing dead animals and offensive matter. A system has been devised, which will go into effect on July 1, for collecting all garbage and rubbish at night, thus eliminating the smells and unsightly heaps of refuse from the hours of daylight. According to the calculation of the superintendent the work is being done at a very low figure, and is much cheaper than that of cities of equal size in the United States, an example being taken in the city of Washington. At the end of the last fiscal year all the garbage was burned in two insufficient crematories, or hauled to sea and dumped into the bay, and the stuff was frequently returned to the beaches with the incoming tide. Since that time a Morse-Boulger crematory of 120 tons daily capacity has been constructed on a plot of ground adjoining the city stables, and it is expected that it will be operating by the end of July.

The large addition to the city stables, built by contract at a cost of \$10,817.29, has greatly facilitated the work of all departments of the city requiring transportation. Despite the improved conditions of the well-ventilated and sanitary stables the percentage of disease affecting the stock is very large. The service done by some of the animals, notably those working in the dumps, where they are subject to wounds and scratches, and those working in the heavy carts in the rain and sun, is so severe as to break down the best animals in a short time, even though they receive the best of care, unless suitable periods are given during which they may recuperate.

An experiment is to be tried with the importation of 40 China mules, a requisition for which has already been sent to the insular purchasing agent. These animals will cost very much less than the American mules, and it is claimed that they can do almost as much work.

During the month of May the offices of the city were removed from the rented building which has been occupied since the days of the military government to the municipal school, in the walled city. This change was made at the earnest request of the church authorities, the owners of the building, which is to return again to the religious purposes for which it was constructed. The unfinished building, known as the Cosmopolitan Hospital, and erected on ground leased from the city, was purchased at a cost of \$50,000 local currency, less the cost of placing the structure in a proper condition for the continuation of the construction thereof. The plans are being prepared by the insular architect for the completion of this building for use as a temporary city hall until the insular government building is completed and the ayuntamiento restored to the city.

The detailed report of the superintendent of buildings and illumination shows repairs and improvements in almost every public building and in several rented buildings, and represents a large amount of work. The total amount of construction reported by this department amounts to \$105,417.95, and this includes the addition to the Santa Cruz fire station by contract; construction of a tenement house in San Nicolas by contract; San Nicolas fire station by contract; Arraque Market addition by contract; addition to the city stables in Tondo by contract; the Anda Market by contract; the crematory at Paco overhauled by day labor; the crematory at Santa Cruz overhauled by day labor; the new crematory in Tondo, nearly completed, by contract; Gangalingin School by day labor; the city pound by contract, and the Paco police station by contract.

The lighting service of the public streets and buildings has been increased and improved at a total cost of \$44,304.77.

The report of the inspection of private buildings indicates the greatest progress in all districts of the city. The tabulated statement submitted by the inspector of buildings shows at length the great activity in all lines of construction. Though the statistics of the last fiscal year were most encouraging, the number of applications for building permits in the fiscal year covered by this report shows an increase of about 87 per cent, while the number of permits issued has increased more than 114 per cent, and the amount collected in fees more than 35 per cent.

During the year the following permits were issued:

	Num- ber.	Estimated value.
Strong materials:		
For buildings .....	873	\$1,946,871
For repairs .....	519	171,741
Light materials:		
For buildings .....	2,242	189,580
For repairs .....	702	26,322

About 150 buildings were condemned and ordered removed. A very large number of nipa shacks which had passed the stage of possible repair or were in the districts of strong materials and, hence, according to the ordinance were not permitted to be repaired, were removed, thus gradually clearing these dangerous spots from the districts of strong materials. The board has exercised great leniency in dealing with the dwellers in these nipa huts, and has frequently extended the time within which these structures must be removed, and during the rainy season, when removal would work a hardship, even greater consideration was exercised.

The board has approved the increase of the personnel of this office by one American inspector.

The city shops and storehouses, occupying an area of 156,218 square meters, have been thoroughly overhauled, repaired, and improved, and plans have been ordered prepared for the erection of a new shop to house the additional machinery now en route from the United States. The value of the shops has been very much increased, so that practically all repair work to the means of transportation used by the various departments is now done by the city laborers. A blacksmith and harnessmaker and the necessary help have been added to the equipment of the shops. All the cement curbing used in the street work is made at the shops, and money has been appropriated for the equipment of a new machine and wood-working shop.

Survey work has been carried on to a large extent in all parts of the city, giving for the first time an accurate record of street lines and grades, and supplying necessary data for the water and sewer work. The proposed improvement to the Pasig River by straightening and filling in the bank and dredging between the Almacen and San Domingo gates has been carefully studied, and detailed plans and specifications for advertisement are being prepared. The removal of the city wall at this point is being done by the prison gang. Much progress has been made by one field party, whose time has been devoted mainly to the survey necessary for the new drainage system. Attention is directed to the discussion of the proposed system submitted by the city engineer and attached to the end of his detailed report. The board will recommend the appointment of an engineer, whose duty it shall be to make a systematic study of the drainage system, and this work should be begun during the first half of the next fiscal year.

In connection with the report of the department of engineering and public works there is inserted an old and valuable map of the city of Manila as it was in the first years of the eighteenth century. This map was produced in Manila in the year 1730, and was removed to England by General Draper, who, in command of the British forces, captured the city in 1762. A photographic copy was made from the original in the British Museum by the Hon. T. H. Pardo de Tavera, a member of the Philippine Commission, by special permission of the British authorities, and through his courtesy the board is able to present it in the Philippines for the first time in nearly a century and a half.

The annual report of the city engineer, marked "Exhibit D," with its various inclosures, gives details of the work of the Department for the year.

#### POLICE DEPARTMENT.

Many changes have taken place in the police department since the writing of the last annual report. These are largely the natural result of the experiments and experience of a formative period. Numerous men joined the force with the idea of retaining their positions until something better offered, and have used their spare time to prepare themselves in their various studies in order that they might take the examinations of the civil service board for clerkships and employment in the other branches of the government paying larger salaries.

The record of appointments and separations of patrolmen and noncommissioned officers shows:

Probational appointments.....	330
Discharges.....	325
Promotions.....	72
Total who have enjoyed accrued leave of absence.....	362

The number of discharges is almost half the entire force, which is out of all proportion, and will be very much diminished in the future. These discharges are divided in the following manner:

Americans:	
By own request.....	109
For good of service.....	38
Total.....	147
Natives:	
By own request, failing to pass civil-service examination, etc.....	112
For good of the service.....	66
Total.....	178
Grand total.....	325

A number of these changes have undoubtedly been caused by the salary scale of the department, which is considered too low. Recommendations for increase of pay, based on length of service, will be considered by the municipal board during the next half year, and it is expected that the next estimate will include a regular graded scale, which it is hoped will encourage the members of the force in their work, and will offer such inducements as will make long service attractive. The police fund will be made the nucleus of a benefit fund, and will be managed by the municipal board.

It is recommended that the salary of Doctor Roxas, assistant surgeon, be increased from \$1,200 to \$1,400. This officer has rendered most efficient service, and in addition to his regular police duties has made the examinations for a large number of civil-service candidates; and it is considered that the salary at present enjoyed is not a just remuneration for the character of the service given.

Among the officers the changes have been quite as numerous, proportionately, as among the subordinate grades, as the following list shows:

#### PROMOTIONS.

*January 9, 1903.*—J. E. Harding, from assistant chief to chief; E. S. Luthi, from assistant inspector to assistant chief; John F. Green, from captain to assistant inspector.

*October 23, 1902.*—George Seaver, lieutenant to captain.

*February 4, 1903.*—Walter E. Wilson, lieutenant to captain.

*October 23, 1902.*—Esrom J. Morse, sergeant to lieutenant.

*January 7, 1903.*—Mark Scott, sergeant to lieutenant.

*March 16, 1903.*—Thomas F. Crowley, sergeant to lieutenant.

*December 1, 1902.*—Santiago Verzosa, sergeant to lieutenant.

#### SEPARATIONS FROM THE SERVICE.

*June 13, 1903.*—Lieut. Bernabe di Malibot, resigned; Capt. Andrew J. Burt, discharged at own request on expiration of leave of absence.

#### DISCHARGED FOR CAUSE.

*June 25, 1903.*—Dr. H. W. Yeamans, police surgeon.

*September 6, 1902.*—Lieut. Hilarion de Guzman.

*December 18, 1902.*—Lieut. H. G. Toone.

The many changes in the first-class patrolmen have been a severe tax on the civil service board, which has frequently been unable to supply the best class of men for filling the vacancies, and this has given rise to a large number of probational appointments. In general, the class of men received to-day is not of as high a standard as during the past two years. The field of available men has narrowed very appreciably. The reduction of the army has, to a large extent, cut off a source of good material. It was found necessary to change the physical requirements for policemen by reduc-

ing the height from 5 feet 9 inches to 5 feet 8 inches, and the weight to 145 pounds. The examination for the third-class police is of the most simple nature, and there is no lack of material, but as a rule a large number of men must be tried out before one can be found who promises to develop into a capable policeman. Those who have been on the force for a year or more, and have been subjected to strict schooling and discipline, have shown excellent improvement, and are performing their work in a very satisfactory way.

The Filipino members of the police force have continued their study of English, and practically all the old men are able to answer simple questions intelligently. The schools, which were closed during the cholera epidemic of last year, have been opened wherever possible, and the attendance has been good.

Fortunately the cholera has been insignificant in comparison with the epidemic of last year, and the police have been relieved of a great amount of laborious and dangerous work. From time to time special police have been employed at the request of the board of health, and these men have performed the work which during the most dangerous period of last year was intrusted to the members of the regular police. The number of complaints concerning the enforcement of the quarantine have been much less in proportion to the number of cases, largely because of the experience during the last epidemic.

The same active cooperation which marked the relations of the department with the military and constabulary during the last year has been continued with the best results, though the extent of the work has diminished by reason of changing conditions. The police have not found it necessary to send out large detachments to cooperate with the constabulary working in the vicinity of the city limits, as was formerly the case. The mounted detachment has continued its active patrol of the city limits, and has worked in harmony with the constabulary officers operating along the border line of the province of Rizal. The ladrone bands which infested this zone have been harassed and driven before both organizations until at the present time there is practically no organized outlawry in this section of the country. From time to time small raids have been made on the outlying barrios, but the offenders have, in a majority of cases, been captured and brought before the courts for trial.

In February the two municipal courts were consolidated, doing away with the court room in Santa Cruz and relieving Judge McGirr from his duties. The municipal court is now established in the Parian police station in the Walled City, and is presided over by Judge J. M. Liddell. The consolidation has been found to greatly simplify the duties of the police, and has caused no apparent interference with the progress of the business of the court.

During the year covered by the last report the department was dependent upon the public telephone system, which is entirely inadequate and unreliable, and in exceedingly bad condition. Since that time the Gamewell police and fire-alarm system has been installed, and is now giving satisfaction in four precincts. The effect upon the force of the systematic reports and careful checking is very noticeable, and the officers are kept in constant touch with the men. Only 80 boxes have been installed, but it is proposed to increase this by 80, covering the greater and more important part of the city.

Three thousand six hundred and four persons were arrested for gambling, and 178 for conducting a gambling house, and convictions were obtained in a great majority of the cases. A strong effort has been made to suppress the gambling in all quarters of the city. During the month of August, 1902, gambling houses were opened with great boldness, and a campaign of several months was waged before they were well cleared out. For a time a well-organized ring or gang, under the leadership of S. R. Price, defied the police and successfully operated gambling joints where Americans lost large sums of money. The players were limited chiefly to clerks and army employees, though certain officers of the civil government occupying responsible positions, and army officers, frequented the games. This gang has been practically run out of town, many of its members being imprisoned, and others having hastily departed for the China coast in order to avoid prosecution.

The police station in Paco, which was constructed by contract at a cost of \$4,900, of American timber, has not proven a success. The materials were unsatisfactory, and the building has offered very little protection against the storms. Extensive repairs have been necessary, and the experience thus gained, it is hoped, will prevent the department from further mistakes of this character. Plans have been ordered for a new station in the district of San Lazaro, providing for a building of much better construction, and the contract will be awarded during the next half year. The other stations of the city have been generally overhauled and improved, but conditions are not yet satisfactory, though very much improved over those of last year.

A new uniform has been adopted, which is described at length in the report of the chief.

The secret service bureau has developed with surprising success, especially the criminal branch of the work. The public is fast recognizing the opportunities offered by the bureau and the excellence of its work, and is relying upon the bureau and aiding it far more than at any time since its organization. The chief, reciting the increase of the work, is careful to state that crime is not on the increase, but that the bureau has gained a reputation as a means of recovering stolen and lost property and running down criminals of all classes. Between July 1, 1902, and June 30, 1903, money and stolen property to the value of \$55,494.31 were recovered. The detectives are being carefully instructed in the laws relating to their work and in the languages of the people among whom they operate. The new ordinance regulating pawn shops, while entailing a great deal of work upon the bureau, has placed it in close touch with that element from which are recovered so many missing articles, and the long list included in the report of the chief shows the success achieved in this branch of the work.

One man is detailed to board every incoming and outgoing steamer and to carefully observe all arrivals and departures. Owing to the increased number of defalcations, both in the Government service and in business circles, this work has been exceedingly valuable during the last few months, and many who would otherwise have escaped were turned back and delivered to the authorities.

The Bertillon system, which was ordered through the insular purchasing agent several months ago, has not yet been delivered, and the old cumbersome identification of criminals and suspicious characters has been continued. It is expected that the Bertillon system will greatly facilitate identification, especially among the native and Chinese population.

Among the most important cases handled during the year was that of Dr. Dominador Gomez de Jesus, the president of La Union Obrera Democrática. Much valuable evidence was secured in the house and office of this president, and important assistance was given to the attorney-general, the solicitor-general, the insular treasurer, and the prosecuting attorney of Manila. The prosecution of this case has developed the most serious charges and has laid bare a clever semipolitical scheme for fostering opposition to the government, and at the same time bringing financial benefit to the promoters. Mainly through the efforts of the discontented element a large number of seditious and sensational dramas have been presented in Manila. The majority of these, if not all, were in the Tagalog language, and portrayed scenes between Americans, Filipinos, and Spaniards. In many cases the plot was so designed that the audience was considerably affected, and it is believed that the malcontents used these plays for the purpose of exciting the people and keeping them discontented and in touch with those who oppose the policy of the government, and, in fact, the United States Government in any form. The constabulary has worked with the bureau in breaking up these plays, and the discovery was largely due to the careful observation of members of the bureau who have mastered the Tagalog language.

Attention is invited to the recommendation of the chief concerning the advantages of conferring rank in the department upon the chief and the members of the bureau. It is recommended that this be approved, viz: That the chief of the bureau be given the rank of inspector; the senior American detective the rank of captain; the second senior American detective the rank of lieutenant, and all other American detectives the rank of sergeant.

In general it may be stated that the conditions in Manila compare favorably with those of any American city of its size, and the record of the department shows a surprisingly small number of crimes. In no city are the laws governing the sale of liquor and the suppression of gambling more rigidly enforced. This is the more remarkable when the mixed character of the population is considered. Manila is singularly free from sailor dives and tough boarding houses and bawdy houses of all classes. There are no streets within its limits which may be considered dangerous to the public at any hour of the day or night, and street robberies and hold-ups are so rare as to be hardly worthy of mention.

The annual report of the chief of police, marked "Exhibit E," gives details of the work of the department for the year.

#### LAW DEPARTMENT.

The work of all branches of the law department has increased both in scope and efficiency. The office of the city attorney has been largely occupied in the preparation of ordinances, acts to be submitted to the Philippine Commission, bonds, contracts, deeds, leases, etc., and a large number of legal opinions rendered to the municipal board and various city departments. The office was represented in 36 suits and 8

land titles were cleared and registered. The organization of the new court of land registration has considerably increased the work of the city attorney, as the court cites the city in all cases involving the ownership or boundary of a street or public plaza, as well as in cases in which the city claims an interest in the land sought to be registered, or is the owner of adjacent property. Many investigations arising from this source cover periods of one and even two centuries. Only in the rarest cases do documents show that the lands owned and occupied by the city were conveyed by deed, and, as a rule, the old grants are to be found only after searching through ancient records and plans, hopelessly lost in a mass of unindexed municipal and insular records.

The consolidation of the two municipal courts has brought about a considerable improvement, as it centralizes the work and reduces the expense, yet permits full justice in the transaction of all business.

#### PROSECUTING ATTORNEY.

One thousand and sixty-four cases were instituted by the office of the prosecuting attorney; 472 of these being disposed of in the court of first instance, 592 being disposed of in the municipal court. Thirty-four deaths were investigated by this office in its performance of the duties of coroner. The business of the office has increased more than 100 per cent during the last year, and in addition to this there have been a great number of investigations of cases submitted, in which no complaints were filed owing to insufficient evidence. The secret service bureau has been very largely used by the prosecuting attorney for the purpose of investigating cases and supplying evidence on which to institute proceedings.

#### SHERIFF'S OFFICE.

The addition of Part III to Parts I and II of the court of first instance, and the creation of the court of customs appeals and the court of land registration have imposed a heavy increase on the work of the office of the sheriff. On November 1, 1902, the sheriff took over the transportation of prisoners to and from the several courts, which work, up to this time, had been in the charge of the police department. The amount of fees, derived almost exclusively from civil cases, was as follows: \$9,015.41, Mexican currency; \$226.89, United States currency.

#### MUNICIPAL COURT.

The experiment of consolidating the two courts of the city has proven successful, as will be seen from the detailed report of this department, which appears under the head of "Exhibit F," reciting at length the number of complaints filed and the persons tried, with the disposition of each case.

#### FIRE DEPARTMENT.

During the past year the fire department has developed perhaps more than any other department of the city government. From a partially organized, insufficiently equipped, poorly housed department, with untrained horses and men, has been developed a first-class department, well organized, fairly equipped, fairly housed in temporary buildings—with the exception of the Santa Cruz and San Nicolas stations, which are permanent—with men and horses trained to as near efficiency as possible with the material at hand. However, the department is not yet of sufficient size and efficiency to give fire protection necessary for this city. The department has made every effort for improvement during the year, under the direction of its able chief, and its work has proved its value in extinguishing several fires, the extension of which would have jeopardized the business section of the city.

The department has been hampered by small water mains in fighting the three largest fires that occurred during the year, which had gained such headway before notification had been given to the department, due to unfamiliarity by the public with the alarm system, that the resulting losses were very heavy. Personal observation at two of these fires demonstrated that had there been water mains of a larger diameter in service at these points, these fires would have been controlled and confined to the property which had been destroyed prior to the time of the arrival of the department. To remedy this deficiency of water mains there has been ordered \$50,000 worth of pipe of large dimensions, which will be immediately installed upon

its arrival under plans which have been prepared by the engineers for the distribution system of the new waterworks.

To further acquaint the public with the alarm system the fire department is about to issue circulars which will be posted throughout the city in English, Tagalog, Spanish, and Chinese, which it is hoped will accomplish that purpose, and delays in sending in alarms will be obviated.

The records of the department show during the year 95 alarms of fire, resulting in losses and damage estimated at \$835,325, United States currency, while for the year previous are recorded only 47 alarms, and losses aggregating \$42,058, United States currency. Of the 95 alarms received, 10 were false, and the causes for the remaining 85 fires are reported as follows:

Unkown.....	22	Lighted torch .....	1
Carelessness .....	12	Ignition of box of matches .....	1
Defective flues or open fireplaces ....	12	Heat from smokestack.....	1
Lamp explosions .....	13	Supposed incendiary.....	3
Overtured lamps .....	7	Spontaneous combustion.....	1
Chemical combustion.....	2	By order of board of health.....	4
Electric-light wires .....	2		
Lamp or candle too near woodwork..	2	Total .....	85
Sparks from chimney.....	2		

These alarms were received in the following manner:

Telephone.....	38
Verbal .....	29
Alarm system.....	28

Since inaugurating the alarm system 60 per cent of all alarms have been received through this source.

The large losses during the year are due to the burning of the Pacific Oriental Trading Company warehouses in July, 1902, loss \$280,000; the Trozo nipa fire in May, 1903, loss \$125,000, and the burning of the "Compañía General de Tabaco" warehouse in June, 1903, loss \$375,000, or a total loss in three fires of \$780,000, or more than 93 per cent of the entire losses for the year.

The chief of the fire department reports three fires during the year of supposedly incendiary origin; yet this is doubtful, and no proof has been developed by the police department, after a searching investigation, that these were fires of incendiary origin. Wherever oriental peoples, especially Chinese, are a factor in the population, insurance companies invariably charge an increased insurance rate against fire on account of moral risk, and both the fire and police departments of the city have investigated causes of fire, with the idea of obtaining possible data relative to the moral risk in the Philippines, and yet during the past year no single case has been developed as a cause for the fires to which the department has been called.

The strength of the fire department has been increased by 20 men during the year, from 80 to 100, and consists of 53 Americans and 47 Filipinos.

There are now in the service 1 chief, 1 assistant chief, 1 electrician, 3 engine companies with the accompanying hose wagons, 4 chemical companies, and 2 hook and ladder companies, occupying 5 stations, using 34 American horses and 11 native ponies, and 11,000 feet of 2½-inch fire hose. The department is also supplied with hand extinguishers, life-saving apparatus, and other modern appliances for use at fires. The past year has seen the completion of the San Nicolas fire station, a modern station which is most satisfactory, and in a section of the city where it was badly needed, at a cost of \$35,849.13, local currency. All the other stations have received repairs, except the Tanduary station, where it is expected the new station will be erected very soon. All the stations are now in good condition, and reflect credit to the city and the department.

The accepted plans for the permanent organization of the department call for 6 engine companies, 4 chemical companies, 2 hook and ladder companies, and 1 fire-boat company, with a total personnel of 153 men and 50 horses, which are to be housed in 8 stations throughout the city. With this plan in view, all the apparatus, except the fire boat, has been contracted for, and plans are being prepared for a fire boat for use on the river and bay. To properly house this department it will be necessary to erect at least 4 new stations within the next two years, including the Tanduary station, which has already been provided for. It is believed that the organization thus proposed will be completed during the present fiscal year, with the

exception of the fire-boat company, and with the permanent quarters now in use the city will be well protected from fire.

During the year the board has adopted rules and regulations for the fire department which have been printed and distributed to all members thereof. New uniforms, devices, badges, and insignia were also authorized and are in use by the department.

The question of proper horses for the department is a serious one, as 4 horses were lost through disease during the past year, and there is no available supply of horses at hand. It is hoped that arrangements may be made through the insular purchasing agent to purchase direct from the United States or Australia all horses for the department which may be suitable for the work, instead of purchasing almost any animal that can be purchased in the local market.

Increased activity in the electrical department is apparent, and increase in the personnel has been necessary. The Gamewell system consisting of 80 fire-alarm boxes, 80 police-alarm boxes, and the necessary central office apparatus, switch boards, etc., have been installed and are in operation and giving good results. The department is preparing plans for the extension of this system to double its size in the near future and 80 additional police boxes have already been ordered. This department has also undertaken the installation of interior electric lights for the city at a cost considerably below that which contractors would bid for the work. The city electrician has been gradually compelling the remodeling of all installations not up to the standard, and is also at work upon plans for the exterior remodeling of the systems of the electric light company and the telephone company. The records show 1,457 permits for electrical installations, and 1,244 certificates issued. The condition of the Manila Telephone Company's lines is such as to call for extensive alterations, and these lines are in some instances a menace to safety and very unsightly, and the electrician expects to obtain immediate results on outside construction by this company.

The total expenditures of the department for the year were \$173,831.50, United States currency, and may be segregated as follows:

#### NONRECURRING EXPENSES.

New apparatus and equipment, including Gamewell fire-alarm system..	\$88,942.01
Installation of Gamewell fire and police alarm system.....	9,999.71
	<hr/>
	98,941.72
	<hr/>

#### CURRENT EXPENSES.

Forage, general supplies, and contingent expenses.....	13,535.51
Salaries and wages.....	61,354.27
	<hr/>
Total.....	74,889.78
	<hr/>
Grand total.....	173,831.50

The annual report of the chief of the fire department, marked "Exhibit G," gives details of the work of the department for the year.

#### DEPARTMENT OF ASSESSMENTS AND COLLECTIONS.

The department of assessments and collections has been greatly inconvenienced during the past year by changes in the personnel, due to various causes, yet the work accomplished has exceeded that of any previous year. The department was in charge of the chief deputy collector, Mr. Ellis Cromwell, from the beginning of the fiscal year to January 10, 1903, when Mr. A. W. Hastings was appointed city assessor and collector, but since his appointment he has been almost continually engaged as a member of the board of tax revision, and has not been able to devote his undivided attention to the office of city assessor and collector. Several subheads of divisions have also been promoted out of this department during the year, and such changes have caused serious delays to the department in its work, and the best results have not obtained.

The collections during the year, \$1,383,407.11, United States currency, show an increase of 29 per cent over those of the year previous, notwithstanding that the collection of the land tax for the first half of the year 1903, of over \$420,000, United States currency, was postponed by the tax-revision act.

The increases in collections may be segregated as follows:

**Increases of collections of 1903 over 1902:**

Land tax .....	\$278,315.16
Industrial tax .....	31,304.69
Certificates of registration .....	1,088.45
Matadero fees .....	13,167.28
Market fees .....	6,916.68
Licenses .....	11,615.92
Vehicle tax .....	2,361.32
Justices of peace fines and fees .....	232.45
Sheriff's fees .....	1,351.25
City attorney's fees .....	84.71
Rents .....	1,852.97
Certificates of electrical installation .....	722.31
Pound receipts .....	770.76
Registration of cocheros .....	1,119.15
Public health fees .....	4,065.33
<b>Total increase .....</b>	<b>354,968.43</b>

**Decreases of collections of 1903 from 1902:**

Stamp sales .....	1,927.64
Municipal court fines .....	15,530.20
Live stock registration .....	18.44
Vehicle equipment .....	116.88
Miscellaneous collections .....	2,522.43
Frontage tax (abolished) .....	21,592.37
Sale of land .....	489.95
<b>Total decrease .....</b>	<b>42,197.91</b>

**Net increase of collections of 1903 over 1902 ..... 312,770.52**

The greatest increase in collections is in the land tax, due to increased rate, the addition of new territory, and the collection of many delinquent taxes of the two previous years. Many other items also show material increases. The actual increase in industrial tax, certificates of registration, matadero and market fees, vehicle tax, and rents is more than is apparent on account of the fact that these items are payable in local currency, the value of which has been materially reduced during the year, thus causing a loss to the city's revenue when expressed in United States currency.

The apparent decrease in the stamp sales is mainly due to the decline in the rate of local currency and discontinuance of the use of these stamps by the customs authorities, and although this statement shows a decrease in the amount collected, the actual number of stamps sold is in excess of the year previous.

The decrease in the municipal court fines is due to the decrease in the number of gambler's fines, due to the stringent antigambling ordinance, and all other items showing decreases are due to the fact that such collections, as revenue, have been abolished. Thus it can be fairly stated that every item of legitimate revenue to the city shows an increase for the year.

The cost of collection (entire expense of the department) for the year was \$82,244.49, or 5.9 per cent of the collections. This is a reduction of \$13,456.57 from the expenses of the previous year, notwithstanding the increased collections. The cost of collection for the year previous was 8.9 per cent of collections.

The public markets of the city have been considerably improved during the year, and a new market, called "Anda Market," was opened to the public in the walled city, and a contract entered into for more than doubling the size of the present Arranque Market. The markets of the city are well patronized and are giving general satisfaction both to the public and the vendors therein, and owing to the large patronage of the three principal markets—Divisoria, Arranque, and Quinta—some complaints have been received of the insanitary condition and overcrowding of these markets. These matters have received the attention of both the board of health and the municipal board, and the number of volantes has been materially reduced in order to overcome this objection, and it is believed that when the addition to the Arranque Market is completed, the city can furnish to all comers the space they desire in the public markets for the sale of food products. The outlying districts, Sampaloc, Paco, Santa Ana, and Gagalangin, are in need of better market facilities,

and plans are being prepared for the erection of small market houses in these suburbs. The removal of Herran Market to a more conveniently situated site is desirable from a point of convenience to the public and a financial standpoint, and it is the intention to convert the present market into a city stable and erect a new market of about half its size in the vicinity of Calle Ligeras, Malate. The net revenue derived from market fees for the year was \$88,906.66, United States currency.

The collections at the public slaughterhouse during the year indicate an increased business of 23 per cent over the year previous. This is caused both by the increased number of animals slaughtered and the enforcement of a new ordinance regulating the conduct of the slaughterhouse. Increased facilities for handling meat, such as an overhead trolley system, automatic scales, etc., have been contracted for and should be installed very shortly.

The following comparison indicates the increased consumption of meat by the native population of Manila over the previous year:

*Animals slaughtered in matadero.*

	1902.	1903.	Increase.
Hogs .....	54,644	63,599	8,955
Cattle .....	16,516	23,335	6,869
Sheep .....		204	204
Total .....	71,160	87,138	16,028

Few complaints have been received during the year regarding the conduct of the matadero, and it can be considered as perhaps one of the most successful of the city's institutions, as well as producing during the past year a net revenue of about \$65,000.

The operation of the land tax during the year, besides producing the largest amount of revenue of any item to the city, has had the effect of compelling holders of vacant property to either make improvements thereon or dispose of their holdings. That this effect is beneficial to the interests of the city can scarcely be doubted, and already suburban additions to the city are being made, landholders offering property for street purposes and terraplaning marshes and swampy ground and erecting residences in sections which heretofore have been undeveloped. Attention is invited in this respect to the report of the engineer regarding building operations in the city, all of which will tend in the near future to reduce the excessive rentals for residences which have obtained almost since American occupation. This property improvement has also caused the removal of large numbers of nipa buildings from the district of strong material, thus decreasing the fire risk, and removing from good residence localities what have heretofore been considered as eyesores—old nipa shacks. It is anticipated that during the present fiscal year the districts of Ermita and Malate will be materially improved in appearance, and other outlying districts are fast building up, such as Santa Mesa, Trozo, and Paco. All these improvements are forced more or less by the operation of the land tax law.

LICENSES.

Notwithstanding that during the past year general business conditions have been considered unfavorable, the number of licenses issued shows an increase over the year previous, and these licenses are an item of considerable revenue to the city of Manila, amounting to \$164,820.45 for the year. The number of liquor licenses, exclusive of native wine licenses, has been somewhat reduced, and at the close of the year there were extant in the city 124 bar licenses and 53 restaurant and hotel liquor licenses, or a total of 177 drinking places where liquor could be obtained and drunk upon the premises, exclusive of native wine shops.

The board has ceased to authorize bar licenses in the residence districts of Ermita and Malate, and the Philippine Commission has prohibited the selling of liquor in the southernmost portion of the district of Malate and the eastern portion of the district of Sampaloc. The number of native wine licenses during the year has been increased to 1,168, as it has been found by experience that these places are orderly, well kept, and when under the supervision of the police and sanitary officers seldom create disorders or become objectionable.

The licensing of pawnbrokers has been regulated by ordinance by which the police department is charged with the supervision over this class of business, and the results so far obtained have been very satisfactory.

The number of vehicle licenses, dog licenses, and bicycle licenses has been materially increased during the year.

The amount of revenue received from the rents of landed city property, \$4,509.18, shows an increase of over 40 per cent over the year previous, the city having entered into several leases during the year by throwing open to the public bid the leases on property the title to which is not in doubt. There are many other pieces of city property which will undoubtedly be leased in the future, but the uncertainty of titles and the necessity for property for public buildings has delayed the board in offering this property to the public for revenue purposes.

Attention is invited to the annual report of the assessor and collector, Exhibit H, for further details of the work of the department.

#### DEPARTMENT OF CITY SCHOOLS.

The school department, like many other departments of the city, has had a change in the position of chief of department, Mr. Mason S. Stone retiring on June 15, 1903, and the position of superintendent being vacant until June 6, when Mr. G. A. O'Reilly was appointed superintendent.

During the year the schools made very little progress, and have been unsatisfactory in many ways. Primarily, the attendance of about 3,000 in the day schools and 1,500 in the night schools is far below what the attendance of public schools in the city should be. There are many causes which have tended to reduce the attendance of public schools during the year, of which the lack of proper schoolhouses and the large number of private schools are the principal ones.

The board has furnished the school department, upon their application, all the buildings they require for school purposes, but it must be admitted that these buildings in many cases are certainly not adapted for the purpose for which they are used, and plans are being prepared for the erection of school buildings in the immediate future. It is proposed to erect, as soon as plans can be drawn and contracts entered into, a school building in Tondo with a capacity of 1,000, one in Ermita with a capacity of 400, and one in Trozo or San Miguel with a capacity of 400. During the year a small school building has been erected in the suburb of Gagalangin, which has been very satisfactory. Owing to the necessity of the removal of the offices of the city government from Calle Palacio, it has been necessary to take the school building on Calle Victoria, Intramuros, for use as a city hall. This was done during the long vacation, and the pupils attending that school were diverted to other parts of the city. The occupancy of this building, however, should not continue after the 1st of March, 1904, when the building will be entirely renovated, the grounds remodeled, and it will then be a satisfactory school building for the Intramuros district.

The personnel of the local school board has somewhat changed during the year, and now consists of Messrs. F. E. Green, R. E. Herdman, Catalino Sevilla del Rosario, W. S. Washburn, and the superintendent, Mr. G. A. O'Reilly.

It is believed that the coming fiscal year will see a great improvement in the public schools, both in attendance, in buildings, and in the administration of the school department of the city.

Attention is invited to the detailed report of the superintendent, Exhibit I.

#### FINANCES.

The condition of the finances of the city of Manila, after a year of increased revenue and expenditure, is very satisfactory, showing a credit balance of \$205,152.36, with practically no liabilities.

The following statements show the receipts of the city for the fiscal year, the expenditures for the fiscal year by departments, and a statement of the financial condition June 30, 1903:

Department of engineering and public works .....	1, 139. 72	946. 73	\$31, 720. 76			33, 807. 21
Total .....	15, 656. 14	76, 765. 51	31, 720. 76	20, 115. 53		75, 168. 94

Total expenditures during year, \$1,962,078.

Statement of financial condition of city of Manila, June 30, 1903.

Balance June 30, 1902 .....	\$48,052. 19
Total receipts from all sources.....	1,530,554. 78
30 per cent of expenses paid by insular government .....	588,623. 40
Total.....	2,167,230. 37
Total expenditures during year .....	1,962,078. 01
Balance to credit of city .....	205,152. 36

The revenues for the year, \$1,530,554.78, show an increase of \$413,962.99, or more than 37 per cent over last year, due mainly to the increase of the land tax from 1 to 1½ per cent on the assessed valuation, and also to an increase in almost all other items of revenue.

Had the payment of the land tax for 1903 not been postponed by the tax revision law, the revenues would still further have been increased to the extent of \$400,000.

The principal sources of revenue of the city, contributed in the following ratios:

	Per cent.		Per cent.
Land tax .....	38	Municipal court fines .....	4
Industrial tax .....	14	Certificates of registration.....	3½
Licenses .....	10	Vehicle tax .....	1½
Water service .....	8	Building permits .....	½
Market fees .....	7	All other items.....	5
Matadero fees .....	4½		
Stamp sales .....	4		100

The total expenditures for the year, \$1,962,078, have exceeded those of last year by \$435,592.86, or about 22 per cent. Of these expenditures \$75,168.94 is applicable to the fiscal year 1902, leaving the actual expenditures for the fiscal year 1903 \$1,886,909.06, which may be segregated as follows (into current and nonrecurrent expenses):

CURRENT EXPENSES, FISCAL YEAR 1903.

Department.	Salaries and wages.	Contingent expenses.	Public works.	Equip-ment.	Tax re-fund.	Total.
Municipal board.....	\$38,184. 54	\$28,883. 55	.....	.....	.....	\$67,068. 09
Law department.....	60,355. 69	6,499. 88	.....	.....	.....	66,855. 07
Fire department.....	53,104. 23	10,730. 85	.....	.....	.....	63,835. 08

Police department.....	523,121. 79	18,994. 75	.....	.....	.....	542,116. 54
Department of engineer-ing and public works....	301,962. 18	49,285. 01	\$219,791. 92	.....	.....	471,039. 11
Total.....	1,116,299. 79	119,939. 29	219,791. 92	.....	.....	1,456,031. 00

NONRECURRENT OR EXTRAORDINARY EXPENSES, FISCAL YEAR 1903.

Municipal board.....	\$5,748. 23	\$1,377. 36	.....	.....	.....	\$7,125. 59
Fire department.....	2,226. 81	9,570. 39	.....	\$94,553. 47	.....	106,410. 67
Department of assessments and collections .....	11,472. 91	.....	.....	.....	\$716. 17	12,189. 08
Police department.....	9,692. 50	.....	.....	47,513. 54	.....	57,206. 04
Department of engineer-ing and public works....	.....	.....	\$247,946. 68	.....	.....	247,946. 68
Total.....	29,200. 45	10,947. 75	247,946. 68	142,067. 01	716. 17	430,878. 06

Total, \$1,886,909.06.

This statement indicates that the current expenses of the city were \$1,456,031, of which \$1,116,299.79, or 76 per cent, was expended for salaries and wages; \$119,939.29, or 8 per cent, for contingent expenses, and \$219,791.92, or 16 per cent, for the maintenance, repair, and upkeeping of public works.

The relation of salaries and wages, which consumed 76 per cent of the current

expenses of the city, may be stated as follows, showing the number of Americans and Filipinos employed to consume this sum of money: •

	Relation of salaries and wages paid to total current expenses.	Average number of Filipinos employed.	Average number of Americans employed.	
	<i>Per cent.</i>			
Municipal board .....	2½	23	17	Including secretary's office, disbursing office, and advisory board.
Law department .....	4	45	19	
Fire department .....	3½	46	51	
Department of assessments and collections.	4	122	26	
Department of city schools .....	7	156	2	Superintendent and American teachers paid from insular funds.
Police department .....	35	521	425	
Department of engineering and public works.	20	287	123	

Day laborers, 2,368.

There are included in the expenditures for contingent expenses, public works, and equipment various amounts, the aggregate of which is \$36,456.18, which has been paid to the insular purchasing agent as the 10 per cent increased cost of all supplies purchased by the city through him. This 10 per cent materially increases the cost of supplies and materials, and the amount paid during the past year is excessive, and the city should not be called upon to contribute in this manner for maintaining the office of the insular purchasing agent, as the service rendered is poor, the prices paid and the materials furnished are not always satisfactory, and the delays occasioned through this method of purchasing material and supplies are often a hindrance to public work. It can be clearly shown that in many cases the insular purchasing agent contracts for supplies or material to be delivered at the warehouses of the city, the city thus paying freight, insurance, and lighterage to point of delivery, and then paying 10 per cent in addition for what little time, expense, and bookkeeping the insular purchasing agent's office has expended. This is not justice to the city, and the rate should either be materially decreased to 2 or 3 per cent, or the city be allowed to purchase many supplies which they are now compelled to purchase through the insular purchasing agent, in the same manner as provincial governments under the provisions of section 1 of Act 231. It is not the intention of the board to establish a purchasing agent's office for the city, but merely that the city should be able to purchase, for example, its own paving blocks by direct contract, or coal for use of the various departments, without resorting to the insular purchasing agent and getting supplies that are not satisfactory and that have cost the city 10 per cent above the cost to business concerns. There is no doubt but that in the purchase of stationery, tools, and other articles coming from the United States the benefits by purchasing through the insular purchasing agent are worth something to the city, but it is not believed that the insular purchasing agent should make a profit on the supplies furnished to the city.

Regarding the items of nonrecurrent expenses of the city for the year, attention is invited to the report of the disbursing officer under the caption "Expenditures for public improvements," which shows that the engineer's department expended during the year under this head. \$247, 946. 68 In addition the following nonrecurrent expenses were paid:

Expense of board of tax revision .....	7, 125. 59
Purchase of new fire apparatus, equipment, and installation of Gamewell system .....	106, 410. 67
Emergency employees, city assessor and collector's office, on real estate tax assessment .....	12, 189. 08
Cholera police and the Gamewell police alarm system .....	57, 206. 04

Or a total of..... 430, 878. 06

## FISCAL YEAR 1904.

The outlook for increased revenue for the city for 1904 is encouraging, and the estimated revenues, based upon the collections for the past year, are as follows, providing that no change occurs in the revenue laws:

*Statement of estimated revenues, fiscal year 1904.*

	U. S. currency.		U. S. currency.
Land tax .....	\$1, 100, 000	Miscellaneous .....	2, 000
Industrial tax .....	240, 000	Certificates electric installa-	
Stamp sales .....	70, 000	tion .....	1, 500
Certificates of registration...	45, 000	Pound receipts .....	1, 500
Matadero fees .....	75, 000	Registration of cocheros.....	1, 000
Market fees .....	120, 000	Public health fees—ceme-	
Licenses .....	170, 000	teries .....	8, 000
Live stock registration.....	600	Water service .....	90, 000
Vehicle tax .....	25, 000	Building permits .....	8, 000
Vehicle equipment .....	1, 250	Weights and measures .....	3, 500
Municipal court fines .....	68, 000	Miscellaneous, city engineer.	1, 000
Justice of peace fees and fines.	2, 200	Register of deeds .....	8, 000
Sheriff's fees .....	4, 500		
City attorney's fees.....	150		
Rents .....	7, 000	Total .....	2, 053, 200

The estimated expenditures for the fiscal year 1904, based upon appropriations already made and the necessities of the city for public improvements, etc., are as follows:

*Statement of estimated expenditures, fiscal year 1904.*

Appropriation act 804: Current expenses, July 1 to December 31.....	\$969, 015. 00
Appropriation act 820: Public works, July 1 to December 31 .....	351, 648. 00
Estimated expenses, January 1 to June 30, 1904 .....	900, 000. 00
Estimated public works, January 1 to June 30, 1904 .....	200, 000. 00
Total .....	2, 420, 663. 00

*Statement of prospective condition of city's finances, close of fiscal year 1904.*

## Credits:

Balance from fiscal year 1903.....	\$205, 152. 36
Total revenues (estimated) .....	2, 053, 200. 00
30 per cent expenses borne by insular government.....	726, 198. 90
Total credits .....	2, 984, 551. 26
Debits: Total expenses (estimated).....	2, 420, 663. 00
Estimated balance, June 30, 1904.....	563, 888. 26

From the above statements it can be seen that the city's financial condition is improving each year. Even with increased expenditures the balance at the close of the next fiscal year should be in excess of half a million dollars. However, agitation along the lines of revised internal-revenue taxes will no doubt cut from the city's revenue in the near future at least a quarter of a million dollars. This, however, should be partially covered by an increased license of many industries which are now paying both license and industrial tax. It is also understood that a reduction of the land tax is being considered by the Commission from 2 to 1½ per cent. This would reduce the revenues by about \$175,000, and there is also reason to believe that a bond issue for the construction of a new water system should be negotiated during the present fiscal year, and an allowance for interest and sinking fund added to the estimated expenses, which would probably consume \$100,000, and thus, although the margin as shown by the estimated balance appears to be large, it will, in the event of any change in the revenue laws or the consummation of the bond issue, not be excessive to cover such contingencies.

In addition to this it may be stated that the last appropriation act for the current

expenses of the city was hardly sufficient to meet these expenses, and deficiency appropriations will probably be necessary.

Several amendments to the charter have been under consideration by the board, and among them is one which has for its object the change of the date on which the annual report of the board must be forwarded to the civil governor from the 1st day of August to the 1st day of September. It is the experience of the past two years that the heads of the various departments of the city have been unable to present their reports in proper season to enable the board to carefully consider and formulate its own report. It is believed that such an extension of time would result in more complete and satisfactory reports.

In conclusion, the board desires to acknowledge the faithful and efficient service rendered by the heads of departments and the employees, Americans and Filipinos, in all branches of the city government. With the evidence of more complete peace and the numberless signs of increasing prosperity, the work of nearly all the officers has grown in detail and volume. The presence of cholera and smallpox has surrounded the work of some departments with many dangers, but the services of those so employed have been given faithfully and without fear.

Very respectfully,

A. CRUZ HERRERA, *President.*  
CHARLES H. SLEEPER, *Member.*  
P. G. McDONNELL, *Member.*

---

EXHIBIT A.

REPORT OF THE SECRETARY OF THE BOARD.

MUNICIPAL BOARD OF MANILA,  
OFFICE OF THE SECRETARY,  
*Manila, September 28, 1903.*

The MUNICIPAL BOARD:

I have the honor to submit herewith the annual report of the secretary of the municipal board for the fiscal year ending June 30, 1903.

During the period from June 24 to December 29, while the secretary, Mr. A. L. B. Davies, was acting as a member of the board, in the absence of Mr. C. H. Sleeper, the office of secretary was filled by Mr. Bert Eddy, chief clerk of the board. On December 29, Mr. Sleeper having returned and taken his place on the municipal board, Mr. Davies assumed the office of secretary, and continued as such until March 9, when he resigned to accept the appointment of local purchasing agent. Pending the appointment of his successor, Mr. O. F. Ricard, a clerk of the board, was designated as acting secretary, and continued in that position until May 1, when the board appointed the present incumbent.

In accordance with the provisions of section 5 of the Manila charter, which define the duties of the secretary, there has been kept a full record of the proceedings of the board, both legislative and executive, and all documents relating thereto have been properly recorded and filed. Records have been kept of all ordinances and amendments to ordinances, and the same have been published in the English and Spanish languages as prescribed by law. There being a large portion of the inhabitants of Manila, however, who are unable to read either English or Spanish, a contract has also been made for the publication of all municipal ordinances and announcements in Tagalog.

On February 5, by resolution of the board, all of the old Spanish municipal records pertaining to the city of Manila, which up to that time had been in the custody of the city attorney, were transferred to the office of the secretary of the municipal board, and the task of filing these papers, with a view to easy and accurate reference, was undertaken by this office, and is being completed as rapidly as their condition will permit. An item of \$600 has been included in the appropriation by the board, to be used to provide suitable steel filing cases, so that these and other documents may be properly safeguarded.

While there have been no demands for certified copies of city records or documents, except from government officials for official use, for which no charge is made, the office is prepared to furnish promptly copies of any city document which may be called for.

A forfeiture of \$500 by Frank Twombly for failure to execute a contract for the building of additions to the Arranque Market, and a forfeiture of \$150 by José

(Gutierrez for failure to execute a lease for city property on Calle Tabora, are the only municipal funds collected during the year by this office.

During the fiscal year just ended the municipal board sat in session 304 times and considered 7,380 items of municipal business, of which, for the purpose of assisting the board in taking final action, 97 were referred to the advisory board for their consideration and recommendations. No written communications, however unimportant, have been ignored by this office; 5,020 letters have been received and, based upon the action of the board, 5,893 letters have been written.

There were presented to the board 32 ordinances, of which 17 were enacted, while 15 have passed one or two readings. Twenty-three contracts were entered into by the city during the year. Deeds were executed for the sale of four pieces of city property and for the purchase of three pieces of property by the city. There were four leases for city property executed during the year. Leases entered into by the city for private property are not shown in this report as the same were entered into by the superintendent of buildings and illumination and were merely authorized by the board.

The ordinances, contracts, leases, and deeds, in detail, were as follows:

No. 34. An ordinance amending ordinance No. 2, enacted by the municipal board December 5, 1901, entitled "An ordinance relating to gambling."

No. 35. An ordinance establishing a public slaughterhouse and providing for the regulation, inspection, and use thereof.

No. 36. An ordinance relating to the sale and supply of electricity and telephone service, and the inspection and installation of electric wires, meters, and other apparatus.

No. 37. An ordinance prescribing the fees to be charged by the secretary of the municipal board for certified copies of city records and documents.

No. 38. An ordinance relating to guest registers in hotels and lodging houses.

No. 39. An ordinance amending ordinance No. 9, issued by the provost-marshal-general June 12, 1901, entitled "An ordinance relating to licenses and permits," as amended by ordinances Nos. 17, 29, and 32, enacted by the municipal board.

No. 40. An ordinance relating to exits and fire protection in public halls and theaters.

No. 41. An ordinance amending ordinance No. 40, entitled "An ordinance relating to exits and fire protection in public halls and theaters."

No. 42. An ordinance relating to pawnbrokers.

No. 43. An ordinance relating to the misuse of and obstruction of approach to police and fire-alarm apparatus and systems.

No. 44. An ordinance granting to Charles M. Swift a franchise to construct an electric street railway on the streets of Manila and its suburbs, and a franchise to construct, maintain, and operate an electric light, heat, and power system in the city of Manila and its suburbs.

No. 45. An ordinance amending ordinance No. 39, enacted by the municipal board January 23, 1903, by which is again amended ordinance No. 9, issued by the provost-marshal-general June 12, 1901, entitled "An ordinance relating to licenses and permits."

No. 46. An ordinance providing regulations for the government of the Carriedo water supply of the city of Manila.

No. 47. An ordinance regulating the manufacture, storage, sale, transportation, and use of gunpowder, gun cotton, dynamite, nitroglycerin, calcium carbide, benzine, gasoline, turpentine, petroleum, tar, pitch, resin, and all other highly explosive or combustible materials.

No. 48. An ordinance amending ordinance No. 4, issued by the provost-marshal-general May 2, 1901, entitled "An ordinance relating to the collection of garbage and rubbish," as amended by ordinance No. 7, enacted by the municipal board December 24, 1901.

No. 49. An ordinance amending ordinance No. 10, issued by the provost-marshal-general June 19, 1901, entitled "An ordinance regulating the use of public vehicles."

No. 50. An ordinance amending ordinance No. 46, enacted by the municipal board April 1, 1903, entitled "An ordinance providing regulations for the government of the Carriedo water supply of the city of Manila."

Ordinances have been introduced and considered and given one or two readings, but final action thereon withheld, as follows:

Amending the building ordinances in the matter of the construction of balconies, projections, arcades, etc.

A general health ordinance for the city of Manila.

Regulating plumbing and the licensing of plumbers.

Relating to immoral publications.

Relating to the ringing of church bells and the making of loud and unusual noises.  
A proposed substitute for ordinance No. 36, regulating the sale and supply of electricity and telephone service.

Establishing Bancusay fish market.

Providing for the quarantine of contacts of bubonic plague and smallpox.

Permitting cable companies to lay pipe lines from stations in Malate to offices in Binondo.

Relating to the slaughter of suckling pigs. (Amendment to Ord. No. 35, Mun. Board.)

Defining the powers and duties of health inspectors.

Amending the gambling ordinance (Ord. No. 2, Mun. Board) by the exemption of race tracks and certain parlor games from the provisions of the ordinance.

Regulating the fire-hydrant service within the city.

Repealing section 42 of ordinance No. 11, provost-marshal-general, which requires residents of unlighted streets to hang out lights from their houses.

Relating to the filling and terrepleining of private property for the abatement of nuisances.

The following contracts were entered into by the board during the fiscal year, viz:

The following real property of the city was sold during the fiscal year, viz:

To Generio Herredia, on December 2, 1902, a piece of land 44.48 square meters in area, situated at the corner of Calle Soler, Tondo, and the road known as "Calle Para el Mercado;" consideration, \$202.68 United States currency.

To José Machuca, on February 13, 1903, a piece of land 33.54 square meters in area, situated at the corner of Calles Azcarraga and Antonio Rivera, Tondo; consideration, \$262.14 United States currency.

To Pedro Sy Guia, on May 10, 1903, a piece of land 97.79 square meters in area, situated on Calle Azcarraga, near Antonio de Rivera, Tondo; consideration, \$489.95 United States currency.

To Luiss Lichauco, on May 23, 1903, a piece of land 46.99 square meters in area, situated on Calle Jaboneros, San Nicolas; consideration, \$1,500 United States currency.

The following real property was purchased by the city during the fiscal year, viz:

From Ramon Fabie y Gutierrez, a piece of property at the corner of Calles Camba and Lara, San Nicolas, to be used for street purposes. Date, November 19, 1902; consideration, \$206.30 United States currency.

From Doña Maria Barbara Padilla, a piece of land on Calle Sevilla, San Nicolas, to be used for street purposes. Date, November 25, 1902; consideration, \$783.93 United States currency.

From Tomas Rodriguez y Lopez, a piece of land 42.96 square meters, situated at the corner of Calles Jolo and Meisic, to be used for street purposes. Date, April 24, 1903; consideration, \$243.36 Mexican currency.

The following city land was leased during the fiscal year, viz:

To Fred H. Hilbert, a piece of land in the rear of No. 249 Calle Real Malate, for two years and four months from January 1, 1903, at a rental of \$100 United States currency per annum.

To Robert J. Harrison and J. W. Marker, the city land at the corner of the Escolta and Calle Nueva, upon which is situated the kiosko, for five years from June 1, 1903, at a monthly rental of \$155 United States currency.

To Joseph H. Hartman, a piece of land on the Estero Binondo, just north of Calle Soledad, for nine years and two months from October 3, 1902, at a monthly rental of \$7.50.

To Vicenta Rodriguez, a piece of land in block 82, Tondo, for two years from August 17, 1903, at an annual rental of \$80 United States currency.

Respectfully,

JNO. M. TUTHER,  
*Secretary Municipal Board.*

#### EXHIBIT B.

#### REPORT OF THE DISBURSING OFFICER.

CITY OF MANILA,  
OFFICE OF CITY DISBURSING OFFICER,  
*Manila, P. I., August 21, 1903.*

The MUNICIPAL BOARD OF MANILA.

GENTLEMEN: In compliance with the provisions of the city charter, I have the honor to submit herewith my report of the business of this office for the fiscal year ending June 30, 1903, and also a summary report of the work connected with the office.

The scope of the duties of this office is narrowly defined by law to consist of "the disbursing of all moneys drawn from the insular treasury pursuant to appropriations made by the Philippine Commission," and in accounting for the same "in such a manner as the auditor for the Philippine Archipelago may prescribe." In this respect I believe the law has been strictly complied with. In addition to the foregoing prescribed duties, the municipal board has made it part of the work of the disbursing office to perform in part those functions devolving upon the city comptroller in the ordinary form of municipal government, and to keep such records in detail of the expenses of the city of Manila as the board might require from time to time for statistical purposes, and as a basis for estimating amounts of required appropriations.

The work of the department is carried on by the disbursing officer and a meager corps of 3 able assistants.

Realizing that the salary list of the city is very large, and that every employee desires his pay promptly on the last day of the month, to satisfy which, however, would be a physical impossibility, every effort has been put forth to so carefully systematize the salary payments by schedule as to accommodate the largest number of employees in the shortest period of time.

Ten days are required during the first part of each month to pay off all of the employees of the city, including those located outside of the city at San Juan del Monte, the pumping station, at Santolan, and the rock quarry on Talim Island.

Funds to the amount of 400,000 pesos are disbursed monthly, of which sum about 250,000 pesos go toward paying the salaries of the city's 4,250 employees, and the fair portion of this sum is paid over the disbursing office counter in actual cash, which, owing to the cumbersome monetary system, entails considerable manual

labor in the handling of these funds, it having been found that over a ton of silver dollars are passed over the counter daily during the first ten days of each month when the pay rolls are being paid.

In this connection it may be a matter of interest to note that 44 policemen or 53 peones (laborers) can be paid in the same space of time that it requires to pay one lady school teacher.

It has been observed with some pride that the insular government has, to a certain extent, utilized the disbursing office as a preparatory school of instruction for disbursing clerks, inasmuch as this office claims the honor of having trained and furnished to the insular government two of its most capable and efficient disbursing officers, viz, Mr. A. J. Robertson, chief paymaster, Philippine Constabulary, and Mr. Paul A. Weems, disbursing officer of the bureau of coast guard and transportation, both of whom were formerly clerks in this office.

In conclusion, I take pleasure in expressing my appreciation of the deep interest manifested by the clerks of this office in the execution of their duties and their untiring efforts to perfect the efficiency of the office, and especially their uniform courtesy toward all persons whose business brought them in contact with the office.

Very respectfully,

R. C. BALDWIN,  
Disbursing Officer, Municipal Board.

*Statement of expenditures for the fiscal year 1903.*

[Amounts are expressed in Mexican currency.]

DISBURSING OFFICE, MUNICIPAL BOARD,  
Manila, P. I., August 10, 1903.

EXHIBIT C.

REPORT OF ENGINEER IN CHARGE OF NEW WATER SYSTEM.

REPORT ON INCREASED WATER SUPPLY FOR THE CITY OF MANILA, P. I., FOR FISCAL YEAR ENDING JUNE 30, 1903.

The present water supply for the city of Manila is drawn from the Mariquina River at Santolan, pumped through cast-iron pipes to an elevation on the hill to the west of the pumping station, and thence runs by gravity through a closed conduit and cast-iron pipe to the present deposito.

The deposito consists of a double series of underground chambers, and has a capacity of about 60,000 cubic meters, or approximately 16,000,000 United States gallons.

The total capacity of the present pumping plant is about 7,500,000 gallons daily, which gives a per capita supply of 30 gallons, on the basis of the present census.

From the deposito the water is carried through a 28-inch cast-iron pipe to the city distributing system.

These works were built by the municipality under Spanish Government during the years from 1878 to 1882 and were opened to the public use on the — day of —, 1882.

As a preliminary to the investigation of the subject of an increase in the water supply, a determination of the present and future needs of the city is necessary, and it here follows.

On the map of the city, accompanying this report and marked "A," it will be noticed that the city consists of a central district, comprised within the fire limits, and a series of outlying barrios scattered along the numerous streets leading out from the business center.

Within the fire limits as marked no houses except of strong materials can be constructed, and within the next few years it is reasonable to assume that all buildings within these limits will be of strong materials, and naturally will sooner or later be equipped with an interior water supply.

For the inhabitants, therefore, contained within the fire limits, a maximum daily per capita quantity should be provided.

In the districts outside the fire limits, though there are many houses of strong materials, the majority of the buildings are of light construction, unsuitable for the installation of interior water supply.

While the growth of the city, the installation of a sewer system, and the extension of the fire limits will in time increase the use of water from the city mains, it seems safe to conclude that a per capita supply of two-thirds that of the section within the fire limits will be ample.

No data is at hand to determine the average per cent of increase in the population of the city per year, and an estimate of the increase in water consumption due to this cause must therefore to a large extent be assumed.

The census of the present year gives the population of Manila at 223,029, including 16,339 living in boats and also including 3,229 inhabitants of Santa Ana.

The Spanish census of 1883 gives the population of Manila as 230,407, showing a slight decrease during the past twenty years.

Lacking the usual incentives to a rapid increase in population, it would seem that a permanent average increase of 2 per cent would be ample to cover the probable increase.

The population by districts, given by the present census and hereto appended, indicates an approximate population within the fire limits of 140,000, and for this number the maximum daily per capita supply should be furnished.

There remains, then, the outside population of 83,000 to be furnished with the lesser daily per capita supply.

In determining the maximum and minimum per capita daily supply it will be necessary to take into consideration the effect of the installation of a sewer system and the increased consumption due thereto.

The average daily per capita consumption is made up in general of the following four subdivisions: (1) Domestic use; (2) commercial use; (3) public use; (4) loss and waste.

*Domestic use.*—The results of the careful investigations tabulated by Brackett of a number of American and European cities give extremes of 6.6 gallons for the lowest class of houses and 59 gallons for the highest class of houses, and an average extreme of 11.2 gallons for the manufacturing town of Fall River, as compared to 44.3 gallons for Brookline, a wealthy suburb of Boston.

The domestic consumption of the city of London varies from 18.6 gallons for the middle-class districts to 25.5 gallons for the better-class districts.

The above citations are all in metered districts and may be safely used in the present investigations for Manila, where the use of meters is general.

Taking into consideration the conditions prevailing in Manila, it seems that a supply for domestic purposes of 20 gallons per capita will be ample.

*Commercial use.*—Under this head are grouped: Office buildings and stores, railroads and street cars, factories, breweries, steamers and shipping, saloons, hotels, miscellaneous.

Statistics for New York City show a commercial consumption of 24 gallons per capita of total population; for Boston, 30 gallons; for Syracuse, 30 gallons; for Fall River, where most of the factories drew their water from outside sources, 2 gallons; in Yonkers, 27 gallons.

In all these cities the factory consumption is large, and the total commercial consumption per capita is without doubt largely in excess of the needs of Manila.

In view, however, of the possible development of the city along manufacturing lines, it is not considered advisable to reduce the estimates for this purpose below an ample limit, and I have therefore fixed on 20 gallons per capita of total population daily for commercial use.

*Public use.*—This includes the water used for schools, public buildings, street sprinkling, sewer flushing, water troughs and fountains, parks, fires, blowing off dead ends, and miscellaneous public use.

The quantity necessary for these purposes has been carefully measured in a large number of cities, and the maximum and minimum averages have been determined at 5 gallons and 3 gallons per capita of total population.

On account of the long dry season in Manila and the street sprinkling incident thereto, the maximum amount of 5 gallons has been assumed in the present investigations.

*Loss and waste.*—This item may be of considerable importance. In a well-metered city it is caused by leakage in the mains, errors in the meters, and errors in measuring the actual amount of water delivered. Brackett gives 15 gallons per capita of total population as a minimum allowance from these causes.

As the carrying capacity of a long pipe decreases and leakage in the distributing system increases with age, the minimum quantity mentioned by Brackett is not deemed sufficient, and a quantity of 25 gallons per capita of population will be assumed in these computations.

Recapitulating the above estimates for these various purposes, we have the following average per capita:

	Gallons.
Domestic .....	20
Commercial .....	20
Public .....	5
Loss and waste .....	25
Total .....	70

Concluded, therefore, that the present average maximum per capita consumption is 70 gallons, there remains the determination of the increased consumption due to increase in population within a reasonable fixed time.

As a premise to this computation it should be stated that any system devised to meet existing conditions must be capable of expansion to meet conditions which may arise during the comparatively distant future.

With this in mind it seems fair to assume an increase of 2 per cent compound for a period of twenty years, leaving the cost of necessary extensions after this term to coming generations.

Two per cent compounded for twenty years amounts to approximately 50 per cent, and 50 per cent of the estimated necessary present supply is 35 gallons per capita daily.

Seventy gallons plus 35 gallons equals 105 gallons, and this amount will be assumed as the daily per capita supply for the residents within the fire limits.

Recapitulating all the above, we have, then, as the necessary increased supply as follows:

One hundred and forty thousand multiplied by 105 gallons equal 14,700,000 gallons; 83,000 multiplied by 70 gallons equal 5,810,000 gallons, or a total of 20,510,000 gallons, which is the minimum daily supply which should be considered.

*Possible sources of supply.*—Situated in an alluvial plain, raised but slightly above sea level, and with a dense population, Manila must look to the mountains of the east for a possible source of supply.

Laguna de Bay and the Pasig River can not be considered on account of the excessive pollution, both organic and inorganic.

The choice of a source is narrowed, then, to the Mariquina River and adjoining watershed, and this fact was immediately recognized by the Spanish engineers who installed the present system.

The Mariquina River rises in the mountains directly east of Manila and flows in a northerly direction through a typical mountain valley for a distance of approximately 20 miles.

Its course then changes to the west, and breaking through the first range of mountains east of Manila it emerges into the broad and fertile Mariquina Valley, where, turning to the south, it flows for some 20 miles nearly parallel to and in the opposite direction from its original course to its junction with the Pasig River.

From its source to the town of Montalbon its watershed is an almost impenetrable forest, and with the exception of the small town of Boso Boso, at the headwaters, the valley is almost entirely uninhabited.

A few nomadic groups of semisavage mountaineers and a few woodcutters complete the tale of possible human pollution, and no difficulty should be experienced in reducing this danger to a minimum.

From Montalbon to the mouth of the river the valley is densely populated, with several large towns on the banks of the river itself.

As a consequence the purity of the water at present supplied has only been main-

tained by a constant and vigilant quarantine system, alike expensive to the government and irksome to the inhabitants of the valley.

The point of diversion for the new system should therefore be above the town of Montalbon, leaving the supply free from the danger of infection or the disadvantages of a quarantine patrol.

From the sources of the Mariquina River near Bosoboso to Montalbon it is confined on the west by a range of mountains running approximately north and south, and on the east by the parallel range which constitutes the backbone of Central Luzon. Between Antipolo and Bosoboso these ranges are joined by a narrow ridge, which forms the southern boundary of the Mariquina watershed.

Some 3 miles above the town of Montalbon the stream breaks through another cross range forming what is known as the "Gorge."

No extended survey has been made of the entire watershed, but, in general, the valley above the gorge has an exterior of 12 miles in a northerly and southerly direction with an easterly and westerly breadth of 5 miles, or a superficial area of 60 square miles, approximately.

Throughout its extent the valley and mountain slopes are nearly unbroken forest, and with the exception of a few hundred acres in the vicinity of Bosoboso no agricultural land is to be found.

The only possible industry for 90 per cent of the watershed is lumbering, and the difficulties of transportation make this of doubtful value. Bosoboso is the only town within its limits, and contains some 300 inhabitants.

The residents have, however, diverted the stream through the streets, from which their water supply is drawn, and in which all refuse is thrown and all washing and bathing is done. For the proper preservation and safeguarding of the purity of the water supply for the city of Manila it is essential that this town be removed and the entire area of the watershed be created a forest reserve and withdrawn from settlement.

*Rainfall; run off.*—It is extremely gratifying in an investigation of such importance as the present one that data so complete and accurate as that of the Manila Observatory is available. Full reports covering the years from 1865 to 1898 are presented, and the maximum and minimum rainfall is given by years, months, and days. Though this data is collected at Manila, the results may be assumed correct for the watershed.

From the tabulated results herewith presented it will be seen that the normal rainfall per year is 75.457 inches.

Assuming the effective run off at one-third of this, which is conservative, the result is far in excess of any possible requirements and fully four times the proposed yearly supply.

The rainfall, however, by months, is very irregular, ranging from a normal of only 0.413 inches for the month of February to 14.925 inches for the month of September. During the observed period in the single month of September, 1867, 57.862 inches of water fell, and 13.228 inches fell in a single day.

During the months from May to January, inclusive, the normal rainfall supplies an available run off equal to or in excess of the proposed new supply, but during the remaining three months of the year the normal precipitation is little or nothing.

In notable dry years the rainfall for the months of December and January has failed, as, for instance, in 1896, when the precipitation for these months was, respectively, 0.008 inch and 0.039 inch.

The flow of the stream, however, from so large and well wooded a watershed will continue without notable decrease for some time after the cessation of actual rainfall; and it seems safe to assume a natural supply for eight months in the year, leaving the remaining four months to be determined by actual gaugings.

While it is true that the gauging of a stream for a single season should not be relied upon where extreme accuracy is required, the records of the gaugings of the Spanish engineers during a season of extreme drought are available, as are also those of Lieutenants Brown and Casey in 1901.

The investigations of the Spanish engineer, Genevo Palacio, preceding the construction of the present system and carried through to the possibilities of a gravity supply, are complete, and during my own investigations have proved so accurate that the result of his gaugings and his notes of existing conditions are worthy of all credence.

In his report he says: "In June, 1867, I measured the stream in various localities, and though in this year it rained in February and May the average of my gaugings was 3.52 cubic meters per second." (This is equal to a daily supply of 80,000,000 gallons.)

Further he says: "After the great storm, September, 1867, it did not rain until the

THE MARIQUINA VALLEY.

Report of the Philippine Commission, 1903. Part 1.

LOWER DAM SITE.

THE GORGE FROM BELOW.

middle of May, 1868. This state of affairs, existing during my investigations, has permitted me to determine the minimum flow of water after nearly six months without rain."

After reciting his methods of measurements and the formulæ employed therein he gives his results as approximately one-half cubic meter per second, equal to a daily flow of 11,500,000 gallons. No gaugings of maximum flow have ever been attempted.

In May, 1901, Lieutenants Brown and Casey, by direction of the provost-marshal-general, made a survey of the Mariquina Valley and gauged the stream at various points.

Although the month of May is at the close of the dry season, the results of their gaugings showed a surprising amount of flow—that at the gorge being given as 141.81 cubic meters per minute, or a daily flow of approximately 54,000,000 gallons.

No report is made as to a possible rainfall immediately before these gaugings.

My own gaugings were made in the present year during the month of May, and at the close of an exceptionally dry season. Intelligent natives living along the river told me they had never seen the stream so low, and in every respect I believe the conditions to be similar to those of 1868 at the time of the investigations of Señor Palacio.

My gaugings were taken with a weir with end contractions and, due to the porosity of the gravel bed of the river, are subjected to an increase of 20 per cent estimated visually of the amount of water escaping, aside from the flow over the weir.

The result gives a minimum daily flow of approximately 11,000,000 gallons, surprisingly close to the gaugings of Señor Palacio, and mutually confirming the exactitude of the measurements taken.

Disregarding, then, the gaugings of Lieutenants Brown and Casey, which must have been due to exceptional conditions, it may be assumed that the minimum flow of the very driest years is 11,000,000 gallons daily.

As this is only one-half of the needed supply, storage of the surplus waters during the rainy months becomes necessary.

For a determination of the amount of storage necessary a careful examination of the monthly rainfall is essential.

Broadly stated, the run off from a rainfall of 1 inch in any month will maintain a sufficient stream flow for the proposed supply. At the end of a dry season such a rainfall might not fulfill the above condition, while at the end of the rainy season it would probably exceed the requirements.

Moreover, the cessation of rainfall is not followed by immediate diminution of stream flow.

Señor Palacio points out that no noticeable diminution of the stream was observed until after January, 1868, though no rain had fallen since the September previous.

Though the normal rainfall is sufficient for nine months in the year, the minimum must be provided for, and the years of 1867 and 1868, noted by Señor Palaco, will be used. For a period of nearly six months practically no rain fell. At the close of a rainy season the ground water in so large a watershed may be relied upon to maintain a normal flow for the first two months.

The flow will then diminish gradually until the absolute minimum is reached. If, then, the average daily shortage in the third month be 5,000,000 gallons, in the fourth 7,500,000 gallons, in the fifth 10,000,000 gallons, and in the sixth 11,000,000 gallons, the resultant storage will be 1,000,000,000 gallons, or a full supply for the city, with no accretions for forty-five days.

Should these estimates of the conditions likely to arise be exceeded and an abnormal dry season occur, the city's supply, though somewhat curtailed, will still suffice for its absolute needs, by means that will appear further on in this report.

The basis of the storage capacity of the system is, then, taken at 1,000,000,000 gallons.

*Examination of the water.*—As is to be expected in a mountain stream, the water of the Mariquina River above Montalbon at normal stage is in taste and physical characteristics all that could be desired. The stream consists of a series of deep pools joined by short stretches of rapids, and the sedimentation of the pools and aeration of the rapids purify and clarify the stream to the extreme. In the gorge itself the water is tasteless, odorless, and almost colorless. Its temperature is far below the water at the present pumping station.

Under conditions of an extended hot spell and in the hottest part of the day the water in the gorge showed 82° F, while under exactly similar conditions the water at the pumping station showed 88°, or a difference of 6 degrees in favor of the water at the gorge.

While this is not a low temperature for potable water, it is pleasant and cool in comparison with the present supply.

It may also be pointed out that the coolest water of the day (taken just before sunrise) would reach the distribution system in Manila at the hottest part of the day; i. e., from 12 m. to 2 p. m., and the probabilities are that all water in use by Manila consumers would show a temperature of less than 80° F.

Samples of water were carefully taken for the laboratory, and chemical, bacteriological, physical, and microscopical analyses were made.

The results follow herewith. ("F.")

It will be noticed that chemically the water is acceptable. Free ammonia and chlorine are present but in minute quantities, and as these impurities are the visible indication of sewage pollution it is clear that no danger exists at present. The removal of the town of Bosoboso and creation of a forest reserve (elsewhere referred to) will eliminate these substances.

None of the other salts are deleterious.

In the bacteriological examination a singular fact is developed. The sample from the "gorge" shows 3,500 bacteria per cubic centimeter, while that from the present intake shows only 500 per cubic centimeter. No evident explanation exists for this state of affairs, other than that the sample from the gorge was drawn from a rapid current, while that from the intake was drawn from a comparatively quiet source. Sedimentation might, then, have affected the bacteriological result.

In view, therefore, of the necessity of a storage reservoir of large capacity at the point of diversion and that the water for the city will be drawn after complete sedimentation, I believe the filtration referred to in the laboratory report to be unnecessary.

(Since the above was written, the bacteriological report was referred back, with a statement of proposed conditions, and a reference to third indorsement gives confirmation to my above expressed opinion.)

Recapitulating, therefore, the results of the preceding discussion, the bases of the investigations concerning new works of collection, conduction, and distribution are:

1. A supply of at least 21,500,000 gallons per day, which shall be susceptible of enlargement.
2. A storage capacity sufficient to provide for an extraordinarily dry season at or near the storage basin.
3. Diversion works at or near the storage basin.
4. A pipe line of sufficient capacity from the diversion works to the city.
5. A reservoir system for storage and distribution in the immediate vicinity of the city.
6. A distribution system whose mains and ramifications shall reach and supply all portions of the city.

*Surveys.*—The examination of the watershed having proved its adequacy to meet the first of these conditions it remains to take up the question of storage.

A careful survey has been made of the entire distance from the depósito to a point some 7 miles above the town of Montalbon, and on the map of this survey herewith presented two available storage basins are shown, which, in this report, will be referred to as the upper and lower basins.

The lower basin is about 2 miles above Montalbon, and would be closed by a masonry dam at a point where the valley narrows to less than 500 feet, and is distant 14.1 miles from the depósito.

The elevation of the crest of this dam, necessary for storage and gravity pressure, is 160 feet above mean low water, Manila Bay, which would require a dam 100 feet in extreme height. The length of the dam on the crest would be 450 feet, its contents 43,270 cubic yards of masonry.

The storage area 250 acres, capacity 2,000,000,000 gallons, of which 1,000,000,000 gallons is above the plane of 150 feet elevation and is effective full flow storage. Both sides and bottom are in rock and present no unusual engineering features. The pipe line from this dam would be 48 inches in diameter and 14.1 miles in length.

The upper basin is above the gorge 15.72 miles from Manila, and the retaining dam would be at the upper end of the gorge. The elevation of the crest of the dam would be 210 feet above mean low water, Manila Bay, but the dam would be but 60 feet in extreme height and 375 feet in length on the crest. The pipe line from this point would be 42 inches in diameter. Above the dam the valley widens out and the storage basin is very large.

Its area is 311 acres, capacity 2,500,000,000 gallons, of which 1,250,000,000 gallons is above the plane of 195 feet and is effective full flow storage, while the dam would require 16,000 cubic yards of masonry.

Due to the seamy nature of the limestone rock comprising the two mountains which form the gorge, a considerable amount of stripping and concrete patching of the bottom and wetted sides of the storage basin would be required, which will be taken up in the comparative estimates which follow.

The upper basin presents the following advantages: A small dam, 16,000 cubic yards, as compared to 43,270 cubic yards; larger storage basin, 311 acres, as compared to 250 acres; smaller pipe, 42 inches diameter, as compared to 48 inches diameter.

The lower site has the following advantages: Shorter pipe line, 14.1 miles, as compared to 15.72 miles; the distance between them contains the heaviest rock work on the line; impervious foundations on bottom and side slopes for the dam; a larger watershed by about 10 square miles.

From either basin the water would be conducted through a pipe, following the south bank of the Mariquina River to the town of Montalbon, thence traversing the Mariquina Valley to the eastward of San Mateo, it would cross beneath the Mariquina River in the vicinity of Bayan Bayana, a barrio of Mariquina.

Thence, climbing the hills to the west of the river it would pass through a tunnel, to the lower ground east of the depósito and thence to the reservoir system.

Three kinds of pipes are in general use for the conduction of water: (1) Cast-iron; (2) wood stave, and (3) riveted steel plates.

Cast-iron is economical where the question of transportation is of little importance. For use here in the long pipe line its weight and the cost of transportation makes it almost prohibitive, and it must be eliminated from the discussion, except for use in the distribution system.

Wooden-stave pipe has of late years come into general use in the United States, and its ease of transport and construction, together with its great carrying capacity give many advantages over pipes of metal.

Its cost is determined by the spacing of the bands which hold it, and in general it may be said to be the cheapest pipe in use, with pressure not exceeding 50 pounds per square inch. Above that limit it has about the same cost as steel-riveted pipe, while above a pressure of about 75 pounds it can not be used, as in a large pipe under such pressure the bands crush the fibers of the staves and leakage ensues.

Though the pressure in the proposed new pipe line is not excessive, I should not feel justified in advocating wooden-stave pipe, unless under the bonded guaranty of a responsible contractor.

The objections to the pipe are, first, the ease with which it can be wrecked or damaged by irresponsible or malicious persons, and its uncertain life under tropical conditions.

Steel-riveted pipe seems to be the best pipe for the present purposes.

It is comparatively light, has certain strength, and fair carrying capacity. It is easily laid, and its life is ample for the purpose.

The plates should be purchased and shipped to Manila flat and of exact size, thus insuring a cheap freight rate.

In Manila, preferably by contract, they should be bent, riveted, made into five or six course lengths, and dipped in a hot asphalt bath. From Manila they should be hauled to the trench in the field, leaving only one round lap to be single riveted in the field.

Pipe of this class is too well known and uniformly successful to need further discussion.

On account of the liability of a long pipe line to temporary interruptions of service, it will be necessary to provide a reasonable storage capacity within the immediate vicinity of the city.

A three days' supply is generally considered ample for this purpose, and it is proposed to provide for this amount of distribution storage, first, by the enlargement of the present depósito, and, second, by the construction at some future date of an additional reservoir on the higher ground to the eastward.

The capacity of the present depósito is about 16,000,000 gallons and the elevation of the flow line 78 feet.

By cutting out the roof and pillars, and building retaining walls of the excavated materials it will be easy to raise the level of the water to approximately 100 feet elevation, increasing the storage capacity to nearly 70,000,000 gallons, and giving an additional static pressure of nearly 10 pounds on the present distribution system. An additional reservoir, partially in excavation, on the higher ground east of the depósito, with a capacity of approximately 25,000,000 gallons, will be sufficient for the system and its construction may be deferred until its necessity becomes apparent.

In these estimates it is proposed to make these reservoirs open to the sky, but if found desirable they can be roofed in with light materials at small expense.

No plans or estimates of the necessary extensions to the present distribution system have as yet been prepared. The subject will, however, be immediately taken up.

The plan, therefore, proposed for an increased water supply for the city of Manila comprises: (1) The construction of a dam and storage reservoir at or near the gorge above Montalbon, together with the necessary diversion works and controlling

devices; (2) about 15 miles of 42-inch steel-riveted pipe, laid in trench and tunnel; (3) the immediate enlargement of the existing depósito and the construction later of a new reservoir; (4) the extension of the present distribution system to meet all requirements.

The estimates of cost of such a system as herein outlined here follow:

*Estimate for upper dam site.*

15.7 miles of road, depósito to dam, at \$2,000 .....	\$31,400
Upper storage reservoir:	
Clearing and grubbing 311 acres, at \$100 .....	\$31,100
Stripping soil and covering with gravel, 60,000 cubic yards, at \$0.30 .....	18,000
Lining near dam and stopping crevices in rock, over area of 720,000 square feet, 13,000 cubic yards concrete, at \$10 ....	130,000
	<hr/> 179,100
Dam:	
Excavating 4,500 cubic yards rock, at \$2 .....	9,000
16,000 cubic yards concrete, at \$10 .....	160,000
Gate chamber and fittings, including sluices, screens, gates, etc. ....	15,000
	<hr/> 184,000
Pipe line:	
14.3 miles steel-riveted pipe, 42 inches diameter, No. 6 B. W. G., 7,100,000 pounds, at \$0.05 laid .....	355,000
217,000 pounds rivets, at \$0.05 .....	10,850
	<hr/> a 365,850
Trench:	
85,000 cubic yards earth excavation, at \$0.30 .....	25,500
28,000 cubic yards dhobie rock, at \$1.25 .....	35,000
11,000 cubic yards lime rock, at \$2 .....	22,000
	<hr/> 82,500
Reservoir:	
Excavating 210,000 cubic yards dhobie rock, at \$1 .....	210,000
Embankment, 20,000 cubic yards, at \$0.50 .....	10,000
Concrete lining, 2,000 cubic yards, at \$10 .....	20,000
Asphalt coating, 40,000 square yards, at \$0.10 .....	4,000
Gatehouse and fittings .....	20,000
	<hr/> 264,000
Tunnel:	
6,000 linear feet, at \$12 .....	72,000
14 air valves, 17 blow-offs, 34 manholes, 2 standpipes .....	11,800
200,000 brickwork, at \$30 .....	6,000
Iron trestles, 40,000 pounds, at \$0.05 .....	2,000
Engineering and superintendence .....	40,000
	<hr/> 59,800
	<hr/> 1,238,600
10 per cent for contingencies .....	123,860
	<hr/> 1,362,460
Total for system from upper dam site .....	1,362,460

*Estimate for lower dam site.*

14.1 miles of road, at \$2,000 .....	\$28,200
Lower storage reservoir:	
Clearing and grubbing 250 acres soil, at \$100 .....	\$25,000
Stripping soil, etc., 60,000 cubic yards, at \$30 .....	18,000
Concrete patching over 100,000 square feet, 27,000 cubic yards, at \$10 .....	37,000
	<hr/> 80,000
Dam:	
Excavation 5,500 cubic yards rock, at \$2 .....	11,000
43,270 cubic yards concrete, at \$10 .....	432,700
Gate chamber and fittings .....	15,000
	<hr/> 458,700

a Equal \$25,584 per mile.

Pipe line:		
12.8 miles 48-inch steel rivetted pipe No. 6, 7,565,000 pounds,		
at \$0.05.....	\$378, 250	
211,000 pounds rivets, at \$0.05.....	10, 550	
		\$388, 800
Trench:		
92,500 cubic yards earth, at \$30 .....	27, 750	
30,000 cubic yards dhobie rock, at \$1.25.....	37, 500	
		65, 250
Reservoir: (as before) .....		264, 000
Tunnel:		
7,000 linear feet, at \$12.....	84, 000	
Air valves, blow-offs, stand pipes, etc.....	12, 000	
225,000 brick work, at \$20 .....	6, 750	
Iron trestles, 40,000 pounds, at \$0.05.....	2, 000	
Engineering and superintendence .....	40, 000	
		144, 750
		1, 364, 450
10 per cent for contingencies .....		136, 445
Total for system from lower dam site.....		1, 500, 895

No estimate has here been made for right of way through private lands nor for the purchase of property rights within the watershed area.

This office has no data as to the extent or value of private land holdings along the proposed lines.

The question should be taken up by the legal department of the city through a land agent.

No estimate has been made of the cost of an additional pumping plant for comparison with a gravity system.

This would require the necessary pumps and buildings, dam and intake, and about 4 miles of new force main, and, in addition, the establishment of an extensive filter plant.

Mr. Dieck has kindly furnished me with an estimate of the cost of operation of a pumping plant of 20,000,000 gallons daily capacity.

His estimate is \$60,000 per annum, almost entirely made up of items not found in a gravity system. On the basis of an excess of \$50,000 for operating expenses against the pumping plant, capitalized at 5 per cent, \$1,000,000 may be spent on a gravity system more than for a pumping station.

Excluding the cost of the reservoir (necessary in either case) from the above estimates of a gravity system, the cost for the upper dam site is \$1,072,000, and for the lower dam site \$1,210,000, leaving, in the first instance, \$72,000, and, in the second, \$210,000, as the economical surplus available for installing new pumps, force main, and filter beds.

As these sums are plainly insufficient, the economy of the gravity system is clear.

As to the time necessary for the installation. The preparation of detail plans, specifications, and forms for proposals can be completed within three months; advertising, four months; preparations of contractor, two months; actual construction, two years; a total of two years ten months, or say June 30, 1906, for the completion of the entire system.

I therefore offer the following recommendations:

1. The authorization of a gravity system of waterworks, taking the supply from the Mariquina River above Montalbon, on the general lines outlined herein.

2. The necessary legislation for creating a forest reserve within the following-described limits:

Beginning on the summit of Mount Cayabasan, on the northern boundary line of Rizal Province, and running in a southerly direction along the summit of the range of mountains to a point on the summit of the mountains about 5 miles northeast of the town of Varas; thence westerly along the summit or ridge to a point half way between Antipolo to Bosoboso, where the trail crosses said ridge; thence northerly along said ridge or summit to Mount Bantay, where the northern boundary line of Rizal Province crosses Mount Bantay; thence easterly along said northern boundary line of Rizal Province to place of beginning, containing 100 square miles, more or less.

Private property within these limits should be purchased.

3. The purchase of rights of way through private property along the line of the proposed pipe line.

4. The immediate construction of a wagon road along the proposed line, which I believe should be done by days labor under foremen instead of by contract.

5. The letting of contracts and the construction of the entire system with the greatest possible dispatch.

6. In a project of so much importance I would also suggest the advisability of engaging a consulting engineer of recognized standing and ability to pass on the proposed plans.

While there are no serious questions involved, there are many points on which the best engineering experience available can be profitably engaged.

With this report, and forming a part thereof, are the following: (A) Map of the city of Manila, showing fire limits; (B) map of the watershed, Mariquina River; (C) map of the proposed pipe line; (D) profile of the proposed pipe line; (E) sections at upper and lower dam site; (F) laboratory report on water supply; (G) photographs of the reservoir, pipe line, river, gorge, and watershed.

All of which is respectfully submitted.

J. F. CASE,  
*Engineer Increase Water Supply.*

#### SUPPLEMENTARY.

The question of the riparian rights of landowners and municipalities along the banks of the stream below the proposed diversion works is of importance and should be referred to the legal department for an opinion.

My own reading of the Spanish laws governing the waters of the Archipelago leads me to the conclusion that the waters of the stream in question may be diverted for public use, though an action for proved damages will lie.

I propose, however, to meet the question by an excess of storage capacity and the release during the dry season of a quantity sufficient for the needs of the valley.

My estimate is that 2,000,000 gallons per day, with the flow from the Nanca, Ampit, and Mango rivers, and numerous lesser streams, will suffice for the needs of the valley. This amount can be increased at small expense by increasing the height of the proposed dam and consequent storage, or the waters may be conserved and the towns of the valley supplied through a small auxiliary pipe.

I would therefore request a legal opinion, first, as to the right to divert the waters of the Mariquina River as herein outlined; second, as to the percentage of the total stream flow which can be diverted.

J. F. CASE,  
*Engineer Increase Water Supply.*

DEPARTMENT OF THE INTERIOR,  
BUREAU OF GOVERNMENT LABORATORIES,  
OFFICE OF THE SUPERINTENDENT OF LABORATORIES,  
*Manila, P. I., June 18, 1903.*

SUPERINTENDENT OF GOVERNMENT LABORATORIES,  
*Manila, P. I.*

SIR: I have the honor to present the following report on the bacteriological examination of the samples of water submitted on May 18, 1903, by the city of Manila:

The water was collected on May 17 in sterile bottles and kept on ice until May 19. The sample of water marked "From the gorge 3 miles above Montalbon" contained about 3,500 bacteria per cubic centimeter; that from "the intake at the pumping station" about 500 bacteria per cubic centimeter. Both samples contained about an equal and considerable amount of flocculent organic matter.

In order, roughly, to determine the presence or absence of *B. coli*, dextrose fermentation tubes were inoculated with from one-quarter to 3 cubic centimeters of water from each sample. The total gas production varied from 40 to 90 per cent, with a final ratio, in each instance, of  $\text{HCO}_2=1:2$ , thus probably excluding the presence of the common varieties of *B. coli*, which gave a ratio of  $\text{HCO}_2=2:1$ .

Litmus lactose agar plates were prepared, using one-fourth, one-half, and 1 cubic centimeter of water from each sample. A number of organisms were then worked out culturally in a search for members of the colon-typhoid group of bacilli.

In both samples of water a number of organisms was obtained, which, although a typical, in many respects resembled *B. coli*. Other organisms—resembling *B. hog cholera* and *B. dysenteriae* in some respects—were finally classed as “Saprophytes” on account of a typical reaction, such as the production of pigment, fluorescence, etc.

Sterile peptone solution was added to 100 cubic centimeters of each of the samples, and after two and four days of incubation they were examined for amebae and other protozoa. No protozoa grew in either sample, but the pellicle which grew upon the surface of each contained many actively motile curved rods. Gelatin plates from these pellicle growths gave a few colonies resembling those of the cholera bacillus. Pure cultures, however, failed to give the cholera red reaction, and their nonidentity with the cholera bacillus was probably shown by the fact that they failed to agglutinate with anticholera rabbit serum at a dilution of 1:40 in five hours, whereas known cholera organisms agglutinated at a dilution of 1:200 in thirty minutes.

It seems rather strange that the water from the gorge should contain so many more organisms per cubic centimeter than that at the present intake, but this may be due to local conditions unknown to the laboratory or a failure to keep the sample cool throughout the period of transportation.

Notwithstanding the apparently harmless character of most of the organisms found in the water from the gorge, the large amount of organic matter present would seem to indicate the necessity of some plan for its filtration.

Very respectfully,

WM. B. WHERRY,  
*Pathologist.*

True copy.

LORA S. CASE, *Clerk.*

[First indorsement.]

BUREAU GOVERNMENT LABORATORIES,  
OFFICE OF THE SUPERINTENDENT,  
*Manila, P. I., June 25, 1903.*

Respectfully forwarded to the department of engineering and public works, city of Manila, for the information of Major Case, engineer at the waterworks.

PAUL C. FREER,  
*Superintendent Government Laboratories.*

[Second indorsement.]

MANILA, P. I., *June 27, 1903.*

Respectfully returned to the superintendent government laboratories, with a request for an additional opinion.

The water for the new system will be drawn from a storage reservoir of more than a billion gallons capacity which will be supplied from a reserved watershed.

Will not the purification, due to the perfect sedimentation, obviate the necessity of the filtration mentioned in the within report of Mr. Wherry?

J. F. CASE,  
*Engineer Water System.*

[Third indorsement.]

BUREAU GOVERNMENT LABORATORIES,  
OFFICE OF THE SUPERINTENDENT,  
*Manila, P. I., June 30, 1903.*

Respectfully referred to Maj. J. F. Case, engineer in charge of the water-system department of engineering and public works, city of Manila.

In view of the size of the storage reservoir and the fact that it will be supplied from a reserved watershed, I believe purification due to perfect sedimentation will obviate the necessity of filtration referred to in the within report. However, regular and consistent analyses of the reservoir water at the outlet should be made after such reservoir is established.

PAUL C. FREER,  
*Superintendent Government Laboratories.*

A true copy.

Lab. No. 1234.]

EXHIBIT D.

REPORT OF THE CITY ENGINEER, MANILA, P. I., FOR THE FISCAL YEAR ENDING  
JUNE 30, 1903.

MANILA, P. I., August 10, 1903.

SIRS: I have the honor to submit the following summary of work performed by the department of engineering and public works for the fiscal year ended June 30, 1903: The work of this department was in charge of Capt. R. E. McGregor, Corps of Engineers, U. S. Army, as city engineer from July 1 to December 28, 1902; in charge of Mr. R. G. Dieck from December 28, 1902, to January 1, 1903; and in charge of Mr. O. L. Ingalls since that date. The work of the engineering department of the city of Manila is subdivided into the following heads: Street construction and bridges, Mr. L. F. Patstone; street cleaning and parks, Mr. J. C. Mehan; water supply and sewers, Mr. R. G. Dieck; buildings and illumination, Mr. L. A. Dorrington; and inspection of private buildings, Mr. R. M. Loper.

STREET CONSTRUCTION AND BRIDGES.

[Mr. C. H. Farnham, superintendent in charge until November 30, 1902; Mr. J. C. Mehan, superintendent street cleaning and parks, acting superintendent until March 30, 1903; and Mr. L. F. Patstone superintendent since that date.]

For the purpose of facilitating the work the city has been redivided into four districts, as follows: (1) Intramuros, Ermita, and Paco west of Paco Estero; (2) San Nicolas, Tondo, and Binondo; (3) Santa Cruz, Quiapo, Sampolac, and San Miguel; (4) Paco east of Paco Estero, Malate, Santa Ana, and Pandacan. The pavement of the city consists of granite blocks, wood block, and macadam, and is divided as follows:

	Sq. meters.
Granite blocks .....	50,695
Wood block.....	3,969
Macadam .....	1,274,894

The following work has been performed during the year:

A new street has been extended through the botanical gardens from Calle Arroceros to the Bagumbayan drive; curbing set, granolithic sidewalk built, and roadway macadamized.

*Government printing plant.*—Driveways have been graded and macadamized.

*Plaza Lawton.*—Curb reset and roadway graded.

*Bridge of Spain.*—Concrete foundation introduced and wooden block pavement laid.

*Calle Valderama.*—A retaining wall has been constructed here for the purpose of reclaiming land to be used in connection with the tenement houses recently erected by the city. The wall was built from stones taken from the dismantled Santo Domingo gate, and sand for the filling was taken from the beach.

*Calle Padre Faura.*—Curbing has been set, cement sidewalks laid, and tubes for drainage have been put in in front of the exposition grounds.

*Calle Concepción.*—This street, from San Marcelino to Marques de Comillas, runs through marshy ground, and the work of bringing it to grade is still in progress.

*Calles Panaderos and Laymayan, Santa Ana.*—This road starts at the church, and from there runs to the Pasig River, thence along the Pasig River in the form of a loop back to the point of beginning, a distance of 1,382 meters. Starting opposite the church, and going toward the Las Damas Bridge, a double roadway 307 meters in length, has been constructed, forming a parking space in the center.

After the roadway had been brought to proper subgrade, telfording was introduced, and all necessary stone obtained from the city quarry on the lake.

The total area of roadway improved has been 13,000 square meters.

Five hundred and thirty-six lineal meters of cement curb have been set, 5 culverts have been built, and 591 meters of pipe laid to provide proper drainage.

There will be much traffic over this road in the future, as it is one of the main points of embarkation of people going up the Pasig River in bancas. This road will also be a great relief to the residents in this section, for the reason that during the last rainy season the road was impassable.

*Wall along Calle Tetuan from Gandara to Obando.*—This street runs along San Jacinto Estero and is the main thoroughfare to the water front. During the rainy season this street has usually been covered with from 2 to 3 feet of water, which will be obviated when this wall is finished and the street raised to the proper grade. Stone for this work has been taken from the dismantled city wall.

The following streets have been resurfaced:

Streets.	Between what points.	Square meters.
San Fernando .....	Madrid to Blanco Bridge .....	852.6
Bagumbayan .....	Botanical Gardens to Luneta .....	18,840.8
Fraternidad .....	Jesus to Gaingin .....	2,050
Peñafrancia .....	Pandacan to Bridge .....	2,800
Real .....	San Luis to Herran .....	2,631.5
Baluarte .....	San Francisco to Victoria .....	404
Total .....	.....	26,808.8

*Santo Domingo gate.*—The work of remodeling this gate has been completed. Two 60-centimeter pipes have been laid to take care of the drainage from the moat to the Pasig River. The wooden bridge crossing the moat has been removed and replaced by earth fill with stone retaining walls.

*City walls.*—The demolition of a small section of the city wall was begun in March of the present year and is still in progress.

The portion being demolished lies between the Aduana and Almacen gates. The stone is being used for building the approach to the Palomar crematory, Tetuan wall, repairs to bridges, etc.

On May 28, 1903, 30 convicts from Bilibid Prison were put to work tearing down the wall, and have been so employed from the above date. The warden of Bilibid furnished the transportation necessary in removing the stone required by him. This department furnished the labor for loading the carts.

*Summary of work performed during the year.*

Streets repaired .....	square meters..	333, 253
Curbs set .....	linear meters...	959
Pipes laid, 60 cm. ....	do. ....	223
Pipes laid, 40 cm. ....	do. ....	109
Pipes laid, 30 cm. ....	do. ....	729
Pipes laid, 20 cm. ....	do. ....	76
Pipes laid, 15 cm. ....	do. ....	57
Gutters, 40 cm. ....	do. ....	254
Road material used:		
Broken stone .....	cubic meters..	22, 860
Gravel .....	do. ....	4, 522
Average daily transportation:		
Wagons .....		14
Carts .....		4
Bull carts .....		28

The average number employed in street construction during the year has been 356.

*Bridges.*—There are 55 bridges and 17 culverts in the city, all of which are under constant inspection and care of this department.

New floors are being put in the wooden bridges as fast as possible, as most of them have become badly decayed and are dangerous to traffic.

The arches of the masonry bridges are being repaired and put in good condition.

A force of painters are engaged in cleaning the iron work of the bridges and giving them a coat of graphite paint.

An average force of 80 men has been employed in the repair of bridges.

*Quarry.*—The Gates crusher has been installed, together with the two smaller crushers, which are able to turn out sufficient crushed rock to keep both launches hauling steadily. The amount of crushed rock delivered at various points in Manila during the year has been 22,860 cubic meters.

When the storage bins are finished and the new scows built it will be possible to handle the stone to better advantage.

The average number of men employed at the quarry during the year has been 97.

## STREET CLEANING AND PARKS.

[Mr. J. C. MEHAN, superintendent in charge.]

The work of this department will be treated under the following heads: Street cleaning, street sprinkling, city parks, city stables, water transportation, collection of refuse, city crematories, and city cemeteries.

*Street cleaning.*—Since July, 1902, the work of street cleaning has made great progress in the efficiency of the work performed and discipline of the forces.

The city at present is divided into seven districts under the charge of one American as chief inspector, assisted by one Filipino inspector for each district. Each district is subdivided into smaller districts, which are presided over by Filipino foremen, who are held responsible for the condition of their respective subdivisions.

The chief inspector visits the seven districts daily, meets each district inspector, and notes the number of men employed and the condition of the district. The district inspector visits each subdistrict of his district four times a day and signs the foreman's trimonthly report, as follows: The time of day the visit is made, the number of men employed, and the location of the gang. The foreman signs the inspector's semidaily report showing the time of day the inspector was there, and reports any infraction of the city ordinance which may have occurred in his subdivision. It is also the duty of each foreman to report all water mains in bad condition, all trees that may need attention, and the general condition of the street's surface, in order that the repair gangs may be informed and the needed repairs promptly made.

All men are instructed to be polite, courteous, and to attend strictly to their duties, and appear on the work at 6 a. m. and remain until 11 a. m., to return promptly at 2 p. m. and to remain until 5 p. m. Sundays the hours are from 6 a. m. until 11 a. m., for which time the men receive pay for a full day's work.

Any employee found guilty of a violation of any of the rules of this office is, for the first offense, suspended five days; for the second, ten days; for the third, fifteen days; and for the fourth, discharged. All complaints are investigated by the superintendent, and evidence from both sides admitted. All promotions are made from the rank and file, which seem to give general satisfaction, and is also an inducement for the faithful performance of duties assigned.

Hand carts for street cleaning have been introduced and have, in a measure, increased the efficiency to a higher standard. All employees seem to be imbued with a spirit of self-advancement, and no difficulty has been experienced with them as a whole.

A branch of the service which is worthy of comment is the patrol gang, which visits all esteros, patrols the beaches, walks the banks of the Pasig in search of dead animals and any other offensive matter that may be found. If animals or offensive matters are found a cart is called to promptly remove the same to the crematory. In fact nothing is left undone to make this branch of the service a success.

All principal streets in the city are cleaned twice, three, and four times daily.

The following table shows the organization of the forces employed and rate of pay per month and per day, and the superficial street area of the city of Manila by districts:

	City.	District.							Dumping board. <sup>a</sup>	Night work. <sup>b</sup>	Cleaning gutters.	Total.	Rate.	
		1	2	3	4	5	6	7					Month. <sup>c</sup>	Day. <sup>d</sup>

Average cost per 1,000 square meters sprinkled .....	\$0.74

Collection of garbage.—This branch of the service has been working during the past year under difficulties, principally on account of the fact that householders made absolutely no difference in garbage, sweepings, or other refuse. All efforts have failed to force the residents to separate the matter, as is done in all cities of the United States. All manner of refuse, even night soil, is frequently found in the garbage receptacles.

Another fact that has contributed largely to prevent proper working of this branch has been the lack of suitable transportation. The sanitary dump carts used have been in the service for years, and the corrosive action of the refuse has caused them to become leaky and generally unserviceable.

The animals when passing over the ground at the various dumps injure their feet on bits of glass, nails, etc., and are consequently in the hospital for treatment.

Dumping in the suburbs has many objections; it is crude and insanitary. It is costly and dangerous, owing to the fact that it requires close and constant supervision to prevent fires from spreading, which fires are kept burning to destroy paper and other light refuse.

The method of dumping garbage at sea is also unsatisfactory. At certain seasons of the year the scows can not go out a sufficient distance to prevent the tide or winds from throwing the refuse back on the beaches of the Luneta and Malecon Drive.

Cremation is the best method of disposing of city garbage. There have been in operation two crematories of capacity entirely too small to handle the large amount of matter collected, even when working to their full capacity.

These crematories are old, and, having been hastily built and working continuously, are beginning to show signs of weakness.

The following table shows the number of cartloads of material removed from the street monthly, and total loads for the year:

District.	1.	2.	3.	4.	5.	6.	7.	Night work.	Total cart loads.

The following shows the classification of material removed from the streets, disposition of same, and the names of the various dumps in the city:

	Cart loads.
House garbage.....	80,085
Street sweeping and refuse.....	84,904
Street mud.....	87,882
Slop.....	2,257
Burnt animals in Trozo fire.....	22
Total.....	155,150

Disposed of as follows:

Taken to sea.....	20,738
Cremated.....	18,409
Dumped in park.....	5,898
Dumped in suburbs.....	110,610
Total.....	155,150

The disposition of the material by districts is as follows:

District.	Names.	Location of dump.	Disposal.
1	Maestranza.....	Wharf.....	Taken to sea.
2	Sande.....	Calle Sande.....	Filling.
3	Corral No. 2.....	Calle Azcarraga.....	Do.
4	San Rafael.....	Calle San Rafael.....	Do.
5	.....do.....	.....do.....	Do.
6	San Antonio Abad.....	Malate.....	Do.
7	.....do.....	.....do.....	Do.

City parks.—The following is a complete list of all parks within the city:

	Area.		Area-
	Sq. meters.		Sq. meters.
Luneta.....	21,920	Plaza Santo Tomas.....	1,105
Plaza McKinley.....	4,222	Plaza San Gabriel.....	407
Plaza de Gracia.....	516	Plaza de San Juan de Letran.....	237
Ermita Park.....	536	Plaza Sampalucan.....	675
Plaza San Sebastian.....	492	Plaza Malate.....	767
Plaza de Calderon.....	4,199	Botanical Gardens.....	47,000

The last-named park is the largest in the city, and was in a dilapidated condition when the city assumed control. The surface was very low and drainage was impossible until a large area had been filled and raised to grade. The house occupied by the city engineer has been painted, closets installed, and a soil-pipe drain laid to the river. Trees have been pruned, trimmed, and transplanted, and walks resurfaced. A zoological department has been installed in this park, which contains a number of animals and birds. The animal cages are so located as to be in the public view, and it is believed that they are thoroughly appreciated by the large number of people that visit the same daily.

The old propagation station is inadequate for a park of this size. I would respectfully recommend that a new station be built on the present site of the nipa house soon to be demolished.

Grades have been established and curbs are now being set around this park. It is the intention to lay a cement sidewalk around the park during the next three months.

A new site has been selected for a deer park. The animals will be moved to other locations in order to prevent large crowds of people collecting in any one place.

The necessity for acquiring more land for playgrounds in different parts of the city is becoming more and more apparent. The most crowded parts of the city are either entirely unsupplied with breathing spaces or are very inadequately provided with recreation grounds. I have carefully studied this subject from every point of view and would recommend that additional playgrounds, in areas from 1 to 6 acres, be purchased in the crowded and outlying districts of the city.

The following table shows the force employed in the care of parks and cost of same.

Labor.	Num-ber.	Days.	Cost.
Second-class foreman.....	1	365	\$420.00
Third-class foremen.....	4	1,401	751.53
Gardners.....	5	1,498	606.90
Carpenter.....	1	186	75.85
Masons.....	3	1,086	571.18
Laborers (average).....	142	34,836	9,185.25
Watchman.....	1	11	10.77
Total.....			11,620.98

The following is the daily average cost of maintaining horses, harness, mules, ponies, sprinkling wagons, etc., per day:

Shoeing horse or mule.....	\$0.0096
Forage for 1 horse.....	.5065
Forage for 1 mule.....	.4483
Forage for 1 native pony.....	.3247
Forage for 1 chino pony.....	.4483
Shoeing native pony.....	.0066
1 American teamster.....	2.3333
1 native teamster.....	.6666
1 native teamster, carretela.....	.4080
Repairs on 2 single sets harness.....	.06
Repairs 1 dump-cart harness.....	.02
Repairs 1 pony harness.....	.0107
Repairs 1 escort wagon.....	.0566
Repairs 1 dump cart.....	.04
Repairs 1 carretela.....	.01

*Cemeteries.*—This department has the care and preservation of Paco and La Loma cemeteries. Paco Cemetery is laid out into sections, namely, 142 sections, divided into subsections or niches, making the total number of niches or vaults 1,760, of which 1,259 are reserved for adults and 501 for children.

The small church was cleaned, repainted, and put in good condition. The walks have been repaired, walls whitewashed, grounds cleaned and partly filled. It is the intention to continue to fill all the low places and maintain a lawn and plant a few choice shrubs that will aid in beautifying the grounds.

La Loma Cemetery also has been much improved in the way of cutting down all the weeds and high grass that were found when this cemetery was turned over to this department. The walks also have received some attention.

The following table shows the number of interments in Paco and La Loma cemeteries from July 1, 1902, to June 30, 1903:

Cemetery.	1902.						1903.					
	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May.	June.

Interred at La Loma .....	2,837	2,022	4,859
Total .....	2,989	2,168	5,157

*City crematories.*—The city owns and controls two crematories, located as follows: Santa Cruz crematory is located in the district of Santa Cruz, in the rear of Bilibid Prison. Capacity about 40 tons per day. The other is located in the district of Paco, south of calle Real, capacity about 40 tons per day.

The above crematories are crude affairs, having been hurriedly built during military days and constructed with what materials were on hand at that time. They have served their purpose, being intended solely for cremation of animals. For the past year about 40 or 50 loads of garbage have been cremated daily at each crematory along with the regular work of animal cremation, which has been very wearing on the plants, and as a consequence they are badly in need of repairs. It is presumed that the Santa Cruz crematory can be abandoned as soon as the More-Boulger destructor is completed, which was built under contract by Peabody & Co., and located on the island of Palomar. This crematory has a capacity of 120 tons per day and is, in my judgment, able to consume all the garbage on the north side of the Pasig River. The south side of the Pasig should now be considered, and a suitable location selected for a new crematory. I would respectfully suggest that the present site of the Paco crematory be considered. The selecting of this site for a crematory should be considered along with the proposed site for city stables, in order that if possible the crematory and stables may be located as near together as practical, thus saving the animals much unnecessary travel after they have finished their work.

The following table shows the operation of the crematories during the past year:

ANIMALS CREMATED.

Animals.	Number.	Animals.	Number.
American horses .....	278	Rabbits .....	8
Native horses .....	1,032	Monkeys .....	73
Carabao .....	266	Turkeys .....	103

Total.....	4,102.20

*Water transportation.*—The city owns two steam launches, viz, *Washington* and *Jan*. These are employed in transporting crushed stone from the city quarries, located on the island of Talim, in Laguna de Bay, to the city of Manila.

The *Washington* was purchased by the Quartermaster's Department in November, 1899, from civil funds, for the sum-of \$9,483.44 United States currency.

The *Jan* was purchased February, 1903, by the city of Manila from J. S. Michael, of the firm of Michael, Gasper & Co., for the sum of \$5,500 United States currency. The launches are in good condition and are well suited for the work assigned to them. Each launch is equipped with a nest of six scows, of 25 cubic meters capacity each.

It has been impossible to make one trip each day owing to the condition of the river for some months past, but it is hoped, now that the port works have placed a dredger on the river to open the channel, less time will be consumed in making the trip.

The following table shows the daily cost of maintaining city launches:

	Expenditure.	
	Per month.	Per day.
1 launch master .....	\$100.00	\$3.83
1 captain.....	30.00	1.00
1 engineer .....	30.00	1.00

Coal consumption.—The coal consumption of the same period aggregated 2,095.6 long tons and the pumpage for the same period amounted to 11,108,520 cubic meters, or 2,935,000,000 United States gallons, and was distributed throughout the year in accordance with the following table:

	Coal consumed.	Water pumped. <sup>a</sup>
1902.		
July.....	Tons. <sup>b</sup> 156.6	Cubic meters. 870,047
August.....	158.4	808,418

May.....	214.9	1,200,967
June.....	217.4	1,090,528
Total.....	2,095.6	11,108,520

<sup>a</sup> Estimated.

<sup>b</sup> 2,240 pounds.

The average daily consumption, as indicated by the above table, on a basis of an average population of 235,000 persons, amounts to 129.5 liters or 35.2 United States gallons per capita. From this it may be noted that the consumption is a fair average for cities of the same class as Manila. While not a manufacturing city, the long continuance of the dry season is productive of heavy droughts for sprinkling purposes.

The records of the office of street cleaning show an expenditure of 30,820,679 United States gallons or 116,654 cubic meters of water by the sprinkling wagons.

No returns can be made of the expenditure of water for sprinkling purposes by means of hose, but it is fair to presume that at least 50 per cent more water is used by this method than by sprinkling wagons to produce equal results. This excess in consumption is brought about by flooding, improper handling, loss through insufficient tightening of the couplings, and wastes in the hose.

The total area sprinkled during the year was:

	Square meters.
By hose .....	182,665,138
By wagon .....	175,998,838

Deposito.—All work at this point has been in the nature of general repairs. The improvement in ventilation of the basins by the construction of larger and higher

ventilator covers has been completed. The main building has been thoroughly painted and repaired within and without, and the basins cleaned and investigated.

*Pumping station.*—Grounds and roads: The condition of the Santolan road has been a matter of great concern throughout the year. In August of 1902 this road was practically impassable for wagons hauling ordinary loads. The hauling of coal for engines during a large part of the rainy season further increased the bad condition and made transportation of supplies very difficult. The repairs were commenced in September, 1902, and have been prosecuted to date. The road has been widened and straightened, so that two escort wagons are now able to pass with ease. In some places the roadway was found considerably below the level of surrounding land, and during ordinary showers it became little better than a quagmire. The soft material in these low places was removed and replaced by local stone and gravel, and wide and deep ditches were constructed for the purpose of draining the water to the adjoining fields. A traction engine, which has been ordered for the water supply, will make it possible to complete the repair of the road and at the same time furnish all the needed transportation for the movement of coal and other heavy supplies.

Upon the site of the old fort within the grounds of the pumping station a coal shed has been erected which is capable of storing a supply of coal sufficient for the operations of the plant for six months. This increased storage capacity has furthermore permitted the transportation of coal during the dry season, and will save the Santolan road very much wear.

*Buildings.*—The main buildings at the pumping station were thoroughly overhauled. Ventilation was improved by the opening of air spaces beneath the floors. New flooring was laid in the engineer quarters. By a rearrangement of partitions a small office room and a more airy and light storeroom were secured.

A row of houses is now under erection, in cottage form, for the accommodation of the regular employees. These quarters will afford accommodations for at least six families, and permit of a better governing and supervision of the employees.

*Repairs to engines.*—Moving parts of all the engines have been badly worn because of the almost continuous action of the pumps for several years. Piston rods and piston rings have become pitted and scratched, and all the packing glands have been leaking badly. In consequence a great quantity of steam has been wasted. New parts in quadruplicate were ordered, but only those parts for engines Nos. 3 and 4 could be installed because of the demand for water. Repairs on these two engines have been highly satisfactory. Engine No. 4 afterwards developed a serious crack in its main bracket and main bearing cap, which was temporarily repaired, but under the heavy duty soon broke down, and the engine was put out of commission. A bracket and cap of heavier section were cast and placed in position, since which time no trouble has been experienced.

Indicator cards have revealed many serious defects in the valve motion, causing much loss of power. These defects will be corrected at a later date when the water consumption falls.

The flooding of the engine room, which in former years occurred regularly at the time of high water, has been prevented by the installation of a double-action Worthington pump, since which time no trouble has been experienced.

*Repairs to dam and canal.*—With the first rise in the water during July, 1902, the dam began to show signs of weakness and gave way at various points. During the high water no more than temporary repairs, which were of a very unsatisfactory nature, could be attempted. Plans were prepared for a complete repair as soon as the conditions would permit, and although it seemed more proper, from an engineering standpoint, to abandon the present dam and canal and to construct a dam farther up the stream with a canal leading directly to the pumping station, yet time and funds would not permit. Temporary repairs were therefore undertaken. After much delay in the delivery of material, the work of reinforcing the dam was commenced on the present site during the month of April. A row of 6 by 6 inch redwood piles were driven along the downstream face of the dam and the exposed face of the canal about 5 feet from the old work, and to a depth of from 8 to 10 feet into the hard gravel bottom. Planking 2 by 12 inches was then nailed to the inner face of the piling and to a height of the cut-off ends. The space between the old and new work was then carefully filled with local stone, gravel, and clay from the river banks. The downstream side of the work was protected from wash by heavy rock fill. The overflow crest was made to conform with the entire east end of the dam. This scheme of repair has succeeded in diverting the channel and kept the pumps constantly supplied with water. The northeast line of the dam was raised above the level of the crest about 6 inches and covered with a 6-inch coating of concrete, with a lip extending 12 inches into the body of the dam on the upstream side. The sharp

angle in dam was further protected by a heavy stone fill. Although several heavy floods have since passed over the new work, only small leaks have developed, which were at once repaired.

The total cost of this work was:

Pipe extensions.—During the year the following extensions were made:

	Size.	Length.	Cost, United States currency.
	<i>Inch.</i>	<i>Meters.</i>	
Custom-house yard.....	4	152.6	\$590.60
Calle Duque de Alba.....	4	90	442.15
Plaza Lawton .....	2	41.4	63.38
Calles Gulpit and Balicbalic .....	5	630	1,776.02
Calle Arroceros.....	5	27.3	146.88
Calle S. Sepulcro .....	3	78.15	123.51
Calle Paz .....	5	26.5	78.57
Calle Arquiza .....	4	221	247.79
Calle Solana.....	4	57	147.48

The total extensions were 1,323.95 meters, or 4,342.7 feet.

General repairs.—The supply system has been generally overhauled during the year. The old valve boxes with their unwieldly covers had given much trouble because of their restricted size. A cover of circular form was designed, and the old brickwork of the boxes was replaced by a heavier structure. Where conditions permitted, round valve boxes were constructed, covers resting directly on the masonry, and rectangular forms were constructed with covers resting on a grill work of scrap-steel shapes. Forty-nine round boxes were built at a total cost of \$1,406.46, average cost, \$28.70; and 45 rectangular boxes were built at a cost of \$1,386.12 United States currency, average cost, \$30.80.

Street plugs.—Great breakage occurred during the year in the street plugs. The keys, threads, and packing failed together, and lids were broken in all parts of the city. New keys were ordered, and an improved lid of more compact design was introduced and less trouble was noted, but the breakage of the lids continued. It was

therefore determined to remove the hydrants from the streets and place them upon the sidewalks. This work was commenced during the month of June. The removals noted have been nearly completed within the district of Intramuros, and the work will be pushed until all plugs are removed from the highways.

*Fire and sprinkling hydrants.*—The first shipment of hydrants of the post pattern was received late in the year, and but few have been installed. Lack of specials and tapping machines of large size has rendered this work difficult and made installation quite expensive. It is worthy of note that the hydrants are too large for the present mains, and temporary connections only have been made. It is the intent, however, to remove such connections when the new distributing system is laid. A shipment of hydrants with large engine suction has been ordered, and installations will be made with these along the larger mains.

*Shops.*—The shops have been moved from the old Cuartel del Fortin to the present quarters at the Arroceros Market. Because of the restricted floor space and small yards much confusion has resulted from the transfer of materials. A new drill of large power has been installed. A meter-testing apparatus is in good working order, and the blacksmith shop is in good condition. A power plant is very much needed at the shops, and plans are now under way for the installation of an engine and shafting to operate all the machines. The transfer of the shops deprived the water guard of quarters and compelled the office to provide suitable room for the pony transportation. The erection of a stable, barracks, and a house for the district foreman were found necessary. The first two buildings have been completed and are occupied. The third is still under construction. The stable provides accommodations for two ponies and carretelas, while the barracks in reality are six distinct houses of one room each and are occupied by nine workmen under charge of the storekeeper. The total cost of these buildings was:

	United States currency.	Local currency.
Stable.....	\$216.72	\$463.87
Barracks.....	892.07	2,070.83

*Special sprinkling service.*—The result of heavy drafts for street-sprinkling purposes in Ermita, Malate, and San Nicolas districts has caused the pressure in these regions at times to become extremely low. There is no method at present to carry more water into the districts, and the main service pipe is being taxed to its utmost. In order to relieve this condition a separate street-sprinkling service is proposed for the districts of Malate and Ermita, contemplating the use of sea water by pumpage into the storage tanks situated on the bay front. A gasoline or petroleum motor is recommended for this service, because of its small cost and ease of operation under the variable conditions to be met. Three tanks will be found necessary. The estimates contemplate the introduction of one gasoline engine and double-acting pump, delivering 200 gallons of water per minute, three elevated tanks, and connecting pipe lines.

The probable cost is estimated to be—

	U. S. currency.
Pump and engine.....	\$750.00
Tanks, 2, at \$150; 1, at \$250.....	550.00
Pipe line (in place), 1,275 meters, at \$3.50 .....	4,462.50
Total .....	5,762.50

This system would immediately relieve the conditions existing in these districts and furnish the street-sprinkling service with a steady supply. It is also believed that the sea water would be effective as a disinfectant.

*High-pressure fire service.*—The crowded condition of the shipping along the bay and river fronts demands a more efficient fire service than is furnished by the present system of post hydrants. It is not to be supposed that the fire service from the ordinary street mains can be neglected, but there should be a supplementary service of high pressure, supplied either by fire boats or by a central high-pressure station or by a combination of both. The districts most requiring protection are Intramuros, Binondo, and San Nicolas. The pressure in the mains at the present time, or which it may be possible to secure by any new construction, can not exceed an average during maximum draft, which occurs in the morning between 6 and 12 o'clock, of

25.3 pounds. This pressure is quite inefficient to throw a strong stream to the height of a third floor. Even the location of larger mains in the streets can not serve for more than a temporary reservoir, which would be rapidly emptied in time of continued fire where many engines would be necessary.

The needs of the service in Manila, with its low, quick-burning buildings and the liability of a rapid spread of flames, are large mains under a pressure of 125 pounds, numerous hydrants, and quick-acting pumps. The low construction will enable a long stream to be thrown and permit the fire to be fought from a considerable distance. The Pasig River forms a natural barrier to the operation of a high-pressure system from a central station, and if Intramuros and the districts of Binondo and San Nicolas were protected in this way two stations would be required.

Plans have been prepared indicating in a general manner the lines most needed for a fire service. From these plans it may be seen that three fire districts are provided, but that designated as district No. 3 should be considered as an auxiliary to district No. 2, from which pressure station it would secure its supply.

It is assumed that four nozzles delivering 175 gallons of water per minute will be required to cover district No. 1, and that six nozzles delivering the same rate will suffice for districts Nos. 2 and 3. In computing the boiler capacity provision has been made by providing for 50 per cent increase over that required by the service, in order to meet sudden drafts, insure safety during cleaning and breakdowns, and to permit of extensions.

The estimated cost of such installations is as follows:

*District No. 1.*

**Materials:**

2,639 meters 6-inch pipe, at \$165 per meter.. 435,435 pounds.  
3,110 meters 8-inch pipe, at \$240 per meter.. 746,400 pounds.

1,181,835 pounds, at \$0.025 \$29,545.88

3 8-inch valves, at \$50 ..... 150.00  
24 hydrants, at \$50..... 1,200.00  
Specials, approximate, 20,000 pounds, at \$0.04 ..... 800.00

Setting hydrants, at \$25 ..... 350. 00

11,666. 13

RÉSUMÉ.

	Cost.	Number hydrants.
District No. 1.....	\$40,020. 88	24
District No. 2.....	41,332. 25	32
District No. 3.....	11,666. 13	14
	93,018. 76	70

Assuming a profit of 15 per cent for contractor, and that all material be given free entry, the cost of these lines, complete, would be \$106,971.58. With interest on the plant at 8 per cent, depreciation at 6 per cent, and repairs at 2 per cent the total cost per year, less operating expenses, would be \$17,155.52.

Office.—Through the confusion attending the assumption of civil control the office management has been somewhat neglected. Files were badly kept and more or less trouble has been experienced by the method of rendering bills. Requisitions were frequently sent forward without note, and no record was kept of street work or repairs. A card file of all materials requisitioned for has been kept, and is in excellent operation, providing accurate data for future estimates. A system of daily reports has been instituted under the heads of pipe location, general repairs, pipe installations, and hydrant installations. Each time that a main is exposed during work a card is prepared and forwarded to the office, on which is stated the precise location of the pipe, with actual cost of labor and material for the work. In this manner a large amount of valuable information has been secured at practically no cost. In ten months the index has grown until the following conditions have been reached:

	Number of cards.
Pipe locations .....	419
Pipe repairs.....	379
Pipe installations.....	11
Fire hydrant installations.....	6

Tests have been made upon types of meters most common in use in this city under varying conditions of head, opening of valve, and positions of dial. This investigation, while not extended to any great length, furnished a fair index of efficiency under normal city conditions and determined the action of the office in selecting five types of meters for installation.

The office has devised an index of meter cards, upon which is preserved a complete record of all meters submitted for installation and returned for repairs.

Attention is invited to the inclosed drawings and also to inclosed table, which indicate the pumpage, metered consumption, and revenue collected by the office of water supply for the fiscal year ending June 30, 1903.

Sewers.—Aside from maintaining the present drainage system, very little work has been accomplished. A sewer was constructed for the Paco police station, along Calle 13 de Agosto, from Calle Paz to the Estero de Paco. The sewer was 190 meters in length, 6 inches in diameter, and was laid at a cost of \$185.43 United States currency. This sewer has given satisfaction, and no stoppages have been noted, although laid at a very small grade. The outfall sewer for the Malate Barracks was badly broken up by wave action and failure in its foundation. The broken section was removed and relaid upon a concrete bed 6 inches in thickness. Up to the present time no storms of any considerable violence have tested the work, but the extension has suc-

ceeded in removing a very offensive nuisance which existed at the point of the old discharge. Repairs cost \$60.30 United States currency.

The department has also been engaged in the collection of information regarding the size, depth, and location of all sewers which have been exposed for any purpose, and aside from this no other work has been attempted.

It can not be denied that a thorough inspection and repair of the present drainage system is necessary. The sewers are leaking badly and emit foul odors. The outfalls are badly choked and very much restricted in sections. Improved inlets, trapped basins, manholes, etc., are required and should be undertaken at once.

## BUILDINGS AND ILLUMINATION.

[Mr. A. L. DORRINGTON, superintendent in charge.]

All public and rented buildings in use by the city have been cleaned and cared for daily, and the general condition has been greatly improved during the year.

The total cost of supplies expended during the year in cleaning and caring for municipal and public buildings amounted to \$16,409.86 United States currency.

The following buildings and lands are rented by the city for public purposes:

For school purposes.....	25
For police purposes.....	9
City hall.....	1
Land registration and registrar of deeds.....	1
Superintendent of cemeteries.....	1
Lands for crematories.....	2
Lands for market sites.....	2

During the year leases have been made for the following buildings:

For school purposes.....	12
For police purposes.....	2
Land registration and registrar of deeds.....	1
Storehouse.....	1
Superintendent of cemeteries.....	1
City hall.....	1
Morgue.....	1

Lands have been leased as follows:

For market sites.....	2
For crematory.....	1
For morgue.....	1

The following rented buildings have been vacated, leases canceled, and better buildings procured instead:

For school purposes.....	6
For police purposes.....	3
For city hall.....	1
Morgue.....	1
Storehouse.....	1

Cost of rents for the year \$32,982.04 United States currency.

Repairs and alterations have been made as follows:

*Municipal building, calle Victoria.*—Interior of building changed for use of city hall; storehouse made in rear; platform and stairs built for disbursing officer; entire building overhauled preparatory to painting; installed two additional water-closets and remodeled old plumbing; painted all interior new work.

*Old city hall.*—Installed office signs throughout the building; repaired water-closets and water tank; painted telephone booths; repaired awnings and plumbing.

City attorney's office: Repairs to doors and locks.

Drafting room: Repairs to faucets, cabinets, and large table.

Secretary's office: Repairs to desks and tables.

Municipal board: Repairs to desk, map racks, and four fan shelves.

Secret-service office: Made three new partitions, new cabinet, and repaired desk and furniture.

City schools: Repairs to furniture.

Building permits: Installed railing.

*Headquarters fire department.*—Repairs to roof; closets; replaced window glass; repaired skylights; installed 3 shower baths, 3 water-closets, 4 wash basins, 2 urinals, and changed entire plumbing to conform with sanitary rules; painted interior and exterior of building; constructed new cesspool.

*Paco fire station.*—Remodelled plumbing, and installed 2 water-closets, 2 wash basins, and 1 urinal; painted interior and exterior of the entire station; repaired bath room, and installed 1 shower bath; constructed 4 stalls and painted same; made filing case for office; made 2 blackboards; repairs to down spouts and gutters; made back entrance to building, and installed large double doors; repairs to roof.

*Tanduay fire station.*—Repairs to faucets; built cesspool and installed 1 water-closet, 1 urinal, 2 wash basins, and 2 shower baths; built and installed 8-foot watering trough for horses; enlarged doorway for new apparatus.

*Audiencia fire station.*—Installed 2 water-closets, 2 baths, 3 wash basins, 2 urinals; painted interior and exterior of building.

*San Nicolas fire station.*—Painted 10 new stalls; built and installed 12 feed boxes; built and installed 30 lockers.

*Divisoria market.*—Extensive repairs to roof; repaired and cemented floor; repairs to hydrants; introduced new roof on superintendent's quarters.

*Quinto market.*—Repaired and cemented floors; repaired hydrants; repaired gutters and down spouts; introduced roof on superintendent's quarters and made 2 windows; extensive repairs to roof.

*Anda market.*—Repairs to gutters and down pipes on fish tables; built market office and quarters for superintendent; installed partitions and numbers for tables; painted tables, office, superintendent's quarters, and inclosure to water-closets; extensive repairs to roof.

*Arranque market.*—Building entirely overhauled.

*Matadero.*—Repaired roof and scalding vats; repaired fence and made new gates in stockyards; new fire picks and grates in crematory; buildings painted, interior and exterior.

*City stables, Tondo.*—Repairs to waterspouts and gutters; installed 4 awnings over office windows.

*Malate police station, native.*—Extensive repairs to roof and ceiling; made new door-casing and door; replaced all broken window glass and repaired window sash; building given general overhauling preparatory to painting.

*Quiapo police station, native.*—Made and installed galvanized iron urinal.

*Mounted police station, Tondo.*—Extended soil pipe.

*Native police station, Sampaloc.*—Built stalls for patrol horses.

*Paco police station.*—Installed 4 water-closets, 6 shower baths, and 4 urinals; built back entrance and stairs to building; made and installed bar doors and windows on lower floors; converted back cell into water-closet; recemented floors to bath and toilet rooms; changed windows on upper floor, making them swing instead of slide to prevent rain from beating in; built room for motor; installed water connections for entire building.

*Anloague native police station.*—Closed back entrance in rear of building; screened off closets; repaired floor, roof and eaves; also repaired closets.

*Tondo police station.*—Repairs to water pipes.

*Parian police station.*—Introduced temporary closet for prisoners; made soaking tub for patrol horses.

*Santa Cruz police station.*—Repaired doors and made iron bars for windows and doors in cell; made platform for alarm apparatus; made new floor in office; installed 2 additional water-closets, 3 baths, and 2 urinals; installed 2 awnings over office windows; repaired skylight and roof; built women's cell.

*Anloagua metropolitan police station.*—Installed 2 skylights over office; repaired office floor; installed 3 water-closets; 3 wash basins, and 3 urinals.

*River and harbor police station.*—Overhauled plumbing and installed 3 water-closets; 2 urinals and 3 wash basins; building painted, interior and exterior; made and installed sink for kitchen; constructed drains.

*Calle Crespo school.*—Overhauled and painted entire building, interior and exterior; installed iron awnings; laid new floor in lower rooms, and installed 1 water-closet.

*Tondo school.*—Made and installed 1 flagstaff; placed screens for closets.

*San Pedro school.*—Repairs to roof; partitioned off front room, building painted, interior and exterior.

*Malate schools.*—Both buildings thoroughly overhauled; changed vent pipes in closets and repaired drains; buildings now being painted, interior and exterior.

*Gagalangin school.*—Painted interior and exterior of building; built double water-closet and vault.

*San Miguel school.*—Put in 2 partitions; interior of building painted by owner.

*Sampaloc school.*—Put in partition; interior and exterior of building were overhauled and painted by owner.

*Santa Mesa school.*—Building overhauled and interior and exterior painted by owner.

*Luneta.*—Eighty-foot flag pole erected.

*Disbursing office.*—Repairs to office furniture.

*City assessor and collector's office.*—Reclothed ceiling of 2 rooms; replaced all broken glass; repairs to floor in vehicle-tax department; repairs to closets; 2 water-closets and 1 urinal installed; partitioned off 1 large room 30 by 60 feet, and painted same; installed ceiling fans for tax revision board; changed stairway and landing; removed partition in rear of back room.

*City schools warehouse.*—Removed and changed partitions; repaired water-closets; installed shelving; painted office.

*Public water-closet, back of English drug store.*—Repairs to plumbing and painted screens.

*Court of first instance.*—Removed Judge Sweeney's court into adjoining room.

*Prosecuting attorney's office.*—Extensive alterations for new office quarters in Audiencia Building.

*Court of land registration and registrar of deeds.*—Built and installed bench and platform in court; made 4 office signs; installed 3 shelves for fans; removed office in court from old city hall to No. 138 Calle Real, Intramuros.

*Municipal court.*—Installed ceiling fan; made and installed bench and railing; installed iron bars over windows in prison room.

Total cost of repairs for year, \$17,457.81, United States currency.

*Lights.*—During the year the following increases have been made to public lighting and electrical service:

Nozaleda, Paco, 2,000-candlepower arc lights.....	9
Tondo, 2,000-candlepower arc lights.....	18
Trozo, 2,000-candlepower arc lights.....	11
Santa Ana road, 2,000-candlepower arc lights.....	10
Calle Gonzales, 2,000-candlepower arc light.....	1
San Luis, 2,000-candlepower arc light.....	1
Anda market, 1,500-candlepower arc lights.....	3
Arranque market, 1,500-candlepower arc lights.....	3
Tanduay fire station, 16-candlepower lights.....	13
Paco fire station, 16-candlepower lights.....	3
Paco police station, 16-candlepower lights.....	23
Anloague police station, 16-candlepower lights.....	7
Secret-service office, 16-candlepower lights.....	5
San Nicolas fire station, 16-candlepower lights.....	44
Audiencia Building, 16-candlepower lights.....	17
Santa Cruz police station, 16-candlepower lights.....	16
Land registration court, 16-candlepower lights.....	7
Prosecuting attorney's office, 16-candlepower lights.....	12
Ascuncion school, 16-candlepower lights.....	2

*Fan connections:*

City hall.....	6
Land-registration court.....	3
Municipal court.....	1
Sheriff of Manila.....	1
Fire-department headquarters.....	2
Tax-revision board.....	1

The following table shows the aggregate number of lights and fans as reported above:

Arc lights, 2,000 candlepower.....	50
Arc lights, 1,500 candlepower.....	6
Incandescent lights, 16 candlepower.....	149
Fan connections.....	14

*Interior lighting remodeled.*—During the year the following interior lighting has been remodeled to conform with underwriters' rules:

Two hand stands, Luneta, 16-candlepower lights.....	50
Ascuncion school, 16-candlepower lights.....	9
Paco fire station, 16-candlepower lights.....	16
Headquarters fire department, 16-candlepower lights.....	36
Land-registration court, 16-candlepower lights.....	16
Anloague police station, 16-candlepower lights.....	7

Total..... 140

Night and day circuits have been installed in the following buildings: Headquarters fire department, Santa Cruz police station, Parian police station, Anloague police station, Paco police station, and Sampaloc police station.

The night and day circuits have been installed in all police and fire stations throughout the city for the purpose of connecting up with alarm system.

Meters have been introduced in all public buildings, and have greatly improved the service and reduced the cost of lighting.

Day circuits have been established for private lighting throughout the following districts: Ermita, Malate, Sampaloc, Paco, Intramuros, Santa Cruz, Binondo, San Nicolas, Tondo, and Trozo.

Plans are underway for the establishment of lights on calles: Herran, Santa Mesa, Isaac Peral, Santa Monica, Folgueras, Rada, Salinas, Lardizabal, Reten, Palmera, Anton, Roque, Castanos, Balicbalic, Guipit, and Lavenderos.

The entire line along the Malecon drive has been changed by removing the poles and wires from among the trees between the wagon road and walk to a location on the commons, which has greatly improved the service, and removed, so far as possible, all danger to the public. Formerly it was quite a common occurrence for the wire along the old line to be broken during the typhoon season. The change thus made prevents further damage to the trees. The harbor lights along the Pasig River have been changed, greatly benefiting the service.

The municipality has now in operation the following lights along public streets and in public buildings:

Arc lights, 2,000 candlepower (streets).....	241
Arc lights, 2,000 candlepower (harbor) .....	18
Arc lights, 1,500 candlepower .....	15
Incandescent lights, 20 candlepower (streets) .....	1,002
Incandescent lights, 20 candlepower (Divisoria market).....	50
Incandescent lights, 16 candlepower .....	492
Incandescent lights, 10 candlepower .....	6
Fan connections.....	14
Motor connections.....	6

Total cost of service for the year \$44,304.77, United States currency.

During the year 165 20-candlepower lights were discontinued and replaced by arc lights for the benefit of the service.

Eight 2,000-candlepower arc lights were discontinued on account of the Trozo fire.

*Telephones.*—Telephones in all fire stations throughout the city were changed by substituting Ericsson apparatus for the old pattern, greatly improving the service.

During the year the following telephones have been installed: Señor Herrera, president municipal board; Mr. Sleeper, member municipal board; Mr. McDonnell, member municipal board; office prosecuting attorney; residence assistant prosecuting attorney; office sheriff of Manila; city shops, and Tanduary fire station.

The telephone used by Mr. A. L. B. Davies, formerly secretary municipal board, has been transferred to the insular purchasing agent.

The telephone service throughout the city has been greatly improved. The entire service was suspended for four days on account of typhoon.

The old line crossing Camp Wallace has been removed, and a new line reestablished along the Luneta.

The positions of 8 apparatus were changed for the convenience of users during the year.

The total cost of service for the year was \$1,264.84, United States currency.

Construction.	Cost. <sup>a</sup>
Santa Cruz fire station: Built addition and remodeled old structure; completed construction of addition and remodeling of old structure.....	\$1,277.54
Tenement house, San Nicolas: Built by contract; completed.....	5,918.82
San Nicolas fire station: Built by contract; completed.....	10,160.41
Arraque market:	
Overhauled main building; completed.....	1,486.64
Addition under construction; expended .....	3,992.85
City stables, Tondo: Large addition built by contract; completed.....	10,817.29
Anda market:	
Completed construction of market under contract; final payment.....	3,900.00
Floor and fittings .....	5,999.61
Crematory, Paco: Overhauled by day labor .....	400.00
Crematory, Santa Cruz: Overhauled by day labor.....	400.00
Crematory, Tondo: Nearly completed by contract .....	50,000.00
Gagalangin school: Completed.....	1,583.09
City pound: Completed .....	4,631.70
Paco police station: Completed by contract .....	4,900.00
Total .....	105,417.95

<sup>a</sup> United States currency.

During the year claims for market sites, buildings destroyed on account of contagious diseases, and Trozo fire sufferers were paid to the amount of \$1,419.65, United States currency.

Recapitulation.

Cost of rents for year .....	\$32,982.04

Total.....	873	1,946,871	519	171,741	2,242	189,580	702	26,322

During the year about 150 buildings were condemned and ordered removed.

A brief comparison with last year's report shows that the number of applications for building permits has increased about 87 per cent, the number of permits issued more than 114 per cent, and the amount collected in fees more than 35 per cent.

For a long time the practical working of this office was crippled owing to an inadequate force of building inspectors, the entire work falling upon sometimes 2 and sometimes 3 American and 2 Filipino inspectors, and in addition the force of inspectors was constantly changing every few months.

On March 16, 1903, the present inspector of buildings was placed in charge and the work of preparing plans and specifications for all proposed municipal buildings and the supervision and inspection of their erection added to the other duties of the office.

The present personnel of the office, including 1 American building inspector asked for during the next fiscal year, it is hoped will prove a practical working force, and consists in an inspector of buildings, an architectural draftsman, 4 American inspectors, 2 Filipino inspectors, 1 Filipino employed by the day to number or renumber buildings, a Filipino clerk acting as cashier, and 2 Filipino assistant clerks. It is to be hoped that the present force of inspectors and clerks will continue in the service until the work both inside and outside the office can be systematized.

Considerable work has been done by the architect, Mr. S. J. Fountain, in the three months during which he has been attached to this office, of which the following is a brief summary:

Plans and specifications for addition to Arraque market (under construction; estimated cost \$13,000). Reading room, Paco fire station (completed; cost \$440 U. S. currency). Bandstand, Plaza de la Barca (under construction; estimated cost \$850 U. S. currency). Arroceros shop building (estimated cost \$4,500 U. S. currency). Tanduy fire station building (estimated cost \$20,000 U. S. currency). Veterinary hospital building, Palomar (estimated cost \$5,000). Bancusay market building. Closets for Arraque market (estimated cost \$400).

Water color sketch plans for school building, Tondo (estimated cost \$100,000). Normal school building, Malate (estimated cost \$50,000). Central fire station building (estimated cost \$75,000).

Much other architectural work of a minor character has been performed.

Much unnecessary and annoying labor has been caused the inspector of buildings by the careless preparation of plans for private buildings. Few of those at present preparing such plans are qualified as architects, and I would respectfully recommend that proper regulations be enacted to prevent unqualified persons signing plans and specifications.

Experience has shown the desirability of making certain changes or amendments to the present building regulations, and it is hoped that during the next few months a thorough revision of same may be made.

#### CITY SHOPS.

The present repair shops and storehouses situated on calle Arroceros at the site of the old Arroceros market were occupied by the department on September 10, 1902, and all the property removed from the old storehouse on calle Audiencia.

The level of the shop inclosure has been raised about 10 inches and graded, and the surface of the portion subject to traffic covered with stone screenings and rolled. Roadway at entrance has been built and curbings installed, and the open space in front of storehouses partially sodded. A new shop building, 30 by 120 feet, has been constructed with equipment for blacksmiths and wheelwrights; repair shop for harness reconstructed and supplied with a complete outfit of tools.

All repair work to means of transportation required by the various city departments is done at these shops, as well as the shoeing of all horses and mules in the service of the city. These shops supply all the materials and labor and direct all the repairs for municipal buildings.

The area of the shop inclosure is 156,218 square feet, in which are the following buildings and sheds: Office building, 26 by 29 feet, also used as dwelling by storekeeper and superintendent of shops; also for storing stationery. Carpenter shop, 30 by 94 feet, carpenters' repairs to municipal buildings. Oil house, used for storing oils, paints, and inflammable material; building is stone, 32 by 32 feet. Saddler shop, 32 by 32 feet; stone building. Storehouse No. 2, 30 by 94 feet, used for storing cement, lime, hay, and old tools, etc.; awaiting condemnation. Horseshoeing, blacksmith, wagon, and paint shop, 30 by 120 feet. Water department shops, 32 by 94 feet. Main storehouse, 30 by 120 feet; materials and tools stored here. Original building rented forestry bureau, 32 by 94 feet. New building erected by forestry bureau, including shed, 41 by 69 feet. Space occupied by logs, etc., forestry bureau, about 35 by 51 feet. Shed for making cement curbing, etc., 16 by 36½ feet. New building for water-supply employees, 25 by 54 feet, with baths and kitchens in rear 8½ by 54 feet. Residence for subforeman water department, 24 by 25 feet. Stable for horse used by water department, 12 by 17½ feet. Lumber shed, 20 by 92 feet. Space for stable horse used by superintendent, 13½ by 18½ feet.

A new machine and wood-working shop, 50 by 120 feet, is to be erected at a cost of about \$4,500. In this is to be placed a planing machine, band saw, circular saw, shaper, drills, spoke-tenoning machine, lathe, tire bender, welding machine, bolt cutter, blower for forges, hub-boring machine, and 20-horsepower engine and boiler.

## SURVEYING AND DRAFTING DIVISION.

*Surveys.*—After assuming charge of the office on January 1, 1903, the greater part of the months of January and February were devoted to the reorganization of the engineering department and looking after the needs of the work which had accumulated in the office at the time it was without assistants. The routine of the work in the office since that time is given in the following table:

Grades for buildings.....	2
Street lines for buildings.....	147
Grades for street construction .....	4
Grades for sidewalks.....	17
Surveys for street extensions.....	12
Surveys for bridges.....	3
Surveys for esteros.....	3
Detail plans for construction .....	7
Estimates.....	16
Land surveys .....	16
Plans.....	64
Blueprints.....	446
Surveys for new streets.....	16
Building plans.....	9

A river wall back of the government ice plant, near the suspension bridge, has been rebuilt. This wall for a length of about 90 feet fell into the river, due to the action of the water washing away the foundations from underneath, the wall having been constructed without making suitable provision for the same. The settling basin for the ice plant water supply was also destroyed and the overflow from the condensing pumps washed away the filling from under the coal bin. Repairs were made by means of a cofferdam, and the foundations for the new wall were carried to a depth of five feet below low water, at which depth the concrete foundation was built, on top of which a new settling basin was constructed of stone, with an opening into the river supplied with screens.

A pipe drain 40 centimeters in diameter was rebuilt, carrying the overflow from the pumps, and two pipes 30 centimeters in diameter were constructed through the wall to care for the roof and surface drainage.

Palomar crematory has been completed, and the retaining walls for the approach have been finished. Owing to the very unstable character of the foundation upon which all of this work was located, it was found necessary to construct a pile foundation to an elevation of mean low water, from which point concrete piers for foundations were laid to the surface of the ground, and upon which the crematory and walls and approaches were built.

The work of plotting the old survey notes for the city maps has been undertaken, but the traverses have worked out so poorly that additional field work may be necessary to check the surveys before satisfactory results can be obtained.

Surveys have been completed for a new river wall, approximately 1,000 feet in length, situated on the south bank of the Pasig River and extending from a point near the Santo Domingo gate, near the eastern bank of the moat where it joins the Pasig River, and extending to a point opposite and near the site of the Almacén gate, and as soon as soundings have been completed for the purpose of ascertaining the character of the foundations required detail plans and specifications will be made ready for the advertisement of the work.

Plans and details have been made for introducing a system of trolley tracks and hooks in the Matedero and the installation of track scales therein.

The city boundary line has been relocated ready for introducing the necessary boundary stones from the Maytubig Creek through Singalong, Santa Ana, San Felipe Neri, and Santa Mesa to the Chinese cemetery. It is the intention of the office to complete the setting of boundary stones as soon as the services of the assistants can be spared for that purpose. The lengths of the various lines bounding the city will no doubt vary from those given in the act of the Philippine Commission establishing city limits, inasmuch as it appears from inquiry and examination of notes that no survey of this line has ever been made, other than a preliminary stadia traverse.

Surveys are now in progress by one field party for a new drainage system for the city. The work in hand at the present time consists in establishing a system of street elevations and benches throughout the city, using as a basis for determining a datum mean low-tide level, as obtained by the United States Coast and Geodetic Survey from observations for a period of two years.

A large amount of time has been devoted by the various survey parties in the

engineering department in reestablishing building lines and setting corner stones throughout all parts of the city and in new subdivisions of land which have recently been made. Up to the present time no well defined street lines have existed, and much difficulty has been experienced in giving lines for the erection of buildings.

Openings through the city wall and extensions of streets have been planned for calles Aduana, Palacio, and Victoria. In making these openings and laying out the streets, the object has been to serve public convenience, obtain appropriate locations and grades for drainage, and mar the appearance of the wall as little as possible. Inasmuch as the only use of the moat at the present time is for surface-draining purposes, it is believed that the same can be filled up after drains of suitable size have been substituted.

Report of the sealer of weights and measures for the fiscal year ending June 30, 1903.

## PROPOSED DRAINAGE SYSTEM.

Everyone who is familiar with and has been accustomed to modern sanitary arrangements, which are usually found in all large cities, will agree that the conditions existing in Manila offer a rare opportunity for sanitary investigation. The welfare and health of the city demand most of all a complete system of drainage and no

time should be lost in making the necessary surveys, preparing plans and estimates for the same, in order that the work of construction can be undertaken and carried to completion as quickly as possible. History in questions of this kind has demonstrated the fact that at best, several years must elapse before a system of drainage of the magnitude required for this city, if undertaken at once, can be completed and made ready for operation.

The department of public health and the department of engineering and public works are constantly besieged during the dry season with innumerable complaints due to the offensive odors arising from the foul and polluted moat and esteros, a condition which is undoubtedly growing worse each year at an alarming rate, and due almost entirely to the fact that the sewage matter from a large part of the population of the city is now dumped into these water courses, converting them into open sluggish sewers. With the discontinuance of this practice, very much, if not all, of the objections to their existence will be removed. The open water courses or esteros will always remain the natural outlets for the purpose of handling surface drainage, but should never be used for any other purpose.

It will be necessary to design and build new such a system of sewerage as has usually been developed in other cities of similar size, by a gradual growth, extending through several generations. The system must be so designed as to afford not only adequate drainage for the present needs of the city, but must also be so designed that the future needs of the city can be accommodated when it has attained possibly double its present size and population.

A discussion of the different methods of sewerage which have been adopted in different cities from time to time is quite unnecessary. The method of dry removal, which was once thought the only proper system, has been tried in Manila, to a slight extent, with not the most satisfactory results. In all large American communities accustomed to an abundance of water supply, and therefore dealing with large quantities of waste water or sewage, the water-carriage system is considered the only satisfactory one by which the sewerage itself becomes the vehicle which immediately and continuously carries away from the inhabited districts both thoroughly and economically all refuse matter which can be held by it, either in solution or suspension.

Owing to the peculiar topographical features of Manila, where natural conditions for drainage are almost entirely wanting, due to the fact that the highest parts are located at elevations of from 2 to 6 feet above mean high water in the bay, it will be necessary to create the fall by increasing the depths of the sewers, and for the sake of expense the question of minimum grades becomes of the utmost importance. Grades should be established in such a way as to insure efficiency and the satisfactory operation of the sewers.

As all of the sewage from the city will necessarily require pumping, and as some of it may have to be pumped twice or possibly three times, it becomes of the utmost importance, on account of the cost of maintenance, that the amount of sewage be reduced to a minimum, which can best be accomplished by adopting the separate system. By the separate system is meant a system of sewers admitting sewage only, allowing the storm water to flow off upon the surface of the streets to the near-by esteros and river or providing for its removal by storm-water drains to the nearest water courses.

The older parts of the city are quite well provided with storm-water drains, which have also received the drainage from a large number of dwellings and the overflow from cesspools, which connections of late years have been permitted to be made.

These storm-water drains have been constructed of rectangular blocks of stone laid on the natural soil with stone covering, and built in such manner as to be quite unsuitable for sanitary purposes. As these drains are very rough and uneven and without suitable grades, a large amount of filthy matter is retained, which putrefies and gives off through the inlets or catch-basins odors which are extremely disagreeable and most detrimental to the health of the citizens. No traps are provided at the catch-basins to prevent the escape of these foul odors, nor are the so-called sewers or drains ventilated except through the inlets. The existing storm-water drains should be made use of for the purpose of removing storm water only, which is the purpose for which they were originally constructed, and all house drainage should be disconnected from them as soon as independent sewer lines can be constructed and put in operation.

Storm-water removal is an entirely independent question, and one which is of minor importance, and which should be considered in connection with the canalization of the esteros after the introduction of the separate system of drainage. A complete review of the whole situation leads me to believe that a separate system of sewerage will be the best for the city of Manila, and it is believed that the wastes can be disposed of by means of a system of pumping stations with two points of dis-

charge, one located north and the other south of the Pasig River outlet, discharging the waste in its crude or unclarified form into the deep water of the bay at least 3,000 feet from shore, without any previous treatment, by means of submerged cast-iron pipes. At that distance from the shore the sewage would become so thoroughly and completely disintegrated by the action of the waves that there would be little or no danger of its becoming offensive. All sewage when sufficiently mixed with a large volume of water is entirely inoffensive, and chemical changes at once begin to take place which will in time purify the whole mass. This process of purification is not very rapid, but being a process of oxydization no offense is caused thereby. All floating material which would be likely to interfere with the pumps or afterwards strand along the shore of the bay will be caught and removed from the sewers by means of screens or filth hoists located at the pumps.

It is hoped that this office may be able to render a full and complete report, together with detail plans and an estimated cost of a complete separate drainage system for this city, along the lines outlined above, during the coming year, provided some slight additional engineering assistance can be secured to aid in carrying on the work.

In conclusion, I wish to express my appreciation of the active interest shown by the employees of this department in the execution of their work, and in the excellent results attained since I assumed the duties of city engineer on January 1, 1903.

Very respectfully,

O. L. INGALLS,  
*City Engineer*

A. CRUZ HERRERA, C. H. SLEEPER, P. G. McDONNELL,  
*Members of the Municipal Board, Manila, P. I.*

#### EXHIBIT E.

#### REPORT OF CHIEF OF POLICE.

DEPARTMENT OF POLICE, CENTRAL OFFICE,  
*Manila, P. I., July 1, 1903.*

The SECRETARY, MUNICIPAL BOARD, *Manila.*

SIR: I have the honor to submit the following report of operations of the police department for the fiscal year ending June 30, 1903.

#### PERSONNEL AND SALARIES.

These are the same as were submitted in report of last year. The different precincts of the city are commanded by the following officers: Precinct No. 1, Capt. Jack Dawson; precinct No. 2, Lieut. Esrom J. Morse; precinct No. 3, Lieut. Mark Scott; precinct No. 4, Capt. George Seaver; precinct No. 5, Capt. José de Crame; precinct No. 6, Capt. Joaquin Monet; river and harbor, Capt. Walter E. Wilson.

#### BUILDINGS.

The buildings occupied by the police department as police stations are unsatisfactory and inadequate, it being absolutely impossible to put several of these buildings or keep them in a sanitary condition. A new building recently erected in Paco district, precinct No. 6, was almost worthless, as finished by the contractors, and necessitated the expenditure of a considerable amount of money to put this building in a fit condition to be used, especially during the rainy season. A new station for precinct No. 5, has been ordered and plans have been drawn for same.

I recommend that if possible, a duplicate of this building, but on a larger scale, be constructed in precinct No. 4, Sampaloc district, as the buildings now in use as stations in Sampaloc are not suitable and are very unsatisfactory, in fact, adequate stations are urgently required in precinct 1, subprecinct 1, precincts 4 and 5. During the fiscal year buildings that were formerly used as police stations on Calles Ronquillo and Isla de Romero, respectively, were vacated and Third precinct stations removed to the central fire station in Santa Cruz, a private building being rented near by for the use of the native police of this precinct; it is also used as storerooms.

#### ALARM SYSTEM.

An improvement of most vital importance and interest to the police department was consummated when the Gamewell police and fire alarm system was installed.

This is now in working order in four precincts. This system is working very well, and when the additional materials which have been ordered from the United States, and which are badly needed, arrive each precinct will be connected and police work will be greatly facilitated. The Philippine civil hospital has also been connected with the central desk at Parian station and the ambulance from that institution is called in cases of emergency when the services of a physician are immediately required. The installation of this system prevents loitering on beat by patrolmen, indicates to the desk sergeant at all times where his men are, renders the work of men more systematic and thorough, is of the greatest benefit in calling for necessary assistance, reporting accidents, etc., and, in fact, keeps the station in touch at all times with every part of the precinct.

#### CIVIL SERVICE.

The entire department is now under the civil service, and, on a whole, this has been beneficial. All promotions are conducted by a board composed of 3 police officers and 1 representative from the civil-service board. In this manner satisfactory results have generally been obtained. The civil-service board has been able so far to keep the department supplied with new men. Some difficulty in this line will evidently be experienced in the coming year, due to the fact that with the reduction of the army in the islands good material is not so plentiful and applications come in rather slowly. The greatest benefit derived from the civil service is the leave of absence. At present cooperation between the police department and the civil-service board is very good.

#### POLICE QUALIFICATIONS.

During the year the physical requirements for policemen were changed and the height reduced from 5 feet 9 inches to 5 feet 8 inches, and the weight to 145 pounds, which has enabled a number of good men to enter the department and has somewhat eliminated the scarcity of police material.

#### METROPOLITAN POLICE.

The high standard reported in the last annual report is still maintained in the metropolitan police force. The number of complaints made by citizens, due to the fact of the inexperience of the men and the new method of police administration with which the people were not familiar, has greatly diminished, and the efficiency of the force is probably greater than ever before. This high standard of efficiency is, however, rather difficult to maintain and calls for a large amount of work and the greatest of zeal on the part of the officers, owing to the fact of the large number of changes continually being made, as shown by the report of appointments and resignations given in another part of this report. Conditions, however, are rapidly becoming more settled, and it is expected that the number of changes that will be made in the ensuing year will be much smaller. Only one case of theft or dishonesty has been discovered among the American patrolmen during the past year, and this point alone illustrates the high character of the men composing the force. Undoubtedly their work can be favorably compared with that of any police department in the world.

#### NATIVE POLICE.

The good progress being made by the native police at the time of the last annual report is being continued. They are daily becoming more valuable to the city and their good work exceeds anticipations. They are rapidly learning the English language and acquiring a knowledge of the laws and police duties. They, however, require much more watching and more work on the part of their officers than the American police.

#### DETECTIVE BUREAU.

The detective bureau has developed in large strides and is daily becoming of more importance to the city, and the present conditions of the city are very largely due to their efforts. Their work during the past year can not be too highly estimated. Especial attention is invited to the report of Chief Trowbridge, hereto attached, and to the recommendations made therein regarding rank in the department. These recommendations are fully concurred in by this office.

## RIVER AND HARBOR POLICE.

The river and harbor police is another department which has rapidly developed in the importance and scope of its work. It has been very ably commanded by Capt. Walter E. Wilson. During the year an additional launch, the *George Curry* (so named after ex-Chief of Police Curry), has been added to this force. This is a small launch and is used for the purpose of patrolling the river from its mouth to the city limits. It has been of the greatest benefit to commercial interests in regulating traffic on the river. The large launch, the *Bucky O'Neil*, is used almost exclusively for bay work and makes four patrols a day of the entire bay. This launch is very frequently called upon by the vessels in the bay for making arrests, taking off injured persons, etc. It is recommended that a large pump, to be used in case of fire, be placed on this launch. It would be of great value in extinguishing fire among the shipping or along shore. The river and harbor police also patrol all of the many esteros in the city with rowboats, and where these esteros were at one time the scene of many crimes, they are now comparatively peaceful.

## MOUNTED DETACHMENT.

The mounted detachment, under the command of Sergeant Henderson, has rendered excellent service during the past year, and has aided greatly in cleaning out the ladrone element which formerly infested the district surrounding El Deposito. They have often been called upon to cooperate with the Philippines Constabulary stationed around and about that district, and have greatly assisted them on many occasions. They have also regularly patrolled the north and northeastern limits of the city and have done considerable escort work, etc.

## CITY POUND.

The city pound, in charge of a roundsman of this department, has done excellent service during the past year in impounding the cur dogs which infest the city. A great many other animals have also been handled by this department. The fee charged for the redemption of dogs is the same as that for other animals, and in most instances is considered too high, with the result that the dogs are not redeemed, but are killed and cremated. More than 3,000 dogs have been cremated during the past fiscal year. The revenue derived from the impounding of animals during this time amounted to \$334.04 United States currency and \$1,731.74 Mexican currency. I would recommend that the pound fees for small animals, such as dogs, pigs, goats, etc., be reduced one-half the present rate, which is \$2 impounding fee and 50 cents a day for maintenance.

## CLERICAL FORCE.

The clerical force during the past year has rendered very effective service, and the records of the department are up to date. There are at present 21 men in this department. The following is the list of salaries paid:

1 chief clerk .....	\$1, 800
6 clerks, at \$1,400 .....	8, 400
4 clerks, at \$1,200 .....	4, 800
2 clerks, at \$900 .....	1, 800
8 clerks, at \$600 .....	4, 800
Total .....	21, 600

I recommend that this be changed as follows:

1 chief clerk .....	\$2, 000
1 assistant chief clerk .....	1, 600
1 clerk .....	1, 500
4 clerks, at \$1,400 .....	5, 600
3 clerks, at \$1,200 .....	3, 600
1 clerk .....	1, 000
1 clerk .....	900
7 clerks, at \$600 .....	4, 200
Total .....	20, 400

This will be a reduction of \$1,200 over the present salary list, and I think will result in better service. In the past this department has experienced great difficulty in keeping competent and efficient men in the clerical department, due to the fact

that the salary list is not so regulated that a man can be advanced in proportion to his ability. With few exceptions we have only been able to keep the best men a short time; they then transfer to other departments, where larger salaries can be obtained. Under the new arrangement competent men can be promoted in accordance with their abilities, and will not be compelled to seek positions elsewhere. Under the provisions of Act 392, United States Philippine Commission, enacted April 18, 1902, a chief of a department can reduce the salary of a position at will, but can not increase the same beyond the appropriation. Under this new arrangement the maximum salary will only be given when men by their services have demonstrated that they deserve and are entitled to the same.

#### PATROL WAGON.

The department has only one patrol wagon at present, and this has rendered very effective service. A large number of calls have been answered and a number of lives saved by the prompt service rendered. The wagon in use at present is too cumbersome and heavy, and is very hard on horses. A lighter wagon has been ordered and will arrive shortly, and the efficiency of the department in this line will be greatly increased.

#### ARMS.

The police department since its organization has carried .45-caliber Colt's revolvers, army model. While this weapon is good, it is also very cumbersome, antiquated, and old. Eight hundred new .38-caliber police revolvers have been ordered. This change will materially affect the appearance of the men, as the revolver will be small enough to be carried in the pocket instead of being carried in a large and heavy holster as at present. As an emergency arm the police are now equipped with 300 Winchester repeating shotguns, short-barrelled, commonly known as a riot gun, which are very effective, carrying a buck-shot shell, and at close range are very deadly. From this standpoint the police are well equipped.

#### UNIFORM.

A new uniform has been selected for the police department, the cloth of which, an olive drab serge, has withstood every test made to determine its stability, shrinking qualities, and fast color. The uniform will be made in the same style as that at present in use, and will be adopted about the first of the year. A cork helmet, which is a great improvement on the one at present used, has also been adopted, and I am satisfied that the new uniform will prove satisfactory in every particular.

#### SCHOOLS.

The much extra work devolving upon the police during the past cholera epidemic and other unusual occurrences reduced the average attendance at the night schools to the extent of the attendance falling below the necessary average of 25, and most of the schools were closed. At present a great part of the extra work of the above character has been removed and the average attendance required has also been reduced, and arrangements will be made to open up schools in each police station. The third-class police are very eager to learn the English language and take great interest in the work. There are at present about 40 second-class policemen, a working knowledge of English being required before the men can enter this class.

#### PROMOTION OF OFFICERS.

On January 9 J. E. Harding was promoted from assistant chief to chief of police, E. S. Luthi from assistant inspector to assistant chief, John F. Green from captain to assistant inspector; October 23, George Seaver from lieutenant to captain; February 4, Walter E. Wilson from lieutenant to captain; October 23, Esrom J. Morse from sergeant to lieutenant; January 7, Mark Scott from sergeant to lieutenant; March 16, Thomas F. Crowley from sergeant to lieutenant; December 1, Santiago Versoza from sergeant to lieutenant.

#### RESIGNATION OF OFFICERS.

The following officers separated their connection with this department during the year under the circumstances herein enumerated: Lieut. Bernabe de Malibot, resigned June 13, 1903; Capt. Andrew J. Burt, on leave of absence in the United States to be discharged July 3, 1903; Lieut. Hilarion de Guzman, discharged for

cause September 6, 1902; Lieut. H. G. Toone, discharged for cause December 18, 1902; H. W. Yeamans, police surgeon, discharged for cause June 25, 1903; one officer, Capt. Ward P. Shattuck, is on leave of absence in the United States at the present time.

#### APPOINTMENTS AND SEPARATIONS OF PATROLMEN AND NONCOMMISSIONED OFFICERS.

During the year the following appointments, separations, etc., have occurred in this department:

Probationary appointments .....	330
Discharges .....	325
Accrued leaves of absence .....	362
Temporary appointments .....	50
Transfers from the department .....	16
Transfers to the department .....	5
Reinstatements .....	67
Promotions .....	72

#### CRIMINAL IDENTIFICATION.

The methods of criminal identification in use a year ago are still in vogue. A complete Bertillon system has been ordered and is expected to arrive within a short time. This will enable the department to keep a line on all criminals arriving here from the United States and from other parts of the Orient and will greatly facilitate the work in this line.

#### VAGRANTS.

A very undesirable, hard to cope with element are the vagrants which infest the city, and in most cases are men who live off the gains of fallen women. During the past year this class of people have been hunted down, prevented from landing, driven out of the city, and sentenced to terms in Bilibid, and at the present time the city is practically without this undesirable class of people. This state of affairs is largely brought about through the efforts of the detective bureau. During the year 613 arrests were made under this charge. It is recommended that some arrangements be made whereby American criminals of this class can be forced to leave the islands.

#### GAMBLING.

One of the most persistent, law-defying evils of the city is gambling, and during the past year the police department has been very earnest in its endeavors to suppress this vice. This evil still exists principally among the Chinese population, and it seems to be almost an impossibility to entirely stop it. An index to the work of the department in this direction is furnished by a résumé of the court records for the year, which show 178 persons arrested for conducting gambling houses, 39 for conducting gambling games, 25 for collecting for games, and for gambling, 3,604. Convictions were obtained practically in every case and the revenue to the city was considerable.

#### POLICE FUND.

The police fund at the present time is in a very flourishing condition and during the year has done much toward assisting members of this department. In all cases where members have died the burial expenses have been borne by this fund. Families of deceased policemen have also been assisted, and from the large amount of benefits derived from this fund in so comparatively small a way I feel assured that the police-aid organization at present being contemplated would be of incalculable benefit to the members of this department. At the end of the fiscal year this fund has a balance of \$1,745.68, Mexican currency.

#### HEALTH OF THE DEPARTMENT.

The general health of the department has been excellent during the past year, considering the various epidemics through which the city has passed and the nature of work performed. The number of cases of sickness in the department during the year was 1,480 and the number of deaths 7. The unsanitary condition of several of the police stations must also be taken into consideration in this connection.

## OFFICERS OF THE DEPARTMENT.

The entire staff of officers at present in the department are young, energetic men, and while very few have had any previous experience in police work, the ability shown is of the highest order. The best of feeling and esprit de corps exists among the members of the department, and everyone is working in hearty cooperation toward bringing the department up to the highest state of efficiency.

## TRANSPORTATION OF PRISONERS.

During the past year the work of handling the prisoners of the court of first instance has been done by the sheriff of Manila, a police-patrol wagon being turned over to him by this department for that purpose. The police department at present only handles municipal-court prisoners.

## CELLS.

This department is still greatly in need of proper cells at several of the police stations. Progress was made during the year in installing proper cells in stations of precincts 3 and 6. The cells at the other stations are as yet constructed of wood, very insecure, and in most cases unsanitary.

## RECOMMENDATIONS.

I urgently recommend that a plan for an increase of the salaries throughout the department be formulated and put into effect as soon as possible; that the proposed method of handling the police fund and plan of retired pay be also consummated as quickly as possible, as they are extremely essential to the stability of the force and to prevent the constant changes that are at present taking place.

I desire to take this opportunity of expressing my appreciation for the support and assistance that your honorable board has rendered me in the performance of my duties during the year. It will be my desire in the future as in the past to at all times perform my duty and follow the instructions as provided by your honorable board to the best of my ability.

I inclose herewith statement of expenditures of this department during the fiscal year 1903, record of prisoners apprehended, report of the detective bureau, report of the storekeeper, and report of poundkeeper.

Respectfully submitted.

J. E. HARDING, *Chief of Police.*

DEPARTMENT OF POLICE, SECRET SERVICE BUREAU,  
*Manila, P. I., July 25, 1903.*

The CHIEF OF POLICE, *Manila.*

SIR: I have the honor to submit the following report of operations of this bureau covering the fiscal year ending June 30, 1903.

The growth of various branches of the bureau's work during the period above mentioned has been greater than that of any space of time since the organization of civil government. This is particularly true of the strictly criminal branch of the work, and it is not too much to say that the entire time of the present detective force could be very comfortably taken up if devoted exclusively to this part of the work. The increase is undoubtedly due, for the most part, to the fact that the bureau is becoming better known, not only by the public at large, but by the various departments of the civil government, both in the city of Manila and throughout the provinces. Merchants and people of all classes, who in times past did not care to go to the trouble of investigations and trials subsequent, and who were not sure as to the best medium, now bring their reports to the bureau for the necessary action. This is evidenced, not only by a marked increase in the amount and value of lost and stolen property recovered, but by the continuous crowded condition of the office during the ordinary business hours.

With reference to the relation of this bureau to the various departments of civil government, both executive and judicial, it may be said with truth that this work has almost tripled in the last year. Under this head come the following: First, the service of criminal papers for the sheriff for the city of Manila; second, the handling of that portion of the criminal work of the constabulary division of information which pertains to the city of Manila; third, private and secret investigations of officials and employees, many of whom have had to be shadowed to prevent their leaving the islands; fourth, actual documentary investigations in connection with various departments, including the summing up and reporting on cases referred by the prosecuting attorney; fifth, correspondence in and investigation of inquiries of lost and missing persons who have been either soldiers or civil employees in the islands, the majority of which cases come either from the executive secretary or the adjutant-general, Division of the Philippines.

In outlining briefly, as is done here, the increase of the work of the bureau, it is not to be understood that crime is increasing or has increased. The bureau has simply gained a reputation as a means of recovering lost and stolen property, running down criminals of all classes, furnishing accurate information on public matters, and rendering assistance in a multiplicity of cases, criminal and otherwise; in short, in handling work that formerly went by unnoticed, largely by reason of ignorance of the existence of the bureau.

The present force of the bureau is 28 men all told, of which 4 are detailed from the uniformed force, 3 being Americans and the fourth a native. These details were found necessary several months ago, and are of a double advantage. These men so detailed are given the same class of work as those of the regular force, and in the meantime are receiving the benefit of instruction in the manner of work that comes from the actual handling of cases. This, of course, fits them to fill any vacancies that are occasioned in the regular force, and whenever possible appointments are made of these men in preference to outsiders, except in cases where the latter exhibit some particular fitness, either in speaking the languages in vogue, previous experience, or marked aptitude.

Under present arrangements, several of the agents of the bureau are assigned to duty on particular lines of work, thus making them practically unavailable for assignment to cases. One agent of the bureau boards every incoming and outgoing steamer on which passengers arrive or depart. This not only keeps the bureau in touch with all new arrivals, be they good citizens or bad, but prevents a hasty departure on the part of peculating accountable officials and others.

A most valuable auxiliary to the bureau is the pawnshop inspection, which is a novelty as beneficial as it is thorough. This is operated under a city ordinance governing and regulating pawn agencies. One agent of the bureau is assigned to this work, and makes thorough daily inspection visits to all the agencies. The propensity of the native to turn any ill-gotten article into ready cash by the hasty negotiation of a loan has caused many a one to spend a term in Bilibid and has been the means of recovering thousands of dollars' worth of jewels and other property.

One agent of the bureau handles the identification of criminals and suspicious characters. The work embraces the photographing, measuring, and recording of every convicted criminal of any importance released from the public carcel of Bilibid and all dangerous and suspicious characters. This agent is assisted in the work by one native detective, who does this in addition to his other duties.

One agent of the bureau is detailed in charge of the interior work of the office, and has charge of all details, including the assignment of men, recording of cases, preparation of evidence; in fact, everything which pertains to the routine of the office. One agent of the bureau is detailed in charge of the office at night, and he is assisted by a native agent. He receives reports from the various police stations and attends to any complaints that may be made; he is in telephonic connection with many of the agents, who are obliged to respond promptly and willingly to his calls.

During the year 1,141 reports or "alarms" have been received of lost and stolen property. Each one of these has received due attention, and a large percentage have been successfully worked out. These, it must be understood, cover cases of theft and embezzlement only. There are perhaps hundreds of other criminal cases, such as rape, abduction, illegal marriages, etc., and many cases of missing persons and lost children. By reason of the fact that the object of the bureau is the prevention as well as the detection of crime, a large amount of work has been done which could not and does not show in the records.

Statement of money and money value of articles recovered by the detective bureau from  
July 1, 1902, to June 30, 1903.

[Amounts are expressed in Mexican currency.]

Months.	Money.	Money value of articles.	Total.
1902.			
July .....	\$235.00	\$2,664.50	\$2,899.50
August .....	1,950.70	8,944.97	5,895.67
September .....	554.73	2,894.17	3,448.90
October .....	364.41	2,914.74	3,279.15
November .....	2,479.90	1,107.10	3,587.00
December .....	3,666.35	2,081.25	5,697.60
1903.			
January .....	898.00	1,738.00	2,636.00
February .....	87.00	2,442.80	2,529.80
March .....	1,025.80	3,827.01	4,852.81
April .....	1,299.25	2,295.10	3,594.35
May .....	728.00	11,964.25	12,692.25
June .....	3,367.35	1,013.93	4,381.28
Total .....	16,656.49	38,837.82	55,494.31

Following is a statement of the number of arrests made by the bureau, and their disposition, from July 1, 1902, to June 30, 1903, inclusive:

Number of arrests .....	1,842
Convicted .....	1,204
Dismissed .....	117
Acquitted .....	7
Released .....	242
Jumped bond .....	1
To proper authorities .....	220
Held as witnesses .....	4
Committed suicide .....	1
Escaped .....	5
Charges withdrawn .....	3
Cases pending June 30, 1903 .....	38
Total .....	1,842

On June 30, 1902, there were pending 7 cases, which were disposed of as follows:

Convicted .....	5
Dismissed .....	2
Total .....	7

During a portion of the year, and especially during the last few months, the work of the bureau has been crippled by a lack of clerical help, this work, of necessity, having kept step with the increase in other lines.

During the month of August, 1902, numerous gambling houses were started and were running and flourishing in the various precincts of the city. By your orders a vigorous campaign was instituted against these, with the result that the districts of Binondo and Santa Cruz, which seemed to be the most thickly infested, were pretty thoroughly cleaned out. This work can be done much more effectively by the bureau than by the precinct people, for the reason that the plain-clothes men of the precinct become so well known in their particular jurisdiction that their work is seriously hampered. However, on account of the great amount of more important work on hand, the bureau is not particularly active in this line at present, but all reports received of games running in any precinct are at once transmitted to the precinct commander for his information.

Following is a statement of games, number of persons arrested, fines, and confiscations during the period from July, 1902, to June 30, 1903:

Month.	Number of per- sons ar- rested.	United States currency.		
		Fines.	Confisca- tions.	Total.
1902.				
July.....	13	\$173.00	\$3.07	\$176.07
August.....	2	100.00	.....	100.00
September.....	9	650.00	38.00	688.00
October.....	23	1,051.00	594.00	1,645.00
November.....	79	3,183.00	679.26	3,812.26
December.....	87	725.00	32.90	757.90
1903.				
January.....	162	1,339.50	312.24	1,651.74
February.....	91	2,766.00	726.95	3,492.95
March.....	75	1,526.00	88.48	1,614.48
April.....	28	635.00	19.81	654.81
May.....	71	848.00	282.22	1,130.22
June.....	55	669.50	26.98	696.48
Total.....	695	13,616.00	2,797.91	16,419.91

During the past year the bureau has handled a goodly number of cases semipolitical in nature, the most important of which was that involving the affairs of the organization known as "La Union Obrera Democratica," and its president, a Spanish-mestizo physician named Dominador Gomez de Jesus. In this case the bureau rendered assistance to the attorney-general, the solicitor-general, the insular treasurer, and the prosecuting attorney of Manila, not only in the injunction proceedings which were instituted against the organization, but in the criminal charges against Doctor Gomez. Attention was also given to the matter of the seditious dramas which were being presented in the city, and, in fact, the initial steps to suppress this evil were taken by this bureau. Investigation of other restless factions, such as labor leaders, religious disturbers, etc., has been conducted and an endeavor has been made to keep the finger of the bureau at all times upon the pulse of Manila's populace, the latter being regarded as a criterion in matters political.

Cooperation with the division of information of the Philippines Constabulary has increased materially during the year and not a day passes without the transaction of business matters, either criminal or political. This cooperation is of mutual benefit, and attention is invited to the uniform courtesy and accommodation that has been accorded this bureau by the chief of the constabulary and the superintendent of the division of information. Work done for and with the military authorities, which was formerly an important branch, has been greatly reduced and is now of minor importance.

The city of Manila has, mainly through the efforts of the bureau, been practically cleared of the worthless American element which formerly infested it. A body blow was given to this element when the so-called "gang," headed by the notorious S. R. Price, and consisting of gamblers, confidence men, ex-Alaska adventurers, and ex-convicts, were compelled to seek more congenial climes. Some of these went to south Africa, others to China, some to the States, while a few still languish in Bilibid.

Some few months ago the quarters of the bureau were changed from the old provost-marshal-general building to the municipal school building on Calle Victoria. The new quarters, while more comfortable, so far as light and ventilation are concerned, are very cramped, and this is a serious hindrance to good and effective work. The most important recommendation to be made in this report is that more commodious quarters be secured as soon as possible.

Without in any manner reflecting on the precinct commanders of the city, I would respectfully invite your attention to the necessity of a more thorough and complete cooperation with this bureau. It has always been the case that reports from police stations have been given precedence in importance over other matters, and I regret to state that in several instances tardiness in such reports has caused delay in bringing matters to a successful issue here in the bureau. Agents of this bureau have been repeatedly instructed, and it is my belief that a great many are following out the instructions to cultivate a feeling of friendship and fraternity with the uniformed force—officers, noncommissioned officers, and patrolmen. Wherever practicable, and especially where police assistance is likely to be invoked, precinct commanders are

consulted, and I speak for the whole bureau when I here express heartfelt gratitude for their cooperation.

In connection with the last recommendation, I have the honor to suggest, rather than recommend, that it will be beneficial to the bureau and to the police department to so amend the present police regulations as to give the American portion of the detective force, including the chief, a rank in the department. As matters now stand cooperation of police officers and patrolmen has become more or less a matter of courtesy. In my last annual report I recommended that the American agents of this bureau be given the rank of sergeants of police, thus giving them authority over patrolmen who might be on duty which would bring them in contact with the detective. I now respectfully suggest the following: That the senior American detective be given the rank of captain; that the second senior American detective be given the rank of lieutenant, and that all other American detectives be given the rank of sergeant.

This arrangement will serve to give the members of the bureau a fixed status in the department, and will go far toward making the detective bureau appear what it really is, namely, a part of the police department.

Very respectfully,

C. R. TROWBRIDGE,  
Chief Secret Service.

MANILA, P. I., July 31, 1903.

CHIEF OF POLICE, Manila, P. I.

SIR: I have the honor to submit herewith receipts of the city pound for the fiscal year ending June 30, 1903.

DEPARTMENT OF POLICE, CENTRAL OFFICE,  
Manila, P. I., June 30, 1903.

The CHIEF OF POLICE, Manila, P. I.

SIR: I have the honor to make the following report of the work of the storekeeper's office for the fiscal year 1903:

A complete list of property on hand at the close of the fiscal year 1903 was submitted by me to the chief of police on the 8th instant, and was forwarded by him to the secretary of the municipal board for record, a duplicate being placed on file in the office of the chief of police.

By comparing this list of property with my report of June 30, 1902, it can readily be seen that the property of the police department has increased considerably, both in quantity and in value, during the past twelve months. The most important addition has been the Gamewell police telegraph apparatus, which represents an expenditure of \$42,460 United States currency for the original equipment and \$1,015.63 United States currency for additional appliances.

An additional launch, named *George Curry*, has been placed on police papers, and 20 complete outfits of cavalry equipment have been added for the use of the mounted police.

The secret-service bureau has been given almost an entirely new outfit of office furniture, and 3 large file cases have been added to the office of the chief of police. Four American horses and 4 Chinese ponies have been added to the equipment of the mounted police, and 2 native ponies and a dog-catcher's carretela have been placed at the city pound for use in collecting stray animals. Another native pony and carretela have been placed at Paco station to be used between that station and the substation at Santa Ana. The 2 police launches, in addition to their large amount of oils and other expendible materials, have received many articles of permanent equipment, such as ship's compass, ship's clocks, chairs, flagstuffs, awnings, ship's lanterns, and side lights.

During the fiscal year just completed, the sales department of the storekeeper's office has not been able to close out its entire stock, since the demand for the articles still on hand is not very large.

On July 1, 1902, there had been sold up to date since January 1, 1902, when the sales began, the following amounts of uniform material:

Blue serge cloth.....	yards..	2, 364½
Canamo cloth .....	varas..	7, 995½
Blue trimming cloth .....	do....	224
Caps .....		41
Collars .....		231
Shoes, russet .....	pairs..	313
Cuffs .....	do....	42
Chevrons:		
Sergeant.....	do....	4
Corporal .....	do....	8
Buttons:		
Large .....		356
Small .....		369

The above sales represent \$10,539.66 local currency, which amount was turned over by me to the insular treasurer as a refund to the city of Manila.

These sales left a balance on hand on July 1, 1902, of the following amounts:

Blue serge cloth.....	yards..	32½
Canamo cloth .....	varas..	2, 537½
Blue trimming cloth .....	do....	14½
Caps .....		559
Collars .....		769
Shoes, russet .....	pairs..	187
Cuffs .....	do....	958
Chevrons:		
Sergeant.....	do....	146
Corporal .....	do....	142
Buttons:		
Large .....		1, 894
Small .....		2, 331

During the period from July 1, 1902, to June 30, 1903, inclusive, the sales of uniform materials have been as follows:

Blue serge cloth .....	yards..	323
Canamo cloth .....	varas..	2, 537
Blue trimming cloth .....	do....	14
Caps .....		249
Collars .....		769
Shoes, russet .....	pairs..	187
Cuffs .....	do....	487
Chevrons:		
Sergeant .....	do....	24
Corporal .....	do....	27
Buttons:		
Large .....		1, 894
Small .....		2, 331

These sales represent \$3,400.83 local currency, which amount has been turned over by me to the insular treasurer as a refund to the city of Manila, with the exception of \$52.31 local currency, which is the amount of the collections for June, 1903, and which will be turned over to the treasurer on July 11, 1903.

The balance of uniform material left on hand at the close of the fiscal year June 30, 1903, is as follows:

Caps .....		310
Cuffs .....	pairs..	471
Chevrons:		
Sergeant .....	do....	122
Corporal .....	do....	115

The value of these articles now on hand is \$886.34 local currency. When these articles shall have been sold and their money value of \$886.34 local currency shall have been deposited with the insular treasurer, that official will have received \$14,826.83 local currency as a refund from the city of Manila for an expenditure of \$14,765.46 local currency, which was incurred by the department of police through an act of appropriation by the civil commission. The treasury will then be gainer to the extent of \$61.37 when the sales are completed.

During the past fiscal year the number of articles in the assortment of lost, stolen, confiscated and deposited goods has almost doubled, the entry numbers now reaching nearly to 800. The increase in this direction is due largely to the depositing of fire-arms, by reason of a recent act of the civil commission. There are now on deposit in this office at least 250 firearms for safe-keeping, for which there will probably never be obtained any permit, and which will be here on the shelves until the owners either go to the United States or to some foreign country.

Although the storeroom has been used as a depository for a large portion of the pound receipts and the cochero receipts, it would hardly be in the province of the storekeeper to make an itemized report of these deposits, since they do not represent the entire amounts collected and were merely left in the storeroom as a place of safe-keeping.

The police fund, however, is directly under the supervision of the storekeeper, who acts as custodian and collector of fines, and the following is a consolidated report of that fund from July 1, 1902, to June 30, 1903, inclusive:

[Values are expressed in local currency.]

Months.	Receipts.	Expendi- tures.	Balance on hand.
1902.

June 30.....			1, 745. 68

Total receipts during fiscal year.....	\$4, 456. 58
Total expenditures during fiscal year.....	2, 909. 09
Increase of police fund.....	1, 547. 49

The present storeroom for police property is exceedingly cramped for space, but can be made to serve for a few months pending the assignment of the department to more commodious quarters, in which it is hoped the storekeeper will be allowed the equivalent of four large storerooms and a suitable office, where visitors will not have convenient access to every item on the shelves, as they had and have taken in the past.

The monthly accounts current for the past year are all on file with the auditor and have been audited and approved as far as to include December 31, 1902. The account current for June, 1903, and the property return for the quarter ending June 30, 1903, are now in process of preparation, and unless some unforeseen event arises, will both be placed in the auditor's hands by July 10, 1903.

Respectfully submitted.

BENJ. P. LUKENS,  
Storekeeper, Department of Police.

OFFICE OF THE CHIEF OF POLICE,  
Manila, P. I., July 13, 1903.

EXHIBIT F.

REPORT OF THE LAW DEPARTMENT.

CITY OF MANILA, OFFICE OF CITY ATTORNEY,  
Manila, P. I., July 1, 1903.

The SECRETARY OF THE MUNICIPAL BOARD,  
Manila, P. I.

SIR: I have the honor to submit the following report in duplicate of the operations of the law department of the city for the fiscal year ending June 30, 1903:

OFFICE OF CITY ATTORNEY.

Investigations, generally among the old Spanish insular and municipal archives and resulting reports to the municipal board and the various city departments .....	79
Legal opinions rendered to the municipal board and various city departments (these are written opinions; in addition, numerous oral opinions have been rendered concerning matters of current business) .....	175
Ordinances prepared for the action of the municipal board .....	44

Acts prepared for the action of the Philippine Commission.....	12
Bonds, contracts, deeds, leases, etc., prepared and submitted to the municipal board .....	78
City land titles cleared and registered.....	8
Suits attended to .....	36
Letters sent.....	611
Letters received .....	599

During the year the following changes have occurred in the official personnel of the office:

On April 8 Modesto Reyes, former assistant city attorney, was appointed city attorney, vice W. L. Goldsborough, resigned, and George N. Hurd, formerly law clerk in this office, was on the same date appointed assistant city attorney.

As during the preceding year, the time of the office has been largely occupied by investigations of land titles and the preparation of opinions and reports requiring an examination of the old Spanish insular and municipal records. The organization of the new court of land registration has resulted in a considerable increase of the work of this character, as the city is now cited by said court in all cases involving the ownership or boundary of an estero, or the boundary line of a street or public plaza, as well as in cases in which the city claims any interest in the land sought to be registered, or is the owner of adjacent property. Frequently an investigation of this character requires the careful examination of Spanish documents and records running back hundreds of years. This is made necessary by the fact that almost none of the lands occupied and owned by the city were conveyed to it by deed, but the grants thereof are evidenced by old records and plans which must be sought out from a great mass of unindexed insular and municipal records.

The administrative work of the department arising from its supervision of the seven offices constituting the law department has also increased materially. This increase is in part due to the addition of the registrar of deeds to the offices which report to this department.

During the past year there has also been a very notable increase in the amount of litigation conducted by this office, and it seems quite probable that during the coming year there will be a further increase of this character.

At the rendering of our last report there were 8 suits in which this office appeared in its official capacity. There are now 29 actions in the various courts in which the city or its officials are parties, and in which the city attorney is required to appear. During the year 28 new cases have been begun, 10 of these being brought by the city or prosecuted on behalf of the city or the public by this office, while 18 have been instituted against the city or its officers. Of the 10 cases in which the city or the public appear as plaintiff, 6 were brought for the reclamation of land; 1 was a suit on bond for the violation of a contract with the city; 1 was a prosecution for the violation of an ordinance; 1 a criminal case in which the city attorney conducted the prosecution, and 1 suit for the collection of water rent due the city. Of the 18 cases brought against the city or its officers, 3 were for services and materials furnished the old city of Manila under Spanish administration; 6 were against the sheriff for alleged misfeasance or nonfeasance of his official duties; 1 was a mandamus against the disbursing officer for alleged illegal failure to pay the salary of an employee; 3 were for the reclamation of land; 3 were injunctions or similar writs against the city engineer to restrain him from enforcing building regulations; 1 suit against the city for alleged failure to comply with contract, and 1 a suit for the redemption of a censo involving property in which the city has an interest.

The following cases have been disposed of during the year:

Thomas Rodriguez y Lopez *v.* The city; by settlement acknowledging the city's contention.

Coico *v.* Municipal board et al; this case involved the removal of buildings condemned for sanitary reasons, and, although the city was unsuccessful both in the court of first instance and in the appellate court, the result of the litigation was the removal of the buildings condemned.

City *v.* Pereyra et al.; settlement acknowledging the city's contention.

Veloso y Grey *v.* Municipal board; dismissed at plaintiff's cost.

City *v.* Vicenta Rodriguez; settlement acknowledging the city's claim in full.

Padilla *v.* Municipal board (injunction); judgment in favor of the city.

Padilla *v.* Municipal board (certiorari); dismissed by plaintiff.

City *v.* Cong Wa; judgment in favor of city paid and satisfied.

City *v.* Electricista; involving a number of cases against the electric company for violation of Ordinance No. 36; judgment in favor of the defendant.

United States *v.* Parra (Dos Hermanos case); judgment against all defendants.

Watson *v.* Peterson; judgment for plaintiff.  
 The following cases are now pending in the court of first instance:  
 Clotet *v.* Winsor; pending settlement.  
 Clotet *v.* Winsor (province of Rizal); pending settlement.  
 City *v.* Cheng Ye Chiang; on trial.  
 Estate of Jerome L. Mudge; settled but awaiting instructions from heirs in United States as to distribution of funds remaining in hands of administrator.  
 Button *v.* City; pending on demurrer.  
 Tambunting *v.* City; judgment for city in justice of peace court; now pending on plaintiff's appeal in court of first instance.  
 Skidmore, B. H. *v.* Cadwallader et al.  
 Skidmore, W. C. *v.* Same; awaiting decision of court.  
 Aballana *v.* City; awaiting decision on city's motion to strike.  
 Dorr *v.* Ui Eng Seng et al.; issues not joined.  
 Barretto *v.* Municipal Board; pending on defendant's motion to strike.  
 Schmid *v.* Peterson; issues not joined.  
 City *v.* Go Checo; judgment for defendant in municipal court now pending on appeal in the court of first instance.  
 City *v.* Salgado; tried September 11, 1902; decision not yet rendered by judge.  
 Farré *v.* Municipal Board; pending settlement.  
 City *v.* Morley; pending trial.  
 S. del Rosario *v.* Municipal Board et al.; pending on plaintiff's motion to make temporary injunction permanent.  
 Porcuno et al. *v.* Yap Tico et al.; pending on demurrer.  
 City *v.* Dy Feco et al.; pending settlement.  
 City *v.* Basa y Mariafosque; pending trial.  
 City *v.* Delfin Santiago; pending settlement.  
 Merchan *v.* City; demurrer argued March 17, 1903; decision not yet rendered.  
 Button *v.* City; pending on demurrer.  
 In re Roman Canlas; judgment in court of land registration against the city; now pending on city's appeal to court of first instance.  
 Aguado *v.* city; awaiting decision of defendant's demurrer.  
 In the Supreme Court—  
 Villar *v.* Municipal Board; pending settlement of bill of exceptions.  
 City *v.* Jacinto de Rosario; pending settlement.  
 Hoey *v.* Baldwin; pending settlement of agreed statement of facts.

## OFFICE OF PROSECUTING ATTORNEY.

	12
	<hr/>

Number of deaths investigated as coroner.....	34
Number of letters received .....	480
Number of letters sent.....	673

The following changes have occurred in the personnel of this office during the fiscal year: July 18, 1902, Mr. Herbert D. Gale, appointed assistant prosecuting attorney; October 8, 1902, Hon. John C. Sweeney appointed prosecuting attorney; October 8, 1902, F. B. Ingersoll appointed first assistant prosecuting attorney, but afterwards, during the year, resigned; April 1, 1903, Hon. John C. Sweeney appointed judge of the the court of first instance; April 1, 1903, Mr. Charles H. Smith appointed prosecuting attorney for the city of Manila; April 7, 1903, Dionisio Chanco, first assistant prosecuting attorney, appointed judge of the court of first instance; April 7, 1903, José Abreu appointed first assistant prosecuting attorney.

A comparison of the amount of business done by this office during the past year, with that accomplished during the year preceding, shows that during the first year mentioned, there were 189 cases instituted in the court of first instance, while during the second year there were 653 cases.

During the first year there were 96 convictions in the court of first instance; during the second year, 270.

In the municipal court during the first year there were 370 cases instituted by this office; during the second year, 592.

In the same court during the first year there were 143 convictions; during the second year, 279.

It will be seen that the business of the office of prosecuting attorney has increased more than 100 per cent during the last year, and in addition to this there have been, during the period covered by this report, a great number of investigations of cases submitted in which no complaints were filed for the reason that at the conclusion of such investigations it was considered by the prosecuting attorney that the evidence submitted did not justify formal proceedings.

The performance by this office of the duties of coroner has also enlarged the work of the office substantially. In the court of first instance there are now pending nearly seventy criminal cases in charge of this office.

## OFFICE OF SHERIFF OF MANILA.

A considerable increase of business is reported in this office arising from the creation of Part III of the court of first instance, court of customs appeals, and the court of land registration. This office now serves the following courts: Three divisions of the court of first instance, Manila; the court of customs appeals; court of land registration; two justices of the peace courts, city of Manila; supreme court of the archipelago.

The duties of the office have also been increased by the transportation of prisoners to and from the several courts, which was assumed by the sheriff November 1, 1902. The following is a detailed statement of the processes which have passed through this office during the year just closed:

	Number.		Number.
Attachments .....	80	Order to make deed .....	1
Citations in civil cases .....	923	Order to make deposit .....	2
Citations in criminal cases .....	3,051	Order to place child in convent .....	1
Executions .....	302	Order to deliver property .....	3
Injunctions .....	47	Posting notices of land registration....	48
Notices of attachments, filed with reg- istrar .....	26	Putting person in possession.....	5
Notices of garnishee served .....	29	Raising attachments.....	30
Notifications .....	71	Raising injunctions.....	2
Order of ouster .....	117	Sales advertised .....	62
Order of arrest:		Search warrants .....	14
Civil cases.....	24	Summonses with complaint .....	1,792
Criminal cases .....	700	Taking indemnity and other bonds ...	13
Order of sale .....	2	Writs of habeas corpus.....	46
Order to show cause.....	25	Writs of replevin.....	16
Order to suspend execution.....	2	Writs of mandamus.....	2
Order to take possession.....	4		
Order to render inventory .....	2	Total.....	7,442

A comparison of these figures with those of the preceding year show a decided increase. The amount of fees collected by the sheriff during the year was as follows: Mexican currency, \$9,015.41; United States currency, \$226.89. These fees were derived almost exclusively from civil cases.

MUNICIPAL COURT OF THE CITY OF MANILA.

On February 15 of the present year the municipal court north of the Pasig was consolidated with that south of the Pasig, and since that date all proceedings have been before Judge J. M. Liddell, holding court at the Parian station. This has resulted in a large increase in the work of that judge and a decrease in the operating expenses of the court. Judge Liddell has been able to take care of all of the business which has come before him, but there would seem to be an urgent need for an increase in his clerical force. The results of the first four and a half months since the consolidation would seem to justify the wisdom of uniting the courts. Below is a statement of the operations of both courts for the fiscal year:

	Municipal court.			
	District south of the Pasig River.	District north of the Pasig River.	City of Manila.	Total.
Complaints filed .....	906	3,534	5,237	9,802
Persons tried.....	1,467	4,567	7,166	13,184
Persons convicted.....	1,002	3,688	6,877	11,562

Committing nuisances.....	209	Attempt at bribery.....	21
		Other offenses.....	27

Collections in fines, forfeitures, etc., \$52,894.11, United States currency.

OFFICE OF THE REGISTER OF DEEDS.

This office was created by Act 496 and was organized February 7, 1903.  
The first incumbent was Señor Francisco Ortigas, who filled the office from its organization to April 15, 1903, when he resigned and was succeeded by the present incumbent, Señor Alberto Barreto.  
Below is a statement of the operations of the office since its organization.

I.—Proceedings under the provisions of the mortgage law.

Inscriptions of titles .....	416
Titles returned for correction.....	31
Inscriptions denied .....	10
Inscriptions suspended.....	11
Titles presented for inscription .....	468

II.—Proceedings under land registration act (Act 496).

Decrees of court transcribed and original certificates of property issued .....	18
Conveyances of property which had already been registered and certificates issued .....	6
Mortgages and other contracts entered affecting estates registered in accordance with Act 496 .....	1
Entries made in the so-called mortgage book in accordance with Act 496 (6 of sales and 1 of mortgage) .....	7

III.—Fees collected since the organization of the office.

In accordance with the mortgage law (Mexican currency) .....	\$4,898.44
In accordance with Act 496:	
Mexican currency .....	78.39
United States currency .....	34.00

JUSTICES OF THE PEACE COURTS.

There has been no change in the personnel of these offices. The amount of business transacted has been substantially the same as for the preceding year, although there has been a slight increase in the receipts.

Below is a statement of the business transacted by the two courts during the year:

Suits for the recovery of sums of money .....	807
Suits to recover possession of real property .....	423
Suits to secure return of personal property .....	37
Suits for specific performance .....	37
Affidavits taken .....	35
Deposits of money received.....	91
Marriage certificates received.....	2,134
Marriages solemnized.....	65
Marriage certificates registered .....	2,199
Total .....	3,629

Collections, costs, and fees, \$4,480.50, Mexican currency.

## CONCLUSION.

It will be noted that during the period between the making of the last report and April 8, 1903, the department was in charge of Mr. W. L. Goldsborough. It only remains to be stated that the present city attorney, upon assuming his duties, found the department in excellent condition, thoroughly organized, and all litigation and other matters in charge of the office completely in hand and the books and accounts in excellent condition, results which must be attributed to the energetic and painstaking work of Mr. Goldsborough while at the head of the department.

Lastly, the undersigned takes pleasure in reporting that the finances of the department are in first-class condition, and the best proof of this is that the income, after paying all expenses, leaves a surplus of about \$15,000, Mexican currency, to be turned into the city funds.

Respectfully submitted,

MODESTO REYES,  
*City Attorney.*

## EXHIBIT G.

## REPORT OF THE CHIEF OF THE FIRE DEPARTMENT.

[HUGH BONNER, Chief of Department.]

FIRE DEPARTMENT, CITY OF MANILA,  
OFFICE CHIEF OF DEPARTMENT,  
*Manila, P. I., July 25, 1903.*

The HONORABLE MUNICIPAL BOARD,  
*Manila, P. I.*

GENTLEMEN: I have the honor to transmit herewith the annual report of the operations of this department for the fiscal year ending June 30, 1903, together with such recommendations as are deemed necessary for betterment of the department.

Ninety-five alarms of fire were received by this department. The total estimated amount of loss and damage to buildings and their contents amounted to \$1,085,429, United States currency. The time worked by companies at these fires was one hundred and seventy-two hours and thirty-three minutes. Forty-one thousand two hundred and eighty feet of hose were laid; 524 feet of ladders raised, and 1,980 gallons of chemical used.

By direction of your honorable board the department was called upon to destroy during the year a number of shacks infected with disease, under the supervision of a member or representative of the board of health, who was invariably present on such occasions. The department was present with apparatus as a matter of precaution to prevent the possible extension of the fire to adjoining buildings. In no instance was the fire permitted to extend to adjoining property. A complete report of these fires is submitted herewith and marked "Exhibit A."

*Receipts and expenditures.*

	Appropriation.	Expended.	Balance.

The new fire station located in the San Nicolas district has been received from the hands of the contractors and placed in use. It is occupied by engine company No. 1, hook and ladder company No. 1, and chemical engine company No. 1. With a few alterations and repairs necessary for the comfort of the men, this station will be complete for the uses and purposes of this department.

In the quarters of engine company No. 2, located at No. 11 Calle Alcala, district of Santa Cruz, several alterations and repairs were rendered necessary, including the

setting up and placing in use of a water heater for the purpose of facilitating hot water for the boiler. There are some additional repairs to be made in this station, orders for which have been issued, and I expect to have them completed shortly.

The quarters of engine company No. 3, located at No. 288 Calle Nozaleda, Paco district, have been entirely overhauled, repaired, and painted, and are now in excellent order.

The quarters of chemical engine company No. 3, located at No. 284 Calle Nozaleda, Paco district, have been entirely renovated and a recreation room attached for the use of the men of each company. This station is now in good repair and will not require any additional alterations or repairs at present nor for some time to come.

The quarters of engine company No. 4, located at No. 27 Calle Audiencia, Intramuros, were formerly used as a storeroom by the street cleaning department and were turned over for the use of this department. These quarters were entirely overhauled, repaired, painted, and placed in first-class condition, and afford one of the most convenient and comfortable houses we have for the accommodation of men and apparatus. Light, ventilation, and sanitary conditions are entirely satisfactory.

The quarters of hook and ladder company No. 2 and chemical engine company No. 2, located at No. 11 Calle Concordia, Tanduary, Quiapo district, received but a small amount of repairs on account of contemplated erection of a new building on the present site in the near future. This building will in all probability be erected this season, the companies being in the meantime housed in temporary quarters in the immediate vicinity.

Rules and regulations for the guidance of the force were submitted to your honorable board for approval and were approved on November 5, 1902. These were caused to be printed in both Spanish and English, and bound copies were furnished to all members of this department.

The new uniform, together with the new style of buttons, cap devices, badges, and officers' insignia, which were approved by your honorable board, have been placed in use and are now worn by the uniformed members of this force.

The schools formerly used by the members of this department were discontinued on account of lack of appropriation, and there has been substituted in lieu thereof a practice form of drill, with apparatus and horses, and each company is required to practice early each morning on the days assigned for such work, continuing the year around, the weather permitting. This practice consists mainly in the methods and movements in vogue at fires, as well as the use of appliances, with a view to systemize the action of the officers and men while on duty at fires. This practice has had a beneficial result to the officers and men of the department, which could not have been obtained otherwise.

Number of horses owned by the department: American, 33; Australian, 1; and native, 11.

During the fiscal year the department acquired by purchase 26 American horses, at an average purchase price to this department of \$264 United States currency per head.

On November 7, 1902, the department sold at public auction, by order of the Philippine Commission, 2 native horses which were adjudged unfit for further service in this department.

On August 23, 1902, 1 American horse died suddenly of enteritis.

The city veterinarian destroyed horses for this department as follows: July 7, 1902, 1 American horse on account of comminuted fracture of the right metacarpal bone; October 30, 1902, 1 American horse on account of glanders; March 30, 1903, 1 American horse on account of glanders.

Under present conditions we are compelled to purchase horses from the quartermaster's department or dealers, most of which were in use in the cavalry branch of the military service and have never been accustomed to wearing a collar, and we also find many evidences of disease among them.

We are in hopes that some remedy will be devised whereby this department may obtain suitable horses. This can only be done by direct purchase from the United States, under contract, through the insular purchasing agent. This course would save a great amount of expense and trouble in the handling and conveyance of our apparatus.

The following apparatus, received under contract dated January 7, 1902, with the American Trading Company, was tested and placed in use, all of the requirements of the contract being satisfactorily complied with: 2 steam fire engines, Metropolitan, 3-horse hitch, capacity 700 gallons per minute; 4 chemical engines, 2-horse hitch, capacity 160 gallons each, carbonic-acid gas system; 2 hook and ladder trucks, 2-horse hitch, each carrying 182 feet of ladders; 4 hose wagons, 2-horse hitch, each with a carrying capacity of 1,000 feet of 2½-inch hose.

The test of the engines was held September 23, 1902, and proved fully satisfactory, coming up to the standard of the contract. The above-named apparatus is complete, with all the improvements and apparatus necessary for effective fire work.

In addition to the above-named apparatus, there were also received under this contract, 1 chief's buggy, 1-horse hitch; 15 double sets quick-hitching harness and 2 single sets of quick-hitching harness (these harness are fitted with the Barry quick-hitching hame extension collars); a Sigafoss ladder hoist; 2 Champion chemical fire extinguishers, hand, 3 gallons; 6,000 feet of standard 2½-inch rubber-lined Paragon hose and a miscellaneous assortment of pipes, shut-off, control, and spray nozzles, and general supplies for the use of this department.

The following apparatus is in service and in good condition:

*San Nicolas fire station.*—Engine company No. 1, 1 Metropolitan steam fire engine and 1 hose wagon; chemical engine; hook and ladder company No. 1, 1 hook and ladder truck.

*Santa Cruz fire station.*—Engine company No. 2, 1 steam fire engine, Metropolitan; 1 hose wagon; 1 supply cart; a chief's buggy; a deputy chief's buggy, and 1 chief engineer's cart.

*Paco fire station.*—Engine company No. 3, 1 steam fire engine (Merryweather, London, England), capacity 400 gallons per minute, unreliable; 1 hose wagon; a supply cart. Chemical engine company No. 4, 1 chemical engine.

*Tanduay fire station.*—Hook and ladder company No. 2, 1 hook and ladder truck; chemical company No. 2, 1 chemical engine. Five thousand feet of Amazon 2½-inch hose and 6,000 feet of 2½-inch Paragon hose is in active service with the engine companies.

On April 24, 1903, by authority of the municipal board, 1 steam fire engine (Shand, Mason & Co., London, England), complete with suction hose, couplings, wrenches, etc., was transferred to the department of engineering and public works, it being deemed unfit for further service in this department.

Contracts have been entered into by the insular purchasing agent for additional apparatus for the use of the department, some of which will probably be in use in a few months and the balance will be due about January 1, 1904. When this new apparatus has been placed in service it will complete the equipment of the department, giving a total of 6 fire engine companies, which I think will be ample for the use of this city in protection against fire.

Additional equipment has been ordered for the use of this department, which consists of life nets, life belts, and scaling ladders, all of which are intended for the protection of lives at fires. Each company will be furnished with a part of this equipment, and in emergency cases can be put to use by the first company to arrive at the scene of the fire.

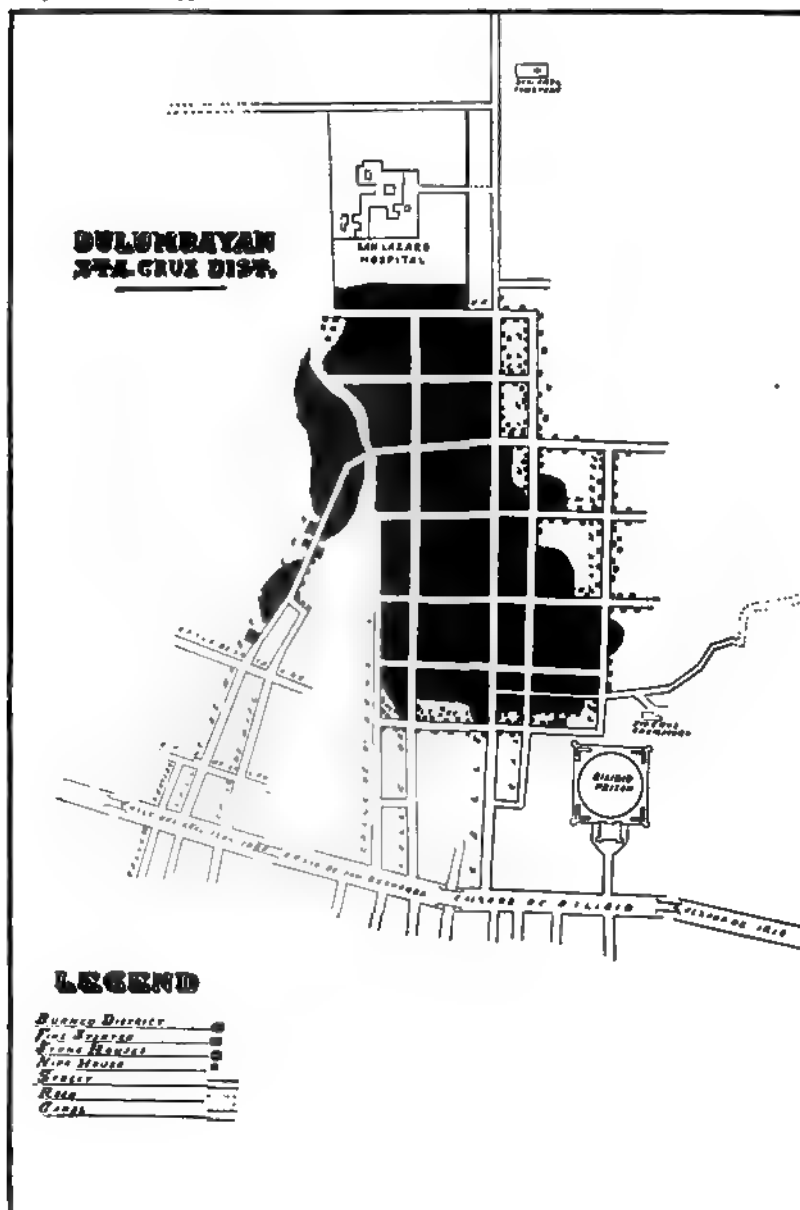

Inspection of buildings was continued from time to time when found necessary to enforce regulations and requirements for safety against fire or dangers to life or property. There are many old and dilapidated buildings in the city, some of which should be razed, as they are a menace to the public.

Since my last report a new ordinance has been adopted, and its requirements relative to the safety of the general public when attending places of amusement enforced. The requirements of the new ordinance required the installation of certain fire appliances, extra means of exit from all parts of the buildings, regulated the width of aisles, and provided that all doors open outward. The theaters that have been licensed by the city assessor and collector are regularly inspected in order that the requirements of this ordinance may be complied with. Whenever performances are rendered that cater to the citizens of this city a detail of firemen is on duty throughout the entire performance, and the building is thoroughly inspected for evidence of fire both before and after performances.

The majority of the fire plugs, or street hydrants, being located on the surface of the streets, are frequently rendered unserviceable by traffic, the box surrounding them becoming filled with dirt and other refuse. The department for its own inspection purposes has divided the city into 10 inspection districts, each of these districts being under the supervision of one of the captains of this department. The hydrants are being continually inspected, and when they are found to be out of order report of such fact is immediately made to the superintendent of water supply, sewers, etc., thereby enabling such defects to be readily located and repaired. This is necessary for the proper protection of the city, and enables the firemen of this department to become acquainted with the location of the hydrants throughout the city.

The department of engineering has recently purchased a number of post hydrants, which are now being set in various portions of the city, particularly in the streets having large water mains. This will be a great improvement over the old plug, which will be replaced by this hydrant as soon as a sufficient number are on hand.

MANILA FIRE DEPARTMENT AT WORK, 1903.

MANILA FIRE DEPARTMENT, 1900, SHOWING OLD STYLE APPARATUS.

MANILA FIRE DEPARTMENT, 1903.

Report of the Philippine Commission, 1903. Part I.

MANILA FIRE DEPARTMENT, 1903.

I desire to again call your attention to the necessity of enforcing a rigid inspection of all boilers located within the city limits, and the licensing of all engineers, when found competent to fill such positions after a rigid examination.

A new ordinance regulating combustibles and explosives, and the storage, handling, and use of petroleum, has been enacted during the last year. This ordinance requires a great deal of time and attention by this department to keep in touch with the dealers as to the exact location of such materials while in storage and in transit. Since the enactment of this ordinance 24 permits for storage have been granted, 3 of which were for fireworks and the remaining 21 covered storages, as follows: Gum copal, 163,950 pounds; gum elemi, 35,000 pounds; varnish, 500 gallons; naphtha, 20,000 gallons; lubricating wax and oil, 1,000 barrels, and kerosene oil, 3,551,950 gallons.

There were also granted 18 permits for transportation of explosives and combustibles through the streets and waterways of this city.

The fire and police alarm system (Gamewell), constructed under the supervision of the electrical branch of this department, has been accepted and placed in use and has given complete satisfaction. The material received under contract has been entirely satisfactory, with the exception of one switchboard, which has been replaced by the contractor without cost to this department.

The following is a summary of the work done by the electrical branch of this department:

Molded 5,480 lead screws on iron-pole fixtures, Set 418 poles. Strung 182 miles of wire. Installed 75 fire-alarm boxes, 78 police boxes, central fire alarm and switchboard, battery board, 5 police desks and battery boards, 5 meter generators, 600-cell storage battery, fire gongs in 5 police stations; fire gongs, indicators, and electric horse releasers in 5 fire stations; fire gongs in residences of chief of police and inspector of police; 1 fire gong in La Electricista plant; ambulance gong and indicator in Philippine civil hospital; telephones in office and residence of chief of police, police headquarters, offices of captains at various police stations; 1 private police box at Bilibid prison; 11,897 incandescent lights, 202 fan motors, 32 power motors, 59 arc lights, 4 power dynamos, 385 meters, and placed automatic electric-light switches in each of the 5 fire stations in this department; constructed new telephone line from city hall to rotunda for city waterworks telephone, and telephone line from Santa Cruz fire station to fire stations Nos. 1, 4, and 5. These lines are the property of the city, but the telephones are rented from the Manila Telephone Company.

Santa Cruz, Tanduay, and Paco fire stations were rewired; all the wiring removed from the provost building; the court of land registration building, building occupied by the city attorney, Anloague police station, Parian police station, and the building occupied by the police court wired, and estimate made for electric lights in several other city buildings.

After the entire police circuits were built, a police station was established at Paco, and consequently the lines along calles Concepción, San Marcelino, and Nozaleda had to be rebuilt. The Santa Cruz police station was established and lines run, and afterwards changed to Santa Cruz fire station. The establishment of an ambulance station at the civil hospital also necessitated the rebuilding of the line from Santa Cruz fire station to Plaza Santa Ana on heavier poles. Several other changes in the police system necessitated the changing of various lines in the Walled City, along Calle Nueva, Ermita, and Calle Misericordia, Santa Cruz.

The inspection department of the electrical branch of the fire department issued 1,457 permits and 1,244 certificates, and collected \$1,840 United States currency, in inspection fees, report of which has been rendered monthly to the auditor for the Philippine Archipelago and amounts deposited with the city assessor and collector.

The electrician of the fire department is the city electrician, and is assisted in his work of enforcing the requirements of ordinance No. 36, and in the supervision and maintenance of the fire and police alarm system, by an assistant electrician and three American linemen.

In the construction and repair work there have been employed an average of 23 native laborers per month at an average daily wage of \$1.67 local currency. These native laborers are experienced in line and general repair work, and while classed as laborers, their ability is above that of an ordinary native laborer, hence the apparently high wages when compared with the laborers of other departments.

It is contemplated in the near future to extend the fire and police alarm system throughout the various districts of the city, the great need of which is being daily felt by the department, as no companies are as yet located in many of these sub-districts, and by the placing of this contemplated extension, matters would be facilitated by giving quick alarm to distant companies in emergency cases.

I recommend the erection of a new fire station, to be located near the city stables on Calle Azcarraga on city property. This locality is at present not protected by fire companies nearer than those at Santa Cruz and San Nicolas fire stations. The addition of this company would afford very ample protection for the Tondo district, as well as for the city property in the immediate vicinity.

I would also recommend the erection of a fire station in the vicinity of the rotunda, district of Sampaloc, which is now entirely unprotected against fire, the nearest company being the chemical engine company located at Tanduay. In the event of a fire occurring in this district, it will in all probability make great headway before the arrival of the steamer from Santa Cruz, and I request a favorable consideration for the protection of this locality against fire.

I have to thank the members of your honorable board for the many kindnesses and considerations shown this department, and express my appreciation of the zealous efforts of the member in charge of the affairs of this department toward the advancement of its interests.

Very respectfully,

HUGH BONNER, *Chief of Department.*

EXHIBIT H.

REPORT OF THE DEPARTMENT OF ASSESSMENTS AND COLLECTIONS.

DEPARTMENT OF ASSESSMENTS AND COLLECTIONS,  
Manila, P. I., August 10, 1903.

To the MUNICIPAL BOARD OF THE CITY OF MANILA.

GENTLEMEN: In submitting herewith the annual report covering this department for the fiscal year ending June 30, 1903, no attempt will be made to elaborate upon the work done or results accomplished. It is only intended to be a compilation of facts and figures, subdivided, naturally, by the divisions made necessary to properly handle the varied sources of revenue incident to this department, and, if it is not presuming too much, also to respectfully make a few suggestions or recommendations respecting changes in some of the laws governing the assessment and collection of the revenues of the city.

The compilations of the following statements have been carefully made under the supervision of, and comparisons deduced by, the chief deputy collector, Mr. Ellis Cromwell, assisted by the chief clerk and cashier, Mr. C. B. Weltner.

DIVISION OF ASSESSMENTS.

The work of this division for the year ending June 30, 1903, has been of a routine character.

The assessment rolls for 1903 were prepared within the time required by law, using the same values as given in 1902.

The assessment of new improvements made during the calendar year of 1902 was carefully made, and after deducting the value of buildings destroyed, a net gain of \$1,045,398.96, United States currency, is shown, as per statement below.

These assessment rolls were completed on January 5 last, and by virtue of act 581, United States Philippine Commission, passed January 8, 1903, providing for a board of tax revision to revise the assessments for 1903, were turned over to said board for revision.

During the past year the district of Santa Ana was added to the city's assessment roll, with real estate to the value of \$441,084.59, as was Gagalangin, incorporated in Tondo, with \$70,202.60, and the Malate extension, with \$7,665.99, a total of \$518,953.18, which, together with the new improvements, brought the value of the taxable real estate in the city of Manila to \$42,037,825.55, at the time the board of tax revision began its work.

Statement showing value of new improvements, by districts.

[Values expressed in United States currency.]

District.	Value.	District.	Value.
Intramuros.....	\$26,005.00	Santa Cruz.....	\$145,516.00

Paco.....	83,805.00	Tondo.....	128,797.00
Santa Ana.....	906.00	San Nicolas.....	87,846.96
Pandacan.....	2,058.00	Total.....	1,045,398.96
San Miguel.....	56,098.00		
Sampaloc.....	143,040.00		

DIVISION OF COLLECTIONS.

REAL-ESTATE TAX COLLECTIONS.

During the period covered by this report, real-estate tax has been collected only for the calendar year 1902 and on the territory annexed to the city of Manila, under the provisions of act 341, United States Philippine Commission, amounting to one-half of 1 per cent of the assessed value for the year 1901, and 1½ per cent for the year 1902, and the delinquent tax for the year 1901.

The collection of the taxes for the year 1903 has been delayed on account of the revision of the assessed values of all property in Manila by the board of tax revision, created by act 581, United States Philippine Commission.

The tax for the year 1902,  $1\frac{1}{2}$  per cent of the assessed valuation, was collected by half years, the first half being payable without penalty in July and August and the second half at any time prior to January 1, 1903, without penalty, provided the first half had been paid within the period divided by law.

The tax on the annexed territory for the years 1901 and 1902 was payable, without penalty, during the months of October and November.

At the end of the fiscal year 1902 there were 6,377 pieces of property on which the tax for 1901 had become delinquent, in the amount of \$33,853.37, United States currency. Tax has been collected on 2,738 pieces of this property, amounting to \$12,718.69; \$1,630.36 as delinquent penalty, and \$159.43 as interest, making a total collected on account of 1901 of \$14,508.48.

It was found necessary to institute compulsory proceedings, as provided in act 82, United States Philippine Commission, to enforce the collection of the delinquencies against 130 property owners.

No property has been sold for taxes as yet.

Credit has been allowed on account of urbana and frontage tax paid in 1901 as follows: Urbana, \$669.15; frontage, \$4,643.86; total credits, \$5,313.01.

Leaving the net collections for the period covered by this report \$584,146.42.

At the end of the fiscal year 1903 taxes remained unpaid as follows:

For 1901: On 3,539 pieces of property, amounting to \$21,134.68, or  $5\frac{1}{2}$  per cent of the tax assessed.

For 1902: On 6,204 pieces of property amounting to \$47,547.68, or  $7\frac{1}{4}$  per cent of the taxes assessed.

Of this number 4,037 are pieces of property valued at \$25, United States currency, and less.

#### INDUSTRIAL TAX.

During the period covered by this report there have been issued 6,037 new patents and 2,112 have been canceled, leaving in force on June 30, 1903, 11,511 patents.

The collections in this period have been \$230,829.02, United States currency, against \$253,688.94 for the fiscal year ending June 30, 1902.

The decrease in collections from this source, as against those for the same period of last year, is due to the further depreciation of local currency, in which this tax is assessed and collected, and also to the fact that the tax on salaries was abolished by act 497, United States Philippine Commission, effective January 1, 1903. The annual receipts from salary taxes amounted to about \$30,000, Mexican currency.

The number of delinquents June 30, 1903, was 1,226, and the amount of delinquency \$6,496.88, United States currency. It is estimated that about 75 per cent of this amount will have to be declared uncollectible, as many of the industries on which the taxes have been assessed have ceased and the inspectors have been unable to locate the former proprietors. In fact these cases can not well be considered delinquencies, as in most cases the tax was paid on the industry during the time it continued, but through the failure of the owners to notify this office the tax was not discontinued when the industry ceased.

#### STAMPS.

Internal-revenue stamps have been sold amounting to \$66,582.39, as against \$74,817.21 $\frac{1}{2}$ , United States currency, collected during the fiscal year ending June 30, 1902. The decrease in the collections for this period, as against the same period of last year, is accounted for by the further depreciation of local currency, in which the stamp tax is collected, and also by the withdrawal from sale by this department of the customs stamps.

#### CERTIFICATES OF REGISTRATION.

This tax, 1 peso, is collected from all male residents of the city of Manila between the ages of 18 and 55 years, under the provisions of section 60, act 183, United States Philippine Commission.

The tax for the year 1902 was payable without penalty during the months of May and June. During that period there were only 35,934 issued; therefore a great many persons have been required to pay, during the period covered by this report for the year 1902, with the usual delinquent penalty of 100 per cent added, which accounts in part for the large increase from this source over that of the same period of last year.

Certificates have been issued as follows:

To persons not subject to the penalty, such as those arriving in the islands subsequent to the date on which the penalty attached, and to persons becoming of age since that date, at 1 peso each, for 1902.....	2,427
To persons delinquent in the payment of the tax for 1902, at 2 pesos each....	31,047
For the year 1903, payable during the months of April, May, and June, 1903, at 1 peso each.....	63,920
This makes the total number of certificates of registration taken out during the period covered by this report.....	97,394

The total amount collected was \$128,441 Mexican currency, which, reduced to United States currency at the current rate of exchange at the time of the collections, amounts to \$52,088.79.

#### MATADERO.

The ordinances requiring that all animals slaughtered for food purposes be slaughtered in the public slaughterhouse have been more rigidly enforced during the past year than at any other period since the American occupation. A very comprehensive ordinance was enacted by the municipal board August 23, 1902, providing for the regulation, inspection, and use of the public slaughterhouse, the provisions of which have been very well advertised. This ordinance also provides for the collection of the regular slaughterhouse fee of 3 cents per kilogram on livers, hearts, etc., on which no collection was made prior to its enactment.

During the period covered by this report there have been slaughtered in the slaughterhouse 23,385 head of cattle (all imported), 63,599 hogs, and 204 sheep, on which was collected as fees the sum of \$70,245.64 United States currency, as against \$63,273.30½ United States currency collected during the fiscal year ending June 30, 1902.

The slaughterhouse is probably one of the most successful of the city's institutions, as well as being a source of revenue. It has been kept in a cleanly condition, the refuse being carted away or cremated immediately after killing. An overhead trolley system for hanging the meat for the purpose of cleaning, weighing, and loading the same has been considered by the board, but no action has been taken yet. Such an arrangement would be a very valuable improvement.

An inspector from the health department is in attendance during the hours of slaughter and all meat is carefully inspected by him. If any is found to be infected it is immediately cremated in the slaughterhouse crematory.

The total collections for the year have been \$175,220.96 local currency, and the expenses for conducting the matadero, including salaries and wages, lighting, supplies of all kinds, and repairs, for the year have been \$14,061.23 local currency, which represents 8 per cent of the total collections.

The net revenue for the year is \$161,159.73 local currency.

#### MARKETS.

The seven public markets of the city are located as follows: Divisoria, district of Tondo; Quinta, district of Quiapo; Arranque, district of Santa Cruz; Herran, district of Malate; Anda, district of Intramuros; Sampaloc, district of Sampaloc; Santa Ana, district of Santa Ana.

Market tax is also collected from the bay and estero landings, where sales are made. No tax is collected, however, on consignments of goods.

The Anda Market was only thrown open to the public June 1, 1903, and at this time 87 per cent of the stalls remain unoccupied.

The number of stalls set aside for each class of goods, the average number occupied during the period covered by this report, the rate charged for stalls, and the average number of volantes or squatters in each market, with the rate charged same, and number of cascos and bancas on which tax is collected are shown by an Exhibit —, which is a part of this report.

The total market collections for the period covered by this report amount to \$109,024.47 United States currency, as against \$113,070.97 for the fiscal year ending June 30, 1902, which would show a slight increase had it not been for the further depreciation in local currency, in which the tax is assessed and collected.

The following statement shows the total collections from each market, including the collections made on Manila Bay and along the banks of the esteros; the actual cost of maintaining the markets and making collections, such as rent, where the

ground on which the markets are located is not owned by the city (which is the case only with regard to Sampaloc and Arranque markets), labor and supplies for cleaning the markets, lighting, repairs, stationery, such as receipts, etc., and salaries paid the superintendent, inspectors, and collectors of the markets.

In making this statement, the salary of the superintendent has been charged as an expense of the largest market—Divisoria—and those of the inspectors against the Quinta and Arranque markets.

The statement also shows the net collections for the year and the percentage of the expenses to the collections.

It should be borne in mind that the rates charged for stalls were not established with a view of making the markets a large source of revenue to the city, but were fixed with a view of giving the public the conveniences afforded by public markets at a nominal rate of rental.

All amounts named in this statement are in local currency.

Statement of market collections, expenses, etc.

Name of market.	Total collec- tions.	Total ex- penses.	Net revenue.	Percent- age of ex- penses to collec- tions.
Divisoria.....	\$142,521.40	\$18,809.27	\$123,712.13	13

a Nearly.

LICENSES.

All licenses are issued in accordance with the provisions of the Manila liquor licenses act or of ordinance No. 9, provost-marshal-general, as modified by amendatory acts or ordinances.

No separate accounts have been kept of receipts from liquor and business licenses, but it is estimated that the gain from last year is about equally divided between the two.

The advance from \$1.50 to \$5 local currency for native wine licenses, by act No. 524 of the Commission, November 18, 1902, accounts in part for the larger receipts.

The increase in the fee on April 1, 1903, for pawnbrokers' licenses from \$200 to \$500 resulted in a temporary increase in the revenue, but as about two-thirds of those holding licenses surrendered them when the new ordinance went into effect the receipts in the future will be about the same as formerly.

Below are comparisons between the period covered by this report and the entire fiscal year of 1902:

	1902.	1903.	Increase.
Applications for licenses.....	9,228	11,210	1,987
Disapproved.....	198	220	22
Uncalled for.....	291	1,546	1,255
Issued.....	8,704	9,541	837

Licenses were issued under the Manila liquor licenses act as follows:

VEHICLE LICENSES.

The number of public vehicle licenses issued in the city of Manila during the period covered by this report was 2,389, including cart licenses, of which 1,232 were new licenses and 1,157 renewal licenses. There were 289 transfers, 300 duplicates issued, and 132 surrendered.

The total collected from this source was \$8,711.50.

DOG LICENSES.

Dog licenses were issued as follows: 736 male, 245 female, 29 duplicate, and 30 surrendered. The fees collected amounted to \$1,387.74.

BICYCLE LICENSES.

There were 691 new bicycle licenses issued, 7 renewals, and 8 duplicates and 3 surrendered. The fees collected aggregate \$896.84.

During the period covered by this report there has been collected for license fees of all kinds \$164,820.45, against \$168,987.88 collected for the fiscal year 1902, showing a loss of \$4,167.43.

LIVE STOCK REGISTRATION.

During the year there have been registered 4,750 animals, at a fee of 20 cents Mexican each, and 3,302 animals have been transferred at a fee of 10 cents Mexi-

can each, making a total collected from this source during the period covered by this report \$506.71 United States currency, as against \$629.70 for the fiscal year 1902.

This system of registration has proven of valuable assistance to the police and others in locating horses and other animals which have been stolen or strayed.

#### VEHICLE TAX.

Vehicle tax has been paid during the period covered by this report on 611 carriages, at \$12 Mexican per year each; on 2,118 carromatas, at \$6 Mexican per year each; on 946 caretelas, at \$6 Mexican per year each; on 1,008 carretones, at \$6 Mexican per year each, and on 673 other two-wheeled vehicles, such as calesas and quilez, at \$9 Mexican per year each.

Tax has also been collected on 2,353 excess horses and 64 excess carabao.

This tax is collected on all vehicles except those in use for official purposes or owned by foreign consuls, whether the vehicle be for private or public use.

In assessing the tax on vehicles, the number of animals required to draw the vehicles are exempt from taxation, but all animals not necessary to draw the vehicles are considered excess and the owners are required to pay taxes on the same at the rate of \$6 Mexican per year each. From this it will be seen that the tax is really assessed on the animals instead of the vehicles, the tax having been paid during the period on 8,383 animals, 7,312 of which are horses and 1,072 carabao. The collections from this source amount to \$20,952.81 United States currency, as against \$24,587.85½ for the fiscal year 1902, which, considering the depreciation of local currency, in which the tax is assessed and collected, shows a slight increase over last year.

On June 30, 1903, 839 persons were delinquent in the payment of this tax, the amount of delinquency being \$1,939.14 United States currency.

#### VEHICLE EQUIPMENT.

Vehicle equipment consists of staff, disk, number plate, and driver's badge, which are furnished by this office under the provisions of section 7, ordinance No. 9, at a cost to the purchaser of 75 cents United States currency for each complete outfit. Duplicates are furnished upon application at cost price.

During the period of this report there have been furnished 1,232 complete sets, amounting to \$393.20 United States currency, making a total of \$1,317.20.

#### RENTS OF CITY PROPERTY.

During the period covered by this report rent has been collected from 85 persons and firms occupying city property, amounting to \$4,509.18 United States currency, as against \$2,903.13 for the same period last year.

Of this number 76 have no leases or contracts, and 9 have leases. Twenty are occupying apartments in the public tenement house, Calle Valdarama.

The monthly rental for the month of June, 1903, was \$221.83 United States currency, and \$1,093.11 Mexican currency.

#### MUNICIPAL COURT COSTS, FINES, AND FEES, SHERIFF'S FEES, JUSTICE OF THE PEACE COURT COSTS, FINES, AND FEES; CITY ATTORNEY'S FEES, BOARD OF HEALTH FEES, POUND RECEIPTS, REGISTRATION OF COCHEROS, CITY ELECTRICIAN FEES.

These costs, fines, fees, and receipts are accepted and receipted for under the provisions of section 61 of the Manila charter.

The amounts received from the above-mentioned sources during the period covered by this report are as follows:

	United States currency.
Municipal court costs, fines, and fees.....	\$62,691.87
Justice of peace court costs, fines, and fees.....	1,899.39
Sheriff's fees.....	3,566.89
City attorney's fees.....	109.54
City electrician's fees.....	1,673.81
Pound receipts.....	941.66
Registration of cochero fees.....	1,119.15
Board of health fees.....	4,065.33
Total.....	76,067.64

## MISCELLANEOUS RECEIPTS.

The following collections have been made under this head:

Date.	Item.	U. S. currency.
1902.		
July 2	Manila Telephone Co., 7 per cent of gross receipts for quarter ending March 31, 1903; \$763.20 Mexican, at \$2.27 for \$1.....	\$336.21
2	Martin Fernando, for privilege of operating a line of small ferryboats between Santa Ana and San Felipe: For the month of June, 1902; \$20 Mex., at \$2.27 for \$1.....	8.81
Aug. 2	For the month of July, 1902; \$19 Mex., at \$2.35 for \$1.....	8.09
Sept. 2	For the month of August, 1902; \$1 Mex., at \$2.35 for \$1.....	7.66
Oct. 1	For the month of September, 1902; \$18 Mex., at \$2.40 for \$1.....	7.50
17	Manila Telephone Co., 7 per cent of gross receipts for quarter ending June 30, 1902; \$811.15 Mex., at \$2.40 for \$1.....	337.98
Nov. 3	Martin Fernando, for privilege of operating a line of small ferryboats between Santa Ana and San Felipe, for month of— October, 1902; \$19 Mex., at \$2.46 for \$1.....	7.72
Dec. 1	November; \$19 Mex., at \$2.60 for \$1.....	7.81
10	Genario Heredia, in payment of parcel of land extending 3 meters along Calle Soler; 115.55 meters along the unnamed street leading to Arranque Market, known as "Calle para el Mercado," which land was sold by resolution of the municipal board on Aug. 8, 1902; \$526.97 Mex., at \$2.60 for \$1.....	202.68
1903.		
Jan. 3	Martin Fernando, for privilege of operating a line of small ferryboats between Santa Ana and San Felipe for month of December, 1902; \$30 Mex., at \$2.60 for \$1.....	11.64
20	Manila Telephone Co., 7 per cent of gross receipts for quarter ending Sept. 30, 1902; \$750.87 Mex., at \$2.60 for \$1.....	288.80
Feb. 2	Martin Fernando, for privilege of operating a small line of ferryboats between Santa Ana and San Felipe for month of January, 1903; \$22 Mex., at \$2.66 for \$1.....	8.27
3	Manila Telephone Co., 7 per cent of gross receipts for fourth quarter, calendar year 1902; \$924.30 Mex., at \$2.66 for \$1.....	347.48
7	Sale of condemned office furniture; \$13.30 Mex., at \$2.66 for \$1.....	5.00
12	José Manchucha, for piece of land situated on Calle Azcarraga between calles Antonio, Rivera, and Reyna Regente, immediately in front of a piece of land owned by José Manchucha; this land, containing 35.34 square meters, was sold by resolution of the municipal board on Feb. 12, 1903; U. S. Currency \$255, plus \$18.99 Mex., at \$2.66, for \$1.....	262.14
Mar. 2	Martin Fernando for privilege of operating a line of small ferryboats between Santa Ana and San Felipe, for the month of— February, 1903; \$23 Mex., at \$2.66 for \$1.....	8.65
Apr. 1	March, 1903; \$25 Mex., at \$2.60 for \$1.....	9.61
May 2	April, 1903; \$24 Mex., at \$2.50 for \$1.....	9.60
June 1	May, 1903; \$30 Mex., at \$2.45 for \$1.....	12.24
26	Manila Telephone Co., 7 per cent of gross receipts for first quarter of calendar year, 1903; \$1,051.27 Mex., at \$2.45 for \$1.....	429.09
	Total.....	2,316.38

## TOTAL COLLECTIONS.

The total collections for the period covered by this report amount to \$1,383,407.11, U. S. currency, as against \$1,094,654.01, U. S. currency, collected from the same sources during the fiscal year ending June 30, 1902.

In order to make this comparison it was necessary to add to the amount collected by the city assessor and collector from August 7, 1901, to June 30, 1902, the collections for the month of July and six days in August, 1901, made by the collector of internal revenue of Manila, and the department of licenses and municipal revenue, which offices were combined August 7, 1901, to form the present department of assessments and collections.

The collections for this period fall short of the estimate made and submitted with the last annual report to the extent of \$348,792.98, United States currency, which is accounted for by the fact that the collection of the first half of the real-estate taxes for the year 1903 has been postponed by Executive Order No. 19 on account of the assessment of the real estate of the city being revised by the board of tax revision, under the provisions of Act 581, U. S. Philippine Commission.

## CURRENT EXPENSES.

The expenses of the department during the fiscal year have been as follows:

	U. S. currency.
Salaries and wages, regular force.....	\$59,610.20
Salaries and wages, emergency force, from July 1, 1902, to Jan. 1, 1903 .....	11,660.28
Total salaries and wages .....	71,270.48
Regular supplies, such as stationery, office furniture, fixtures, books, registers, tax rolls, forms, instruments, tracing cloths, equipment for public vehicles, etc.....	9,857.18
Incidental expenses, such as coolie hire, advertising taxes due and delinquent, repairs to office furniture and fixtures, typewriters, etc .....	472.44
(Of the last amount, \$210.60 were paid to the treasurer of the Philippine Archipelago for certificates of registration. The sum of \$427.47 was expended for transportation used by the employees of this department on official business. The department is furnished only two carromatas by the insular purchasing agent, which is considered inadequate).	
Tax refunds have been made as follows:	
8 refunds on account of the overpayment of real-estate taxes, amounting to.....	642.30
3 refunds on account of the overpayment of industrial taxes, amounting to.....	29.16
4 refunds on account of the overpayment of frontage tax, paid in 1901, amounting to..	89.71
1 refund on account of money deposited by the pound keeper for one horse sold, which funds were not withheld by this office, as is provided for in ordinance 36, amounting to.....	5.80
Total amount of refunds.....	716.97

The total expenses for the period amount to \$82,244.49, which represents about 5.9 per cent of the total collections.

## PERSONNEL.

The authorized regular force on July 1, 1902, was 99 superintendents, clerks, inspectors, market collectors and laborers, consisting of 22 Americans and 77 natives, with monthly pay roll aggregating \$6,162.19.

There was also authorized an emergency force of 9 Americans and 32 natives, with pay roll amounting to \$2,194.17 monthly, making a total monthly pay roll of \$8,356.36. However, the entire force authorized was not employed, the average monthly pay roll being \$5,105.87.

The emergency force was abolished January 1, 1903, and the vacancies thus created filled in accordance with the civil service rules.

During the period covered by this report 26 employees of the civil service have resigned; 13 have been discharged; two died. Four leaves have been granted with permission to visit the United States, one for fifty-two days; one for sixty-six days; one for fifty-three days, and one for fifty-seven days. In addition 80 employees have been granted leaves aggregating five hundred and ninety-five days, with pay, and one employee a twenty-five days' leave without pay.

During the greater part of the six months that the present incumbent has occupied the responsible position of chief of the department he has been obliged to give a large share of his time to the work assigned to him by the honorable the civil governor upon the board of tax revision, and, as a consequence, has not been able to give the close attention to the details of the duties of the office that he otherwise could and would have done. However, the work has been efficiently carried on by his able deputies and the chiefs of the various divisions. The hearty cooperation accorded him at all times from these sources is worthy of remark and appreciated to the fullest measure.

The suggestions referred to in the beginning of this report to which I would ask your attention and favorable consideration are:

First. That the laws with reference to the collection of the industrial tax and the vehicle tax, now payable quarterly, be changed to semiannual payments, say on the 1st of January and July, attaching penalty to the delinquent payments after the 1st of March and September, respectively.

No inconsiderable expense would be saved by such modification of the laws, and would, it is believed, better satisfy the taxpayers, both large and small.

The law governing the collection of the cedula or registration tax should be uniform throughout, at least, the island of Luzon. Otherwise it is possible for a delinquent in one province to step over into the adjacent province and get his cedula without the penalty. This possibility would seem remote were it not for the fact that one day, late in June, application was made to this office for nearly 1,000

cedulas for persons living in an adjoining province in which the penalty had already attached, and there is little doubt that many pesos were received from, and cedulas issued to, persons representing themselves as residents of Manila, who lived and should have taken out their cedulas elsewhere.

It is further suggested that in the license department changes in existing laws and ordinances might be made that would inure to the benefit of both the contributors and the city.

However, the above are intended only as brief suggestions or recommendations for the purpose of getting your attention and possible favorable consideration.

No argument or detailed plan need be submitted at this time; but, should any of the foregoing suggestions sufficiently interest your honorable body to invite discussion, this office will cheerfully respond to the invitation.

Another suggestion, and one for which no apology is needed, is that better accommodations and facilities be given the department for waiting upon the public. It is oftentimes absolutely impossible to wait upon the public with anything like the dispatch that the taxpayer is entitled to expect. He comes with his money to pay his contribution, and of necessity, under present conditions, is obliged to wait and wait for his turn to be waited upon. This inconvenience and delay is in part, at least, due to the poor arrangement of the office.

Facilities should be such that the least possible inconvenience and delay need be imposed upon the taxpayers.

In this connection it should be borne in mind that this department is to a greater extent than that of any other (municipal or insular) a public office; that is to say, its whole business, exclusive of the assessment department, is that of serving the public. Nearly every employe is working under a strain incident to the demands of the many who are impatiently awaiting for their money to be taken and properly receipted for, or are sitting idle for days when little or no business is done or to be done.

There is very little work that can accumulate in any, except the assessment division, to keep the employees occupied when not in demand by the tax contributors. In this respect it is unlike any other department.

The rushes are periodical, according to the approach of the penalty attaching period. The fact is that the department has too limited a force during the busy seasons and too large a number during the less busy periods.

This is the direct result of being confined to the estimate given and appropriations made for a given six months for a fixed personnel.

The old system of allowing "emergency men" as necessity required, was well adapted for this department and should be restored to it. Money would be saved thereby and the public much better accommodated.

With a few substantial changes in the arrangement of the interior of the building occupied by this department, together with a more elastic provision for the personnel of the office, as to number, you would hear less complaint from the taxpayers, better work would be done, and expenses saved.

Respectfully submitted,

A. W. HASTINGS,  
*City Assessor and Collector.*

## EXHIBIT C.—Office of the city assessor and collector, Manila, P. I., annual statement of receipts and disbursements.

 Bar license prohibited in parts of districts by authority of Manila liquor license act.

EXHIBIT I.

REPORT OF THE CITY SUPERINTENDENT OF SCHOOLS.

SUPERINTENDENT OF SCHOOLS,  
Manila, P. I., September 1, 1903.

The MUNICIPAL BOARD, Manila, P. I.

GENTLEMEN: I have the honor to submit the following report of the public schools of the city of Manila for the fiscal year ending June 30, 1903, and for the months of July and August, fiscal year 1904.

That portion of the report included between dates July 1, 1902, and June 30, 1903, is based upon information contained in reports submitted by former city superintendents. The balance is based on personal observation and experience.

The attendance in both day and night schools during the past year has not been satisfactory. It began in July, 1902, with an enrollment of 2,974 and an attendance of 2,175 in the day schools, and an enrollment of 1,886 and an attendance of 1,482 in the night schools. At the close of the school year, March 20, 1903, the enrollment in the day schools was 3,458, with an attendance of 3,093, and an enrollment of 1,933 and attendance of 1,508 in the night schools.

The following tables will indicate the actual condition:

DAY SCHOOLS.

	Enroll- ment.	Attend- ance.	Attend- ance.
			<i>Per cent.</i>
1902.			
July .....	2,974	2,175	83
August .....	3,080	2,195	80

February .....	2,044	1,742	75
March .....	1,933	1,508	82
June.....	2,626	1,907	88
July .....	2,574	2,019	80
August .....	3,314	2,677	82

A number of causes are indicated in reports of former city superintendents as having been responsible for this condition. My term of service, beginning June 6, 1903, has not been sufficiently extensive to justify the expression of an opinion as to the facts of the case. During the past two months the attendance has been materially increased and is still increasing. The work began on July 15, after the long vacation, with an enrollment of 3,046 and an attendance of 2,341 in the day schools, and an enrollment of 2,626 and an attendance of 1,907 in the night schools. Present enrollment is: Day schools, 4,273; night schools, 3,314. Attendance is: Day schools, 2,950; night schools, 2,677. Notwithstanding this fact, the attendance is small in proportion to the population. This condition will exist until radical improvements in the condition of school buildings have been made. The Filipino in his present condition is not easily impressed with the merits of an educational institution conducted in an ordinary cheap dwelling house, as is the case with many of our schools.

New, modern, commodious school buildings are necessary in all parts of the city. In some parts they are indispensable. In that portion of Trozo lying beyond Azcárraga is a population of perhaps 50,000 without a school of any kind. The houses in this district are built of nipa and are not available for school purposes. Nearly every school building in the city is overcrowded. In some cases it has been found necessary to use rooms which are entirely unfit for occupation. Numerous exercises for pupils are rendered impossible by this lack of accommodations. In several cases school buildings are unsanitary in the extreme.

*Changes in buildings.*

Discontinued.....	6
Secured.....	5

SCHOOLS.

The public schools of Manila are divided into five classes: Kindergartens, elementary schools, secondary schools, night schools, and teachers' normal, in the following proportion:

Kindergartens .....	4
Elementary schools .....	34
Secondary schools.....	2
Teacher's normal.....	2
Night schools .....	23

KINDERGARTENS.

This work is under the direction of Miss Kate L. Bassett, has been established upon a substantial basis, and has proven satisfactory. Each kindergarten is in charge of an American subdirector who is a trained kindergartner. In the American kindergarten the assistants are American. In the Filipino kindergartens they are natives. Equipment and plans are modern. The Filipino children take an active interest in the work and develop rapidly. I believe that the experiment will be entirely successful.

ELEMENTARY SCHOOLS.

Elementary schools are in operation in Tondo, Binondo, Trozo, Gagalangin, Santa Cruz, Quiapo, Sampaloc, Santa Mesa, San Miguel, Concepción, Intramuros, Ermita, Malate, Singalon, Paco, Pandacan, Beata, and Santa Ana.

The work in these schools is in a decidedly healthy condition. Interest of pupils and teachers is active and increasing. Developments of pupils along the lines of study is rapid and reasonably symmetrical. It has been clearly demonstrated that the Filipino possesses both disposition and ability to learn English. Certain undesirable conditions still exist in these schools. I know of none, however, which can not be improved within a reasonable time. The most serious—defective buildings—has already been noted. Other objectionable features are that the schools are not properly or uniformly graded. No definite course of study exists. The entire system is without correlation. No plan exists whereby students may be transferred from one school to another. Pupils do not seem to recognize obligation to attend any particular school, but move from district to district as the whim may direct. Months will be required before these differences can be obviated.

SECONDARY SCHOOLS.

Secondary schools have been established in Sampaloc and Tondo. The Sampaloc school opened August 11 and at present has an enrollment of 193. The Tondo school was opened August 20 and at present has an enrollment of 101. The work in both of these schools has been successful, that in Sampaloc particularly so. The present teaching force of this school consists of 6 American and 2 native teachers and the principal, Mr. F. R. Lutz. The teaching force in the Tondo school consists of 4 Americans and the principal, Mr. Clinton. The course of instruction covers six years, two years for preparatory and four years for regular secondary work.

The following course of study has been decided upon for the regular course:

*First preparatory.*

1. English. Until able to write a letter reasonably correct.
2. Reading. Arnold's Third.
3. Arithmetic. As far as division of fractions.
4. Geography. One-half year oral, then Frye's Geography.
5. Music and drawing.

*Second preparatory.*

1. English. Complete Mother Tongue, Book II.
2. Geography. An advanced political, completed.
3. Reading. Friends and helpers.
4. Arithmetic. Fractions and percentage and their applications.
5. Spelling.
6. Drawing and music.

*High school course.*

1. Arithmetic, completed.
2. Advanced grammar and composition.
3. United States and Philippine history.
4. Physical geography. } Elective—Spanish.
5. Physiology. }

*Second year.*

1. Algebra, as far as quadration.
2. Rhetoric and composition.
3. Universal history.
4. Botany. } Electives: Zoology and Spanish.
5. Latin. }
6. Music and drawing.

*Third year.*

1. Algebra. Quadratics, radicals, and geometry.
2. American literature.
3. Universal history.
4. Physics. } Electives: French and German.
5. Latin. }
6. Music and drawing.

*Fourth year.*

1. Geometry. }
  2. English literature. }
  3. Civics. }
  4. Chemistry. }
  5. Latin. }
  6. Drawing and music. }
- Electives: French, German, trigonometry.

In addition to this regular course special instruction is offered along business and commercial lines. These schools reach a class of students formerly not administered to by the public schools of the city. Grammar schools as formerly existing were not entirely satisfactory, because conducted as advanced features in elementary schools.

The secondary school conducted as a separate and complete institution reaches a class not otherwise available. At least one more secondary school is a present necessity. The lack of American teachers makes its immediate establishment impossible.

## NIGHT SCHOOLS.

The condition of night schools is most gratifying. The interest of adult natives in the work offered is all that can be desired. These schools, 23 in number, are filled to their utmost capacity. New classes are being opened almost weekly. Present accommodations are far from adequate, and hundreds of students have been turned away because of this fact. This condition is being rapidly overcome, and we shall soon be able to accommodate all available candidates. The students in these schools range from 14 years of age upward. Almost every profession, trade, line of business, and condition of life is represented. The standards of these schools are being raised

and many teachers have been discontinued because of inadaptability. Many of the night-school teachers are employees in various bureaus of the Government and have had no normal training or experience. Only the best are retained.

#### NORMAL SCHOOLS.

These schools, two in number, located in Paco and Sampaloc, are established for the purpose of furnishing regular normal training to native teachers employed in the city schools. The course of study covers a period of three years and includes branches taught in regular normals. In order to make this course a possibility it has been found necessary to confine the instruction of pupils to a long session in the morning and to devote the afternoon to instruction for teachers. A definite course of study has been prepared and will be closely followed. Each normal is in charge of a principal, who directs the work. The work of instruction in these normals is performed by the regular American teachers, each teaching for a period of two months.

#### TEACHERS.

The work of American teachers is, in general, very satisfactory. That of many of them is extremely so. Defects existing in the city schools are almost entirely due to conditions over which the teacher has no proper control. The conditions in a very few schools would indicate that the teachers have not done all that might be reasonably expected. I am not at all certain, however, that even in the few cases included the teacher is to blame. So arduous have been my office duties that I have not been able to give nearly proper time and attention to the work of inspection. As a result I am at present unable to severely criticize the work of any teacher. It is my impression that a great many of the city teachers are overworked. Forced by circumstances to live in districts far distant from their schools and to work in buildings the sanitary condition of which is bad, the health of these teachers is subjected to a severe test. The salaries of these teachers are, with a few exceptions, too low. The general average, directors and secondary principals excluded, is \$90. So great is the expense of house rent, subsistence, and transportation to schools that simple necessity forces many to teach in night schools at a sacrifice of health and effort in the regular day schools.

#### NATIVE TEACHERS.

The native teachers of Manila may be divided upon a basis of ability into seven classes. The work of the lowest class is only fair, due in some cases to an imperfect knowledge of English, in others to a lack of training, and in others to defects inherent in the individual. The work of the highest class is splendid. This class includes about 20 teachers. I see no reason why, with proper training, these teachers may not be brought to a reasonably high standard of proficiency. They work faithfully. Their efforts are well directed and productive of proper results. Their interest in the work is all that could be wished. They are tactful and agreeable. Their desire to advance is strong. The slightest suggestion offered by the American teacher is carried to its limit. In general, the efforts of these teachers as far as they presume to go place them in a fairly high class. Several of these teachers have been promoted to positions ordinarily supposed to require qualities confined to American teachers. In this experiment we are meeting with success. Guillermo Santos has been placed in full charge of the Calle Lemery school containing more than 500 pupils and 19 teachers. Ramon Ochoa and Andrea Vitan have been placed in charge of classes in the Sampaloc secondary school. Other teachers will be promoted as rapidly as conditions will permit. The salaries of native teachers average \$35, gold. As at present constituted the native teaching force of the city is divided into fourteen classes, represented by as many different grades of salaries. It is my intention to reduce this number to seven. With the increases which accompany the change in classification indicated a satisfactory basis will have been established. The salary schedule under proposed classification is as follows: Six teachers, at \$60; 6 teachers, at \$55; 6 teachers, at \$50; 8 teachers, at \$45; 29 teachers, at \$40; 63 teachers, at \$35; 30 teachers, at \$30; average salary, \$37, United States currency.

#### IMPROVEMENTS EFFECTED DURING PRESENT SCHOOL YEAR.

Secondary schools: Secondary schools established in Sampaloc and Tondo.

Kindergartens: Kindergartens established in San Nicolas, Sampaloc, and Intramuros for Filipino children, and in Ermita for American children.

**Drawing:** A full course in drawing, compulsory in all grades, with an American director and 6 native assistants.

**Music:** A course in vocal music, compulsory in all grades, with an American director and 2 assistants.

**Teachers:** An appropriation for 50 additional day-school teachers and 35 additional night-school teachers.

**Principals:** An appropriation for 6 additional night-school principals.

**Night schools:** New night schools opened in Tondo, Trozo, Santa Cruz, Quiapo, Sampaloc, Concepción, Malate, and Santa Ana.

**In progress.**—School buildings: Modern school buildings in Tondo, Trozo, and Malate.

**Drill:** Introduction of military drill (foot movements and setting-up exercise) into all schools.

**Normal course:** A full course of normal instruction for native teachers. (This course will lead up to a form of certification similar to that of a regular normal school.)

**Course of study:** A complete course of study and a thorough grading of schools.

**School districts:** Definite establishment of district boundaries and a system of transfer whereby pupils may be transferred from one district to another.

**Classification of native teachers:** A proper classification of native teachers, whereby the fourteen classes now represented by as many different salaries may be reduced to seven.

**Kindergartens:** Establishment of 4 additional kindergartens.

**Chinese school:** Establishment of second Chinese school.

**Proposed buildings:** New school buildings to be erected in the following districts: San Nicolas, Santa Cruz, Quiapo, Santa Mesa, San Miguel, Concepción, Ermita, Malate, Paco, and Sampaloc.

**Transportation:** City transportation for directors of special subjects.

**Office quarters:** Proper office quarters for city superintendent. This includes accommodations for directors of music, drawing, and kindergarten.

**Office force:** The services of a stenographer are absolutely indispensable.

*Statement of expenses, fiscal year 1903.*

**Salaries:**

Office force.....	\$8,760.00
Native teachers.....	132,302.53
Night school teachers.....	56,542.94
American teachers.....	<sup>a</sup> 75,000.00

**Contingent expenses:**

Salaries of janitors.....	<sup>b</sup> 4,800.00
Books and supplies.....	<sup>a</sup> 15,000.00
Office supplies and labor.....	2,984.98

**Total** ..... 295,370.43

Respectfully submitted.

G. A. O'REILLY,  
*Superintendent of Schools, Manila.*

EXHIBIT J.

AMENDED REPORT OF THE MUNICIPAL BOARD

CITY OF MANILA, MUNICIPAL BOARD,  
*Secretary's Office, October 14, 1903.*

The EXECUTIVE SECRETARY, *Manila, P. I.*

SIR: The municipal board desires to amend its report on the proposed continuation of the present tax rate of 1½ per cent for 1904, by increasing the estimated public improvements, January 1 to June 30, 1904. The amount submitted by the board was \$200,000, but after a careful consideration of the needed improvements in detail, and after consultation with the new city engineer, Major Case, it is found that

<sup>a</sup> Estimated; paid from insular revenue.

<sup>b</sup> Paid by engineer department.

\$118,000 additional will be needed for such improvements. This money is proposed to be expended in the following manner:

New bridge to replace present Ayala Bridge.....	\$60,000
Extension of the street system, Ermita and Malate, including curbing streets.....	25,000
Extension of Calle Concepción over the moats and through the walls to Victoria.....	10,000
Foundations and placing of 600,000 paving blocks on the Escolta and vicinity, including curbing.....	23,000
Total.....	118,000

In addition to these much-needed improvements, heads of departments have presented a deficiency estimate, which is now in the hands of the board, amounting to \$108,330, making a total sum to be expended between the present date and June 30, 1904, of \$226,330, which should be added to the \$200,000 estimated public improvements in the above-cited opinion of the board concerning the reduction in taxation, which would reduce the estimated balance to the credit of the city at the end of the fiscal year, without any reductions for a change of the revenue laws or a decrease in the revenues, to \$307,406, and with the reduction proposed, to 1½ per cent, would probably leave the city with a debit balance at the close of the year.

In estimating for these increased sums, the city has carefully kept within the bounds of necessary work, and work which it is believed can be accomplished within the period for which the money is desired. Attention is invited to the report of the engineer on the dangerous condition of the Ayala Bridge, which makes the need of a new bridge very evident.

The paving blocks should be laid with all possible speed, in order that the work may be done before, or at least at the same time that the street railroad is establishing its lines on the Escolta.

Very respectfully,

JNO. M. TUTHER, *Secretary.*

CITY OF MANILA,  
DEPARTMENT OF ENGINEERING AND PUBLIC WORKS,  
*Manila, P. I., October 15, 1903.*

SECRETARY MUNICIPAL BOARD, *Manila, P. I.*

SIR: I have the honor to forward herewith report of the superintendent of street construction and bridges regarding the condition of the Ayala Bridge. I have personally examined this structure and know that the conditions are as stated. The bridge itself was designed for light loads, is entirely out of date, and, aside from the deterioration mentioned, is insufficient to meet the needs of the city traffic. The condition of the stringers supporting the floor is such that I would recommend the immediate expenditure of a sum sufficient to replace them, which I estimate at \$2,500 U. S. currency. This is, however, a temporary measure, and I would recommend that the sum of \$60,000 be made available as soon as possible for the purpose of installing a new and modern steel structure, consisting of two spans, to replace the present bridge. The condition of the abutments and the center pier on the island is such that very little work will be necessary to fit them for a new superstructure. The estimated cost as above mentioned is merely tentative, and, should it be authorized, this office will immediately take up the formation of plans, specifications, etc., so that bids can be invited not later than January 1.

As this matter is decidedly urgent, I would respectfully request its early consideration.

Respectfully,

J. F. CASE, *City Engineer.*

CITY OF MANILA,  
DEPARTMENT OF ENGINEERING AND PUBLIC WORKS,  
*Manila, P. I., October 15, 1903.*

Maj. J. F. CASE, *City Engineer, Manila, P. I.*

SIR: I have the honor to make the following report upon the condition of the Ayala Bridge over the Pasig River.

This bridge was built in 1881, and owing to the metal not having been properly protected by paint the same has corroded and is in a dangerous condition.

The abutments and the main pier are in very good condition, but the intermediate piers are in a very dangerous condition. These intermediate piers consist of cast-iron screw piles, of eight long and two short columns to a pier, and are held in position by cross bracing of horizontal and diagonal angle irons.

There are three of these piers between the main center pier and each abutment. One pier is placed in the center of the stream and the other two are spaced 59.4 feet on either side. The metal work in these piers has become very badly corroded, especially at the collars where the columns are spliced, and also at the water line.

That portion of the bridge between the island Convalecencia and the Germinal Cigar Factory is in the worst condition, owing to the trusses of this portion having been badly racked by the numerous collisions which have occurred to this portion of the bridge.

The floor system of the whole bridge is in a dangerous condition, especially the floor beams at their junction with the piers.

The lateral bracing of the floor system is entirely gone and some of the wooden stringers are so badly rotted that it is impossible to drive a nail in them and have it hold.

Something should be done to remedy the condition at the earliest possible time, and I am of the opinion that the city would save money in the end if a new bridge were put in, rather than try to repair the old one.

The span from the island to the Germinal Cigar Factory side is 195 feet, and it would seem that the three piers between the main pier and the abutment should be done away with, and one span designed to cover this portion.

Respectfully,

L. F. PATSTONE,  
*Superintendent Street Construction and Bridges.*

### CHARTER MANILA STREET RAILWAY.

[Ordinance No. 44.]

AN ORDINANCE granting to Charles M. Swift a franchise to construct an electric street railway on the streets of Manila and its suburbs, and a franchise to construct, maintain, and operate an electric light, heat, and power system in the city of Manila and its suburbs.

Whereas by act numbered four hundred and eighty-four of the Philippine Commission, enacted October twentieth, nineteen hundred and two, authority was given to the municipal board of the city of Manila, with the consent of the advisory board and the approval of the Philippine Commission, to grant to the most favorable bidder as therein provided, a franchise to construct and maintain in the streets of Manila and its suburbs an electric street railway, and a franchise to construct, maintain, and operate an electric light, heat, and power system in the city of Manila and its suburbs; and

Whereas immediately after the passage of said act, the municipal board caused to be filed with the Bureau of Insular Affairs of the War Department and in the office of the municipal board of the city of Manila the text of said law, together with a copy of the map of the city showing the projected routes, and made due advertisement as provided in said act, that the franchise mentioned therein would be granted upon competitive bidding and that bids for compliance with the terms and conditions of the franchises, in the form of an obligation or contract to accept the franchises and comply with all their terms and conditions, would be received at any time before the fifth day of March, nineteen hundred and three, at the office of the municipal board of Manila as provided in said act; and

Whereas on the fifth day of March, nineteen hundred and three, the municipal board met for the purpose of opening the bids that had been received as provided in said act, and it was found that the only bid that had been received was that of Charles M. Swift, which is in words and terms as follows:

"JANUARY 12, 1903.

"To the MUNICIPAL BOARD OF THE CITY OF MANILA.

"GENTLEMEN: I beg leave to submit the following bid for a franchise to construct an electric street railway on the streets of Manila and its suburbs, and a franchise to construct, maintain, and operate an electric light, heat, and power system in the city of Manila and its suburbs, proposed to be granted by you after competitive bidding under and in accordance with an act of the Philippine Commission enacted October 20, 1902, and entitled 'An act providing for the granting of a franchise to construct an electric street railway on the streets of Manila and its suburbs, and a franchise to construct, maintain, and operate an electric light, heat, and power system in the city of Manila and its suburbs after competitive bidding,' on the following terms:

"I agree that if the franchise is awarded to me I will comply with all the terms and conditions of the franchise, set forth in said act: *Provided*—

"1. That the duration of the franchise shall be fifty years.

"2. That the fares to be charged on the street railway shall be as follows: Single fares, first-class cars, six cents; second-class cars, five cents. First-class ticket fares to be sold under paragraph seventeen, at the rate of one hundred for five dollars and fifty cents, and second-class ticket fares at the rate of six tickets for twenty-four cents.

"3. The percentage of gross receipts to be paid to be two and a half per cent of the fares collected and tickets sold on the street railway, and two and a half per cent of the gross earnings of the electric light, heat, and power plant.

"It is of course understood if my bid is accepted I will cause to be formed a corporation as provided in the act to whom the franchise will be transferred.

"Very truly, yours,

(Signed)

"CHAS. M. SWIFT."

and

Whereas, the said Charles M. Swift had theretofore deposited with the treasurer of the Philippine Archipelago a certified check for seventy-five thousand dollars in money of the United States, payable to the treasurer of the Philippine Archipelago, as an evidence of good faith; and

Whereas by resolution of March sixth, nineteen hundred and three, the advisory board of the city of Manila duly consented to, and approved of, the acceptance of the bid of said Charles M. Swift as set forth above and the granting of said franchises to him; and

Whereas the municipal board of the city of Manila, by resolution of March seventh, nineteen hundred and three, duly accepted the said bid of Charles M. Swift and awarded to him the privileges contained in said franchises in accordance with said act numbered four hundred and eighty-four and with the terms of the bid set forth above; and

Whereas the Philippine Commission, at a meeting held on March ninth, nineteen hundred and three, duly approved the action of the municipal board in accepting the bid of Charles M. Swift and awarding to him the franchises as provided by act numbered four hundred and eighty-four amended to include the terms of his bid, with the proviso that said approval should not become operative unless the additional one hundred thousand dollars in money of the United States, in accordance with paragraph twenty-two of part one of section two, with paragraph eleven of part two of section two, and with section four of act numbered four hundred and eighty-four, should be deposited with the insular treasurer and a duplicate of his receipt for the same furnished to the municipal board of Manila within three days from the date of said resolution; and

Whereas on March ninth, nineteen hundred and three, the said Charles M. Swift deposited with the treasurer of the Philippine Archipelago a certified check for one hundred thousand dollars in money of the United States, payable to the treasurer of the Philippine Archipelago, and furnished to the municipal board of Manila a duplicate of his receipt for the same, said sum, together with the sum of seventy-five thousand dollars theretofore deposited by him in connection with his bid, to be retained and applied as provided in said act numbered four hundred and eighty-four: Now, therefore,

*Be it ordained by the municipal board of the city of Manila, that:*

SECTION 1. A franchise is hereby granted to Charles M. Swift, for the period of fifty years, to construct, maintain, and operate an electric street railroad in the city of Manila and its suburbs, over the streets, thoroughfares, bridges, and public places set forth in part one hereof; and to construct, maintain, and operate an electric light, heat, and power system for the purpose of generating and distributing for sale light, heat, and power throughout the city of Manila and its suburbs; all in accordance with the terms and conditions set forth in the two parts hereof, respectively (the terms and conditions in part one applying only to the franchise therein referred to, and the terms and conditions in part two applying only to the franchise therein referred to), and the laws and ordinances, not inconsistent herewith, now or hereafter in force.

#### "PART ONE.

"PARAGRAPH 1. The grantee shall have the right and privilege, and is hereby authorized, subject to the laws and ordinances now or hereafter in force, not inconsistent herewith, to make all needful excavations and constructions in or upon any of the streets, thoroughfares, bridges, and public places designated in the next succeeding paragraph for the purpose of placing, removing, and repairing tracks, sidings, curves, switches, and connections, and erecting poles, wires, and other overhead structures for the maintenance and operation of an electric street railroad, and for the generation, conduction, and distribution of electric current for said street railroad and for building, maintaining, and operating power houses therefor.

"PAR. 2. The streets, thoroughfares, bridges, and public places upon which the grantee is authorized to make such excavations and constructions are the following:

"(a) Commencing at the southerly end of the Bridge of Spain, to and along Calzada de Magallanes, across the Plaza de Martires (Plaza de España), to Calle Santo Tomas, thence to Calle Cabildo, thence to Calle Fundición, thence to Calle Palacio, thence through the wall and across the moat to Paseo de Vidal, thence along Paseo

de Bagumbayan to Calle San Luis, thence along Calle Real to Calle Cabañas, thence over the Bridge of San Antonio, and to the Pasay race track.

"(b) From the easterly end of Calle Aduana to Calle Palacio, thence to Calle de Fundición.

"(c) From the southerly end of the Bridge of Spain to Paseo de Vidal, along said paseo to its junction with Calzada de Nozaleda, along said calzada to its junction with Calzada de San Marcelino.

"(d) From the junction of Calzada de Vidal and Calle Concepción to Calzada de San Marcelino, along the latter calzada to its junction with Calle de Nozaleda, thence to Calle Real (Paco), and along said street to Santa Ana.

"(e) From the southerly end of the Bridge of Spain to the Bridge of Santa Cruz, across the Bridge of Santa Cruz through Plaza Goiti to Calle Echagüe, thence to Calle San Miguel, thence to Calle General Solano, thence to Calzada de Aviles, and along Calzada Santa Mesa to Santa Mesa.

"(f) From Plaza Goiti to Plaza Santa Cruz, thence to Calle Enrile, thence to Calle Lacoste, thence to Calle Carballo, thence to Calle Nueva, to and across the Bridge of Spain.

"(g) From the intersection of Calle San Jacinto and the Escolta along Calle San Jacinto to Calle Sacristía, thence across the Bridge of Binondo to Calle San Fernando, thence to Calle Madrid, thence to Calle Aceyteros, thence to Calle de Sagunto, thence to Paseo de Azcárraga, thence to Calle General Izquierdo, thence to Calle San Bernaldo, thence to Calle Paz, thence to Calle Bilibid, thence to Calzada de Iris to Plaza Santa Ana, thence along Calle Alix to the Rotunda de Sampaloc.

"(h) From the intersection of Paseo de Azcárraga and Calle Ylaya along the latter street around Plaza Leon XIII, to and along Calle de Sande to the Reina Bridge.

"(i) From the intersection of Paseo de Azcárraga, along Calle de Reina Regente, across the Bridge of Maura to the intersection of the line on Calle Sacristía.

"(j) From the intersection of Calle San Bernaldo (Calle Paz) and Calle Arranque to the intersection of Calle Arranque and Calle Lacoste.

"(k) From the intersection of Calle de Bilibid and Calle Cervantes, along said Calle Cervantes to the San Lázaro race track.

"(l) From the northerly end of the bridge of Spain along the Escolta, across the bridge over the Sibacon Estero to Plaza Santa Cruz.

"PAR. 3. The grantee shall have the right to lay double tracks upon each of the streets, thoroughfares, bridges, and public places mentioned in the last preceding paragraph, except the following, upon which, except with the express consent of the municipal board to the laying of a double track, only single tracks shall be laid:

"Calle Enrile, Calle Lacoste, Calle Carballo, Calle Sacristía, where these streets are less than twenty-four feet wide between curb lines; also Calle San Jacinto, Calle Nueva (Binondo), Calle de Cabañas; also Calle Cabildo, Calle Santo Tomas, Calle de Fundición, Calle Palacio, Calle Aduana, these last four being the streets within the Walled City: *Provided*, That the grantee shall have the privilege, under the direction of the municipal board, of placing upon all of the foregoing streets the necessary turn-outs, switches, and sidings: *And provided further*, That in all streets, thoroughfares, bridges, and public places the tracks, rails, and other constructions of the grantee shall be so laid and located as to leave a clear driveway between the tracks and the curb line on at least one side of such tracks where the width of the street between the curbs makes it physically possible.

"PAR. 4. The system of electric railroad to be installed hereunder by the grantee shall be the 'overhead trolley system,' but the grantee shall have the right and privilege to modify, improve, and change such system in such manner as the progress of science and improvements in and the development of motive power may make reasonable and proper; and at any time after twenty-five years from the date hereof the grantee may be required, by ordinance or law, to remove all of its overhead wires and other structures, if reasonably practicable, and to substitute therefor underground wires, or other approved conductor or motive power.

"PAR. 5. Standard T-rails of at least sixty pounds weight per yard may be used, and where used shall be laid and maintained true to the finished grade of the street or place, so that the grade of the street or place and the top of the rails shall present an unbroken surface, excepting that on the inner side of the rails of each track not more than sufficient space shall be left to allow the free passage of the car-wheel flanges: *Provided, however*, That at least two miles of such tracks shall be laid with grooved rails of the most approved pattern, weighing not less than seventy pounds per yard, the municipal board to specify the streets or parts of streets where such grooved rails shall be laid: *And provided further*, That whenever in the future the municipal board shall pave streets or places in which the T-rail is laid with blocks of stone, wood, or other material the grantee agrees to substitute for the T-rail in such

streets, parts of streets, or places, the grooved rail above described, if required to do so by the municipal board.

"PAR. 6. The gauge of all tracks laid or maintained hereunder shall be four feet eight and one-half inches.

"PAR. 7. The grantee shall in all cases lay and maintain its track so as to conform to the grades of the streets, thoroughfares, bridges, and public places along or across which said tracks may be constructed, and whenever such grades shall hereafter be established or altered by the municipal authorities of the city of Manila the grantee shall immediately relay and maintain its tracks to such established grades at its own expense: *Provided*, That if any grade at which any such track is now laid is altered by the said municipal authorities within seven years from the date hereof, the city of Manila shall not only furnish the material to enable the grantee to conform the bed of its tracks to the altered grade, but shall also furnish the material necessary to reconstruct the cement substructure of the track of the grantee at the new grade: *And provided further*, That whenever the grade at which any such track is laid is altered by the said municipal authorities after more than seven years from the date hereof, the city of Manila shall furnish the material to enable the grantee to conform the bed of its tracks to the altered grade less the cement substructure of the track.

"PAR. 8. The tracks, wires, and other constructions of the grantee shall be supported by and cross all bridges in the manner directed by the municipal authorities.

"PAR. 9. The grantee shall pave and keep in good and permanent repair the surface of the street between its rails and between its tracks and for eighteen inches on each side of its tracks under the supervision of the municipal authorities and in such manner as they shall prescribe: *Provided*, That if the municipality shall order a change of the kind of pavement with which any street or place over which the line of the grantee runs is paved the materials necessary to enable the grantee to change the pavement of so much of the surface of the street as it is hereunder required to keep in good and permanent repair in order to conform to the change ordered by the municipal authorities shall be furnished by the municipal authorities to the grantee.

"PAR. 10. The poles erected by the grantee for the operation of its railroad shall be of such height and shall be so located and painted as the municipal authorities shall direct. The poles shall not be of such crooked or ungainly appearance as to disfigure the streets.

"PAR. 11. The trolley wires of the grantee may be suspended by span wires or brackets, shall have double insulation, and shall be strung at such heights above the ground as the municipal authorities shall direct. Feeder wires shall be of the insulated type known as 'triple braid weather proof,' and no overhead wire or conductor shall carry a potential greater than five hundred and fifty volts.

"PAR. 12. The grantee shall at all times keep its tracks, rolling stock, and other constructions in good condition. Two classes of cars shall be run, and at least sixty per cent of the cars run shall be second-class cars. The grantee hereof shall at all times furnish cars of both classes sufficient to satisfy the public demand and carry comfortably all the members of the public desiring to ride thereon: *Provided*, That after one year of operation the municipal board shall have the power, with the concurrence of the grantee of this franchise, to amend this paragraph so as to require that only one class of cars shall be run, upon which the lower rate of fare shall be charged.

"PAR. 13. Every motor car run by the grantee shall be equipped with a fender of a type to be approved by the municipal authorities.

"PAR. 14. The maximum rate of speed at which the grantee may operate its cars shall be fixed by the municipal authorities.

"PAR. 15. The fare charged by the grantee shall not exceed six cents in money of the United States on a first-class car, or five cents in money of the United States on a second-class car, for one continuous ride from one point to another on the railway system of the grantee within the city limits as now or hereafter established, whether it be necessary to transfer the passenger from one car or line of the grantee to another during said ride or not: *Provided always*, That where a change of cars is necessary there shall be established by the grantee a method of transfers not unreasonably burdensome in its restrictions to the transferred passengers; and in case of a failure to comply with the foregoing requirement as to transfers it may be enforced upon application of the municipal board by mandamus to the proper court of first instance or the supreme court: *And provided further*, That on lines running outside of the city limits an additional fare or fares may be charged at the rate of five cents in money of the United States on first-class cars, or three cents in money of the United States on second-class cars, for each two miles or fraction thereof beyond the then city limits: *And provided further*, That the grantee shall for four years from the date hereof accept local currency in

lieu of money of the United States in payment for any ride or fare at the ratio of two cents local currency for one cent in money of the United States, until such time as there shall be established for these islands a gold standard coinage and money thereunder shall be made legal tender, after which time the fares to be charged shall be the equivalent of those stated above in money of the United States: *And provided further*, That pending the adoption of the gold standard, if the official ratio existing between the money of the United States and local currency shall exceed two dollars and forty cents of local currency for one dollar of money of the United States, then and in that case, the grantee may require from the passengers the payment for fares of sufficient local currency to be the equivalent of the fares above fixed in money of the United States at the official ratio: *And provided further*, That at any time after twenty-five years from the date hereof, upon due notice from the city of Manila to the grantee, the fares charged by the grantee may be readjusted on a reasonable basis by three arbitrators; one to be chosen by the city, one by the grantee, and the third to be selected by the two so chosen if they can agree, but if not, then to be selected by the chief executive of the islands. The award of the majority of such arbitrators shall be final.

"PAR. 16. Members of the police and fire departments of the city of Manila wearing official badges shall be entitled to ride free upon the cars of the grantee, subject to such reasonable and proper restrictions as may be imposed. The fares charged children under seven years of age and children under sixteen years of age going to and from school shall not exceed half the ordinary rates of fare. Children in arms shall ride free. The grantee shall have the power to establish reasonable regulations for identifying those children going to and from school.

"PAR. 17. Until such time as the fares herein fixed shall be readjusted the grantee shall place on convenient sale lots of one hundred tickets at the rate of five dollars and fifty cents in money of the United States per one hundred, each of which shall be good for one first-class continuous ride on the cars of the grantee within the limits of the city of Manila; and lots of six tickets at the rate of twenty-four cents in money of the United States per six, each of which shall be good for one second-class continuous ride on the cars of the grantee within the city limits: *Provided*, That the grantee may issue such tickets subject to such reasonable restrictions as to the grantee may seem proper.

"PAR. 18. In compliance with the franchise held by the *Compañía de los Tranvías de Filipinas*, the grantee herein shall pay to said *Compañía de los Tranvías de Filipinas* five per cent of one peseta per passenger for each kilometer of the line of said *Compañía de los Tranvías de Filipinas*, and a proportionate amount for each fraction of a kilometer of said line over which said passenger is transported.

"PAR. 19. The grantee shall be liable to pay the same taxes on its real estate, buildings, plant (not including roadbed and track, rolling stock, poles, and wires), machinery, and personal property as other persons are now or hereafter by law may be required to pay. The grantee shall further pay to the municipal government of the city of Manila two and a half per cent of the fares collected and tickets sold within the limits of the city of Manila, and the same percentage of fares collected and tickets sold without the said limits to the proper municipality or municipalities of the province of Rizal. Said percentage shall be due and payable by the grantee monthly, and shall be in lieu of all taxes and assessments of whatsoever nature, and by whatsoever authority, upon the privileges, earnings, income, franchises, roadbed, track, rolling stock, poles, and wires of the grantee, from which taxes and assessments the grantee is hereby expressly exempted.

"PAR. 20. The grantee shall keep a record of all fares collected and tickets sold, which shall be subject to the inspection of the municipal authorities, who shall audit and approve the accounts of the company at the end of each month before the payment of the percentage tax. The accounts when audited and approved as herein provided shall be final and conclusive evidence of the liability of the company under the provisions of paragraph nineteen.

"PAR. 21. The grantee shall begin the construction of the road within the city of Manila within six months from the date of the granting of the franchise, and shall complete the construction of the road and commence the operation of the same within twenty months after the expiration of said period of six months, unless prevented by an act of God, or the public enemy, usurped or military power, martial law, riot, civil commotion, or inevitable cause, and shall thereafter maintain a first-class street railway service in every respect. The failure of the grantee to comply with the conditions of this paragraph shall render the franchise in this part described liable to forfeiture.

"PAR. 22. Upon the award of this electric street railway franchise and before the same is finally granted, the grantee shall pay to the treasurer of the Philippine

Archipelago, to the credit of the city of Manila, the sum of one hundred and seventy-five thousand dollars, money of the United States, in securities to be approved by the civil governor of the Philippine Islands, as security for the performance of the bid: *Provided*, That the said sum shall be repaid by the said treasurer to the grantee in the event of the faithful performance by the grantee of all the conditions of this franchise and of all the obligations herein imposed on the grantee, whenever, within the period hereinbefore fixed, three-fourths of the mileage of the road covered by this franchise shall have been constructed. If, however, the grantee shall, within the time required, fail to perform the obligations of his contract, then the city may, by appropriate action, recover the sum so deposited as liquidated damages for the breach. If the deposit of one hundred and seventy-five thousand dollars shall be invested in interest-bearing securities, the interest shall be collected by the treasurer and shall be turned over to the grantee as it accrues and is collected, until, and unless, the grantee shall fail to perform the obligation of his contract, when the thereafter accruing interest shall be regarded as part of the liquidated damages.

"PAR. 23. The grantee shall hold the city of Manila harmless from all claims, accounts, demands, or actions arising out of accidents or injuries, whether to property or persons, caused by the construction or operation of the road.

"PAR. 24. All reasonable or proper or necessary changes on the lines or routes of the grantee may be made by the grantee, with the approval of the municipal authorities and the consent of the civil governor.

"PAR. 25. The violation or the infringement by the grantee of any of the conditions or the terms as above set forth in part one hereof shall not subject or render liable to forfeiture the franchise more particularly described in part two hereof.

"PAR. 26. Whenever any franchise or right of way is granted to any other street railway company, now or hereafter in existence, over portions of the lines and tracks of the grantee herein, the terms on which said other company shall use such right of way, and the compensation to be paid to the grantee herein by such other company for said use, shall be fixed by the members of the supreme court, sitting as a board of arbitrators, the decision of a majority of whom shall be final.

"PAR. 27. Failure by the grantee to maintain a first-class street railway service in every respect over any portion of its lines or tracks shall constitute an abandonment of such portion, and the grantee may be required by the city of Manila to remove the lines or tracks so abandoned, or the said city may cause such lines or tracks to be removed at the grantee's expense: *Provided*, That should any part of these lines be abandoned by the company without the consent of the municipal authorities such abandonment may constitute a ground of forfeiture of the entire street railway franchise herein conferred.

"PAR. 28. At any time after twenty-five years from the date hereof the city of Manila may purchase and the grantee shall sell to the city of Manila all of its lines, tracks, cars, real estate, buildings, plant, rights under this franchise, and other property used by it in the operation of a street railway in the city of Manila, at a valuation based upon the net earnings of the grantee, the valuation to be determined, after hearing evidence, by the supreme court of the islands, sitting as a board of arbitrators, whose decision, by a majority of the members thereof, shall be final.

#### "PART TWO.

"PAR. 1. The grantee shall have the further right and privilege, subject to the laws and ordinances now or hereafter in force, not inconsistent herewith, of erecting, extending, and maintaining in and along the streets, thoroughfares, bridges, and public places of the city of Manila and its suburbs the necessary poles, wires, cut-outs, transformers, and other appurtenances and overhead structures for the conducting and distributing of electric currents for light, heat, and power, and the furnishing and selling the same to any person, corporation, or public authority: *Provided*, That such electric current for the furnishing of light, heat, and power shall be furnished under regulations of the municipal board to any person within the corporate limits of the city, residing or doing business within such distance from the main lines conveying such current as the municipal board shall decide to be reasonable: *And provided further*, That the municipal board may require the extension of the main lines of current in any direction within the city limits in its discretion.

"PAR. 2. The municipal board, with the approval of the advisory board and the commission, shall have authority to fix, from time to time by ordinance, the prices at which such current shall be furnished to private persons or corporations and to the city and the insular government: *Provided always*, That the prices so fixed shall be reasonable; and in case the municipal board shall disagree with the advisory board as to reasonable rates, then the commission shall fix them.

"PAR. 3. All poles erected by the grantee shall be of such height and shall be so located and painted as the municipal authorities shall direct. The poles shall not be of such crooked or ungainly appearance as to disfigure the streets.

"PAR. 4. All the wires of the grantee shall have double insulation and shall be strung at such heights above the ground as the municipal authorities shall direct. Feeder wires shall be of the insulated type known as 'triple-braid weatherproof.'

"PAR. 5. The system used by the grantee shall be that known as the 'alternating current system': *Provided*, That where it is desired to furnish heat, power, or arc lighting, direct currents may be used: *And provided further*, That in the carrying of currents, stringing of wires, insulation, and in all other respects, the grantee shall comply with the rules and regulations adopted or hereafter to be adopted by the National Board of Underwriters of the United States for the safeguarding of the conduct and use of electric currents in cities.

"PAR. 6. The plant and system of the grantee shall be erected, extended, and maintained according to the best and most approved type of modern electric light, heat, and power plants and systems, and shall conform in all respects to the laws and ordinances now or hereafter in force, not inconsistent herewith.

"PAR. 7. The grantee shall begin the construction of the system within the city of Manila within six months from the date of the granting of the franchise, and shall complete the construction of so much of the system as shall be coextensive with the lines of the street railway to be constructed under Part One hereof, and commence the operation of the same within twenty months thereafter, unless prevented by act of God, or the public enemy, usurped or military power, martial law, riot, civil commotion, or inevitable cause. The failure of the grantee to comply with the conditions of this paragraph shall render the franchise in this part described liable to forfeiture.

"PAR. 8. The city of Manila shall have the privilege, without compensation, of using the poles of the grantee for the purpose of installing, maintaining, and operating a fire and police telegraph system.

"PAR. 9. The grantee shall be liable to pay the same taxes upon its real estate, buildings, plant (not including poles, wires, transformers, and insulators), machinery, and personal property as other persons are or may be hereafter required by law to pay. In consideration of Part Two of the franchise herein granted, to wit, the right to build and maintain in the city of Manila and its suburbs a plant for the conveying and furnishing of electric current for light, heat, and power, and to charge for the same, the grantee shall pay to the city of Manila not less than two and a half per cent of the gross earnings received from its business under this franchise in the city and its suburbs. Said percentage shall be due and payable at the time stated in paragraph nineteen of Part One hereof and after an audit like that provided in paragraph twenty of Part One hereof, and shall be in lieu of all taxes and assessments of whatsoever nature and by whatsoever authority upon the privileges, earnings, income, franchises, and poles, wires, transformers, and insulators of the grantee, from which taxes and assessments the grantee is hereby expressly exempted.

"PAR. 10. The violation or infringement by the grantee of any of the conditions or terms as above set forth in Part Two hereof shall not subject or render liable to forfeiture the franchise more particularly described in Part One.

"PAR. 11. Of the deposit of one hundred and seventy-five thousand dollars of securities required in paragraph twenty-two of the first franchise, twenty-five thousand dollars shall be held by the treasurer of the Philippine Archipelago for the benefit of the city of Manila, to secure compliance with the second franchise herein granted, on the same terms as those contained in paragraph twenty-two above.

### "PART THREE.

#### "GENERAL PROVISIONS APPLYING TO BOTH FRANCHISES.

"PAR. 1. The franchises here granted shall be subject to amendment, alteration, or repeal by the Congress of the United States, and the right to use and occupy the streets and other public lands herein granted shall revert to the city of Manila, the provincial government of Rizal, or to the insular government, as the case may be, upon the termination of these franchises by forfeiture, repeal, or expiration in due course.

"PAR. 2. It shall be a condition of the enjoyment of these franchises that the person or persons to whom they may be originally granted, under the provisions of this act, shall, before April first, nineteen hundred and three, form a corporation under the laws of the Philippine Islands, hereafter to be passed, or under the laws of the United States or of any State thereof and whose charter shall comply with the laws prevailing in these islands, to take over these franchises, and to perform the terms thereof to be performed by the grantee thereof, in which no stock shall be

issued or bonds sold except in exchange for actual cash or for property at a fair valuation equal to the par value of the stocks or bonds so issued or sold, and in which no stock or bond dividends shall be declared.

"PAR. 3. The books and accounts of such corporation shall be subject to official inspection by the municipal authorities and by the auditor for the archipelago or his authorized deputies.

"PAR. 4. It shall not be lawful for the grantee of these franchises, or any vendee thereof, to use, employ, or contract for the labor of persons claimed or alleged to be held in involuntary servitude.

"PAR. 5. The corporation to be formed by the persons originally receiving the grant for the purpose of maintaining and operating these franchises under the laws of the Philippine Islands shall not have power to alienate the same except by consent of the municipal authorities and the approval of the civil governor."

SEC. 2. This ordinance shall take effect and be in force on and after the twenty-fourth day of March, nineteen hundred and three.

Enacted March 24, 1903.

## EXHIBIT W.

### REPORT OF THE OFFICER IN CHARGE OF THE IMPROVEMENT OF THE PORT OF MANILA FOR THE FISCAL YEAR ENDING JUNE 30, 1903.

OFFICE IMPROVEMENT OF THE PORT OF MANILA,  
SANTA LUCIA BUILDING, MALECON DRIVE,  
Manila, P. I., July 9, 1903.

SIR: I have the honor to submit herewith my report in connection with the improvement of the port of Manila for the fiscal year 1903.

#### DEEP-WATER HARBOR.

CONDITIONS JUNE 30, 1902.

*Pile and timber bulkhead.*—The pile and timber bulkhead had been completed and estimated to the contractors for a total length of 2,093 feet; 17,715 tons (2,000 pounds) of riprap stone had been placed in the completed timber work.

*East breakwater.*—Four hundred and seventeen tons (2,240 pounds) of stone had been placed in extension of the east breakwater. No rock had been placed in west breakwater. A quarry had been opened at Mariveles, employing an average daily force of 140 men; 6,526 tons (2,000 pounds) of rock were furnished during the month of June.

No dredging had been done, but an hydraulic dredge of an estimated capacity of 1,000 cubic yards per hour was being constructed by the contractors.

#### PROGRESS DURING THE FISCAL YEAR ENDING JUNE 30, 1903.

*Pile and timber bulkhead.*—The pile and timber bulkhead has been completed and estimated to the contractors for a total length of 4,189 feet. The remaining length to be completed is 502 feet, and as this part of the work is being carried forward as rapidly as possible, it is expected that in another month the bulkhead will be completed and the area to be reclaimed will be surrounded by a water-tight inclosure.

During the severe storms of July 26 to 31, 1902, 394 feet of the completed and accepted bulkhead were destroyed, owing to the fact that in this portion of the work the rock had not been brought up to the specified height.

During the month of April about 190 feet of the bulkhead gave way from the pressure of the earth filled in behind. In other places the bulkhead was pushed outward a small distance, but was kept from going farther by placing additional rock in the outer slope. Careful watch will have to be kept upon the bulkhead as the elevation of the filling increases, and at signs of the giving way of any portion of the work additional rock will have to be placed to secure it.

Eighty-five thousand two hundred and thirty-nine tons (2,000 pounds) of stone were placed along bulkhead, making a total of 102,954 tons. About 15,000 tons of rock will be required to bring it up to the required section the entire length of the bulkhead.

*East breakwater.*—Twelve thousand three hundred and eleven tons (2,240 pounds) of rock were placed in east breakwater, making a total of 12,728 tons, bringing it up to mean low water in full section its entire length, except the outer end, where it will join the bulkhead.

*West breakwater.*—Eighty-one thousand one hundred and five tons (2,240 pounds) of rock were placed in west breakwater in extension of the old Spanish work. The estimated amount of rock necessary to complete the substructure is 92,314 tons.

*Quarry.*—The quarry at Mariveles is running satisfactorily and is furnishing a good, clean quality of rock. A force of 47 Americans and 306 natives is employed. Four derricks and one cableway are used in loading the scows. As it is now running, the quarry has a capacity of about 25,000 tons (2,240 pounds) per month.

*Dredging.*—The hydraulic dredge was completed and began work during the month of February, and since that time has dredged from the outer basin and deposited behind the bulkhead 1,550,233 cubic yards of material. At first considerable time was lost in adjusting and repairing machinery, but the dredge is running more regularly at present.

Since the dredge began operations the total time worked has been 1,529 hours, and the time lost 1,570 hours. The average amount of material removed for all time worked per hour has been 1,014 cubic yards.

#### PROBABLE OPERATIONS DURING THE FISCAL YEAR ENDING JUNE 30, 1904.

*Pile and timber bulkhead.*—With favorable weather the pile and timber bulkhead will be completed in another month, and the riprap in bulkhead will be completed in full section its entire length. Additional rock along the bulkhead will probably be necessary from time to time to strengthen it as the pressure from the fill increases.

*East breakwater.*—As soon as the bulkhead is completed the remaining rock will be placed in east breakwater. One week will probably be sufficient to finish this work.

The placing of the concrete blocks will begin soon after the riprap is completed, though an opening will probably be left for a spillway till the mud reaches the top of the riprap.

*West breakwater.*—After the riprap work has been completed along the bulkhead and east breakwater, all of the rock brought over will be placed in the west breakwater. With the increased plant, which the contractors expect to have in operation in another month, an average of 25,000 tons should be delivered monthly.

The substructure should be completed in six months. The work upon the superstructure will probably begin immediately after the typhoon season and should be completed before June 30, 1904, with the exception of the end portion, where the superstructure will not have passed through one season of typhoons.

*Dredging.*—If the present rate of progress is continued, the dredging should be nearly completed by the end of the fiscal year.

#### BRIDGE ACROSS THE PASIG.

CONDITION JUNE 30, 1902.

Reports, plans, and designs had been rendered, surveys and maps made, and all necessary borings for determining the nature of the underlying strata completed.

#### PROGRESS DURING THE FISCAL YEAR ENDING JUNE 30, 1903.

All details were completed and plans filed.

#### IMPROVEMENT OF THE PASIG RIVER.

The Bridge of Spain, situated about 6,000 feet above the mouth of the Pasig River, with its stone arches and clearance of but 16 feet at low water, forms a serious obstacle to navigation and limits the wharf front for seagoing vessels to the portion of the river below it. There is, however, a large commerce on the upper Pasig, carried on in barges, cascos, and tugs, which have been constructed so as to pass under this bridge and three others which span the river above it.

During the Spanish occupation of Manila extensive improvements of the river were inaugurated. The river banks below the Bridge of Spain had been faced with substantial masonry walls founded about 12 feet below mean low water and capped by a granite coping extending about 7 feet above, and the channel of this portion of the river had been deepened to about 14 feet. On the upper Pasig numerous wharves had been constructed and the river straightened for a distance of 3,500 feet above the Mariquina River by what is known as Weyler Cut.

The tributaries of the river during floods bring into it large amounts of sand and gravel, and storms in Manila Bay form a bar across its mouth.

The existing project proposes to maintain by dredging an 18-foot channel at mean low water across the bar and up to the Bridge of Spain, and a 6-foot channel through the upper river, the work to be done by Government plant and hired labor.

The elevator dredges built for the Spanish Government have been repaired and are at work on the lower river.

At the close of the last fiscal year a channel through the bar 17 feet deep, 4,000 feet long, and 300 feet wide, with 325 feet width at the bend, had been completed, and the channel of the Pasig River had been deepened to 18 feet over a width of 250 feet through a linear distance of completed channel equivalent to 3,000 feet. The canal connecting the river and harbor basin had been dredged to a depth of 15 feet. The total amount dredged was 472,804 cubic yards.

During the present fiscal year the plant has been increased by three steel dump scows, built at the shops of the works of the port, and a small 30-foot launch constructed. The old wall at the entrance to the canal has been removed to a depth of 12 feet. The channel across the bar has been redredged to a depth of 20 feet below mean low water and a width of 300 feet. In the river a channel between 400 and 500 feet wide to a depth of 19 feet at mean low water has been dredged to the Bridge of Spain; 696,264 cubic yards of dredged material were removed during the year.

For dredging the upper Pasig River a dipper dredge of 1½ yards' dipper capacity has been constructed, the hull having been built at the works of the port and the machinery purchased in the United States. Three wooden dump scows have also been built. Due to the difficulty of disposing of the dredged material, it was decided to place a centrifugal pump on one of the scows for the purpose of pumping the material on land. The pump has been ordered from the United States and is being set up. The dipper dredge is being tested, but is not yet in good working order.

The shops of the works of the port and the dry dock have been run to their full capacity during the year and have accomplished a large amount of work. Whenever the dry dock has not been needed for the vessels employed on the works, vessels belonging to the quartermaster department, the coast-guard service, the customs service, and to the Marine-Hospital Service have been docked and charged the actual cost plus 10 per cent for wear, tear, and renewal. It has been used 128 days by these departments.

#### THE NEW DRAWBRIDGE OVER THE PASIG RIVER.

In connection with the improvements of the port which have been inaugurated, it is proposed to construct a drawbridge across the Pasig River near its mouth, to afford communication from the new harbor front to the business portion of the city. Surveys and maps of the site have been made, the necessary borings to determine the nature of the underlying strata completed, and details and plans for the bridge prepared and filed.

The CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS,  
Manila, P. I.

**REPORT OF THE OFFICER IN CHARGE OF THE IMPROVEMENT OF THE PORT OF MANILA FOR THE MONTH OF OCTOBER, 1903.**

OFFICE IMPROVEMENT OF THE PORT OF MANILA,  
SANTA LUCIA BUILDING, MALECON DRIVE,  
Manila, P. I., November 9, 1903.

SIR: In accordance with section 7, act No. 22, United States Philippine Commission, I have the honor to submit the following report of operations in connection with the improvement of the port of Manila and the Pasig River for the month of October, 1903.

**DEEP-WATER HARBOR.****PROGRESS DURING OCTOBER, 1903.**

*Riprap along timber bulkhead.*—Two thousand two hundred and eighteen tons (2,000 pounds) of riprap were deposited along timber bulkhead in places where rock had settled; 3,744 tons (2,000 pounds) of riprap were placed along basin wall.

*East breakwater.*—Four hundred and forty-nine tons (2,240 pounds) of rock were used in leveling off the top of the east breakwater. Nearly all of the concrete blocks for the east breakwater were delivered at the work, but none were placed.

The placing of the concrete blocks on the east breakwater has progressed slowly and in a very unsatisfactory manner. The work has not been under the charge of a competent foreman, and very poor judgment has been used by the contractors in the planning and execution of the work.

*West breakwater.*—Seventeen thousand six hundred and sixty-six tons (2,240 pounds) of rock were placed in west breakwater, in extension of the old Spanish work.

*Dredging.*—On October 2 the dredge was moved to a place in the harbor 500 feet from the bulkhead and opposite the east breakwater, discharging the material dredged near the south end of the bulkhead, in order that the heavy material which remains near the outlet of the pipe line be deposited along the riprap wall, through which a large part of the softer material had been escaping.

One hundred and forty-seven thousand four hundred and seventy-six cubic yards of material were paid for. A greater quantity than this had been dredged, but a material reduction was made in the estimate to cover the material which escaped over the uncompleted portion of the east breakwater.

*Work being done by the Government.*—The work of building a bulkhead to protect the canal wall was begun this month. It is to be 75 feet from and parallel to the wall. The bulkhead will consist of two rows of sheet piling about 8 feet apart, supported by piles and waling, and with an earth fill between the sheet piling. The supporting piles are nearly all in place.

Seventeen concrete blocks taken from Engineer Island, near the site for the proposed marine railway, were placed on the riprap wall where the bulkhead was destroyed by the typhoon of July, 1903.

**PROBABLE OPERATIONS FOR NOVEMBER, 1903.**

A small quantity of rock is still necessary along the bulkhead and basin wall, and this portion of the work should be completed this month.

The placing of the concrete blocks should be nearly completed this month.

The dredge will continue its operations in the outer basin.

The timberwork for the bulkhead to protect the canal wall should be completed this month and the earth filling begun.

The portion of the bulkhead that was destroyed by the typhoon of July, 1902, will be repaired with concrete blocks and riprap.

*Lower Pasig River.*—Dredge No. 2, working in lower Pasig, removed 52,000 cubic yards of material, at a cost of \$0.068 per cubic yard. Total cost for month, \$3,542.15. Rough weather somewhat retarded the work.

*Upper Pasig River.*—Dredge No. 7, working in the upper Pasig, removed 11,694 cubic yards of material at a cost of \$0.1234 per cubic yard. Total cost for month, \$1,447.65.

*Dry dock.*—Tug *Manila*, October 1 to October 9, inclusive, nine days, was generally repaired; coast guard *Scout*, October 12 to October 18, inclusive; coast guard *George Tilley*, October 19 to October 21. Dredge No. 1, October 24 to October 31, inclusive, eight days, to be thoroughly overhauled, new boilers placed, and new sheathing placed on hull; will be in the dry dock for another month, at least. Launch *Arc* was beached and repaired. Three small pontoon scows were constructed for dredge No. 3. A new boiler has arrived for dredge No. 3 and is being set up.

*Pasig River wall.*—Two hundred feet of wall completed, at a cost of \$289.29.

*Financial statement.*

Salaries and wages:	
Harbor work .....	\$2,574.14
Pasig River .....	4,998.16

The CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS,  
Manila, P. I.

(Through the Chief of Engineers, Division of the Philippines.)

## EXHIBIT X.

### SECOND ANNUAL REPORT OF THE EXECUTIVE SECRETARY TO THE CIVIL GOVERNOR.

MANILA, P. I., *October 1, 1903.*

SIR: I have the honor to submit the following report of the work of the executive bureau for the year ending September 30, 1903:

The first annual report, which covered the period from the inauguration of the civil government, July 4, 1901, to September 30, 1902, recited the duties and functions of this bureau as provided by law and developed in practice during that period. A few more words upon this subject may not be amiss, as throwing light upon the governmental machine that has been evolved and put in motion in these islands, patterned after, but differing in a considerable degree from, the great democratic mechanism known as the Government at Washington.

Under the present organization of the insular government the jurisdiction of the executive bureau is in fact that of a department rather than a bureau, for in the performance of duties specifically fixed by law, as well as pursuant to the general provision "to assist the civil governor in his executive duties," the executive bureau is required to discharge many of the functions of an executive department under the Federal Government of the United States. Like the Department of State, it publishes the laws and resolutions of the central legislative authority and proclamations; grants and issues passports; has the custody of the great seal of the government; countersigns and affixes this seal to all executive proclamations to various commissions and to warrants for the extradition of fugitives from justice; and conducts correspondence with consular representatives of foreign powers accredited to the islands.

The office of the improvement of the port of Manila falls within the jurisdiction of this Bureau, under the direction of the civil governor, and in this respect at least one of the functions of the War Department is discharged. The assignment, relief, and transfers of judges of courts of first instance, and, to a degree, of other officers of the judiciary of the islands, impose upon this office duties of a character which under the Federal Government devolve upon the Department of Justice.

The constant increase in demands upon the time of the civil governor rendered it necessary for this office to assume, under his direction, the supervision of provincial and municipal governments, including that of the city of Manila, in which regard the executive bureau performs duties analogous to, though more extensive than, those of the Department of the Interior in its exercise of certain powers and duties in relation to the Territories of the United States. It has, as well, departmental control as exercised under the Federal Government of the United States by the office of the President, over independent and unassigned bureaus and offices which at this time are the bureaus of the Philippine civil-service board and insular purchasing agent, and the offices of the improvement of the port, the St. Louis Exposition board, and the collecting librarian for the Philippine Archipelago. Interdepartmental business is transacted through this office, so that in many ways it merits the designation recently given by one who termed it "the clearing house of the Government."

During the absence of the secretary of commerce and police in the United States the bureaus of that department were attached for administrative purposes to this office, and from April 9, when the civil governor went to Baguio, Benguet, and while the Commission was in session there from May 11 to June 2, 1903, it became necessary for this bureau to act frequently upon important matters of an urgent character falling within the jurisdiction of all the other departments and in respect of which it was impracticable to await instructions by post when telegraphic communication was interrupted.

The supervisory control and direction of provincial governments, referred to above, carries with it the obligation to solve countless problems of administrative organization and operations, and brings the bureau into closer contact with the nearly 7,000,000 inhabitants of the Archipelago than any department or other office of the central government. A great share of this work is in the form of original requests for decisions

upon matters not clearly falling within the purview of any department, and appeals to the civil governor and the Commission from decisions by those departments.

Within the original jurisdiction of this office lies the review of proceedings in cases involving charges against government officials, including provincial and municipal officials and justices of the peace. The important work of translating, digesting, and preparing the voluminous records in these cases, with recommendations as to disposition, is assigned to the law clerk of the bureau, whose report is herewith submitted (Appendix A), from which may be obtained a more adequate conception than may be here conveyed of the portion of the work of the office assigned to him.

The formative period, so far as it relates to provincial administration—in many respects the most important factor in the work of the bureau—must necessarily extend over several years, and the necessity for consolidation and reorganization in the interest of economy and good administration has demanded and received action in several instances during the year. The following changes have been made in the boundaries of organized provinces during the year under review: By including that portion of Nueva Ecija which extended to the ocean and lay between what were under Spanish Government the districts of Infanta and Principe, the province of Tayabas was given continuity of territory on the Pacific coast and a slight extension to the northward by the addition of a portion of southern Isabela. By act of November 10, 1902, the organization of the province of Marinduque was discontinued and its territory, with the exception of the island of Mindoro, merged in the province of Tayabas. The province of Mindoro was then established, to consist of the island of Mindoro and small adjacent islands, including the island of Luban. The limits of the province of Paragua were extended by act of May 14, 1903, to include the entire island of Paragua, the islands of Dumarán and Balabac, the Calamianes Islands, the Cuyos Islands, the Cagayanes Islands, and all adjacent islands not included within the limits of any other province.

By the creation of the Moro Province by act of June 1, 1903, which went into effect on July 15, from portions of the provinces of Misamis and Surigao, the theretofore unorganized territory of the island of Mindanao, the Jolo and Tawi-tawi groups, and adjacent islands, the provincial organization of the entire Archipelago was completed.

The government of the Philippine Islands now comprises 40 provinces and the city of Manila, the capital of the Archipelago, which is wholly independent of any provincial government. Thirty-four of the provinces are organized under the provincial government act (Act 83) and elect their governor, of whom 31 are Filipinos and 3 Americans. The remaining 6 are organized under special acts, and their governors are appointed by the civil governor, with the advice and consent of the Philippine Commission. Three of these are civilians and 3 commissioned officers of the United States Army. All are Americans.

In addition to the review of proceedings against municipal officials before provincial boards on charges of official misconduct, many questions involving municipal administration reach this office for solution. At present there are 1,035 organized municipalities, but a material reduction will result from the consolidation now in progress, by which many of the smaller and financially weak are to be merged in adjacent stronger ones, with a view to better economic administration. As now constituted, the municipalities of the Archipelago, excepting the Moro Province and Lepanto-Bontoc, from which returns have not been received as yet, comprise 14,097 barrios.

In addition to the president, secretary, treasurer, and councilors who are elected by the people or otherwise selected by local authority as provided by law, there is in each municipality a justice and auxiliary justice of the peace, who are appointed by the civil governor, with the advice and consent of the Commission. Owing to the large number of these officials, together with the many others similarly appointed and the constant changes due to various causes, a considerable office force is required to keep the appointment correspondence and record work up to date. Corrected rosters are kept of provincial and municipal officers, justices and auxiliary justices of the peace, notaries public, as well as miscellaneous insular officials.

Doubtless that which has taxed the resources of this bureau most during the past year has been the work of carrying out the details, pursuant to the direction of the civil governor and Commission, of relief provided by Congress in its appropriation of \$3,000,000 by act approved March 3, 1903, in the distribution of rice to be used in payment for labor on roads and other public works and in the destruction of locusts, in connection with the importation of animals for agricultural work, and in other measures looking to the permanent as well as immediate relief and development of agriculture in the islands.

In this connection orders have been issued from this bureau distributing 182,538 piculs, or 25,098,975 pounds, of rice to the various provinces during the period from

November 4, 1902, to September 30, 1903, inclusive, under authority of acts Nos. 495 and 786 of the Philippine Commission, the distribution having been as follows:

	Piculs.
For sale (Act 495).....	79, 717
Destruction of locusts.....	31, 659
Road work and other public improvements .....	70, 755
	<hr/>
	182, 131
Free .....	407
	<hr/>
Total .....	182, 538

The plague of locusts in 23 of the provinces during the last year has been more severe than usual, the only provinces unaffected by it thus far being Bataan, Benguet, Bohol, Cebu, Masbate, Paragua, and Sorsogon. On August 3, 1903, the Philippine Commission, by Act No. 817, created a board to be made up of the provincial board and three agriculturists, to be appointed by the civil governor, to be known as the "Locust board," which was empowered to issue regulations directing the conduct and controlling the operations of the able-bodied inhabitants in suppressing the plague of locusts in provinces threatened with the same. Incomplete reports (Appendix B) received from these locust boards show that in 23 of the provinces upward of 17,003,252 pounds, or 8,501½ tons, of locusts were destroyed between the date of the passage of the act mentioned and September 30, the greatest number having been destroyed in Occidental Negros (6,930,000 pounds), La Union (1,590,737 pounds), Bulacan (1,534,975 pounds), and Rizal (1,198,862 pounds). The reports from Abra, Antique, Capiz, and Isabela, dated subsequent to October 1, have been included in Appendix B, in order to have no break in the list of provinces.

In order to ascertain the food situation in the provinces telegrams were addressed on June 16 last to all provincial governors and answers received from them, which are hereto appended. (Appendix C.)

Hundreds of telegrams have been received and sent preliminary to the distribution of carabao, which is now about to commence. In the United States a special bureau undoubtedly would have been created for all this work. Here it is impracticable to create such a bureau, and for many reasons the duty of central direction naturally devolved upon this office.

Legislation passed by the Commission March 23, 1903, provided that the executive secretary shall issue to government officials, employees, and members of their immediate families official transportation requests on commercial steamship and railway lines under the terms of an agreement entered into between such transportation companies and the Bureau of Insular Affairs of the War Department, army transport facilities having been practically withdrawn. The arrangement has been in effect less than seven months, and during that period there have been issued by the executive secretary to civil employees and members of their families, including fiancées, 169 steamship transportation requests and 68 railway transportation requests, providing for transportation from Manila to various points in the United States for 209 persons, 42 per cent of whom were teachers. Sixteen of the above-mentioned official requests were issued at the expense of the insular government to officers or employees entitled to traveling expenses either by law or under their contracts. For those not so issued there has been paid into the executive bureau the sum of \$20,162.50 United States currency, or an average of approximately \$3,000 per month, which, in accordance with law, is deposited in the insular treasury to the credit of the appropriation "Insular salary and expense fund," from which the steamship and railway companies are paid by the government.

Prior to February 2, 1903, there was no provision of law under which this government might issue passports to citizens of the Philippine Islands desiring to travel in foreign countries. It had been the practice to furnish such persons and citizens of the United States, upon request, letters of identification and introduction to diplomatic and consular officers of the United States.

On February 2, 1903, the Philippine Commission enacted the following law:

[Act No. 611.]

AN ACT authorizing the civil governor to issue passports to citizens of the Philippine Islands.

*By authority of the United States, be it enacted by the Philippine Commission, that:*

Whereas the act of Congress approved July first, nineteen hundred and two, entitled "An act temporarily to provide for the administration of the affairs of civil

government in the Philippine Islands, and for other purposes," provides in section four thereof "That all inhabitants of the Philippine Islands continuing to reside therein who were Spanish subjects on the eleventh day of April, eighteen hundred and ninety-nine, and then resided in said islands, and their children born subsequent thereto, shall be deemed and held to be citizens of the Philippine Islands and as such entitled to the protection of the United States, except such as shall have elected to preserve their allegiance to the Crown of Spain in accordance with the provisions of the treaty of peace between the United States and Spain signed at Paris December tenth, eighteen hundred and ninety-eight."

SECTION 1. The civil governor is hereby authorized to issue passports to the persons thereby made citizens of the Philippine Islands, identifying said persons as such citizens and as entitled to the protection of the United States by virtue of the provision of law above set forth.

SEC. 2. The civil governor shall prescribe the form of and rules governing the issuance of these documents, which shall be known and referred to as "Philippine passports."

SEC. 3. A fee of two dollars in money of the United States shall be charged for each passport issued hereunder. Such fees shall be paid to the disbursing officer of the executive bureau, who shall keep an account of same and who shall forthwith deposit same in the insular treasury.

SEC. 4. The public good requiring the speedy enactment of this bill, the passage of the same is hereby expedited in accordance with section two of "An act prescribing the order of procedure by the Commission in the enactment of laws," passed September twenty-sixth, nineteen hundred.

SEC. 5. This act shall take effect on its passage.

Enacted, February 2, 1903.

By executive order No. 13 the civil governor prescribed the form and rules governing the issue of passports as follows:

EXECUTIVE ORDER }  
No. 13.

THE GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU, Manila, April 7, 1903.

The following regulations regarding issuance of passports are published for the guidance of all concerned in accordance with the provisions of act numbered six hundred and eleven, entitled "An act authorizing the civil governor to issue passports to citizens of the Philippine Islands," enacted February second, nineteen hundred and three:

#### I.

Philippine passports may be issued to all the inhabitants of the Philippine Islands continuing to reside therein who were Spanish subjects on the eleventh day of April, eighteen hundred and ninety-nine, and then resided in said islands, and their children born subsequent thereto, except such as shall have elected to preserve their allegiance to the Crown of Spain in accordance with the provisions of the treaty of peace between the United States and Spain signed at Paris, December tenth, eighteen hundred and ninety-eight.

#### II.

Those applying for a Philippine passport must present their application, make an affidavit with respect to birth, and state that they were subjects of Spain as defined in Rule I. They must take the oath of allegiance and furnish an identification by a creditable person, in accordance with a form prescribed for such purpose.

#### III.

A passport expires two years after the date of its issuance and will not be renewed. A new passport may be issued upon a new application in accordance with the provisions of Rule II.

#### IV.

When a person applies for a new passport before his old passport has expired, the latter, coupled with proof that the person in whose behalf it is presented is the person named therein, may be taken two years from its date as prima facie evidence of the right of the person to obtain a passport under Rule I.

## V.

When the applicant for a passport is accompanied by his wife, minor children, or by a servant who is entitled to a passport under Rule I, it will be sufficient to state in the passport the names of such persons and their relationship to or connection with him. A separate passport must be issued to each person of full age not the wife or servant of another with whom he or she is traveling.

## VI.

An official fee of two dollars, in money of the United States, shall be collected by the disbursing officer, executive bureau, for each passport issued, and the fee shall be deposited by him in the insular treasury.

WM. H. TAFT, *Civil Governor*.

The foregoing branches of the bureau's work, together with many others—including particularly the preparation of appropriation bills, drawing of leases and contracts for supplies and construction, and firearms permits—are assigned to the administration and finance division, the report of which is hereto attached (Appendix D). The high grade of work done by the clerks of this division and the excellent manner in which it has been performed have been the source of intense satisfaction to the chief of the bureau and merit special mention.

In the interest of economy and the prompt dispatch of public business the office of the secretary of the Philippine Commission was abolished by act No. 609, January 31, 1903, as recommended in the report of this bureau for last year, and the executive bureau so reorganized as to provide for the work of the abolished office. Aside from the enactment of laws the Commission has devoted much time to the consideration in executive sessions of important matters upon which the civil governor or heads of departments desired the benefit of joint discussion and determination. The year's work of the Commission as a legislative and advisory body is admirably described by the recorder, Mr. C. W. Calvin, in his report (Appendix E), to which attention is invited. Great credit is due Mr. Calvin for the ability and industry with which he and his office force have dispatched an immense volume of important business with promptitude and marked efficiency.

In the sessions of the Commission, and on practically all other occasions when the people generally, and particularly the non-English-speaking masses, are to be reached, or desire to communicate by interview with the civil governor or members of the Commission, the services of an interpreter are necessary; and the importance of matters discussed on these occasions demands a degree of expertness of interpretation possessed by but few persons. All acts of the Commission are translated in the Spanish language promptly after passage, and for this work of translation it is essential that there be available trained personnel of a high grade. This is also true in respect of the vast amount of Spanish-English translation incident to the correspondence of this office and the executive departments. This work devolves upon the translating division of the bureau.

Mr. Francisco J. Yánes, Spanish secretary to the Philippine Commission, was in charge of the division until May, 16, 1903, when he returned to the United States because of the continued ill health of his family in this climate. Mr. Yánes was appointed to this service from the Bureau of American Republics, in Washington, because of his special fitness, both by education and practical experience, and with great credit carried the burden of responsibility and to a very great degree that of the actual work under his charge. Every effort has been made to replace him, but as yet without result. Further losses of expert personnel from the translating division have seriously interfered with both the work of translating and interpreting as well. It has been necessary for the present acting chief of division to devote so much time to his regular work of interpreter for the Commission that there have been occasional unavoidable delays in the dispatch of translations of documents of importance. However, the work of the division is now practically up to date, by dint of work at night and on holidays. There seems to be an absolute lack of really expert Spanish-English translators, not only in these islands and the United States, but in practically every other country, as revealed by the ineffectual efforts of this Government to secure such employees. There is no difficulty in finding translators of mediocre ability, but men who know one language thoroughly and have a competent knowledge of one other are rare indeed. The report of the division is hereto attached. (Appendix F.)

The Commission on March 17, 1903 (Act No. 688), authorized the appointment of a collecting librarian of the insular government, "whose duty it shall be, under the

supervision and direction of the civil governor, to visit the countries of Europe, Mexico, and elsewhere for the purpose of purchasing books and manuscripts relating to the history of the Philippine Islands, making historical researches into said history, procuring copies of official documents relating thereto, with the view to the foundation in Manila of a public historical library upon the subject of the Philippine Islands."

For this appointment the civil governor selected Señor D. Clemente J. Zulueta, a Filipino eminently fitted for the work by education and training. Señor Zulueta went at once to Spain, where he is now securing books and documents of historical and general value as contemplated by the act creating his position. Arrangements have been made for the custody and preservation of these papers upon their arrival here by the division having in charge the printed publications and documents of the Commission. There will soon be added to the files of printed documents several hundred selected Congressional publications recently received from Washington, which will be indexed and filed for reference. This division of the executive bureau has distributed during the past year 1,035,362 printed copies of acts of the Commission, executive orders, and miscellaneous publications of a related character. (See Appendix G.)

The disbursing officer of the bureau, Mr. H. A. Lampman, also disburses for seven other bureaus and the secretaries of the four executive departments, the Philippine Commission, the trustees of the College of San José, and the Philippine Museum. He likewise is one of the two officers disbursing the \$3,000,000 Congressional relief fund. The total amounts paid out by him during the period covered by this report were \$936,876.06 Mexican, and \$271,951.90 Philippine currency. Few public servants have greater responsibility resting upon them, and none discharges his duties more ably and intelligently.

The mailing of correspondence, although nominally within the jurisdiction of the mailing division, has been conducted, for the sake of convenience, by the records division. Of such matter, which includes only written communications, there have been dispatched by messenger and post 53,717 separate papers during the year, an increase of 73 per cent over the preceding year.

Provision has been made in the records division by the installation of substantial filing cases of improved pattern for the preservation of the archives of the military government and this office since its establishment. These records have been thoroughly indexed and the typewritten indexes bound, thus making reference to them easy and in every way satisfactory. In addition to the work of indexing, recording, and mailing official correspondence in the records division, much work is done in the compilation of data required by the civil governor, the executive departments, and the Commission, and its personnel is drawn upon continually to fill temporary and permanent vacancies in the other divisions. (Appendix H.) The work in this division is of such character, covering as it does the entire field of this office and of the executive departments as well, as to furnish an excellent opportunity for the training of employees for the other divisions, the functions of which are special. This has been particularly the case in respect of Filipino employees, several of whom, after a few months' service in this division, have been promoted elsewhere and have acquitted themselves creditably.

Ever since the organization of the executive bureau strict adherence to civil-service rules has been observed in the matter of appointments and promotions, it being a fact meriting record that five out of the seven chiefs of divisions in the bureau came to the islands either as volunteers or as clerks at \$1,200 per annum. The other two came as translators at \$1,800 per annum. All are now receiving \$2,250, with the exception of one, who receives \$2,500 per annum.

It has been the rule of this office during the past year to require that all Filipino appointees possess the equivalent of a grammar-school education, at least; a fair conversational knowledge of the English language; ability to use the typewriting machine with some facility; and certificate of having passed the second-grade clerk examination or its equivalent as provided by the civil-service board's schedule. Upon reaching a salary rating of \$600 per annum employees are required to pass the civil-service examinations in the English language as one requisite for promotion. Under this requirement one such employee has passed the first-grade examination, two failed by a very small percentage and will doubtless qualify on their next effort, and several have passed the second-grade examination. As a rule the native employees attend public night schools, and in the case of those who have little or no knowledge of the English language it is obligatory that they attend such schools.

Due to the increase of business incident to the development of government, and in a degree to the merging of the office of the Commission, the personnel of this bureau has been more than doubled numerically during the past year. This increase has

been in great measure in the number of positions in the lower grades, and therefore does not indicate a correspondingly increased expense.

The force of 61 employees, of whom 32 were Americans and 29 Filipinos, which was employed at the date of the last report, has been gradually expanded, until at this time there are on duty in the bureau 123 employees, of whom 46 are classed as Americans and 77 as Filipinos, an increase of 44 per cent in the number of Americans and 166 per cent in Filipinos.

Notwithstanding this marked increase in personnel—more than 100 per cent—it has been found wholly impracticable to dispatch the current business during the regular office hours. A large number of employees are required to work overtime, and some find it necessary to observe uniform hours of from 7.30 a. m. to 6 p. m. daily, with about a half-hour's intermission at midday. In order that a definite idea might be had as to the extent of overtime required, a record thereof has been kept. This shows an average of 325 days per month, or an actual shortage in the office force of approximately 12 clerks, and does not include the overtime of officials, the number of whom has not been increased since the organization of the bureau. Two deaths and the invaliding home of six employees during the year because of diseases probably due to excessively long hours and close application to work under existing climatic conditions indicate the necessity for shorter office hours and doubtless an obligatory annual vacation.

The reports of the provincial governors are appended hereto, marked "Appendix I." Covering, as they do, the period from January 1, 1902, to January 1, 1903, they give no adequate idea of the present conditions prevailing in the provinces, and therefore I have not referred to them before in this report when treating of the political subdivisions of the islands. These reports, if they are to be really such a faithful portrayal of existing conditions as to furnish Congress and the authorities beyond seas that information upon which remedial or any other action could be based, ought to be brought down to a date not later than September 1 of each year. Since these reports were written the locust plague has visited a large number of the provinces with disastrous results to growing crops. Happily, later telegraphic information has brought the intelligence that the measures adopted under Act No. 817, hereinbefore referred to, have been successful in many provinces in exterminating the locusts, and the crop reports are much more encouraging than could have been expected under the circumstances. Many causes for complaint mentioned in the reports of the provincial governors for last year have been removed. The uprising on the island of Camiguin, off the coast of Misamis, in April and May last, was promptly and effectually quelled, and the leaders and a large number of their followers have received their just deserts. The disturbed conditions in the province of Albay are about to be brought to an end, and an era of peace far more extensive and profound than has ever been known since American occupation will without doubt soon settle upon the Archipelago. The civil governor in his report for last year, referring to this same subject, suggested the wisdom of changing the time for submission of the annual reports of the provincial governors from January to September, but no change in the law has been made as yet, although it would seem that no good reason exists for longer delaying favorable action upon the suggestion.

Appendix J, hereto attached, gives telegraphic reports from provinces received in response to a telegram from this office of September 28, 1903, requesting information as to the amount of work done on roads and bridges in each province and the amount of "relief-fund" rice paid therefor. Only such reports as were received up to and including the date of this report are annexed.

During the first half of the period covered by this report the former assistant executive secretary, Mr. Beekman Winthrop, was acting chief of the bureau, owing to absence on leave of the executive secretary. Upon the return of the latter, on March 25, 1903, Mr. Winthrop went to the United States on a well-earned leave, resigning his office on the expiration thereof, much to the regret of the government authorities and his official associates, who had learned to appreciate his worth through daily contact with him.

Mr. Frank W. Carpenter, then chief clerk of the bureau, was appointed assistant executive secretary on September 1, 1903, the promotion coming as a fitting reward to a most zealous, tireless, and able official. Mr. Carpenter, with a residence of nearly five years in these islands, occupying positions of trust calling for the exercise of administrative skill of a high order and technical knowledge of office work brings to his new position a ripe experience and good judgment which, added to his knowledge of the Spanish and Tagalog languages, make of him an ideal official and a broad-minded, tactful, and capable assistant.

The fact that the work of the bureau has been kept up and dispatched with promptitude and thoroughness without addition to the number of its officials, notwithstand-

ing its continued and great increase, is due to the untiring zeal and uncommon ability of the chiefs of divisions and their immediate assistants who, under Mr. Carpenter's training and initiative, have cheerfully met requirements much greater than are ordinarily incident to the duties of such offices. The whole clerical force has shown so lively an interest in the work and has so heartily and uncomplainingly responded to the many calls for overtime duty that I would be ungrateful indeed were I to fail to record here my deep appreciation of their faithfulness and efficiency, which have so signally lightened the burden resting upon the chief of the bureau.

Very respectfully,

A. W. FERGUSON, *Executive Secretary.*

The honorable the CIVIL GOVERNOR.

## APPENDIX A.

THE GOVERNMENT OF THE PHILIPPINE ISLANDS, EXECUTIVE BUREAU,  
Manila, October 1, 1903.

SIR: Pursuant to instructions from you, I have the honor to submit the following report:

The office of law clerk in the bureau was created in January of this year, duties of a legal nature having devolved upon the present incumbent for some time prior to that date. The present duties of the office are mainly as follows: (a) The supervision and preparation for final action, with recommendations, of cases involving charges against government officials, being mainly cases against municipal officers in the provinces and justices of the peace; (b) the rendering of statements on questions of law at the direction of the civil governor and the officers of the bureau; (c) the digesting of voluminous documents involving points of law; and (d) the drafting of bills for the consideration of the Philippine Commission.

A statistical statement of the volume of the work is not possible, for the reason that the present duties of the office are partly administrative and partly legal in nature, and have no well-defined or fixed limits. In this general connection, however, the following statistics may be of interest:

*Statement of provincial officers removed from office, or who resigned at request or under charges, from September 1, 1902, to September 1, 1903.*

Fiscals.....	3
Treasurers.....	4
Supervisors.....	3
Secretaries.....	3
Others.....	2
Total.....	15

The total number of distinct cases against municipal officers and justices of the peace, resulting in suspension from office or an investigation by the provincial board, or both, for the twelve months ending September 1, 1903, was 106, involving 144 officers, 76 of whom were dismissed. Of these 144 officers, 121 were municipal officers—chiefly presidents—and 23 justices of the peace. Of the 135 officers suspended from office, 76 were removed, 12 reprimanded or disciplined, and 47 reinstated. Of the 98 distinct cases investigated by the provincial boards, the findings were approved by this bureau in 80 cases, modified in 9, and reversed in 9.

Perhaps the most noteworthy deductions to be drawn from the above data are: (a) The large proportion of cases where a suspended officer (the matter of suspension being almost entirely in the hands of the provincial governor) is acquitted after full investigation, being about 35 per cent; and (b) the relatively large proportion of cases against justices of the peace. The records show that during the year 16 justices have been dismissed from office and 2 reprimanded. When it is recalled that the technical knowledge and legal training usually possessed by an evilly disposed justice of the peace make it comparatively easy for him to escape detection and conviction, the figures are sufficiently striking.

It should be noted that the above statistics represent only a portion of the total number of papers preferring charges against government officials received in this bureau. The natives of these islands, especially those of the half-blood, are by nature contentious and fond of litigation; and a preliminary inquiry usually shows the charges preferred to be groundless. A comparison of the statistics of this year with those of

the fourteen months preceding shows an increase in the number of removals of provincial officials, being 13 removals for fourteen months, as against 15 for twelve months. In regard to municipal officers and justices of the peace, the figures are approximately the same.

As indicating the improvements which have been introduced in the routine organization of this bureau since the inauguration of civil government, may be noted the fact that during the first fourteen months of civil government the records show 54 cases of suspended municipal officers (including justices of the peace) with no record of either acquittal, reinstatement, or removal, indicating that these cases were pigeon-holed or dropped without any decisive action being taken; while the records for the past twelve months show that in all cases involving charges against municipal officers or justices of the peace some final or decisive settlement of the case has been made.

Very respectfully,

FRED. F. BARKER,  
*Law Clerk.*

The EXECUTIVE SECRETARY, *Manila.*

---

## APPENDIX B.

ABRA.

BANGUED, ABRA, *October 2, 1903.*

The CIVIL GOVERNOR IN THE PHILIPPINES,  
*Manila.*

SIR: In compliance with your telegraphic order of the 26th of September I have the honor to make the following report on the extermination of locusts in this province: On the 15th of August your telegram approving the appointment of the three agriculturalist members of the locust board proposed was received here. On the 19th of the same month the said board was organized and immediately resolved that the aforesaid agriculturalist members repair to the places invaded by the locusts to the end of studying and proposing to the board the most efficient means of destroying the plague, and also to the end of obtaining the data indispensable for drafting regulations provided for by section 2 of act No. 834. At the same meeting it was resolved to ask the civil governor for 1,000 piculs of rice and 400 pieces of sheet iron for the needs of the board, of which articles only the iron has been received until the present date. At another meeting, held on the 22d, the board approved the means of extirpation of the plague suggested by the agriculturalist members. Copies of these resolutions have been transmitted to the municipal presidents for compliance therewith. In the successive meetings of the 4th and 8th of September the regulations for the destruction of the locusts were discussed and approved and a copy thereof furnished to each municipal president for the publication and execution thereof, another copy being sent to the executive secretary for the printing of 250 copies thereof.

On the 23d, 27th, 28th, and 30th of August operations were carried on against the hoppers under the direction and supervision of the provincial governor and the agriculturalist members of the board at the places denominated Pudoca, Calaba, and Cabuluan, of Bangued; Ligtun, Palucana, and of Layun and Pudoc and Suyoy, of Pidigan, the amount of hoppers destroyed in the operation being estimated at 120 quintals. On the 28th of August a swarm of locusts which was passing over a rice field at the rancheria of Peñarubia was frightened away under the direction of the agriculturalist member, Maximo Blanco, and the damage caused was very insignificant on account of this operation. On the 2d of September more operations against this plague were carried on in the barrios of Sapac and Paude, Bangued, under the direction of the president thereof, and at the sitio of Maquinao, of the rancheria Daglas, under the direction of the agriculturalist member, Hugo Baile. On these occasions about 80 quintals of locusts were caught. On the 7th of September the president of Dedmagada reported the presence of locusts and hoppers in his municipality, and I directed Agriculturalist Guillermo Blancaflor to supervise the destruction of the plague, and three days later he reported that the hoppers, in a quantity of 80 quintals, were destroyed, but that it was possible to catch only 20 quintals of the locusts as they flew away in the direction of the province of Ilocos Norte. On the 26th of September a swarm of locusts descended upon rice fields around Bangued, and was frightened away under direction of the provincial governor and an agriculturalist member of the board without having been able to do damage to the crops. About 40 quintals of this swarm were caught, but the majority arose and flew away toward the Bulagao Mountain, boundary line between Abra and Ilocos.

JUAN VILLAMOR, *Provincial Governor.*

Total amount of locusts and hoppers killed, 340 quintals, equal to 34,340 pounds.

---

ALBAY.

ALBAY, *September 30, 1903.*

EXECUTIVE SECRETARY, *Manila:*

Complying with your telegram of 26th: The locusts appeared in this province in the early part of this month but did but very little damage. The locust fungus was at once used with apparently very excellent results. The swarm of locusts was practically exterminated in five days. It was found, however, that the few days they were in the province they deposited a great many eggs, which since hatched. Of these small locusts about 300 bags were gathered and destroyed. The heavy rains during the past few days have apparently exterminated the remainder. This work accomplished at practically no expense.

BETTS, *Governor.*

Total amount of locusts and hoppers killed, 20,000 pounds.

---

AMBOS CAMARINES.

NUEVA CACERES, *October 1, 1903.*

EXECUTIVE SECRETARY, *Manila:*

The locust board held its first meeting on the 6th of August and adopted regulations, which were submitted to the civil governor for approval, but the first section of said regulations was amended in view of the telegram of the 21st of August. The additional members have not been able to attend the meetings of the board regularly, as they are living in pueblos distant from this capital, but they have distinguished themselves by their work, traveling through and visiting the different municipalities of their districts, and explaining to the residents thereof the advisability that all should work in the destruction of the locusts, showing them the most practical manner of catching the same. The municipal presidents have in compliance with their duty kept the government informed of all the work done by the residents and of the number of sacks of locusts caught, which amount to 1,264 sacks, and the approximate weight of which is 75,840 pounds. It is, however, impossible to calculate the quantity of locusts killed which were not gathered up, but burned in the ditches. The entire territory of this province is infested with locusts, and the presidents state in their letters that notwithstanding the great efforts made by the people for the purpose of destroying them, digging ditches without remuneration of any kind, all of the plantations of maize, camotes, paddy, sugar cane, and garden truck have been destroyed. The ditches dug by the people of the pueblos were not sufficient for the destruction of the small locusts on account of their large number. When they did not find anything left to destroy in the fields, they invaded the streets of the pueblos and entered the houses, to the extent that they did not leave the people rest by day or by night. The inhabitants of the pueblos of Pili, Nueva Caceres, Ninalabag, Nubua, and others had cultivated a considerable number of hectares of rice land and hoped to obtain a good harvest, but all they had planted was destroyed by the locusts. However, a good crop of maize was harvested in Baao and Nubua, and the inhabitants are now selling the shelled maize at 1 peso, Mexican, per sack. The rains commenced in this section on the 19th of September, and since then it has been noticed that the locusts have gradually disappeared. It is hoped that the hoppers which still remain will be destroyed by the continuous rains. The governor has issued neither rice nor money for the work of the extermination of locusts. A circular letter has been addressed to the presidents enjoining them to recommend to the people the necessity of again planting rice, maize, camotes, and garden truck, and reminding them of the provisions of Act No. 517, relative to the prevention of famine.

PIMENTAL, *Governor.*

Total amount of locusts and hoppers killed, 75,840 pounds.

## ANTIQUE.

SAN JOSÉ, *October 2, 1903.*EXECUTIVE SECRETARY, *Manila:*

Locust board was convened August 20 and on August 22 rules for extermination of locusts were adopted. During the last fifteen days of September, nearly every town in the province was invaded and a total of 459 cavanés, 10 gantas and 6 chupas were caught as follows: San José, 7 cavanés, 22 gantas; San Pedro, 18 cavanés, 17 gantas, 6 chupas; Bugason, 300 cavanés; Guisigan, 132 cavanés, 18 gantas; Tibiao, 3 gantas.

Reports from other towns have not yet been received, but I believe that larger amounts were caught during the last days of September. Report of crops having been destroyed not yet received, except Guisigan where the crops were destroyed. Governor Fullon was directed to get this information while on tour of inspection throughout the province.

SALAZAR, *Acting Governor.*

Total amount of locusts and hoppers killed, 61,929 pounds.

## BATAAN.

BALANGA, BATAAN, *October 1, 1903.*EXECUTIVE SECRETARY, *Manila:*

In compliance with your telegram of September 25, 1903, I have the honor to state that the locust board of this province was organized on August 20, 1903. As there were no locusts throughout the province, as reported by presidents, no work has been done since the organization of the board.

ZIALITI,  
*Secretary and Acting Governor.*

## BATANGAS.

BATANGAS, P. I., *October 1, 1903.*EXECUTIVE SECRETARY, *Manila:*

In reply to your telegram of September 25 a detailed report will be rendered in a few days. The reports from 20 municipalities in which destruction work of locusts is being carried forward have not come, all having been asked for by telegrams.

Luz, *Governor.*

## BENGUET.

BAGUIO, BENGUET, *September 30, 1903.*Hon. A. W. FERGUSSON,  
*Executive Secretary, Manila, P. I.*

SIR: I have the honor to report, in compliance with your telegram 25th instant, that there has been no work accomplished or demanded from the locust board as yet. The fact is it would be exceedingly difficult for the most enthusiastic sportsman to find one of these little birds, called locust, in my province. The cold rains since the 1st of July have effectually rid us of this pest.

Yours, very respectfully,

WILLIAM F. PACK, *Provincial Governor.*

## BOHOL.

TAGBILARAN, *October 1, 1903.*CIVIL GOVERNOR, *Manila:*

The locust board in my province was established on August 24, composed of the members of the provincial board and three agriculturists. Once established the first task of said locust board was to draw up regulations for its guidance, and a copy was given to all members and each one of the municipal presidents for their information and due observance by virtue of said regulations. The province of Bohol is divided into four inspection districts, namely: South district, north, interior, and west districts. The first three districts are in charge of the three agricultural members in the following form: South district, which is composed of the pueblos of Albuquerque,

Loylila, Dimiao, Palancia, Garcia, Hermiandez, Jagna, Duero, Guindulman, and Anad Candijay, is under the inspection of Señor Pedro Samson. North district, which is composed of the pueblos of Maribojoc, Loon, Calape, Tubigon, Ynaguni-gana, Getafe, Talibon, Ipil, and Ubay, is under the inspection of Señor Sevador Rodriguez. Interior district, which is composed of the pueblos of Carman, Batavan, Sierra Bullones, Calbigailin, Bilar, Antique, Balilijansevilla, and Loboc, is under the inspection of Señor Pedro Maceren. West district, composed of Tagbilaran, Davao, Panglao, Bacolian, Corella, and Cortes, is under the inspection of the provincial board. From August 24 to October 1, 1903, the plague of locusts has not given signs of life in the province. The letters that I have received periodically from the three agricultural members in their districts state there are no flying locusts nor jumping locusts in the pueblos of their respective districts to date. There has been no rice requisitioned for distribution to the poor, nor zinc sheets. The board believing it necessary, a copy of the above regulations will be furnished you by mail.

CLARIN, Governor.

BULACAN.

MALOLOS, BULACAN, October 1, 1903.

The EXECUTIVE SECRETARY, Manila, P. I.:

Replying to your wire of September 26, requesting report of work done by locust board, as follows:

Regulation made. Local committees of locust organized. Province divided into three zones and three members appointed inspectors. Inspectors constantly inspecting towns within their zone. From organization of board and local committees locusts and loctones killed in different towns as follows:

Towns.	Locusts.	Loctones.	Towns.	Locusts.	Loctones.
	<i>Cavanes.</i>	<i>Cavanes.</i>		<i>Cavanes.</i>	<i>Cavanes.</i>

San Ildefonso .....	25
Angat .....	25
Total .....	105

Every effort is taken for complete destruction of loctones now in the province.

PABLO TECSON, Governor of Bulacan.

Total amount of locusts and hoppers killed, 1,476,475 pounds.

CAGAYAN.

TUGUEGARAO, October 1, 1903.

The CIVIL GOVERNOR, Manila:

The locust board having been organized in accordance with act 817, it unanimously adopted methods which were used in all the pueblos of the province invaded by the locusts and hoppers. Screens 6 feet long and 3 feet wide and covered with cloth were prepared, and several of these contrivances, each supported by one person, were placed at the edge of a ditch dug 3 or 4 feet deep and 20 or more meters

long. The area infested was then surrounded on all sides by several persons provided with branches, sticks, and brooms, with which they chased the hoppers toward the ditch and the screens. When the screens were full of hoppers who had saved themselves from the ditch, they were shaken and the hoppers caused to fall into the ditch, which was immediately covered with earth. For locusts in the flying stage netting or cloth was made into an open sack stretched on a bamboo hoop fastened to a stick. These were used where swarms of locusts had presented themselves. This work was performed in all the pueblos of the province on the 9th and 10th of September. It is estimated that the following amounts of locusts and hoppers have been caught: In Tuguegarao, 352 cavanese; Enrile, 42; Solana, 78; Piat, 11; Amulung, 75; Iguig, 30; Peña Blanca, 138, and none in Lallo and Aparri, as no locusts have appeared in said pueblos. At its session of the 28th of September the board resolved that the work of exterminating the locusts be repeated in all the pueblos, designating the 15th and 16th of this month, without prejudice to carrying on this work sooner in the pueblos, barrios, and sitios where clouds of locusts may appear.

GONZAGA, *Provincial Governor.*

Total amount of locusts and hoppers killed, 99,825 pounds.

CAPIZ.

CAPIZ, *October 1, 1903.*

TAFT, *Civil Governor:*

The following work has been done since the organization of the locust board of this province:

Municipalities.	Matter destroyed.	Quantity.	Rice used.
		<i>Cavanese.</i>	<i>Piculs.</i>
Panay .....	Locusts, hoppers, and eggs.....	77½	10
Loctugan.....	Locusts.....	6	2
Panitan .....	Locusts of all classes.....	387	43
Dao.....	Locusts and hoppers, large and small.....	57	10
Mambusao .....	Locusts of all classes.....	60	8
Navas .....	do.....	219	15
Calivo .....	Locusts and hoppers.....	50	5
Ibajay.....	do.....	140	10
Capiz.....	Hoppers.....	84	4
Sigma .....	Small and large hoppers and a few locusts.....	199	23

In all these municipalities there is a large quantity of hoppers, especially in Panitan, Dao, Sigma, Ibajay, and Navas, and their extermination is actively continued. Information in regard to the result of the work in the municipalities of Pontevedra, Jamindan, Dumarao, Numancia, Macato, Tangalan, and Buruanga where there are locusts is expected and will be telegraphed immediately.

JUGO VIDAL, *Provincial Governor.*

CAPIZ, *October 2, 1903.*

TAFT, *Civil Governor, Manila:*

Amplifying my telegram of yesterday: According to reports received from Member Soler, of Alcan, Calivo has been completely cleaned from locusts, 90 more cavanese of locusts having been destroyed.

Municipalities.	Destroyed until—	Quantity.	Municipalities.	Destroyed until—	Quantity.
Numancia.....	Sept. 6	<i>Cavanese.</i> 80	Tangalan .....	Sept. 21	<i>Cavanese.</i> 170

Malinao .....	Sept. 7	<sup>a</sup> 140	Buruanga .....	Sept. 18	150
Banga .....	do .....	80	Baleta.....	Sept. 27	50
Madalag.....	Sept. 10	60	Jimo .....	Sept. 28	10
Ibajay.....	Sept. 16	<sup>b</sup> 10	Batan .....	Sept. 29	15

<sup>a</sup> In addition to the 60.

<sup>b</sup> Besides 140, telegram of yesterday.

Total number of cavanese of locusts destroyed until date in entire province amounts to 2,704½.

JUGO VIDAL, *Governor.*

Total number of locusts and hoppers killed, 371,868 pounds.

## CAVITE.

CAVITE, *October 1, 1903.*EXECUTIVE SECRETARY, *Manila:*

The province was divided into three districts, each under charge of one of the agricultural members of the locust board. Their work since August 14 has averaged about four days per week superintending the work. A consideration of their reports shows a total of 4,971 cavanese of locusts and locusts destroyed. Crops have been damaged to a considerable extent. The number of locusts has been largely diminished by the efforts made against them. Quantity of rice used in payment 1,000 piculs.

SHANKS, *Governor.*

Total amount of locusts and hoppers killed, 4,971 cavanese, equal to 683,506 pounds.

## CEBU.

CEBU, P. I., *October 1, 1903.*HON. WILLIAM TAFT, *Civil Governor, Manila:*

In compliance with the telegram which the executive secretary has addressed to me, I have the honor to report as follows: Since over a month I have not learned of the presence of locusts in the pueblos of this province, not having received a communication reporting this from any of the municipalities. I have, however, received private information that hoppers had been seen in the mountains of Toledo, and have immediately written to the president of that municipality, giving him instructions for the extermination of those hoppers when they come down to the plains or suitable places, because at the places where they are now it is impossible to destroy them by any of the systems known, on account of the thickness of the underbrush. Prior to the time aforementioned I have only received communications in regard to locusts from the municipality of Poro, on the Camotes Islands, and from the municipality of Segod; the former reporting that an immense swarm had invaded the pueblo and destroyed the majority of the maize planted, the latter reporting that another swarm had passed, but had not caused destruction of any importance to the plantations. Several municipalities inform me that the maize harvest has commenced, and the general condition of the crops is good, with the exception of about eight pueblos of the south, where the crop is not abundant. For this reason the price of that grain has gone down. In view of the present crops the critical situation of this province has considerably improved. The board has not yet completed the work of drafting the regulations for the extermination of the locusts, which has been turned over to the members appointed, and is to be submitted for discussion afterwards. The work has been delayed during the twenty days that I was ill. The board asks for 2,000 sheets of zinc.

CLIMACO, *Governor.*

## ILOCOS NORTE.

LAOAG, ILOCOS NORTE, *October 1, 1903.*The EXECUTIVE SECRETARY, *Manila:*

Provincial locust board was organized on the 18th of August, and by virtue of its resolutions the regulations prescribed by Act No. 815 were drafted and adopted and copies remitted to all the municipal presidents. The most appropriate and cheapest implements for the destruction of locusts and hoppers were ordered to be made; instead of sheet iron, 1,000 piculs of rice were requested for issue to workmen, who lack food. There were hoppers in several municipalities, and then they appeared also in the others, with the exception of San Miguel, invading and destroying seedling plots of rice and plantations, especially of maize. The province was divided into zones, which are under the three agriculturist members. The invasions of the barrios by the locusts become less frequent now, the greatest damage caused by them consisting in the destruction of the early rice planted in the mountains or on high land. From the organization of the board until the 30th of September, 4,954 cavanese of these insects were destroyed, according to the data received so far, and the damage caused by them during the said period is estimated at 7,440 pesos. I am still expecting data from several municipalities, and shall complete this report as soon as possible.

JULIO AGCAOILI, *Provincial Governor.*

Total amount of locusts and hoppers killed, 681,175 pounds.

## ILOCOS SUR.

VIGAN, P. I., *October 1, 1903.*The EXECUTIVE SECRETARY, *Manila:*

Replying to your telegram of September 25, the following is a compiled report from presidents of 16 municipalities covering period August 10 to September 30: Six hundred and forty-six cavanese of large locusts and 2,812 cavanese of small locusts destroyed; total number of pounds, 547,312. Reports of 5 municipalities not yet received. Plague has diminished considerably.

CRISOLOGO, *Governor.*

## ILOILO.

ILOILO, P. I., *October 1, 1903.*The EXECUTIVE SECRETARY, *Manila:*

After being organized the locust board drafted regulations, which have been distributed to the pueblos, committees having been organized in each pueblo. At present the number of pueblos whose barrios have been invaded by the locusts is relatively small, and they have been invaded in a manner not alarming. We have received a report from the pueblos in regard to the destruction caused by those insects and the quantities of locusts and hoppers destroyed. The pueblos are actively working for the purpose of destroying the locusts. The rice and sheet zinc have been received here only a few days ago. It has not been possible to distribute same to the pueblos, but the board proposes to do this as soon as possible. With these means the board believes it will be able to comply with its mission as well as possible.

DELGADO, *Governor.*

## ISABELA.

ILAGAN, P. I., *October 6, 1903.*The EXECUTIVE SECRETARY, *Manila:*

Respectfully replying to your telegram received to-day: On the 1st of the present month I had the honor to address to you the following telegram:

"ILAGAN, *October 1, 1903.*

"Pursuant to the directions contained in your telegram of the 25th of September last, I have the honor to inform you that since the organization of the provincial locust board, on the 15th of August, and until date, 109 cavanese of locusts, which until now have been very scarce, were exterminated, as follows: At Cordon, 40; Mercedes, 50; Cauayan, 18, and Gamu, 1, according to data furnished by Member Generoso Cagayan, who went to said pueblos on the 25th of August and returned on the 4th of September.

"I respectfully inform you that on account of the continuous rains the locusts are disappearing in this province, as reported by the presidents."

I have sent you a telegram in regard to the proceedings of board on account of reappearance of hoppers in several pueblos of the province.

DICHOSO, *Governor.*

Total amount of locusts and hoppers killed, 109 cavanese, equal to 14,988 pounds.

## LA LAGUNA.

SANTA CRUZ, *October 1, 1903.*The EXECUTIVE SECRETARY, *Manila:*

The locust board was organized on August 8 last, and has drafted resolutions in accordance with Act No. 817, and communicated the same to the municipal presidents. The province is divided into three districts, the first being in charge of Member Juan Osdeveza, the second of José de Leon, and the third of Gregorio Elbo

who superintend the work for the extermination of the locusts in the pueblos of their respective districts. The following is a statement of the locusts caught:

	Cavanes.		Cavanes.
Tunasan .....	173	Santa Cruz .....	501
Calamba .....	40	Cabuyao .....	275
Pagsanjan .....	276	San Antonio .....	81
Siniloan .....	115	Rizal .....	25
Majayjay .....	34	Longos .....	13
Bay .....	100	Lumban .....	381
Mavitac .....	141	Luisiana .....	187
Lilio .....	8		
Santa Rosa .....	8	Total .....	2,358

All of which were buried.

At a meeting of the 28th of September it was resolved to send, of the 320 piculs of rice shipped to the supervisor of the province, 30 cavanese to Pagsanjan and 20 cavanese each to Calamba, Bay, Binan, San Antonio, Cavinti, Majayjay, Santa Cruz, Lumban, Tunasan, Siniloan, Nagcarlan, Longos, Paete, and Cabuyao. Work continues.

JUAN CAILLES, *Provincial Governor*.

Total amount of locusts and hoppers killed, 311,163 pounds.

#### LA UNION.

SAN FERNANDO, P. I., *October 1, 1903.*

The EXECUTIVE SECRETARY, *Manila*:

Report of the locust board: (1) 136 barrios of the 15 pueblos of the province have been invaded by the locusts. (2) Locusts destroyed until September 30, 11,569 cavanese. (3) 164 piculs of rice distributed for wages. (4) Statements of crops destroyed: The loss of mountain rice is estimated at 75 per cent and the loss of rice in the plains at 20 per cent, in proportion to the production of the barrios invaded. (5) Amount of locusts not destroyed, about 3,200 cavanese. (6) It is estimated that it will take a month to destroy them. I am informed that there are many hoppers in Benguet. If these are not destroyed it is probable that soon they will grow to be locusts and do damage to crops. The general outlook for crops in La Union is good, if the locusts do not reappear and the weather is favorable. The amount of rice necessary has not been distributed on account of difficulty of transportation, but it is expected in accordance with the list of daily wages prepared by the municipalities. The said rice has already been remitted to the pueblos.

ORTEGA, *Provincial Governor*.

Total amount of locusts and hoppers killed, 11,569 cavanese, equal to 1,590,737 pounds.

#### LEPANTO-BONTOC.

CERVANTES, P. I., *October 1, 1903.*

The EXECUTIVE SECRETARY, *Manila*:

In compliance with your telegram September 25, there have been received at Cervantes 6½ tons of locusts, for which rice is being issued at the rate of 1 picul of rice for 500 pounds of locusts; inclusive dates are September 11 to 13. Reports from president of Angqui indicate that 17 tons of locusts have been killed in that district since the passing of regulations by locust board on September 10, but believes his figures are not accurate, although it is true that his district has been the center of plague and that active extermination has been going on constantly for three weeks. Only three districts complain of any trouble from locusts. The rest of the province up to date seems fairly free from their presence, crops being only slightly injured. Locusts have grown to flying stage. It has required some labor on part of inhabitants to scare them away from rice fields. People are now catching them in nets.

DINWIDDIE, *Governor*.

Total amount of locusts and hoppers killed, 46,500 pounds.

## LEYTE.

TACLOBAN, P. I., October 1, 1903.

FERGUSSON, *Manila*:

Tanauan, Dagmi, Pastrana, Palo, and Tabontabon and their jurisdictions have been affected with locusts. Tanauan has destroyed 1,070 sacks of locusts; Palo, 1,036; Dagami, 1,308. Tabontabon and Pastrana have no record of amount, but people have destroyed all locusts in their station. In other parts of the province where locusts have appeared but have been destroyed are Inopacan, Cabalian and Mertida. Señor Esperas has made an inspection and overseen the work on this coast, with Señors Floridelis and Dangangan on the west and east coasts of Leyte. Islands of Panauan and Deleran have no locusts. In jurisdiction of Dagami locusts are used for food.

The means mostly used for destroying locusts are a pit made with a trench of banana leaves placed above. The locusts are then driven against the trench. As the locusts fall into the pit they are covered with dirt. They are in size from  $\frac{1}{2}$  to  $2\frac{1}{2}$  inches in length, black in color when small, but turn dark red when large. The locusts in this province, with the exception of Inopacan and partly in Palo, have done no harm to crops. In the places visited by locusts the farmers are keeping on with the planting of palay, corn, etc. The activity in this regard is very evident; merchants complain that this year only one-half the rice is sold compared with previous years, notwithstanding the reduced prices. Considerable increase in planting has taken place in nearly all parts of the province, and large centers like Dagami, Baruen, and Hilongas have produced this year more corn than used for their own population. Fruit-producing plants, such as bananas, etc., are greatly increased from a year ago; a bunch of bananas which sold then for 50 cents sells now for 10 cents. No free rice and no money have been used in destruction of locusts. The people are busy planting their crops, and, with the exception of Palo, there has been no trouble with the municipal authorities or the people to move them against the common enemy. To-day Tanauan has destroyed 197 sacks of locusts in the barrios affected.

BORSETH *Acting Governor*.

Total number of locusts and hoppers killed, 3,611 sacks, equal to 72,220 pounds.

## MASBATE.

MASBATE, October 1, 1903.

The CIVIL GOVERNOR, *Manila*:

Referring to the labors of the locust board. This was organized August 22, and the making of the regulations August 29. On September 30 I directed a circular to the municipalities urging upon the presidentes the due fulfillment of the law and regulations. For some days past hoppers or loctones have appeared in some of the municipalities, but they were as small as flies. The work of their extermination is now beginning, and I shall wire you later the quantity destroyed. There is no lack of galvanized iron, for the leaves of badiang and bananas can be used very well instead.

SERRANO, *Provincial Governor*.

## MINDORO.

CALAPAN, P. I., October 1, 1903.

The EXECUTIVE SECRETARY, *Manila*:

Eight thousand six hundred and fifteen pounds and 40 cavanese of locusts destroyed. No reports from Sablayan, Mangarin, Bulalacao, Mansalay, and Bongabon.

OFFLEY, *Governor*.

Total amount of locusts and hoppers killed, 14,115 pounds.

## MISAMIS

CAGAYAN, *September 29, 1903.*The CIVIL GOVERNOR, *Manila:*

My report relative to extermination of locusts is as follows:

	Cavanes.		Cavanes.
Cagayan .....	310	Iponan .....	180
Agusan .....	31	Opol .....	75
Tagaloan .....	38	El Salvador .....	50
Santa Ana .....	4	Alubijid .....	8
Jasaan .....	17		
Balingasag .....	10	Total .....	735
Lagonlong .....	14		

equivalent to 101,062½ pounds of locusts exterminated. In this work 52 piculs of rice, which I obtained on credit from merchants, was used. When the 500 piculs of Government rice arrived the locusts had disappeared. At the present time the only locusts are those recently hatched at Tagoloan. It is possible that others may appear later on in other pueblos. Have issued orders to continue work of extermination.

CORRALES, *Governor.*

Total amount of locusts and hoppers killed, 101,062½ pounds.

## NEGROS (OCCIDENTAL).

BACOLOD, *October 1, 1903.*The EXECUTIVE SECRETARY, *Manila:*

From the 24th of August until to-day, besides meetings of the provincial board for the same purpose, the locust board has held four meetings in Bacolod to the end of studying and adopting regulations, acting upon the petition of this municipality, and taking measures to secure activity in the extermination of hoppers. Vice-presidents and councilors appointed inspectors of their respective districts have gone out to supervise work of extermination, receive locusts and hoppers caught, and certify to bills of workmen. Local locust committees have been organized, composed of the municipal president, treasurer, and secretary, to cause regulations to be complied with, facilitate work, render accounts to locust board, and take measures and act upon cases not provided for by regulations until the locust board shall give its final decision. For direct supervision of work in this province the same has been divided into three sections, that of the north, center, and south, one of the agriculturalist members of the locust board taking charge of each. Member Montilla is visiting the pueblos of the south, inspecting the work; Member Gardalzos is inspecting the pueblos of the center, and Member Tecson has already visited several pueblos of his section and will in eight days undertake his voyage to the pueblos of the extreme north. According to reports received in this office from members of the locust board, presidentes, and private citizens, the work of extermination has been carried on since the month of August, when the locusts first appeared, but some planters had worked in a negligent manner, being satisfied with forcing the hoppers into the adjacent fields, but generally they have worked. The regulations have stopped the proceedings of a few negligent planters and the work has been actively promoted. The workmen all take part in the work of extermination, in which they find subsistence. On account of the increased work and the general high prices the provincial board has found that more sheet iron and rice are urgently needed, and has found it necessary to expend rice for road work for issue to workmen engaged in extermination of locusts, it being absolutely impossible to wait for shipment of rice. It is impossible to give exact and complete data, as to-day's news has not yet been received from several pueblos, but in view of official data and references the quantity of locusts can be estimated at 50,400 cavanese. Of this amount 21,000 cavanese were caught since the 1st and until the 30th of September, under the direction and regulations of the locust board.

LOCSIN, *Governor.*

Total amount of locusts and hoppers killed, 50,400 cavanese, equal to 6,930,000 pounds.

## NEGROS (ORIENTAL).

DUMAGUETE, October 1, 1903.

TAFT, Governor, Manila:

In compliance with telegram of 25th of September last, I report as follows: Provincial locust board held first session August 10, with attendance of every agricultural member except Mr. Rotea, of Bais, on account of sickness. Following resolutions were approved on application by supervisor-treasurer of 4,000 piculs of rice and 500 galvanized-iron sheets for extermination of locusts; second, to recommend the towns to proceed vigorously to the killing of locusts in same way as was done pursuant to former directions; meanwhile a copy of act No. 817 and the iron sheets ordered were received here. In session of August 24 the board resolved the following: First, immediately enforce the above act in the province with penalties prescribed therein, recommending the presidents not to compel persons who are too poor and those who have to work to earn their daily food; second, to exempt officials and employees of the provincial government from the destruction of locusts; which resolutions were communicated to the presidents of all municipalities in a circular from this office that same day.

In session of August 29 I submitted to the board the regulations for the destruction of the locusts as follows:

First. To consult the local locust boards, consisting of the president, vice-president, and councilors, being jointly responsible for the compliance of the act and the instructions of the provincial board in accordance with said act.

Second. To divide each municipal jurisdiction into four sections for the destruction of locusts, being in charge of the direction in the extermination of the plague the councilors of the barrios comprised by section.

Third. Duties of councilors to report daily to the president of the work and amount of dead locusts, and also the persons delinquent in the compliance with the law.

Fourth. To go with the people of their barrios to the immediate section when excessively inhabited by the plague.

Fifth. Every person required by the law to kill locusts shall provide himself with a sack or "salibut" for the destruction of the grown locusts on passing his section.

Sixth. Impressing on the councilors penalty prescribed in section 5, act 817, for not complying with these regulations.

Seventh. To require municipal presidents to report to provincial board every three days of the work accomplished in the destruction of the plague, also the amount of fines collected.

Eighth. To recommend to local board that in the administration of rice assigned for the poor people to adhere strictly to the instructions received from the supervisor-treasurer.

These resolutions were approved by the board in session on the 31st of August. The board approved the instructions presented by the supervisor-treasurer for the local boards in the distribution and administration of the rice assignment, the pounds of rice daily for each person working one whole day.

The amount of dead locusts so far is as follows:

	Locusts.	Loctones.		Locusts.	Loctones.
	<i>Cavanes.</i>	<i>Cavanes.</i>		<i>Cavanes.</i>	<i>Cavanes.</i>
Bacoon.....	52	.....	Jimallud.....	.....	90
Siblas.....	26	.....	Guijulangan.....	.....	300
Ayquien.....	14	.....	Maria.....	.....	40
Amblan.....	.....	160			
Tanjay.....	.....	496			
Bala.....	.....	908	Total.....	92	1,994

From the other towns no communication has been received about the locusts. The crop of corn which was commenced to be harvested in the last days of August has caused the rice to be not very much needed in the majority of the towns and only 50 sacks have been sent to Guijulangan and 10 to Maria. The heavy rains which poured in here during September have contributed a great deal in the destruction of the locust plague. In the midst of said month it had disappeared almost entirely, reappearing in those days in intense clouds of locusts from the island of Cebu, causing very little damage in the corn fields, penetrating the thickness of the plague in the interior of the mountains, where it is presumed they have laid eggs, the balance, which passed through the towns of Sibulan, Dumaguete, and Bacong being

destroyed in the last five days of September. The new planting of corn appears to be good and abundant and the general aspect of agriculture is high in favor.

LARENA, *Governor.*

Total amount of locusts and hoppers killed, 2,086 cavanese, equal to 286,825 pounds.

---

NUEVA ECIJA.

SAN ISIDRO, *October 1, 1903.*

TAFT, *Civil Governor, Manila:*

Locust board was organized August 8, 1903, and regulations drafted and remitted to municipalities for compliance on the same date, although no locusts had at that time appeared at any pueblo. On September 14 the board met and resolved to regulate distribution of rice to people engaged in catching locusts and larvæ. Five hundred and thirty-six piculs of rice and 240 pieces of galvanized iron were distributed to municipalities. From August 27 to September 30, 1,296 cavanese and 15 gantas of larvæ and 741 cavanese and 12 gantas of locusts have been caught, according to reports of presidents of Cuyapo, Gapan, Peñaranda, San Leonardo, Jaen, Cabiao, San Isidro, Santa Rosa, and San Antonio. Rice distributed has not yet been accounted for by the presidents. Copy of acts by mail.

ROQUE, *Acting Governor.*

Total amount of locusts and hoppers killed, 2,038 cavanese, equal to 282,225 pounds

---

NUEVA VIZCAYA.

BAYOMBONG, *September 30, 1903.*

TAFT, *Civil Governor, Manila:*

Provincial locust board was organized August 22. Between that date and September 7 nothing of importance was done, as there were no locusts reported in province. Locusts appeared on September 7 in townships of Bayombong, Solano, and Bagabag and active operations against them began at once. The natives obeyed the law and turned out in large numbers. Some 80 or 90 cavanese of locusts were destroyed up to September 24, when they disappeared after having deposited eggs. In various places work is now confined to destroying eggs and young locusts as they hatch. It was difficult to kill the locusts, because they did not come in dense droves as usual, but were scattered.

BENNETT, *Governor.*

BAYOMBONG, *October 2, 1903.*

TAFT, *Civil Governor, Manila:*

Supplementary to my report on locusts September 30, locusts destroyed some corn, sugar cane, and garden truck. They attacked some of the newly planted rice fields, but did little damage, as natives flooded fields with water and locusts were only able to eat tops of new rice down to water's edge. This does not injure crop when rice is still young.

BENNETT, *Governor.*

Total amount of locusts and hoppers killed, 11,688 pounds.

---

PAMPANGA.

BACOLOR, *October 1, 1903.*

The CIVIL GOVERNOR, *Manila:*

Locusts have been killed under direction of the locust board, for the period ending September 30, as follows:

	Pounds.		Pounds.
Apalit .....	33,625	Porac .....	5,000
Arayat .....	3,700	San Fernando .....	50,000
Bacolor .....	1,250	San Luis .....	86,400
Candaba .....	72,500	San Simon .....	52,925
Lubao .....	2,500	Santa Ana .....	10,800
Macabebe .....	250	Santo Tomas .....	9,000
Magalang .....	29,450		
Mexico .....	67,575	Total .....	429,050
Minalin .....	4,075		

JOVEN, *Governor.*

## PANGASINAN.

LINGAYEN, October 1, 1903.

The EXECUTIVE SECRETARY, *Manila*:

In compliance with your telegram of the 25th of September I would state that the board for the extermination of the locusts was organized on the 14th day of August, and the province was divided into three districts, to each of which an agriculturalist member was assigned to the end of directing and inspecting the work. Suitable regulations were adopted for the execution of Act 817 and Act 834 amendatory thereto. The three agriculturalist members continually travel through the pueblos where hoppers appear; these are caught and exterminated by means of ditches, which give very good results. It has been tried once to use sheet iron, and it has been seen that it was not necessary. Hoppers have appeared in 24 of the 37 pueblos of the province. From the date of the organization of the board until the 30th of September 1,189 cavanos of hoppers have been exterminated. No lists of the work performed by poor people who should receive rice, none of which has been expended as yet, have been received so far. The people work with pleasure in the extermination of the hoppers, and no fine has been imposed as yet. The destruction caused by the hoppers is of no importance, it amounts to little in the rice crop, and the rice is recovering, the leaves eaten by the locusts having grown again. The loss of sugar cane is estimated at 50 per cent. The general aspect of the rice crop is satisfactory at present.

FAVILA, *Governor*.

Total amount of locusts and hoppers killed, 1,189 cavanos, equal to 163,487 pounds.

## PARAGUA.

Cuyo, October 1, 1903.

The EXECUTIVE SECRETARY, *Manila*:

The locust board has had nothing to do in the province of Paragua except to be on the lookout for the coming of locusts. Early in August several small swarms of locusts were blown from Panay or Mindoro during a northeast wind to the Cuyos and Calamanes groups. In each case the natives turned out and kept them moving until they were driven either into the mountains or the sea. Very little damage was done by the locusts. The strong monsoon winds prevented them from returning after once being driven away. The rice crop has suffered more from the rain this season, being late in coming, than from the locusts.

MILLER, *Governor*.

## RIZAL.

PASIG, September 30, 1903.

The CIVIL GOVERNOR,  
*Manila*.

SIR: In compliance with your orders I have the honor to inform you that the paddy and sugar-cane crops in the pueblos of Pasig, Mariquina, San Mateo, Montalbon, Cainta, Taytay, Antipolo, Bosoboso, and Teresa are at present in a very good condition, but there is danger that the locusts will return and destroy them, as has happened before.

In Bosoboso and Teresa there is at present a plentiful supply of corn, camotes, gages, ubes, mangos, and other eatable tubers on hand, and it may be affirmed without exaggeration that the production will exceed the consumption.

The locusts have again appeared in the pueblos of Taguig, San Mateo, Montalbon, Tanay, Jalajala, and Pasig, in this province, coming from Cavite and Laguna de Bay. The residents of the aforesaid pueblos have so far destroyed 4,354½ cavanos of hoppers in the stage known as "moscones," and a like amount of flying locusts and their larvæ, which were also destroyed and burned.

During my frequent excursions into the country the residents assured me that they had seen in the woods large amounts of dead locusts, and that they had seen large swarms of full-grown locusts fall down to the ground dead, stating that they did not know to what to attribute this strange phenomena. I then explained to them the marvelous results obtained by the use of the fungus, and told them not to use those insects for food after this.

I believe that I have been to some extent successful by going daily from pueblo to pueblo and advising the inhabitants to be persevering and constant in their work, judging by the large areas of land now cultivated, although it is surprising how well the fields are tilled, as the absence of labor cattle is more to be noticed now than ever.

I have traveled with the provincial board through all the pueblos bordering on Manila, and the 3d instant is the day designated to visit the pueblos of the former district of Morong. I consider these visits to the pueblos very necessary, as it is essential to animate the patient farmer who has to struggle, first, with the lack of carabaos; second, with the lack of water; third, with the destructive locusts, and fourth, with the rats and little worms which attack and destroy the crops of paddy and sugar cane, leaving the stalks standing and useless.

I should like to have on hand at my disposal about 400 piculs of rice for the purpose of succoring with the same the most needy of the people engaged in the extermination of the locusts and of alleviating to some extent the destitution of the inhabitants.

Speaking of the work of the locust board, I can inform you that on the 20th of the current month an ordinance was passed making the work for the extermination of the locusts obligatory for all inhabitants with the exceptions provided by law. As soon as the preparatory work had been completed the members of the board scattered out among the following pueblos in order to make this ordinance more effective: Messrs. Arturo Dancel and Manuel Jabson, in the pueblos of Pasig, Pateros, Taguig, Muntinlupa, San Pedro Macati, San Juan del Monte, San Felipe Neri, Cainta, Taytay, Antipolo, and Bosoboso; Mr. Matias Angeles, in the pueblos of Montalbon, San Mateo, Mariquina, Novaliches, Caloocan, Malabon, and Navotas; Mr. Estanislao Melendrez, in the pueblos of Teresa, Angono, Binangonan, Baras, Cardona, Morong, Tanay, Palila, Quisao, and Jalajala.

The provincial supervisor has been designated for the work of distributing and shipping the material necessary for the destruction of the insects and of the periodical issue of rice to all the pueblos.

This is all that has been done so far in regard to the agriculture and the destruction of the locusts. If it merits your approval, this will be considered a good reward by the undersigned, who respectfully greets you.

A. DANCEL, *Governor*.

Total amount of locusts and hoppers killed, 8,719 cavanese, equal to 1,198,862 pounds.

#### ROMBLON.

ROMBLON, *September 25, 1903.*

The EXECUTIVE SECRETARY, *Manila, P. I.*

SIR: I have the honor to submit the following as a report on the suppression of locusts in this province:

The board appointed by your office for this purpose held its first meeting at Looc, Tablas Island, on the 26th of August, 1903. Rules and regulations (copy inclosed) were adopted.

The question of using iron sheets was brought before the board by the acting supervisor, and after discussion it was decided that inasmuch as the people of this province had been then engaged for a month in the suppression of the locusts and were using this method for catching the locusts with success, iron sheets were not thought to be necessary. (Method used: Building trenches and covering the same with banana leaves and then driving the locusts into this trench when they were covered over with earth.) It was not thought necessary to supply rice unless application for the same was received, and therefore the civil governor was not requested to furnish any. Up to the present date not a single application has been received for assistance and it is not thought that any will be received, as the people seemed very willing to undertake this work for their own benefit.

Reports have been received from the island of Sibuyan, where about 500 pounds of locusts have been exterminated. Owing to a misunderstanding the other pueblos have failed to send in their reports in the manner indicated by the board, and only report that the inhabitants are engaged in the work, but fail to state the amount of locusts caught. This fault will be remedied as soon as communication can be had with outlying towns.

Owing to the scattered location of the pueblos and the fact that no launch is available for use by the board, it is nearly impossible to properly oversee the work.

As soon as corrected reports are received they will be forwarded to your office.

Very respectfully,

FRANCISCO SANZ, *Governor*.

ROMBLON, *September 30, 1903.*The EXECUTIVE SECRETARY, *Manila:*

Report of board for suppression of locusts, Romblon Province. Board organized at Looc, Tablas Island, August 26. Assembly received instructions for extermination of locusts. Work has been carried on with great vigor since that date. Owing to scattered condition of province and no steam transportation members of board not able to get around province. Reports received to date show 6,825 pounds locusts exterminated on Tablas Island. They are supposed to be all of the small class and have not to date done much damage. On Sibuyan Island reports show 500 pounds exterminated. Report does not show size of locusts. As yet no application has been received for rice, and people all seem to realize that work is for their own benefit. Can not civil governor send a launch for about ten days in order to properly oversee this work? Am of the opinion combined operations would be means of entirely exterminating locusts. No locusts on Banton or Romblon Island.

SANZ, *Governor.*

Total amount of locusts and hoppers killed, 7,325 pounds.

---

 SAMAR.
CATBALOGAN, *October 1, 1903.*Governor TAFT, *Manila:*

Since organization of locust board circulars have been sent to all the pueblos giving thorough instructions for the killing of locusts and hoppers and the destruction of the eggs deposited by them. Pueblos invaded by locusts are Catbalogan, Paranas, Jiabong, San Julian, Sulat, Calbayog, Weyler. They have been instructed to comply with the circular orders of this board and the act passed. The governor and two members went to Paranas to push extermination of locusts and see the results of the measures employed. They took to the said pueblo 50 sheets of iron and 10 sacks of rice, as requested. Sixty sacks of hoppers were caught, and the aforesaid pueblo is now free from locusts. In Jiabong 25 sacks of locusts were caught and the swarm left for elsewhere. In Calbayog about 30 cavanies of locusts have been killed. It is calculated that 10 cavanies of hoppers have been killed in Catbalogan. Calbayog, Calbiga, Cathalogan, and Paranas seem to be free from locusts now. Locust plague has destroyed many fields of paddy and sugar cane, and tubers are planted everywhere in order to prevent famine. The launch of this province being in a bad condition, it is not possible to take rice and sheet iron to pueblos invaded by the locusts. I have no news from the pueblos of Weyler, San Julian, and Sulat, for lack of communication. I therefore would ask for another launch while the *Guy Howard* is being repaired, if this is possible, to the end of assisting pueblos invaded by locusts, where all render great assistance to work of this government.

SINGSON, *Governor.*MANILA, P. I., *October 2, 1903.*SINGSON, *Governor Catbalogan, Samar:*

Referring your telegram 1st instant, what was weight of sacks filled with hoppers and locusts?

FERGUSON, *Executive Secretary.*CATBALOGAN, *October 3, 1903.*FERGUSON, *Executive Secretary, Manila:*

Replying to your telegram dated yesterday, I would state that according to information received by this government 11,875 pounds of hoppers and 3,750 pounds of locusts have been killed in four pueblos. The work will, for the present, be rather impeded by the lack of a steamer, although the pueblos are very enthusiastic to cause the locust plague to disappear.

SINGSON, *Governor.*

Total amount of locusts and hoppers killed, 15,625 pounds.

## SORSOGON.

SORSOGON, *October 1, 1903.*The CIVIL GOVERNOR, *Manila:*

Have visited a large part of the province, as I informed you in due time on my arrival, without hearing anything about locusts. However, in order to provide for future contingencies, I believe that in view of the topographical situation of this province it would be advisable to appoint at least four agriculturist members for this service, if your honor agrees. I salute you.

MONREAL, *Governor.*

## SURIGAO.

SURIGAO, *October 1, 1903.*The EXECUTIVE SECRETARY, *Manila:*

Locusts destroyed as follows: August 20, 1½ sacks; August 25, 12 sacks; August 26, 15 sacks; August 27, 4 sacks; August 28, 3 sacks; August 29, 7 sacks; September 1, 3 sacks; September 3, 8 sacks; September 6, 6 sacks; September 7, 7 sacks; September 9, 7 sacks; total, 73½ sacks. Approximate weight, 2,940 pounds; all mature locusts. No report from other towns. One agriculturist sent to Butuan reported no locusts in Juban. Scouts and constabulary called upon to enforce the orders of board in Surigao.

RAFAEL ELIOT, *Acting Governor.*

Total amount of locusts and hoppers killed, 2,940 pounds.

## TARLAC.

TARLAC, *September 30, 1903.*

The EXECUTIVE SECRETARY.

SIR: I have the honor to inform you that during the second half of this month of September the situation of the province in regard to the locusts is the following, according to information furnished by the municipal presidents:

At Pura, Meriones, Murcia, O'Donnell, Gerona, San Clemente, and La Paz neither locusts nor hoppers have made their appearance.

At Paniqui none have appeared either, excepting a small quantity of hoppers which appeared on the field of a resident, whose tenants succeeded in exterminating them immediately. In the pueblo of Capas it has also been impossible to totally exterminate the hoppers which had appeared at three different places of that municipality since the first half of the present month.

At San Ignacio 499 cavanese of hoppers have been killed, and the residents are at work in order to exterminate what still remains. In Victoria the work of destruction is still going on in the barrios where hoppers appear, although the plague has decreased considerably. In the barrios of San José, Burgos, and Maluac, of Moncada, 368 persons have been engaged in the work during the last fifteen days and have exterminated 38 cavanese and 10 gantas. In Bamban 12 cavanese of hoppers were killed in the barrio of Culubasa, and only an insignificant quantity remains. In Tarlac, the capital, about 30 cavanese of hoppers have been exterminated, and the barrios are now free from them. In Concepción the hoppers have appeared in large numbers during the last fifteen days in the barrios of Santiago, Santo Niño, San Francisco, and Telablanca, and the councilors of the said barrios have personally taken charge of the direction of the work, in which 10 persons from each of the 17 barrios of that pueblo are engaged daily. During the period aforementioned they have succeeded in killing 405 cavanese of hoppers, of which so few are left that they do not constitute a menace or danger to the crops.

The pueblos of Camiling and Anao have not sent their weekly reports during the last fifteen days, which indicates that nothing new has happened in the same.

I would invite your attention to the fact that since the work of the extermination of this plague commenced, and notwithstanding all the work performed in all the municipalities of this province, none of the latter have asked the provincial government for rice, although I know personally that many of the residents are without this article and subsist on maize and tubers. This is an unselfish act and a sacrifice for which one must give credit to these people, who humbly obey the law and are ready to defend its interests. I therefore would ask the honorable the civil gov-

error for authority to dispose of at least 300 of the 5,000 piculs of rice on hand here, so that if the inhabitants state their needs and ask for succor I can immediately provide relief, without prejudice to rendering a detailed report to you in regard to the application of the said article.

Very respectfully,

ALFONSO RAMOS,  
Provincial Governor.

Total amount of locusts and hoppers killed, 135,354 pounds.

---

TAYABAS.

LUCENA, September 30, 1903.

The EXECUTIVE SECRETARY, Manila:

During the period from the 26th to the 29th, 74 cavanese of locusts have been destroyed. The locust board record shows that during the period from August 3 to September 30 the following amount of locusts has been destroyed: Two hundred and sixty-seven sacks, 1,221 cavanese, and 3,950 pounds, including the 200 sacks and 163 cavanese destroyed previous to the constitution of the board; during July, in Santa Cruz, Marinduque, 400, and in Torrijos, 45 cavanese.

PARAS, Governor.

Total amount of locusts and hoppers killed, 270,953 pounds.

---

ZAMBALES.

IBA, October 15, 1903.

Mr. A. W. FERGUSON, Executive Secretary, Manila, P. I.

SIR: In compliance with my telegram of the 1st of October, I have the pleasure of sending you a detailed statement of the locusts destroyed in this province from May to September of this year, and a detailed tabulated statement of the crops destroyed by that plague in this province during the months of August and September of the same year.

Respectfully,

POTENCIANO LESACA,  
Provincial Governor.

Locusts destroyed in the several pueblos of Zambales by virtue of ordinances issued by the provincial board, during the period from May 2 to September 3, 1903, said ordinances being suspended on the latter date, 3,541½ cavanese. The provincial treasurer owes therefor to local locusts boards the sum of \$708.20 Mexican.

Caught and destroyed by virtue of Act No. 817: In August, 1903, 2,246 cavanese, and in September, 155½ cavanese; total, 2,401½ cavanese.

The following is a detailed tabulated statement of the crops destroyed by the locusts and hoppers in the several pueblos of Zambales, and the amount of damage thus caused:

	Mexican.
August:	
Paddy (39 quifiones, 9 balitas, 2 loanes) .....	\$27, 389
Maize (18 quifiones, 3 balitas) .....	1, 831
Sugar cane (2 quifiones, 2 balitas) .....	950
	<hr/>
	30, 170
Destroyed in Candelaria and Iba in September:	
Paddy (12 quifiones, 9 balitas, 5 loanes) .....	\$4, 100
Corn (1 balita) .....	25
	<hr/>
	4, 125
	<hr/>
	34, 295

NOTE.—A considerable quantity of locust eggs were destroyed in the municipality of Castillejos on the 25th of August, 1903. Thanks to the zeal and activity of the municipal officials, who cooperated with the locust board, and especially to the patriotism of the inhabitants, who readily and enthusiastically responded to the invitation of the board to exterminate the locusts by the method known as "pintacasi," it has been possible to exterminate the locusts almost entirely, and it can be affirmed that from September 20 to 25 last the province was free from that terrible

plague. Of the government rice only 2 sacks have been used so far for the extermination of the locusts. The wealthy inhabitants of the pueblos, as honorary members of the locust board, took it upon themselves to furnish the poor with food. This report is in accordance with the data furnished by the municipalities and on file in the office of the provincial secretary.

---

## APPENDIX C.

### TELEGRAMS.

MANILA, *June 16, 1903.*

PROVINCIAL GOVERNOR. (All provinces.)

Civil governor desires to know: How is food supply in your province? What is price of rice? When is your next crop, and what the prospect? Are there starving people in your province? Telegraph answer at once.

FERGUSON.

---

### REPLIES.

ABRA.

[Translation.]

BANGUED, ABRA, *June 18-19, 1903.*

FERGUSON, *Executive Secretary, Manila:*

Replying to your telegram of the 16th instant as to price of rice and prospects of crop, I have the pleasure of transmitting to you the following painful data: The coming crop of corn in this province ought to be gathered during this month of June and July next, but these articles, as well as other food stuffs planted in March, owing to the locusts, will be nil in the towns of Bucay, Dolores, San Juan, La Paz, Dangtas, and part of San Gregorio, as well as in the settlements of non-Christian tribes in the north and east of the province; that is to say, in more than half of the same. The next crop of paddy will be in November and December, but the seed plats for this crop, owing to the same plague of locusts, have been likewise lost in the said towns and part of Tayum and Bangued. As the field hands had to sow new seed plats of paddy rather late because of the locusts, if there is any yield at all it will be very small, about a third smaller than usual. The highest present price of rice in the towns most attacked by the locusts is from 8 to 10 cents Mexican per pound, and the lowest price in Bangued and towns in the south of the province, where the locust, thank God, has not appeared in devastating numbers up to the present, the price of the article is from 5 to 6 cents per pound. Ever since the month of May the scarcity of cereals began to be felt here, and the scarcity has increased more and more, owing to the increasing damage caused by the locusts.

By mail I shall send you the detailed communications of the municipal presidentes regarding the sad situation of the towns through lack of food.

JUAN VILLAMOR, *Provincial Governor.*

---

ALBAY.

ALBAY, *June 17, 1903.*

FERGUSON, *Executive Secretary, Manila:*

Replying to your telegram of 16th, there is plenty of rice in the almacenes in this province. Rice in seaport towns worth 7.40; towns center of province, 8.40; towns farthest from the ports, 9 pesos. This is the season for planting rice in this province. A very large acreage is now being prepared. Have just returned from the interior with Colonel Bandholtz, where we have extended the lines of reconcentration in the rice-producing pueblos to enable them to continue the further planting of rice. The dams in the streams that supply these plains with water for the rice fields and were destroyed a few years ago have all been reconstructed, and they now have abundance of water. There is some suffering in some of the reconcentrated pueblos. Up

to the present all who desired work were given work on the public highway. Our road fund, however, is running very low, owing to the fact that the province has not been able to collect scarcely any taxes during the period of reconcentration. A continuation of the reconcentration no doubt will compel us to ask the Commission for some assistance. I am opposed, however, to distributing relief gratuitously; those requiring assistance should be willing to give their labor in compensation for same. An inspection of the highways being constructed by the municipalities with the funds recently loaned them by the province to give work to those requiring assistance discloses the fact that the municipalities can secure a greater amount of work from their people with the same amount of money than can be accomplished by the province. All this work, however, is being done under the supervision of the provincial supervisor through competent road foremen paid by the province. These highways are being constructed at about one-third the price they would cost in normal times. There is but little change in the ladrone situation. They apparently have gone into hiding. I have a great deal of faith in Colonel Bandholtz's ability to handle the situation.

BETTS, Governor.

---

AMBOS CAMARINES.

NUEVA CACERES, June 17, 1903.

FERGUSSON, *Executive Secretary, Manila*:

Price of rice, Nueva Caceres, this morning \$7.60 and \$7.70, local currency, per sack; at Iriga, 23 miles interior, \$8.30 and \$8.40. All local dealers report large supplies stocks on hand. Next crop from January to April, next year. While greater activity in planting this year than any time since war, and several rice towns looking for good crops, the production of province will fall far short of consumption. A great deal of corn is under cultivation. Peaceful conditions of province enable us to work all hemp and cocoanut fields. Fisheries are doing well. No starving people or danger of starvation. Employment available for all willing to work at fair wages.

ROSS.

---

ANTIQUE.

SAN JOSÉ, June 23, 1903.

The EXECUTIVE SECRETARY, *Manila*:

There are approximately 15,000 cavanese of palay at prices as follows: In towns near the Siblom Valley, \$3.10 per cavan; central towns, \$4; \$5 in towns south, and a few north. Next crops in north and south will be in September, and in Siblom Valley in December. Rice, Saigon, is sold by chinos in San José, Bugason, and Colasi at from 33 to 40 cents per ganta. There will be starvation to some extent in August and September, but the crop of corn, camote, and tubers will greatly help out.

SALAZAR, *Acting Governor*.

---

BATAAN.

BALANGA, BATAAN, June 18, 1903.

The EXECUTIVE SECRETARY, *Manila*:

People have harvested probably two months' supply of rice from second crop. First-class rice sells from \$8 to \$8.50 per picul. There is and will be no suffering for food, people always having sufficient money to purchase necessities. Fishing supports over one-half of the population.

GOLDMAN, Governor.

---

BATANGAS.

BATANGAS, June 17, 1903.

FERGUSSON, *Executive Secretary, Manila*:

Food is somewhat scarce, but the relieving work of war emergency funds is of great relief for the people. Rice is sold at \$6 Mexican per cavan, and some given away to the poorest people. No case of starvation has been reported to me yet, though

great difficulty of getting employment is more and more felt for the poorer classes. Large clouds of locusts are hovering on the new rice plantations. Up to date the work of the experts in the management of fungus has not produced satisfactory results. Captain Boughton has extended his relieving work to destruction of locusts. Many towns are being given money for the purpose of buying dead locusts at 50 cents Mexican per cavan. It relieves the poor people very much; at the same time affords employment to able-bodied men, women, and children. The next rice crop is for September next. The prospect is middlingly fair and if not destroyed the next rice crop would be satisfactory indeed. Despite the lack of laboring animals, the people have made every effort and large extent of lands are being planted with rice and corn. The lateness of rain in a few places impedes the completion of the plantations.

Luz, Governor.

---

BENGUET.

BAGUIO, BENGUET, *June 17, 1903.*

FERGUSON, *Executive Secretary, Manila:*

Just returned from northern part of province. Everything satisfactory. Just beginning to harvest rice. Larger yield than ever before. More land cultivated than during past. Conditions excellent. Will start for Kayapa on the 19th.

PACK.

---

BOHOL.

TAGBILARAN, *June 17, 1903.*

The EXECUTIVE SECRETARY, *Manila:*

Answering your telegram of the 16th, majority coast towns have enough rice. Price from \$6.75 Mexican to \$8, interior pueblos. Carmen, Sierra Bullones, Balilijan, and Baklayon have no rice. Principal shortage in Carmen and Sierra Bullones. The next crop of palay will be the end of November; of corn, the end of July and August. Much corn was sowed in the majority of the towns, but there were also clouds of locusts which I have ordered the presidentes to pursue and destroy. Recently there have been killed more than 400 cavanese of young grasshoppers in my province. There are very few starving people.

CLARIN, *Provincial Governor.*

---

BULACAN.

MALOLOS, *June 17, 1903.*

The EXECUTIVE SECRETARY, *Manila:*

Food supply in my province poor and scanty. The treasurer and I just came from a visit in north part, observing that famine hangs on the poor classes, with the fact that locusts, large and small, are stationed in those towns. During the time of five days 8,535 pounds of rice have been exchanged to people for 42,872 pounds of locusts. The price of rice varies accordingly in different towns, fluctuating between \$7.50 and \$10 local currency per cavan. Indian corn crop commences this month, lasting till August, and rice crop in November and December. Prospects not very good, for want of water. Five hundred dollars appropriated for extinction of locusts already expended. Now the board has appropriated \$500 more for same purpose and perhaps another sum still will be needed. To-morrow will confer with you regarding condition of the province.

PABLO TECSON, *Governor Bulacan Province.*

---

CAGAYAN.

[Translation.]

TUGUEGARAO, *June 19, 1903.*

The EXECUTIVE SECRETARY, *Manila:*

Replying to your telegram of the 16th of this month, I report price white Saigon rice \$9.50 Mexican; second grade white, \$7.75 to \$8; ordinary, \$7.50. Locust plague destroyed corn, paddy, and tuberous crop several times. Next crop will be poor and meager, if any at all. Up to present no starving people in this province.

GONZAGA, *Provincial Governor.*

## CAPIZ.

[Translation]

CAPIZ, June 17, 1903.

FERGUSON, *Executive Secretary, Manila:*

All the rice fields were destroyed by the typhoon. Actual conditions relatively good, with little corn and paddy on hand. Within a month hunger will be felt in the interior towns, although they have again sown corn and paddy. Next crop will be in October. It promises to be abundant, as everybody endeavors to till the fields, even with his hands, owing to lack of carabao. This crop is the only hope of the province. Fortunately nobody dies of starvation, but I fear they will die of fevers, owing to lack of shelter and the humidity of the soil. Ordinary rice in this market and Calivo, 8 pesos per picul, and white second grade \$9.50 Mexican per picul. Tapaz, Maayon, Macato, Molinao, piculs rice, ordinary, 9.50 to 10 pesos; second grade white, 12 pesos. Corn at Dao and Sigma, \$3.75 Mexican per cavan.

JUGO VIDAL, *Governor.*

## CAVITE.

CAVITE, June 17, 1903.

FERGUSON, *Executive Secretary, Manila, P. I.:*

Food supply in this province is very limited, and the small crops of rice which will be harvested will only last a few weeks. Rice now is worth from 8 to 12 pesos Mexican per cavan, depending upon the distance of the town from the seaport and quantity bought at one time, whether ganta or cavan. Next full crop will be in December or January, but the locusts have again appeared and threaten the rice crop of that date. There will be no starving in this province, but the people will be in sore circumstances, and I respectfully request that some arrangements be made to assist the people from the 1st of August to the rice crop in December. They will need 60,000 cavans of rice to be brought from outside. Some of the people are able to pay in full, though some will be able to pay not more than half price for their rice.

M. TRIAS, *Provincial Governor*

## CEBU.

[Translation.]

CEBU, June 18, 1903.

FERGUSON, *Executive Secretary, Manila:*

This province does not grow rice. Corn, which is the principal food of all these towns, can not be gathered before two or three months in those towns not destroyed by the cyclone of the 2d instant. Should no contretemps intervene a fair crop is expected. It is impossible to get at the number of persons suffering hunger, but it is estimated that two-thirds of the inhabitants of the towns of this province live only on bananas, tubercles, buri meal, and shellfish in small quantities. The price of corn per cavan is quoted at from 7 to 8 pesos, and a picul of rice, second grade, at this capital, at 7.25, and in the towns from 8 to 9 pesos. There is a sufficient supply of rice in this market. It is advisable that the repair of roads be entered on in those towns where hunger is most felt as a means of providing wages to their inhabitants. I proposed this to the provincial board at the beginning of the invasion of famine, but the provincial supervisor interposed some difficulties.

CLÍMACO, *Governor.*

## ILOCOS NORTE.

[Translation.]

LAOAG, June 18, 1903.

The EXECUTIVE SECRETARY, *Manila:*

Food stuffs of this province very scarce now. Rice sold at \$8.75 Mexican. New crop will begin coming in end of November and assuredly will be small, owing to locust plague and lack of rain. Many towns needing rice.

JUGO AGCAOILI, *Provincial Governor.*

ILOCOS SUR.

[Translation.]

VIGAN, June 23, 1903.

The EXECUTIVE SECRETARY, *Manila*:

Received your telegram of to-day as well as that of the 16th. Did not reply at once, because was awaiting data requested of the towns. Condition of province with respect to rice, according to reports: Scarcity noticeable already in several towns, but up to the present there is a sufficient supply of rice at Vigan, where it is purchased by inhabitants of other towns. All presidentes have been advised to report to me first symptom alarming scarcity. Sowing paddy just beginning. Many locusts, which have destroyed part corn fields. Shall request rice when towns need it and no supply at Vigan.

CRISÓLOGO, *Governor*.

ILOILO.

[Translation.]

ILOILO, June 19, 1903.

The EXECUTIVE SECRETARY, *Manila*:

The condition of the province as regards food supply is critical. Rice, second grade, white, is sold at \$7 Mexican per picul wholesale, and \$7.06½ to \$7.12½ retail. Ordinary quality at \$6.43½ per picul. There is a very small stock of paddy on hand, and that only in a few towns, and it is very dear. Rice in the interior towns is sold at 37½ cents per ganta, and in some a little higher. For these reasons starvation, which is beginning to be felt, it is expected will increase and cause ravages. It is impossible now to foretell the condition of the new paddy crop, because the plowing is just beginning. Owing to late rains, the early paddy crop will be gathered in September and the regular crop in November and December. The latter is garnered in greater quantities, and it is the only one which serves as a basis for calculations, for the early crop is small in quantity. I beg you will inform me what government rice will cost, placed at Iloilo.

DELGADO.

ISABELA.

[Translation.]

ILAGAN, ISABELA, June 18, 1903.

The EXECUTIVE SECRETARY, *Manila*:

Replying to your courteous telegram of the 16th instant regarding the stock of rice on hand in this province, its price, prospects for next crop and its condition, and whether the people of the province are starving, I respectfully report that this province is well supplied with rice and its price is \$8.50 to \$9 Mexican per cavan of Saigon rice. As to the next crop, its conditions are good and will be abundant if all planted is garnered unless the fields should be desolated by the locusts, which abound throughout the province. At present no starvation is apparent. The municipal presidentes continue to give fortnightly reports of the condition of the fields plowed and planted in their various municipalities, as they were directed and urged to do, and the reports are satisfactory.

DICHOSO, *Governor*.

LA LAGUNA.

[Translation.]

SANTA CRUZ, LAGUNA, June 17, 1903.

The EXECUTIVE SECRETARY, *Manila*:

By direction of the provincial governor: Food stuffs in this province are now cheaper than last year, 1902. Price of rice fluctuates between \$6.80 Mexican and \$7.50 per picul. It may be that these prices will rise should the next crop be small. The prospects are rather doubtful, owing to scarcity of carabaos and farm animals, and presence of clouds of locusts in the locality. No one in the province has died of starvation. What is feared will bring about scarcity of resources is numerous immigration of laborers from Bataan.

JOSÉ RIVERA, *Provincial Secretary*.

## LA UNION.

SAN FERNANDO, UNION, *June 17, 1903.*The EXECUTIVE SECRETARY, *Manila:*

There is a reserve supply of government rice in all towns, except San Fernando, which is being held for emergency. When supply held by individuals is exhausted this will be put on sale. Private parties are selling bad class of rice for 8 pesos per cavan. The planting of rice is just being commenced, owing to lack of rain, not through neglect of people. Can not say what crop will be, but everything promises big harvest. Not one case of starvation has been reported, nor is it anticipated. We requested 10,000 piculs of rice for this province; have received about 2,000. Need more to carry the people through until crop is harvested.

ORTEGA.

## LEPANTO-BONTOC.

CERVANTES, *June 17, 1903.*The EXECUTIVE SECRETARY, *Manila:*

In reply to your telegram of June 16, would say that rice is selling at Cervantes for 12.50 pesos per cavan; Bagnen and farther west at this price. New crop harvesting. Price breaking; sufficient camotes. No suffering, and outlook good.

DINWIDDIE, *Governor.*

## LEYTE.

TACLOBAN, *June 17, 1903.*FERGUSSON, *Executive Secretary, Manila:*

Paddy, corn, palawan, gabe, ube, sweet potatoes, bananas, apari, coro, are food stuffs raised in province to feed about half the population. Fresh fish all through the year along the coast to feed two-thirds the population. Four-fifths of the people have hemp lands, where they produce yearly, I calculate, at least 5,000,000 pesos' worth, placed at a price of 20 pesos a picul. Last year 50 per cent of the crops of paddy and corn were lost. Next crop, which is in December, will have a loss of 75 per cent on account of heat. Hemp and other products mentioned above in splendid condition. Rice selling at 8½ to 9 pesos a picul. There are no starving people in province.

BORSETH, *Acting Governor.*

## MASBATE.

MASBATE, *June 19, 1903.*The EXECUTIVE SECRETARY, *Manila:*

Food supply limited. Rice selling \$8.25 in Masbate, but \$10 to \$12 in outlying pueblos. No prospects of next crop on account of drought. Much land in preparation for sowing. No starving people in the province.

SERRANO, *Provincial Governor.*

## MINDORO.

CALAPAN, *June 17, 1903.*The EXECUTIVE SECRETARY, *Manila:*

Food supply in north side of island good; other side, no difficulties known. Price of rice per sack \$7 Mexican. Next crop in October; prospect good. No starving people in province. Governor absent attending municipal elections.

SAN AGUSTIN,  
*Provincial Secretary, Acting Governor.*

## MISAMIS.

[Translation.]

CAGAYAN, June 23, 1903.

The EXECUTIVE SECRETARY, *Manila*:

According to reports of presidentes of the towns, sufficient rice on hand for more than a month. Price of rice from \$8 to \$9 Mexican. Next corn crop will be harvested about middle of September; of paddy, in November and December. Corn crop looks well, if locusts do not eat it. Can not judge of paddy, as just beginning to plant it. The inhabitants are not dying of starvation, but owing to lack of \* \* \* they fare poorly, predisposing them to cholera, which caused several deaths.

CORRALES, *Governor*.

## NEGROS (OCCIDENTAL).

[Translation.]

BACOLOD, June 17, 1903.

The EXECUTIVE SECRETARY, *Manila*:

Rice comes from Iloilo, and the price is 7.50 to 8.50 pesos per picul of second-grade white. First crop of paddy small, will be in in October, and the second and larger in quantity in December and January next; general crop, it is expected, will be small. I have no news of any deaths from starvation, since rice shipped to the towns made it possible to meet the critical situation of several of them. Corn is being sowed, and I would request the shipment of seed corn. The winged and wingless locusts have appeared in several towns. I recommend shipment of fungus recently prepared. Circulars have been sent to the towns recommending the destruction of these insects, and offering rewards in coin.

LOCSIN.

## NEGROS (ORIENTAL).

DUMAGUETE, June 17, 1903.

FERGUSSON, *Executive Secretary, Manila*:

Replying to your telegram I have to state: Rice, second grade, white, \$7.50, Mexican, in this capital; in northern and southern towns from \$8 to \$10, Mexican, per picul. Almost every town has planted corn in the last days of May. The planting has been very good, but very little hopeful on account of two plagues, the locust and the worm "tagustus," which suddenly appeared in most of the towns. It is estimated that 30 per cent of the people of this province feed on roots and tubers from the woods. No deaths have been reported from famine. Proper measures have been taken for the extinction of the plagues. The transplanting of the "palay" (rice seed) is usually made in the last days of the present month. This kind of seed is very scarce in some of the towns.

LARENA, *Acting Governor*.

## NUEVA ECIJA.

[Translation.]

SAN ISIDRO, N. E., June 30, 1903.

FERGUSSON, *Executive Secretary, Manila*:

Replying to your telegram of June 16, 1903, food stuffs among poorer classes are scarce. Price of rice, \$7 to \$8, Mexican, per cavan. Palay, \$3 to \$3.50 (pesos) per cavan. Crop not known because there are no seed plats sown owing to lack of rain and locust plague. It is expected that the yield will be poor. Up to date not known that anyone has died of starvation, but the majority of the poorer classes only eat once a day tubercles and substances extracted from palms, cane, and other vegetables.

SANTOS, *Governor*.

## NUEVA VIZCAYA.

BAYOMBONG, *June 17, 1903.*FERGUSON, *Executive Secretary, Manila:*

Food supply of this province sufficient until next crop. It is too early here to predict regarding next rice crop, which is only planted in July, August, and September, but prospects are good excepting danger from locusts. There are no starving people in this province. We have more work animals this year than last, and they are free from disease so far.

BENNETT, *Provincial Governor.*

## PAMPANGA.

BACOLOR, *June 17, 1903.*The EXECUTIVE SECRETARY, *Manila:*

Food supply in this province in very bad condition. Price of rice No. 1, \$8.50 per cavan. Crop of rice due in December. Prospects very poor. Famine is already felt and will become worse this coming month.

JOVEN, *Governor.*

## PANGASINAN.

[Translation.]

LINGAYEN, *June 17, 1903.*The EXECUTIVE SECRETARY, *Manila:*

In replying to your telegram of 16th instant, at present sufficient supply food stuffs on hand. Rice fluctuates between 4 and 5 pesos; in some pueblos and in Dagupan 6 pesos per cavan, by reason of large exports of rice from there to Union, Zambales, Ilocos and Pampanga. Rice farmers are getting ready, and the sowing will begin next month. Crop will be gathered between November and and February. There is great drouth and many locusts. The latter are continually pursued and destroyed. There are not sufficient field animals. Laboring class not starving.

FAVILA, *Governor.*

## PARAGUA.

CUYO, *June 17, 1903.*The EXECUTIVE SECRETARY, *Manila:*

The food supply in province is abundant. Price of paddy is two-fifty, Mexican, per cavan. Price of rice is 5 cents, Mexican, per pound. Next crop will be in September and October. Prospects good. There are no starving people in province; on the contrary, people are in better condition in every respect than they have ever been before.

PHILIPPS, *Governor, Paragua.*

## RIZAL.

PASIG, RIZAL, *June 17, 1903.*Hon. A. W. FERGUSON, *Manila:*

Antipolo feasts gave and are still giving these towns large allotments of Mexican currency. Famine is not to be feared at present; moreover, district of Morong could furnish crop of rice for a time. Crop of rice and sugar cane looked well before now, with good prospects for husbandmen, but locusts again destroyed plantations. The campaign against bandits being over, I am now using all means to destroy the locusts. The market price of rice here is \$9, Mexican, per picul. Scantiness of water prevents planting seed plot of rice. Conditions in province quietly improved. My respects to civil governor and you.

DANCEL, *Provincial Governor.*

## ROMBLON.

[Translation.]

ROMBLON, June 17, 1903.

The EXECUTIVE SECRETARY, *Manila*:

In the matter of food stuffs my province, up to the present time, is supplied with everything. The price of rice at this time, prime, is 8 pesos per picul, and of Pangasinan rice, \$6.50 per picul. The next crop will be gathered about the months of November and December. The prospects in case of starvation in this province will be to feed on sweet potatoes, corn, and other tubercles; and should the case arise the provincial government would request sufficient rice of your office beforehand to distribute.

SANZ, Governor.

## SAMAR.

[Translation.]

CATBALOGAN, June 17, 1903.

FERGUSON, *Executive Secretary, Manila*:

Replying to your telegram of June 16, people of this province eat only rice and fish; in default of rice or paddy they eat tubercles, which abound here. Price of rice: Saigon prime, \$7.50 per picul; Rangoon, \$7.62½ per picul. Northern and eastern coasts paddy now being sown, or, rather, sowing about to end. Southern and western coasts planting in September and October. Considerable paddy must have been harvested at Catubig, because great quantities sown. Locusts are beginning to appear and have done some damage; unable to learn extent of damage. No reports of people dying of starvation here; nevertheless, would be wise to send some 2,000 sacks of rice to forestall any contingency. Of the shipment sent this province only few sacks left. I have just learned that on eastern coast rice is selling at \$8.50 per picul; retail price, 40 cents per ganta, which is 10 pesos per picul.

LLORENTE, Governor.

## SORSOGON.

[Translation.]

SORSOGON, June 17, 1903.

The EXECUTIVE SECRETARY, *Manila*:

Commission houses, I understand, have sufficient supply of rice of very inferior quality on hand. Prices vary from 8 to 9 pesos per picul, according to location, and tendency is to rise. New paddy crop, owing to lack of animals, will be small. Wretchedness reigns in the reconcentrated pueblos like Donsol, Pilar, and points where the cholera caused such ravages, like Bulusan and Santa Magdalena. The rinderpest has reappeared in the pueblos of the east and south of the province with considerable intensity, carrying off the few carabaos remaining, and the horses suffered a loss of 90 per cent.

MONREAL, Governor.

## SURIGAO.

[Translation.]

SURIGAO, July 6, 1903.

FERGUSON, *Executive Secretary, Manila*:

There is a sufficiency of edible roots and rice in the province. Rice costs \$7.50 Mexican per cavan in commercial houses and \$8 Mexican in Chinese shops. Rice crop harvested in April and May. No famine felt in province at present.

GARCIA, Governor.

## TARLAC.

[Translation.]

TARLAC, TARLAC, June 17, 1903.

The EXECUTIVE SECRETARY, *Manila*:

Replying to your telegram of this date, I have the honor to inform you that although paddy is becoming scarce in this province, owing to the small crop garnered last year, nevertheless the people continue to get food, and from no one have I heard that the actual terrors of starvation are felt, for if food is not to be found in one town it is sought or bought in another of this same province. The present price of ordi-

nary rice is \$6.87½ Mexican per cavan. The next paddy crop will not be planted until this month or July, to be harvested in November and December of this year, but it is to be feared that it will be destroyed by the locusts and hoppers abounding in this province, as they nearly destroyed the early corn and paddy planted last May, as well as the sugar cane planted in December, January, and February last. The people of this province continue to subsist, thanks to the many who devoted themselves to the cutting and gathering of timber and firewood in the forests and to the daily wages they earn in their respective trades and occupations or as laborers on the general road work of the province. Many landowners here still have on hand a fair quantity of paddy of the last general crop and of the little which remains of the early paddy crop gathered in May last, to whom the laborers and people of the town apply when they desire to purchase it, the present price of which is \$3 Mexican per cavan. In general terms, the outlook for the crops now planted is very poor, as they have been damaged by the locusts, and what is to be planted later on is also exposed to being destroyed by the latter unless other causes favor it.

Very respectfully,

ALFONSO RAMOS,  
*Provincial Governor Tarlac.*

---

TAYABAS.

LUCENA, *June 18, 1903.*

The EXECUTIVE SECRETARY, *Manila:*

In answer to your telegram dated 16th instant: There is in this province a famine of food supply. Many towns are supplied with rice from Manila, and others can get such food as camote, bananas, etc. Price of rice in the coast towns, Marinduque, Island and Tiaon, 8.50 pesos per picul; in towns located on Pacific coast, viz, Atimunan, Gumaca, Lopez, Catuag, Mauban, Alabat, Kasiguran, etc., from 10 to 12 pesos. There is no harvest, on account of locusts. The beginning of plowing on the (Caingin) lands is in June and July. The harvest will be during next November and December. In several towns the people are starving where there was no harvest. The suffering among the people will be intense provided the coming harvest does not come up to expectations.

PARAS.

---

ZAMBALES.

[Translation.]

IBA, ZAMBALES, *June 18, 1903.*

The EXECUTIVE SECRETARY, *Manila:*

With the exception of seven towns that have totally lost their crops, all the rest have a sufficient stock of rice on hand until the next crop, which will be in the month of November next. I am not acquainted with outlook for the next crop of rice, as the sowing has not yet begun, although some paddy plats have been dried up for want of rain. There has been no death from starvation.

LESACA, *Governor.*

---

APPENDIX D.

THE GOVERNMENT OF THE PHILIPPINE ISLANDS, EXECUTIVE BUREAU,  
*Manila, October 1, 1903.*

SIR: In compliance with your verbal instructions, I have the honor to submit the following report, covering the period from October 1, 1902, to September 30, 1903, for the administration and finance division of this bureau:

Prior to January 31 of the present year this division was known as the "appointment and finance division," and during the period from October 1, 1902, to the date first mentioned the character of the work was practically the same as during the period ending on the latter date. On January 31, 1903, upon the consolidation of the executive bureau and the office of the secretary to the Commission, the title of this division was changed to the "administration and finance division" and the scope of its labor correspondingly increased. This division took over the work of the former appointment and finance division in connection with all administrative matters pertaining to the office of the governor and the executive bureau, with the exception of the investigation of charges and complaints against municipal and provincial officials, which were transferred to the law clerk of this bureau, whose position was provided for in the act of consolidation mentioned above.

During the period from October 1, 1902, to September 30, 1903, all executive

orders; proclamations of the civil governor; applications for pardon, with complete action thereon; reports in respect of the estates of deceased employees of this government; firearm applications for the city of Manila and all the provinces, under the provisions of Act 610, Philippine Commission, and amendments thereto; cablegrams received and sent, including the making of official excerpts; resolutions of provincial boards with excerpts, and almost all the communications between the Bureau of Insular Affairs of the War Department and offices and bureaus of this government have been handled by the administrative section of this division.

In the finance section all estimates of appropriations are prepared; general and special appropriation bills drafted, to be submitted to the Commission; extracts thereof furnished upon passage; all requisitions for accountable warrants and certificates for settlement warrants handled, also all accountable and settlement warrants drawn and letters of transmittal prepared; committees appointed in matters of inspection of damaged and lost public civil property, and their reports prepared for approval and transmission; and all purchases, contracts, leases, and plans carefully and thoroughly reviewed before submission for the approval of the chief executive. Charges against officials and employees of this government under the provisions of Executive order No. 84, series 1902, covering removals, reductions, and reinstatements, and applications for leaves of absence, accrued and on account of illness, are also handled by this section, together with all consular correspondence, acknowledgments, drafts of proposed miscellaneous acts and resolutions, and general miscellaneous action work.

During the year mentioned there have also been handled by this division all appointments to insular, provincial, and municipal positions from that of the lowest under municipal governments to the highest under the insular government. This also includes all judicial appointments, covering those from judges of courts of first instance to auxiliary justices of the peace in the smallest municipalities.

There are at present 40 organized provinces, containing 1,035 organized municipalities. It is impossible to give even a comparative estimate of the amount of work connected with the supervision of the provincial and municipal governments. While the strictly formative period of government in the provinces and municipalities has been completed, there are still numberless administrative questions arising which require careful and thorough consideration before opinions or instructions can be issued, owing to their possible application in the future.

It is the aim of every clerk of this division, in matters requiring the attention of the chief executive and secretaries of departments, to secure all the information obtainable to enable them to take comprehensive action without delay upon all questions necessarily submitted to them.

In conclusion, it might be stated that there are at present in this division 32 employees, 12 of whom are Americans, the balance being natives of these islands, this report having been dictated to and written by one of the last mentioned, a young Filipino stenographer.

Tabulated statements showing the appointments made by the Commission during the period covered by this report, as well as the number of persons, Americans and Filipinos, at present holding office, and certain statistical information in respect of the quantity of work performed in this division, are hereto attached.

Respectfully submitted.

GEORGE M. SWINDELL, *Acting Chief.*

The EXECUTIVE SECRETARY, *Manila.*

## APPENDIX E.

THE GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
*Manila, October 1, 1903.*

SIR: I have the honor to submit the following report covering the work of the legislative division of the executive bureau for the period from February 1, 1903, to September 30, 1903, inclusive, and of the office of the secretary of the Philippine Commission from October 15, 1902, the date of the last report of the Commission, to February 1, 1903:

By Act No. 609, enacted by the Commission January 31, 1903, in accordance with suggestions contained in the last annual report of the civil governor, the office of secretary of the Philippine Commission and the executive bureau were consolidated

under the name of the executive bureau, the duties which before that date had appertained to the secretary of the Commission being partly assumed by the executive secretary but in a considerable measure assumed by the recorder of the Commission and the legislative division of the executive bureau created by the act above referred to. Upon the consolidation of these offices as above mentioned, act No. 6 of the Commission was so amended as to provide that the recorder should attest the acts of the Commission upon their enactment. The following resolution was also adopted by the Commission at its session of February 2:

"The position of secretary of the Commission having been abolished by Act Numbered Six hundred and nine and the position of recorder created, and that portion of the 'Regulations for the conduct of the business of the Philippine Commission,' adopted by the Commission at its session of June sixteenth, nineteen hundred, which provides for the attesting and custody of the records and official correspondence of the Commission by the secretary being no longer operative, it was, on motion,

*Resolved*, That from and after February first, nineteen hundred and three, the recorder of the Commission, authorized by Act Numbered Six hundred and nine, shall attend the sessions of the Commission, and shall prepare and attest its minutes and have custody of the same."

Except as above set forth, the duties of the recorder and of the legislative division have not been fixed by law or resolution of the legislative body, but rather by orders of the Commission and of the executive secretary. These duties may be briefly summarized as follows: The attendance upon all sessions of the Commission, both executive and public; the recording of all actions by the Commission and of addresses made before it when same are required; the preparation, certification, indexing, binding, and custody of the Commission's minutes; the certification and printing of the Commission's acts, public resolutions, and appointments; the preparation for the signature of the executive secretary of correspondence based upon action of the Commission; the printing, proof reading, and indexing of the quarterly and annual volumes of the Commission's legislation in both English and Spanish, and such other duties as are from time to time assigned. It will be seen, therefore, that the work of the legislative division pertains exclusively, as its name would indicate, to that of the Commission.

To this division is referred, for submission to the Commission, all proposed legislation prepared by the different commissioners acting as committeemen and all correspondence of any nature calling for action by the legislative body. Such papers are submitted by the recorder to the Commission sitting in executive session. Upon the enactment of laws manifold typewritten copies are at once made and after certification are sent at once to the civil governor, the executive secretary, the auditor, the treasurer, the attorney-general, the commanding general of the Division of the Philippines, and all other officials or persons directly affected by the law, a letter being prepared for the signature of the executive secretary calling attention to the legislation. Typewritten copies of all such acts are forwarded to the Secretary of War, over the signature of the executive secretary, by the first mail leaving the islands after their enactment. Two printed certified copies are also forwarded to the Secretary of War at the close of each month. The acts of the Commission are not engrossed, as is the case with those of most State legislatures in the United States, but are carefully proof read, and several copies of each act are printed on heavy white ledger paper; one of which copies in the case of each act is signed by the president of the Commission and attested by the recorder. These certified copies are in the custody of the recorder, and form the official file of the Commission's legislation. In the legislative files in charge of the recorder there is also kept all correspondence, etc., which forms the basis of legislative action by the Commission, the same being filed with other papers relating to the acts passed by the Commission upon the respective subjects to which they relate.

An important branch of the work of the division is the reporting of the public sessions of the Commission, which are held from time to time to discuss measures of general public interest under consideration by the Commission. Stenographic notes of all such discussions are taken in full and are kept on file in the division for future reference. When so ordered by the Commission, and in case of discussions of special importance, a verbatim transcript of the stenographic notes of such sessions is made, but ordinarily there is incorporated in the minutes merely a summary of the arguments presented, including all amendments and suggestions proposed by those addressing the Commission or by the commissioners themselves. This work of reporting becomes rather difficult at times, due to the well-known policy of the Commission to grant a full hearing to anyone desiring to address it, no matter of what nationality, and the cosmopolitan character of Manila's population brings forth at times English which it is difficult for the reporter to follow. Of course, a large portion of the speaking is done in Spanish, and in such cases the record is made from the English inter-

pretation. During the past year there have been public sessions of the Commission upon the following subjects:

Electric street railway franchise for Manila, one session, held on October 20, 1902.

The land-registration bill, one session, October 20, 1902.

The coastwise trade bill, two sessions, November 12 and 17, 1902.

The granting of various franchises for the extension of the lines of the Manila Railway Company (Limited), seven sessions, November 12, 1902 (one session), November 17 (two sessions), December 2 (one session), December 8 (two sessions), and December 16 (one session).

The bills providing for boards of tax revision, five sessions, December 10, 15, and 16, 1902 (each one session), and January 8, 1903 (two sessions).

The reception of provincial governors, three sessions, December 21, 23, and 24, 1902.

The seating of Commissioner Smith, one session, January 1, 1903.

The bill regulating the practice of dentistry, one session, January 10, 1903.

The bill regulating the practice of pharmacy, five sessions, January 10, 12, 23, 24, and 26, 1903.

Petition for a general hospital in Manila, one session, January 10, 1903.

The trade-mark bill, four sessions, February 24, 25, and 26, and March 6, 1903.

The bill forbidding the sale of intoxicating liquors near military reservations, three sessions, February 24 and 25, and March 6, 1903.

The municipal franchise bill, three sessions, February 24 and 26, and March 6, 1903.

The Chinese registration bill, one session, March 10, 1903.

The opium bill, three sessions, July 8, 9, and 15, 1903.

The Filipino students bill, one session, July 29, 1903.

The bill providing for inspection of hemp, three sessions, July 30 and August 10 and 11, 1903.

The purchase of the Oriente Hotel, one session, September 1, 1903.

Making a total, counting each half-day session separately, of forty-six public sessions, verbatim reports of all of which were made. The public sessions of the Commission have been well attended for the most part, and at more than half of them practically every seat in the sessions hall, in which they are held, has been occupied.

The year has been a very busy one with the legislative body, and this activity has been naturally reflected by this division. There have been enacted since October 15, 1902, down to October 1, 1903, 431 laws, Nos. 482 to 912, inclusive, nearly as many as were enacted by the Commission in the previous two years combined. Acts 482 to 493, inclusive, were forwarded with the last report of the Commission, leaving 419 acts which have been enacted subsequent to the last act forwarded with the Commission's report of last year. Of the 431 laws enacted, 90 have been those making appropriations; of the remaining 341, many have been measures which might perhaps be termed temporary or administrative in their character, affecting as they do only the administration of the government or of its branches. This work of administrative legislation and of appropriations has occupied a very large portion of the Commission's attention during the past year. Time has been found, nevertheless, during this period to consider and enact a number of important laws of general interest to the whole public. Among the more important of these might be mentioned the following:

No. 496. The land-registration act, enacted November 6, 1902.

No. 518. Highway robbery and brigandage defined and penalties prescribed therefor, enacted November 12, 1902.

No. 519. Vagrancy defined and penalty prescribed therefor, enacted November 12, 1902.

No. 520. An act authorizing the issuance of special coastwise trade licenses to foreign vessels, enacted November 17, 1902.

Nos. 554, 555. Franchises to the Manila Railway Company (Limited), for railway extensions, enacted December 8, 1902.

No. 556. An act authorizing the closing of insolvent banks by the insular treasurer, enacted December 9, 1902.

No. 593. An act regulating the practice of dentistry, enacted January 10, 1903.

No. 597. An act regulating the practice of pharmacy, enacted January 26, 1903.

No. 611. An act authorizing the issuance of passports to Philippine citizens, enacted February 2, 1903.

No. 624. An act prescribing regulations to carry out the mining law, enacted February 7, 1903.

No. 627. An act regulating the registration, branding, conveyance, and slaughter of large cattle, enacted February 9, 1903.

No. 654. An act providing an appeal from decision of a single judge in habeas corpus proceedings, enacted March 4, 1903.

No. 666. The trade-mark act, enacted March 6, 1903.

No. 667. The municipal franchise act, enacted March 6, 1903.

No. 701. An act regulating mutual benefit and benevolent associations, enacted March 27, 1903.

No. 702. An act to carry out the Chinese registration law of Congress, enacted March 27, 1903.

No. 703. Franchise to the Manila Railway Company (Limited), for railway extension, enacted March 27, 1903.

No. 780. Examination and licensing of officers of seagoing vessels, enacted May 29, 1903.

No. 787. An act providing a government for the Moro Province, enacted June 1, 1903.

No. 849. An act providing for the protection of sea buoys and beacons, enacted August 24, 1903.

No. 854. An act providing for the education of Filipino students in the United States, enacted August 26, 1903.

The number of sessions held by the Commission, the number of acts passed, of resolutions adopted, and of appointments made by the civil governor which have been confirmed, together with the number of pages in the minutes of the Commission in charge of the recorder, during the year from October 15, 1902, to October 1, 1903, may be conveniently set forth in the following table:

	Number of sessions.		Number of acts.		Number of resolutions.		Number of appointments, executive.	Pages in minutes.	
	Executive.	Public.	Executive.	Public.	Executive.	Public.		Executive.	Public.
1902.									
October.....	8	1	11	1	8	.....	53	18	20
November.....	15	2	47	1	33	.....	61	52	22
December.....	15	8	28	2	101	1	57	81	111
1903.									
January.....	14	7	34	4	52	.....	54	56	66
February.....	14	3	34	.....	103	.....	155	87	42

Total.....	182	31	421	10	1,006	2	852	958	565

#### SUMMARY.

Number of sessions held:		
Executive.....		182
Public.....		31
<b>Total.....</b>		<b>213</b>
Number of acts passed:		
At executive sessions.....		421
At public sessions.....		10
<b>Total.....</b>		<b>431</b>
Number of resolutions adopted:		
At executive sessions.....		1,006
At public sessions.....		2
<b>Total.....</b>		<b>1,008</b>
Number of appointments confirmed at executive sessions.....		852

It will thus be seen that the Commission has held a total of 213 separate sessions during the year. This is hardly exact, however, in one sense, as in a great many instances two sessions are held in one day, in which case the minutes for that day

are written up as if but one session had been held. It is estimated that the Commission has been formally convened for legislative work fully 275 times during the period covered by this report.

With a total number of acts passed of 431, and with a total number of resolutions adopted of 1,008, and of appointments confirmed of 852, it will be seen that a total of 2,291 formal actions or decisions of a legislative character have been taken by the Commission during the period covered by this report.

As a rule, a number of communications are considered by the Commission in connection with each action taken by it. While definite figures have not been prepared, it is believed that the number of papers to each decision will average between two and three, and upon this basis it is estimated that a total of approximately 6,000 communications have been considered by the Commission as a legislative body, and handled by this division, during the period under consideration. In addition to this the Commission has been many times informally convened, or has informally discussed questions of an executive character brought to its attention by its members who are executive officials before taking definite executive action. These informal discussions naturally do not appear of record in the minutes of the legislative body. The total number of pages in the minutes of the Commission from the date of its appointment to October 1, 1903, including the index thereto, is 4,933. The minutes have been bound in typewritten legal pages, in volumes of convenient size, and carefully indexed. A great portion of this index work has been done during the past year, and to keep the minutes indexed down to date occupies nearly the entire time of one of the clerks of the division.

By direction of the Commission, the division has been engaged in making four duplicate copies of these minutes. As no additional help was provided for this extra work, it has been impossible, owing to the volume of current work, to complete this copying. About 3,000 pages have been completed, however, and it is hoped that the remainder may be copied in the very near future.

By resolution of the Commission of September 2, 1902, the preparation of a revised edition of the Commission's laws down to September 1, 1902, was directed, the Spanish and the English texts to be issued in separate volumes. In conformity with this resolution, this office immediately proceeded to the preparation of copy for the edition authorized. In preparing copy for this volume it was early decided to make the edition somewhat similar to the statutes of the United States, bearing marginal annotations of the text of the laws and indicating amendments to the different acts and sections thereof which had been subsequently made by the Commission. A tabulated statement of acts which had been amended prior to the issue of the volume was also prepared. There was also inserted as an appendix the treaty of Paris, the acts of Congress affecting the Philippines approved prior to September 1, 1902, and several important general orders of the military governor which are still in force. The publication of this volume was considerably delayed on account of the press of other work in the public printing office. The English edition has just recently been issued and is now being distributed. The Spanish edition is being rapidly rushed to completion, and it is hoped that the same may be issued within the next few months. The Commission has decided, after inspecting the English edition of the volume referred to, to issue annually a volume in similar form, containing all of its legislation of the previous year, separate volumes of such editions in both languages to be issued as in the case of the original volume.

The necessity of preparing copy for these reprints of the Commission's legislation, as well as of issuing the regular quarterly volumes of the Commission's laws and resolutions, of proof reading same, and preparing the indexes thereto has evolved a subdivision or section of this division which might, perhaps, be termed the section of proof reading, printing, and indexing. This work has been in charge of Mr. David Lewis Cobb, of this division. As the work of annotation and indexing has progressed an increasingly large number of calls for information in regard to the Commission's legislation have been made on this division by the different members of the Commission and other officers of the Government. This section of the division has within the past year carefully proof read and indexed between six and seven thousand pages of printed legislation, about equally divided between the English and the Spanish languages. In the performance of this work, over 25,000 index and amendment cards have been used. In addition to this indexes have been prepared for the preliminary number of the Official Gazette and for the first half year of the same publication. This work consisted of the reading and indexing of 612 pages of matter. The native clerical staff of the Official Gazette was also instructed as to the manner of making future indexes for this publication.

The office force of the legislative division on this date is as follows:

Name.	Present salary.	Name.	Present salary.
C. W. Calvin .....	\$2, 250	Julian M. Lacalle .....	\$1, 400
Carl Remington .....	1, 800	A. James McDonald .....	1, 200
David Lewis Cobb .....	1, 800	Natus J. Haynes.....	1, 200
H. E. Partridge.....	1, 600	Leoncio L. Espino.....	720
A. O. Zinn.....	1, 600	Luis Aguilar .....	180

The character of the work performed by this division is such as to demand a high degree of accuracy, and the employees of the division have not been found wanting in this respect. They have always been willing and have done a great deal of overtime work in order to keep up with the current work of the division, which at times is quite heavy, almost too much so, in fact, for the force employed. Numerous calls have been made for help in work not pertaining to the division by different members of the Commission and by other divisions of the executive bureau, and, while the same have frequently caused a great deal of overtime work, it has always been performed uncomplainingly. I can do no less than testify to the efficient and capable manner in which the division's staff has labored during the past year.

Very respectfully,

C. W. CALVIN,  
*Recorder of the Commission.*

The honorable the EXECUTIVE SECRETARY,  
*Manila, P. I.*

APPENDIX F.

THE GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
*Manila, October 1, 1903.*

SIR: I have the honor to submit the following report of the work of the translating division of the executive bureau since its organization to September 30, 1903, inclusive. Prior to the passage of Act No. 609, enacted January 31, 1903, the work of translation and interpretation for the executive bureau and the office of the secretary of the Philippine Commission was done under the supervision of a Spanish secretary in the latter office and in that of the executive secretary. Since its organization the entire force of translators and interpreters attached to the executive bureau and the former office of the secretary of the Commission has been reorganized and consolidated into one office, where all of the work is carried on with the exception of that of the translator and interpreter, who is detailed for special work in connection with interpretations for the civil governor, the translation of annual reports of provincial governors, and other work of a special character.

The duties of the translating division may be summarized briefly as follows:

The translation into Spanish of all acts of the Commission, executive orders, proclamations, and communications of the civil governor and the executive secretary addressed to Spanish-speaking people, and of all matter printed in the Official Gazette, other than that already mentioned, which consists principally of custom-house decisions and circulars, opinions of the attorney-general, reports of the board of health, of the bureaus of archives, agriculture, education, mining, and forestry, of advertisements for bids from the office of the insular purchasing agent and from that of the consulting engineer to the Commission and of the insular architect. The translations into English cover a very wide field, as they consist of all communications addressed in Spanish and the native dialects to the civil governor, to the Philippine Commission, and to the executive secretary, and of all bills drafted by the Filipino members of the Commission, as well as reports and recommendations made by them.

The amount of work performed during the period covered by this report from October 1, 1902, to September 30, 1903, is as follows:

Translations from—	Folios.
English to Spanish .....	10, 864
Spanish to English .....	32, 560
French to English.....	140
Tagalog to English .....	44
Italian to English .....	12
German to English .....	7
Total .....	43, 627

The division has furnished interpreters for public discussions held during the time covered by this report, extending over 46 public sessions of the Commission, and for all executive sessions of that body. An interpreter from the division has also accompanied the civil governor in visits made to the provinces during January and March, 1903, and the vice-governor in his visit of inspection to the province of Albay during last July, and upon all other occasions when an interpreter was required by the civil governor or any member of the Commission.

Since the consolidation of the office of the secretary of the Commission with the executive bureau the translating division has had charge of the work of reviewing the native and Spanish press. This work, formerly carried on independently by Mr. Manuel Arguelles and one assistant, is still continued, although it is not as important at present as it formerly was, owing to the more settled condition of affairs in the islands. The amount of work turned out by Mr. Arguelles averages about four folios a day.

The translating division has suffered very severely from casualties during the present year and its efficiency has been greatly impaired thereby. Its former chief, Señor Don Francisco J. Yánes, who held the office of Spanish secretary of the Commission, a gentleman of rare linguistic accomplishments and peculiarly fitted for the work intrusted to him, was obliged to resign in order that he might accompany his family to the United States, as his wife's health and his own had greatly suffered from the effects of this climate. Mr. Yánes's resignation has been a distinct loss to the service. Mr. William E. Twight, who had been the interpreter of the military governor from 1899 until the establishment of civil government, and of the civil governor from February, 1903, was forced, because of his failing health, to leave the archipelago to recuperate. After spending several months in the United States and Europe in a vain search for health he returned to Manila and died a few days after, August 26 last. It was found necessary to relieve Mr. F. F. Barker from duty in the translating division prior to its reorganization, in order that he might devote his entire time as clerk to matters pertaining to provincial and municipal administration, which are, in a great part, necessarily transacted in the Spanish language. Mr. Sutherland, former expert translator, who had been brought from the United States, was selected to take charge of the Filipino students who are about to leave for the United States. In addition to these permanent losses in the personnel of this division, one translator has been severely ill for more than a month, while another is very ill, convalescing after an attack of Asiatic cholera. Aside from all this, Mr. Leo Fischer, another expert translator, was absent during four months and a half on leave, so that the force of the division has always been reduced to a minimum, while the work has continued steadily to increase.

The present force of the division is made up of experienced men, some of whom have been with the civil government since its organization, and they would be hard to replace.

Every attempt possible has been made to secure competent translators, both here and in the United States, but without success. Some who have passed the civil-service examination have been deficient in practical work to the extent that their services could not be made use of by the division.

The majority of translations from English to Spanish are of a strictly technical nature which require not only thorough proficiency in both languages but also legal training and a very wide and comprehensive academic education, and the translations from Spanish to English are difficult in that the majority of the documents presented in the former language are so faulty in their construction that they are in many cases almost impossible to understand.

The office force of the translating division on this date is as follows:

Name.	Present salary.	Name.	Present salary.
R. D. Fergusson.....	\$2, 250	Carrie F. Mahon .....	\$1, 200
Manuel Cabeza de Vaca .....	1, 800	Manuel Reyes.....	900
Leo Fischer.....	1, 800	Alcibiades Gimenez .....	720
Manuel Argüelles.....	1, 500	Elias T. Zamora .....	420
John B. Santaló.....	1, 200	Mariano Rebaya .....	180
William N. Mahon.....	1, 200		

In a vain attempt to keep up with the current work of the division the employees have put in a great deal of overtime. The amount of work performed, taking into consideration its special character and the high standard required, testifies to the industry of the force, which has always worked when the exigencies of the case demanded it out of office hours uncomplainingly.

Respectfully submitted.

R. D. FERGUSSON, *Chief Translator.*

The honorable the EXECUTIVE SECRETARY.

APPENDIX G.

THE GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, September 30, 1903.

SIR: In compliance with your verbal instructions, I have the honor to submit a report of the affairs of this division, embraced in the property accountability of the entire bureau, for the period from October 1, 1902, to October 1, 1903, as follows:

ORGANIZATION AND PERSONNEL.

Chief of division, Arthur K. Jones (from September 23, 1903); distribution clerk, J. Preysler (suspended September 23, 1903); mailing clerk, Antonio Munian; document clerk, Juan Cabañero, and six messengers.

CORRESPONDENCE.

Entire bureau (excluding printed matter), 54,117 papers.

Philippine publications.

	Received.	Distributed.	Sold.
Laws of the Commission, pamphlet .....	1,338,000	906,901	.....
Laws of the Commission, quarterly volumes .....	21,000	9,266	2,515
Executive orders, pamphlet .....	154,500	102,493	.....
Executive orders, volumes .....	1,000	.....	.....
Proclamations, pamphlet .....	20,500	14,532	.....
Reports of departments, pamphlet .....	2,250	1,200	.....
Total .....	1,537,250	1,035,362	2,515

Receipts from sales, \$1,224.77, United States currency.

UNITED STATES AND FOREIGN PUBLICATIONS.

	Received.	Distributed.
Reports of the Philippine Commission, 1902, two parts (War Department) ..	1,740	100
Documents, Senate and H. R., United States .....	20,000	.....
Supreme Court Reports, United States .....	744	.....
Foreign publications .....	50	.....
Total .....	22,534	100

	Copies.
Philippine, United States, and foreign publications received during the period designated, grand total .....	1,559,784
Philippine, United States, and foreign publications distributed and sold during that period ..	1,037,977
Balance .....	521,807
Publications not included in that period .....	6,000
Old Spanish laws, translations .....	12,000
On hand, as per inventory .....	539,807

The increasing business of this division some months ago began to demand additional office and storage space, which has been made available recently on the first floor of the ayuntamiento building.

In addition to the printed public documents, there will be in the custody of this office the manuscripts and other documents and books which will be secured by the collecting librarian in Spain and elsewhere. Already a small consignment has been received, and it is understood that further shipments have been made and are en route here. Provisional arrangements have been made for the care of this valuable property which will meet present necessities.

The personnel of the division consists of 1 American and 9 Filipino employees. This would be sufficient under normal conditions, but by reason of absences due to leave of absence in the United States, suspension, and illness it has been necessary

to work much overtime in order that publications might be given the prompt distribution their character has demanded.

In addition to the custody and distribution of printed public documents, the immediate charge of the furniture, supplies, and property of the executive bureau and ayuntamiento building has been assigned to this division. During the period covered by this report there has been a notable improvement, as compared with the preceding year, in both the quality of supplies and the promptitude with which they have been furnished by the insular purchasing agent and the local market.

Very respectfully,

ARTHUR K. JONES, *Chief of Division.*

EXECUTIVE SECRETARY, *Manila, P. I.*

## APPENDIX H.

THE GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
*Manila, October 1, 1903.*

SIR: I have the honor to submit the following report of the work of the records division for the year ending September 30, 1903:

During the period above mentioned there has been completed the organization of the division, and its equipment in respect of file cases. As now organized, the division comprises 6 sections, viz, briefing, searching, indexing, examining, recording, and filing. Its personnel consists of 25 clerks and 1 messenger. Of these employees 14 are Americans and 12 are Filipinos.

There has been a constant increase in the volume of work devolving upon this division, as is apparent from the fact that there have been recorded during the year just ended more than 28,000 communications, as against 19,000 for the preceding twelve months. There have been used nearly 150,000 cards in indexing this year's records, and the card index of the preceding year has been transcribed on typewritten sheets and bound for reference.

By the consolidation of the office of the secretary of the Commission with this bureau on February 1 last, there came over to this division several thousand records, which are being indexed and filed as rapidly as the current work will permit.

In addition to the work of recording, this division has performed an increasing amount of labor, which ordinarily does not come within the jurisdiction of a record office, but is closely related thereto. The work referred to is the preparation of memoranda and digests of records for the information of officials and other divisions of this bureau.

The increase in work, together with casualties in the service, has made it at times very difficult to keep up the personnel of the division to a satisfactory standard, either as to numbers or quality, because of the scarcity of good material. It has seemed best, for sufficient reasons, to make this division a preparatory school from which clerks are drawn for other branches of the bureau, with the result that there have been on that account also many changes in personnel. The work of training Filipinos for office work in the English language has given encouraging results.

Very respectfully,

SIDNEY THOMAS, *Chief of Division.*

The EXECUTIVE SECRETARY.

## APPENDIX I.

### ANNUAL REPORTS OF ALL PROVINCIAL GOVERNORS.

#### REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF ABRA.

OFFICE OF THE PROVINCIAL GOVERNOR, PROVINCE OF ABRA,  
*Bangued, January 14, 1903.*

SIR: The present annual report for the province of Abra for the year 1902 is divided into three parts. In the first the present condition of the province is described, the second part is a brief relation of the events of a general and local character which have occurred in the province, and the third contains the recommendations which I take the liberty of bringing to the notice of yourself and the Commission.

The province of Abra was created in the year 1854 by separation from the province of Ilocos Sur. It was governed subsequently by officers of the Spanish army, and the capital was located in the town of Bucay until it was transferred to the town of Bangued in 1861.

The abundance of the natural pasturage for all classes of animals has been a great incentive to immigration and the greatest cause of the increase in the number of inhabitants of the province.

Cattle and timber are the principal factors which contribute to the present wealth and prosperity, because the resource of agriculture, despite the fact that the people are very fond of farming and are industrious in such labor, by reason of the small extent of the cultivable land, the rudimentary kind of farming tools, and the lack of irrigation on account of the scarcity of water, has become almost unworthy of consideration so far as the exportation of its product is concerned, excepting tobacco, which is exported from the province annually in the amount of from 15,000 to 25,000 hundredweight.

Rice and corn, the principal agricultural products, are scarcely sufficient even for local consumption, when they are not impaired in some manner by accidents of the weather or by insects, such as locusts and others.

I calculate the present area of the province to be 140,000 square kilometers, and of this 5 per cent is under cultivation and the remainder is occupied by forests and rivers.

When this province was separated from Ilocos Sur it contained a population of 18,000 Ilocanos and 7,000 members of non-Christian tribes. Of the latter, one-half were semicivilized by constant contact with the Ilocanos and the other half were cannibals. There are at present in the province 32,949 Ilocanos and 11,680 of the non-Christian tribes, whose character and customs have been softened both by the constant application of governmental rule to them and still more by the boldness of the Ilocanos in approaching their haunts, carrying to them articles of which they have need, such as salt and beads, and exchanging them for the tobacco leaf which they raise for honey produced by bees in their forests. The Catholic religion, implanted here by Spain, on account of the lack of zeal upon the part of the friar missionaries, has had no effect upon the improvement of the character of these savages. As for the military rigor with which the Spanish Government attempted to control them, it produced the opposite effect, for it caused many of the tribes to betake themselves farther into the interior. However, now due to the policy of attraction through constant and active solicitude for them during the past six years, the depredations of these people have greatly decreased, and to-day even Ilocano women dare to go to the most remote regions of the central mountain range, trafficking with these savage tribes.

The Ilocano people of the province are truly hardworking. As a proof of this I will say that in spite of the smallness of their fields and the scarcity of work animals there has never been felt here, within the memory of man, any of the effects of want or the scarcity of articles of food. The non-Christian tribes, naturally indolent, have become imbued with this spirit of industry of the Ilocanos, year by year, to such an extent that at present they engage in agriculture, cultivating in their fields rice, corn, sweet potatoes, and tobacco.

In this spirit of industry, while foreseeing the want that will be felt this year, owing to the failure of the last rice crop, which was due to the plague of locusts and the lack of water at the proper season, this people feels no worry over the threatened famine, for the very reason that they are willing to work.

To this diligence in labor is also due the fact that up to the present outlawry, as it is found in various other provinces, has been unknown in this province. The example of perseverance and industry furnished by the higher classes of people, as well as the interest which each one feels in keeping alive within the limits of duty and mutual respect a thoroughly public spirit, these also contribute to the present welfare of the people.

Since the surrender of the forces here organized, and which fought for their independence against the United States, the state of peace has been perfect, and there is no fear that it will be disturbed. The loyalty and industry of the people guarantee this, as do the knowledge which I have of their aspirations and the confidence which I feel in the efforts of the Government in behalf of the moral and material progress of the country.

The material progress of this province is much impeded by the lack of wagon roads to unite it with the markets and ports. The difficulties which confront the exportation of the products of this province deter capital which might otherwise be invested here. This results in the restraint of the natural energies of the people for lack of an advantageous outlet for the products which they raise over and above those necessary for their own consumption.

Vigan, the capital of Ilocos Sur, is the only point with which this province carries on an interchange of products, but with that place there is only one means of communication—the river Abra, which during half the year, the rainy season, it is impossible to navigate on account of the overflowing of the stream—so that it is but natural that in this isolated condition of the province with regard to the only market which we have the activities of the people are unavailing. This lack of passable roads also prevents those who would like to visit the province, and causes outsiders to have no accurate information as to the condition of the people, the soil, the means of livelihood, the wealth of the forests, the rivers, and the mountains.

According to people with some knowledge in such matters, there are in the province deposits of gypsum and coal in great abundance, though this latter is of inferior quality to that of Australia. In the beds of some of the rivers gold in small particles has been found, which proves the existence in the vicinity of this precious metal in large quantities. The great weight, in proportion to their size, of rocks taken from the ground at certain places causes the supposition of the existence here in abundance of iron. The wealth of the forests, here displayed by divine providence, with prodigious ostentation, is a source of incalculable riches.

But all of these elements of so great value to industry and commerce are being wasted for lack of means of attracting the attention of men and capital.

Professional and literary education is in a lamentable state, and as for scientific education, it is unknown in the province. This condition, though it is hard to say it, is due to the despotic rule which the friars desired to exercise in their attempts to exploit the country by means of the ignorance of the people. Although at present the department of public instruction and the teachers distributed throughout the pueblos, with an interest worthy of the highest praise, exert themselves in the effort to remedy the deficiencies of the public instruction, which, in their selfishness, the friars desired to strangle in blood by despising those who were distinguished on account of their learning, this people, intimidated by oppression, having experienced the horrors of the past government, are very prone to cling to their innate suspicions, the natural result of those times when learning and knowledge, as well as loyalty and integrity, were rewarded only with death and banishment and all their terrible consequences. This horrible state of mind, which can only be cured by the inspiration of confidence, is, in my opinion, one of the obstacles in the way of the success of the teacher here.

This fear of learning engendered mistrust, and mistrust discouraged any desire that this people might have felt for science and art, though on account of natural fondness the art of music is cultivated here, but under the most unfavorable circumstances. In proof of this I may mention a theater in the capital of the province built and maintained solely through the love of the natives for music, singing, declamation, and sociability.

As for religion, the people of this province, in their majority, have never been fretted by the reforms and discussions which keep the supporters of the different religions in a perpetual ferment in the capital of the islands. This attitude is fostered by the great distance between the capital and this province, as well as by the conviction which these people feel that every principle of religion which is not so regulated as to adjust itself to the scope of the intelligence of the people is vain and useless. And moreover, through the liberty of thought which they to-day enjoy, and a comparison of the various sects, doctrines, and religions which have become established here as a result of individual liberty, having discovered the falsity and the incongruity of certain dogmas and rites imposed upon the people by the friars, who claimed to be the representatives and the sole depositaries of the Apostolic Roman Catholic religion, this people, I repeat, has come to a realization that all religions are defective, but that at the same time all are good when professed in good faith. The only worry that they have is the fear of the return of the friars to the pueblos through the influence of the Government, whereas their return, it is feared, would provoke some disorder. The friars are hated here, owing to the great injuries which they have caused to the natives in every phase of life—political, religious, and social.

The precarious state of agriculture in this province, as a result of the conditions described in preceding paragraphs, has been aggravated in grievous measures by the rinderpest, which diminished by 80 per cent the number of carabaos and cattle, so absolutely necessary for the cultivation of the fields.

Cattle, which constituted such a source of wealth before the year 1900, have been reduced in number to 20 per cent of the former stock of these animals. But thanks to the fact that surra has not as yet reached this place, horse stock is on the increase; but by having been decimated in the provinces of the south, as far as Union, these animals have increased in price to five times that paid before the year 1900. The fabulous price of these animals has of course awakened the activities of the thieves;

but due to the energy of the constabulary forces stationed in this province and to the vigilance of the municipal authorities the cases of this stealing are on the decrease and it is certain that hereafter the increase in cattle will consequently be uninterrupted.

#### NOTEWORTHY EVENTS.

The occurrences worthy of mention in this report, which have taken place in this province, are the following:

The establishment of a school of higher instruction, opened in the month of July, and also the opening of the night school, brought satisfaction to the anxious minds of many youths desirous of higher studies without large expenditures upon the part of their families, which would be the necessary result should these youths be obliged to attend those institutions of learning outside the province.

The poor harvest of rice last year, owing to the lack of water at the proper season and the damages caused by locusts, and the drought still felt in the fields for lack of rain, and the continuous presence of locusts threatening to destroy what little corn, sweet potatoes, and beans have been planted, have caused an unexpected rise in the price of corn and rice. And while the poor are still able to reach this price up to the present time, should said commodities become still more scarce in the towns of Ilocos Sur, I am certain that the price will rise still more, in which case the poor will be unable to buy these necessities.

With respect to the effect of Act No. 517, which has been very well received, I foresee that it will be rendered ineffective for climatological reasons—that is, for lack of water—in which case, since the fields can not be cultivated, famine will aggravate the condition which in March and the months following will become frightful on account of its generality throughout all the Ilocano regions.

Asiatic cholera appeared here also along in the months of August and September, and although the mortality was not great, as compared with the number of inhabitants, for in the whole province there were registered but 208 deaths from the disease, it nevertheless left its indelible stamp, and most mournfully, upon some families which to-day are disconsolate.

Acts Nos. 518 and 519 have produced very good results here by restraining the ladrones and evil doers in their depredations and restoring many workingmen to labor and honesty who were before in idleness.

Last year certain of the municipal treasuries showed deficits; but as reforms have been made in the sources of revenue to cover the appropriations of the present year by increasing the taxes upon certain enterprises which are productive of vice, such as cockpits, the training of gamecocks, the conveyance of cattle, and certain others unnecessary to mention, the municipalities are promised larger revenues with which to cover the expenditures of the present year and the deficits of the last.

The special act of the Tinguianes, of the province of Abra, enacted by the Commission, has produced some difficulty in its administration in some of the settlements, owing to its novelty; but I expect to be able to overcome this difficulty by the exercise of constant and energetic care.

This act will also cause a decrease in the revenues of the provincial treasury, owing to the following effects of its provisions:

In the year 1902, by virtue of section 13 of Act No. 83, the provincial board imposed upon the real estate of those tribes for provincial purposes a tax of three-eighths per cent of the value thereof, which tax is abolished by section 43 of the special Act No. 387 of the Tinguianes by declaring that the revenues of the pueblo shall be dedicated exclusively to purposes of the pueblo itself. This diminution in the provincial revenues, as well as that which results from the Philippine act of Congress, which provides that the sums collected for the cubature of forest products shall belong to the insular treasury, will produce a further inability upon the part of the provincial treasury to meet its obligations in the present year of 1903. If assisted by these revenues during the past year the provincial treasury still showed a deficit and was obliged to seek, through the Commission, assistance from the insular treasury, which was granted in the sum of \$2,000 gold. Without these revenues this year the provincial treasury, instead of paying the indebtedness just mentioned, will be forced to ask another and greater loan.

The fighting of cocks, authorized by law, has been suppressed in certain of the pueblos with the consent of the people, who, seeing in it a menace to honesty and a subversion of the morals of the individual and of the family, had the good sense to close their cockpits and to refuse to attend others. Appreciating this regenerate tendency, certain music lovers of Bangued, the capital of this province, erected a theater, which is attended by the residents with great pleasure, thus entertaining

themselves in a more refined and acceptable manner than would be possible in the poultry combats.

One of the signs of the awakened energy of the people against Chinese competition in the local trade is the opening of two bazaars in the provincial capital by Filipino subscription.

A branch agency of a powerful lumber firm has also been established here, resulting in the benefit to the pueblos of furnishing employment for some hundreds of laborers.

#### SUGGESTED LEGISLATION.

*Executive.*—I suggest the sending to this province of 10,000 piculs of rice, upon the account of the provincial treasury, to be sold to the people at cost; also the placing in this provincial capital of 300 carabaos, to be sold at cost to the farmers; also the establishment in this town of a practical school of arts and trades, teaching especially the trades of harness making, masonry in all of its branches, and the manufacture of tiles, bricks, earthenware, and other objects whose principal material is fine clay.

*Legislative.*—On account of the lack of funds in the provincial treasury of Abra available for its needs, it is necessary to pass a law uniting in one person the offices of secretary and fiscal, with a salary of \$100 gold per month; and to add to the duties of the treasurer those also of supervisor, with a like salary of \$100 gold per month. I also recommend the increase of the salary paid the provincial governor to \$100 gold.

I recommend—

A law providing for the opening of a wagon road joining the province of Abra with that of Ilocos Sur at the expense of the insular treasury.

A law providing for the payment into the provincial treasury of the revenues derived from the cubature of forest products, as was practiced before the enactment of the Philippine bill.

A law repealing section 43 of Act No. 387, in order that the real estate belonging to the non-Christian tribes shall pay a tax for provincial purposes, authorizing the provincial board to levy the same tax of three-eighths per cent of the value of such property, as was done during the last year. (Sec. 12, paragraph (i), Act No. 83.)

A law providing that the tax upon real estate be levied according to the value of the same in Mexican currency, as was the case at the beginning of the year—that is to say, at the rate of \$2 Mexican currency for \$1 United States currency, to avoid the complaints of the property owners, as set forth in my communication to you under date of January 8 of the present year.

A law which shall provide greater ease for obtaining free-timber license to be granted to the poor, and the increase to 1,500 cubic feet in the amount of timber which may be cut under each license, without distinction as to the class of timber, so that the limitation prescribed in section 28 of the regulations for the utilization of forest products, shall no longer be effective, since the classes of timber included in the superior and first groups of the official schedule as in vogue in this province are as abundant here as the kinds included in the other groups.

And finally a law abolishing the right of provincial officials to receive their traveling expenses, when such travel shall be in pursuance of their duties as such official.

Respectfully,

JUAN VILLAMOR, *Provincial Governor.*

The CIVIL GOVERNOR, *Manila.*

NOTE.—In compliance with the recommendation contained in your favor of November 20, 1902, relative to photographic views, I have the honor to inclose 10 pictures of different scenes.

#### REPORT OF THE PROVINCIAL GOVERNOR PROVINCE OF ALBAY TO THE INSULAR GOVERNOR PHILIPPINE ISLANDS, FOR THE YEAR ENDING DECEMBER 31, 1902.

In compliance with that portion of section 7, act 83, United States Philippine Commission, the governor of the province of Albay has the honor to submit the following report of the conditions existing in this province for the year ending December 31, 1902:

The year opened with everything in a very peaceful and prosperous condition. In compliance with section 4, act 83, United States Philippine Commission, there was held, at the capital at Albay, on the first Monday in February, an election to select a chief executive for this province. As a result of that election the present governor, then acting as governor under appointment of the United States Philippine Commis-

sion, was elected for a term of two years. In compliance with this same act and section, the chief executive of the province was inaugurated on the first Monday in March, at the capital at Albay.

In compliance with section 4, act 122, the presidentes throughout the province have been assembled at the capital twice during the year, and submitted to the provincial board such recommendations as they had to make concerning the government of the province. These recommendations have usually been of very great benefit to the board in its endeavor to pass legislation that would be of benefit to the greatest number of people in the province.

There have been two regular sessions of the court of first instance held at the capital during the past year. It is very gratifying to note the great confidence these people display in the administration of justice by the court of first instance.

#### HIGHWAYS AND BRIDGES.

The supervisor has conducted the work of his department during the year just ended with the same energy that he has shown in the past. The road between Legazpi and Ligao, which passes through the center of the great hemp country lying to the south of the volcano Mayon, was practically completed during the early part of the year. The enormous traffic, however, passing over this highway makes it necessary to employ continually a large corps of roadmen to keep this highway in excellent condition.

On the completion of this road it was found that in order to maintain it in any passable condition whatever it was absolutely necessary to eliminate from its use the antiquated bull cart. Therefore, in the early part of the year a law was passed by the provincial board prohibiting the old-style bull cart from passing over the Camino Real, and making it obligatory to use a cart with modern wheels, movable on the axle and with a 4-inch tread. Carts with wheels of less than a 4-inch tread were limited as to the amount of cargo they could carry, while those with a 4-inch or greater tread were practically unrestricted as to the weight of their cargo. As might have been expected, these restrictions crippled the transportation facilities of the province for a short time; but suitable wheels, conforming to this law, were quickly imported and the inconvenience at first experienced by the enforcement of this act was readily compensated for by not only the preservation of the highways, but also by the amount of cargo the carts were able to carry, hauled by a less number of bulls. To illustrate this: It formerly required three days for a cart, drawn by three bulls, to make a trip over the full length of this highway, while with modern carts and on the new highway they are now able to make this trip in one day, using only two bulls and carrying 50 per cent more cargo. When these facts became evident no further argument was necessary to induce the cart owners to purchase modern equipage.

Because of the great saving of time in transporting cargo over this highway, and to the fact that nearly 50 per cent more freight can be hauled with one-third less number of bulls, it has been estimated that the saving in the cost of transportation over this highway in one year only, as contrasted with former conditions, amounts to \$720,000 local currency. This great saving to the people of the province has been effected in one year through an expenditure for the maintenance of this highway of about \$67,889.64, local currency.

There have been imported into the province during the past year in the neighborhood of 5,000 wheels of modern construction, to take the place of those that had been used on the antiquated bull carts. This change has been brought about at an estimated expense to the cart owners of about \$80,000, local currency.

The lack of transportation facilities and the excessively high price at which available means of transportation was held made it impossible for the province to continue the road work as it would have done under normal conditions. In order to supply the supervisor's department with adequate means for continuing the road work it was found necessary to purchase a modern transportation equipment. An equipment consisting of 22 American draft horses, escort and rock wagons, and in fact all the accessories necessary for an adequate transportation equipment, was purchased at a cost of about \$6,000, gold. The purchase of this equipment has proven to be a very great saving to the province, for the expense that would otherwise have been incurred for transportation in this construction work would have amounted to a sum several times in excess of that which was originally paid for this equipment.

This Camino Real, when completed, had a temporary top dressing, to which was afterwards added 8 miles of permanent top dressing, 3 miles of it macadamized, and the remainder of the highway covered with oxide of iron, a material found between Ligao and Guinobatan, which has been found to make an exceedingly durable top dressing.

In order to maintain this highway it was found advisable to divide it into sections of one mile each, the repair work on each section being under the direct supervision of a section foreman, whose duty it is to make all small repairs and report any great break or washout that may occur on his section. This system of repairs has effected a great saving to the province; for a break in the highway that can be repaired at once may be done at a very small cost, while if permitted to remain a few days it would necessitate an expenditure of a considerable sum to restore it to its original condition. Each roadman is provided with a badge showing the number of the section to which he is assigned, and he is authorized to make full report of any violation of the rules of the road.

Numerous bridges and culverts have been constructed, or are under construction, in various portions of the province, notably among the large bridges, the completion of the 200-foot suspension bridge across the Quinali River at Libon, the 60-foot Howe truss combination wood and iron bridge across the Guinobatan River, and the two-span combination wood and iron bridge across the San José River, in the Tabaco district, which is at present under construction.

The total expenditures of the supervisor's department, including buildings and the repair of same, maintenance of provincial prison, etc., amount to \$67,880.64. local currency. In addition to the sum mentioned before for the construction of public highways was that appropriated by the various municipalities for the construction and care of that portion of the public highway coming under their jurisdictions. These appropriations by the municipalities were always expended under the direction of the provincial supervisor; these sums, however, are not included in the above-mentioned expenditures, they representing only that portion expended by the province.

It is hoped that during the coming year some suitable legislation will be enacted by the Commission providing a road law or poll tax, something after the form now in force in the greater part of the United States.

#### TRANSPORTATION.

The question of transportation still remains one of the most important problems to deal with in the province. The greater portion of this year the average price for a bull cart per day has been \$40, local currency, while the average cost of a carromata has been \$25 per day, local currency. The great demand on this transportation is for moving the hemp from the interior down to the seaports and taking the rice and merchandise from the ports back into the interior.

Some idea of the enormous traffic passing over the Camino Real can be had from the fact that there was shipped from the port of Legazpi this year in the neighborhood of 344,270 piculs of hemp, the greater portion of which passed over the Camino Real; there entered the port at Legazpi 455,770 piculs of rice, the greater portion of which was transported to the interior over this road. There is no record of the great tonnage of package freight that passed into the interior from Legazpi, but the greater portion of the supplies necessary for the maintenance of 250,000 people was carried into the interior over this road.

This great demand for transportation, and the excessively high prices paid for it, has induced outside capital to bring into the province other means of transportation, and, as a result, there are at present in the province two modern traction engines, with full equipment, for transporting products of the province. These engines have an 18-inch tread, while the cars used in their trains have an 8-inch tread, and therefore the use of these engines has resulted in but very little damage to the highways. One of these engines has been known to transport from the interior to the port in one trip 260 piculs of hemp, or the equivalent of what formerly required about 40 bull carts to transport. It is hoped that by the introduction of this modern method of freight transportation the bulls will again be available in the fields and mountains for the purpose for which they had formerly been employed.

A stage line has been introduced between the port of Legaspi and the towns of the interior, the stage making triweekly trips. Owing to the excessively high price of carromata hire, the stage line at once became very popular and is well patronized, being run on a time schedule very similar to stages run in the western portion of the United States.

The difficulty in securing means of transportation and the high prices demanded for same have been instrumental in introducing numerous modern means of transportation, most prominent among these being the automobile and the bicycle. Automobiles are now running on the public highway, and during the present year there have been imported into the province in the neighborhood of 400 bicycles.

## COMMUNICATION.

The only means of communication with the outside world in this province, so far as transportation is concerned, is by steamer. The mail, freight, and express destined for this province is brought to and forwarded from the ports of Legaspi, Tabaco, and Virac.

An overland mail route has been established between Legaspi and the interior towns of the province, thus giving us triweekly communication with the towns in the interior. Telegraph and telephone communication has been established with several towns of the province.

A cable connecting the mainland with the island of Catanduanes is very badly needed. The commercial importance of the island of Catanduanes has grown to such proportions that it is almost absolutely necessary that this island be brought into closer communication with the commercial world. It is sincerely hoped that the honorable Commissioners will take such action as is necessary to establish communication between this island and the mainland.

## COMMERCE.

The condition of trade from a business point of view has been most satisfactory throughout the province during the past year. At no time in the history of the province have affairs, from a business and financial view point, been in more prosperous condition.

While the province is exceedingly rich in many tropical products, the one excelling all others is, of course, the hemp plant, the production of the fiber of which forms its chief commercial interest. This product, not being limited to any particular season, gives steady employment to the major portion of the inhabitants of the province throughout the year. The exceedingly high price of hemp during the year just closed has brought enormous sums of money into the province. Owing to the manner in which the hemp fields are worked, this money readily finds its way into the hands of the hemp worker, or day laborer, the hemp lates always being worked on shares. In other words, the beneficiador receives in compensation for his labor one-half of all the hemp he produces, the other half going to the owner of the late.

The exportation of hemp from this province during the past year has been in the neighborhood of 500,000 piculs, for which the people in the province have received in the neighborhood of \$12,500,000 local currency in payment. In other words, monthly clearances in hemp alone amount to a little over \$1,000,000 local currency.

Numerous other valuable fiber plants grow in abundance throughout the province, but the easy manner in which the hemp fiber is obtained and the little care and cultivation necessary during the growth of this plant gives to this fiber preference over all others.

The production of ylang-ylang for the year just closed amounts in value to about \$500,000 local currency. This flower grows in great abundance throughout the province. Copra was produced to the amount of about \$300,000, and sinamay, \$3,250,000 local currency. The greater portion of the product of sinamay is consumed in the province, it being the fabric from which is chiefly made the clothing worn by the natives. Of this product there was exported to the value of about \$1,000,000 local currency.

The province produces a small amount of rice, though, when all the sementeras are cultivated—as they are in normal times—the percentage produced is very small in comparison with the consumption. The greater portion of the rice consumed in this province is imported from Saigon.

Although apparently the identical plant from which the hemp fiber is extracted grows equally well in all portions of the province, yet the grade of this fiber varies in almost every pueblo, and those conversant with the classification can readily determine from what particular district or pueblo a bale of hemp is produced the moment they examine the fiber. The greater portion of the hemp produced in this province is shipped to America, where, owing to its long, strong fiber, it finds a ready market in the rope industry.

The highest grade of hemp produced in this province is in the district around Daraga, this hemp being famous, not only for its long, strong fiber, but for its white and silk-like appearance. A very large percentage of the hemp produced in the jurisdiction of Daraga is consumed in weaving the sinamay, this pueblo being famous throughout the islands for this product.

Complaints have been made that the hemp produced during the past two years has been of a much lower grade in general than that formerly produced. While this no

doubt is true, the remedy for overcoming this lowering of the classification lies solely with the commercial houses dealing in this product. The difference between the prices paid for the higher and lower grade is comparatively slight, and so long as only this small difference in price between hemp of a higher and lower grade exists so long will the beneficiador produce a greater amount of the lower classification than he will of the higher. To produce the higher grade of hemp necessitates nearly one-third more labor on the part of the beneficiador than is required to produce an equal amount of hemp of the lower grade, so that unless the difference in price between the two grades will compensate him for the extra amount of labor necessary to produce the higher grade, he will continue to produce the one requiring the least amount of labor.

The remedy lies solely in the commercial houses establishing a scale of prices for a fixed classification that will induce the beneficiador to produce the higher grade. As the beneficiador receives in compensation for his labor one-half of the hemp he produces, it can readily be seen that he would be equally interested in producing the higher grades as he is now in producing the lower, as his compensation would be thus increased.

Among the majority of the leading commercial houses dealing in hemp there is a fixed classification, each house having its own particular marks for a specific grade, and on those particular marks the market quotations are based. The classifying of the various grades of hemp is usually intrusted to the almacenero and his classifiers. If there has been a lowering of the grade under specific marks that have practically become standard, then the difficulty lies in the classifiers at the almacenes; but in either event, as stated above, the remedy for correcting these evils lies solely within the power of the commercial houses themselves.

Engineers of the United States Coast and Geodetic Survey have completed, during the past year, surveys of the ports of Legaspi and Tabaco. Several important obstructions to navigation have been developed, and a new channel has been found entering the port of Legaspi, which shortens the time of entering and clearing that port fully one hour and a half. By buoying two reefs near the center of Albay Bay and the erection of a suitable port light in Legaspi, this channel will be sufficiently marked to enable vessels to enter or clear from this port either by night or by day. By placing a port light at the entrance of Tabaco Bay, vessels will be able to enter and clear from that part either by night or by day. As Virac, on the island of Catanduanes, has now become a port of considerable importance, it is sincerely hoped that a survey of that harbor will be made during the coming year.

#### TAXES.

The present system of taxation has supplied the province with sufficient revenues to conduct its affairs on a fairly progressive basis.

During the year there was introduced a territorial or land tax, which at the time of its introduction was received apparently by a portion of the public with some disfavor. Much of the unpopularity of this tax, however, can be attributed to the fluctuation in the rate of exchange. The average native not being able to understand the difference in exchange, always objected when his taxes could not be paid at the same rate of exchange prevalent at probably only a short time previous in another pueblo.

Much confusion and a great deal of extra work was necessary in preparing the tax registers for the collecting of this tax, owing to the fact that under the Spanish régime there had been a very incomplete system of land registration. It is the opinion of the provincial governor that much of this complaint, as above mentioned, might have been avoided had we first introduced an adequate system of land registration, and after the property of the province had been properly registered and a fixed rate of exchange established there would have been but little difficulty in ascertaining what rate of taxation was necessary to produce a sufficient revenue to conduct the affairs of the province.

The aggregate sum collected through the operation of the land tax during the past year amounted to about \$75,494.73, which sum, without additional revenue, would be totally inadequate to conduct both the provincial and municipal affairs of this province. It is the opinion of the provincial governor, however, that the land tax will ultimately prove of very great benefit to the province, for it has already caused many owners of uncultivated land to prepare this land for cultivation, that they may get some revenue from it. A complete but very simple system of land registration is very badly needed, and it is hoped that legislation to that end will be speedily enacted.

## FINANCES.

The receipts of the provincial treasurer from all sources for the year just ended amounted to \$359,095.48 local currency. Of this sum \$131,959.82 was returned to the municipalities, that being their portion of the general tax. Owing to the few deputies in the service and the great number of pueblos to be visited, the entire land tax for the year has not been collected. By act of the Commission the municipalities whose taxes had not been collected at the close of the year were given until March of the following year in which to complete the payment of the taxes. Reports from the deputies show that there has been scarcely any complaint as to the rate of taxation, and that they have found very little difficulty in collecting the taxes due. Many of the municipalities have made numerous expensive improvements, but

## SCHOOLS.

It is very gratifying to note the great progress that has been made in the educational department of the province during the past year. Numerous school buildings have been erected in all parts of the province, and some municipalities are deserving of special mention for the very excellent buildings constructed. This is particularly true of the town of Virac, on the island of Catanduanes, and of Legazpi, on the mainland, where very excellent buildings indeed have been constructed. A high school was opened in the town of Guinobatan during the latter part of the year, beginning with a very excellent attendance, and, from present indications, the popularity of the school will necessitate the province providing a much larger building in order to accommodate the pupils. At present we have in the province 1 high school, 38 schools directed by American teachers in which English is taught, 6 parochial schools, and about 700 private schools in which instruction is given in Spanish and Bicol.

A great deal of credit is due the American teachers for the very excellent manner in which they have conducted the schools during the past year.

## MINERALS.

The mineral resources of the province have received but very little attention in the past, although there are paying deposits of coal and quicksilver in several localities. Coal is found on the island of Bataan in very large quantities in fact the entire island seems to be a field of coal. The very high price this article brings in the islands should be sufficient inducement for outside investors to explore the resources of this island and bring this product into the market.

## POLICE.

Each municipality supports an organized police force, paid and equipped from the funds of the municipality. This force varies in number from 6 to 20, under the charge of lieutenants, sergeants, and corporals. The force is armed with revolvers, although in a few pueblos loans of rifles have been made by the constabulary. In most pueblos the police force is equipped with a prescribed uniform.

This force has rendered some very excellent service, not only in guarding the peace of their pueblos, but by frequently assisting the constabulary in their operations. After a more thorough organization of this force and a better comprehension of the importance of discipline, they no doubt will be able to render a still better account of their services.

The province has a constabulary force consisting of five inspectors and 140 men. This force is distributed in various portions of the province, wherever it is believed they will be able to render the best services to the general public. Ladrone bands have appeared in the province from time to time, and the constabulary force has been found very effective in cleaning the province of this troublesome element. I have great confidence in the future of the Philippine constabulary, and believe that after the body is more properly organized and the necessary amount of discipline has been installed into its men it will be able to render even still more effective service.

## UNITED STATES MILITARY FORCES.

There is stationed in the province two companies of the Twenty-sixth United States Infantry. Plans are at present under way for the construction of a suitable barracks for these troops between the towns of Albay and Daraga. The officers and men of this force have conducted themselves during their stay in the province in a very gentlemanly and soldierly manner. The best of feeling exists between the citizens and the soldiers.

## CENSUS.

Preparations are being made to comply with the order of the central government to take an effective census of the province sometime during the coming year. The information obtainable through a census of this sort is very badly needed, and no doubt the information gained from this census will assist greatly in the work in several of the provincial departments.

## GENERAL CONDITIONS.

The best of feeling exists between the natives and the American residents of the province, and it is extremely gratifying to note the readiness with which the people adopt new ideas and modern customs.

This province opens a wonderful field for the introduction of American supplies and implements, and it is sincerely hoped that American manufacturers and merchants will take advantage of these new markets. The provincial officials will be very glad to render every possible assistance to American manufacturers in introducing their goods and wares into this province.

The wages paid for labor have steadily advanced, until the average price paid for ordinary day-labor is from \$1 to \$1.50 local currency per day. Hemp-press workers average \$2 local currency per day; carpenters and stone masons, \$2.50 local currency per day; longshoremen, who usually work by the piece, average from \$3 to \$7 local currency per day. The beneficiador of the hemp lates, with two members of his family, will average from \$8 to \$10 local currency per day.

While the price of labor has risen several hundred per cent from what it formerly was, the cost of living has also increased greatly, the people consuming a greater variety of food than they had ever been accustomed to in the past. Rents have risen on an average of nearly 300 per cent throughout the province, this being particularly true in the coast towns. The very large demand for living houses and suitable business rooms presents an excellent field for contractors and builders, who would do well to investigate the conditions existing here.

A very excellent field presents itself here for the manufacture of paper, and it is hoped that those interested in the manufacture of this product will investigate the conditions existing in this province. Thousands of tons of short fiber, the residue from the hemp-cleaning machines in the lates, go to waste annually. This residue could be had for the mere hauling it away from the late, and there is probably not a finer product in the world for the manufacture of paper than this residue of hemp.

The social conditions have been greatly improved, and the advance that has been made by the female sex is noteworthy and gratifying. In the effort to occupy a higher plane in the social world clubs have been formed in the more progressive pueblós by the leading women to assist one another in securing the respect and social position their sex is entitled to.

Owing to the very rigid quarantine placed on the ports of this province by the provincial medical board, we have so far been successful in keeping cholera from entering the province. No other disease of any importance exists here to any great extent. By subjecting the carabaos of the province to an injection of rinderpest serum every six months we have been practically successful in stamping that disease out of this territory.

The report of the provincial medical board shows the province to be in a very healthy condition.

In closing this report the provincial governor desires to commend the chiefs of departments and their subordinates for their very excellent work and untiring efforts to bring their offices to a high state of efficiency. To the other members of the provincial board the governor desires to extend his sincere thanks for their great assistance in the effort to conduct the affairs of the province in a manner conducive to the greatest good to all.

A. U. BETTS, *Provincial Governor.*

The Hon. WILLIAM H. TAFT,  
*Governor of the Philippine Islands, Manila.*

## REPORT OF THE GOVERNOR OF THE PROVINCE OF AMBOS CAMARINES.

OFFICE OF THE GOVERNOR  
OF THE PROVINCE OF AMBOS CAMARINES,  
*Nueva Caceres, P. I., January 14, 1903.*

SIR: I have the honor to submit the following report for the year ending December 31, 1902:

In my last annual report I stated: "Absolute peace prevails in all sections." I am

very glad to now be able to repeat that statement and to report the peaceful conditions that have existed ever since the end of the insurrection unchanged. The people of this province evidently understand that the maintenance of peace and order is a condition precedent to progress and prosperity, and I desire to say that to the people of the province themselves belongs the credit for the very satisfactory conditions that exist within our borders, there having been at no time during the year necessity for any special effort or display of force by the insular or provincial authorities to maintain order, and the work of the constabulary has consisted almost entirely in guarding the borders and patrolling mountain regions where the wild tribes were formerly considered more or less dangerous by the Christian inhabitants of neighboring barrios. Commercial houses are in the habit of sending large sums of money out to distant points by unarmed messengers. American prospectors and explorers have penetrated the most remote mountain regions in parties of two and three, or entirely alone, and none of these have ever been molested in the slightest degree. I doubt if there is a district of like territorial extent and population in the Philippine Islands, or elsewhere, that is so free from crime of all sorts as this province; and when it is remembered that the country has but recently emerged from war, that it has been ravaged by pestilence and disease and the patience of the people sorely tried in many ways, and that in some parts the people are still poor and are obliged to work very hard to gain an honest living, I believe the absolutely peaceful and orderly conditions that exist here are worthy of special mention and should be noted to the credit of our population.

#### MUNICIPAL AFFAIRS.

Since my last report municipal governments have been established in the following-named towns: Calasgasan, Capalanga, Gainza, Labo, Lupi, Ragay, and Sipocot. A demonstration of the incompetency of the officials, the small population, and scant resources of Calasgasan led to a recommendation from the provincial board that the town be disincorporated and annexed to the neighboring pueblo of Daet. This recommendation received the approval of the honorable Philippine Commission, and on December 3, 1902, by act No. 544, Calasgasan was incorporated as a barrio of Daet. In the other recently organized towns municipal affairs are being administered in a satisfactory manner, which is generally true throughout the province, very few complaints against officials having been received during the year. The only cases of this character of any importance were lengthy sets of charges against the president of Nueva Caceres, who was tried by the provincial board and acquitted, and against the president, justice of the peace, and treasurer of Nabua, which latter charges were investigated and found without foundation. In the month of May Inocentes Aspe, president of Magarao, was tried by the provincial board on charges of having suppressed cholera reports from his town, was found guilty, and dismissed from office. Each of these cases has been made the subject of a special report to the executive department.

#### HEALTH.

The province suffered during the year from an epidemic of Asiatic cholera, which began on the 1st day of April and continued with some force until the end of May, during which time 895 persons were attacked, with 648 deaths. From the 1st of June to the end of the year occasional outbreaks and scattering cases occurred, with a total for the seven months of 476 attacked and 326 deaths. Total for the year, 1,371 cases and 974 deaths, distributed as follows among the various races and nationalities:

	Attacked.	Died.
Filipinos.....	1,304	943
Americans.....	53	21
Europeans.....	2	2
Chinese.....	12	8
	1,371	974

Immediately upon the appearance of the disease energetic measures were taken to prevent its spread. Dr. Shannon Richmond, then captain and assistant surgeon, United States Volunteers, was detailed by the military commander to assist the provincial authorities, and to his able and energetic efforts is due the success with which the epidemic was combatted. Hospitals and detention camps were at once estab-

lished under Doctor Richmond's direction, and he worked day and night administering treatment to the sick, examining cases, and enforcing sanitary regulations. Doctor Richmond is now president of the provincial board of health, and is a most able, active, and conscientious official. I desire at this time to gratefully acknowledge the valuable assistance rendered by the Medical Corps of the United States Army during the epidemic.

Aside from the invasion of cholera, general health conditions were better during the year than at any time during my three years' experience in the province. The general and thorough system of vaccination which has been carried on has resulted in a material reduction in the number of smallpox cases, and the gradual adoption by the people of improved sanitary measures and a better manner of living is making itself felt in a marked decrease of fevers, beriberi, etc. At the close of the year the general health of the province was excellent, and cholera had practically disappeared, with the exception of a small local outbreak at Daet, which, however, promised to be of but short duration.

#### AGRICULTURE.

The migration of laborers from the impoverished rice-land country to the rich hemp districts, mentioned in my last report, has continued during part of the year, and in this manner the demand for labor in the hemp industry has been in part supplied, resulting in a material increase in hemp production. During the year the province exported 251,969 piculs of hemp, as follows:

Lagonoy.....	73, 710
Nueva Caceres .....	98, 259
Daet .....	80, 000
Total.....	251, 969

Other products exported are rattan, ilang-ilang, and copra. Of the latter 4,830 piculs were shipped from the ports of Nueva Caceres and Daet during the year. I have no data as to the other two articles named, but both are very prosperous industries in a small way and capable of much further development.

I have found that there exists a more or less general impression in Manila that Ambos Camarines is almost exclusively a rice-producing province, but this is far from correct. It is true the province in former years produced a large surplus of rice, which it shipped to Albay, Sorsogon, and other parts of the country, and that its rice fields were then regarded as its main source of wealth. Owing to the low prices which prevailed in those days, hemp was not so highly regarded as at present, and rice growing was doubtless more profitable in proportion to the capital and labor required for its production; but this province is one of many and varied resources, and the fact that hemp had not been entirely neglected became very evident when the loss of draft animals made the cultivation of the rice fields on a large scale impracticable, and the hemp industry at once took up the surplus laborers turned adrift from the rice fields and furnished them regular employment at a rate of wages hitherto unheard of in the country. At the present time no application for employment in the hemp-producing districts is denied, but, on the contrary, there is a demand for labor greater than the supply.

The growth of the hemp industry last year was not solely along the lines of production from existing fields, but there was quite a boom in opening up new lands in localities where no effort has formerly been made to cultivate abaca. From all parts of the province we received information that almost every man fortunate enough to possess a tract of land large enough and suitable for the purpose was planting hemp. It will require from two to three years for these new fields to mature, but when that time come Ambos Camarines may be looked to as a strong competitor for the first place as a hemp-producing province. There are but two or three towns that have no hemp fields, either existing or in prospect, and in those places, while money is not plentiful and the people are poor, there is no suffering or danger of famine, the inhabitants gaining a livelihood by fishing, weaving, boating, wood cutting, as laborers in neighboring large towns, and in cultivating small crops of rice, corn, sugar cane, potatoes, etc.

As to hemp production, there is necessarily a limit fixed by the available supply of labor. How near we are now to the end of that supply is not to be definitely determined at the present time, but certainly the day can not be far distant when the local supply of labor will be fully taken up. This condition already exists in some places, and everywhere are to be seen signs of its approach in the constantly increasing demand for higher wages by laborers of all classes.

The agricultural possibilities of this province are practically unlimited, possessing a climate excelled by none in the Tropics (personally I believe by none anywhere) with a rich and fertile soil that will grow almost anything, and with a population of the most peaceable and friendly people in the Archipelago, it seems to me that Ambos Camarines offers a most inviting field for the investment of American capital in agricultural enterprises, provided, of course, that some means can be found for supplying the necessary labor. The total area of the province is calculated to be, approximately, 3,000 square miles, about a third of which is mountainous and heavily timbered, a third foothills and low mountains perfectly adapted to hemp culture, and a third rich, low valley lands available for all sorts of agricultural purposes. Considerably less than half of the available area is now under cultivation.

I mention the following as the principal agricultural and natural products of the province, most of them at present being produced on a small scale, but all successfully: Hemp, rice, corn, coffee, cacao, sugar cane, cotton, cocoa (and copra product of same), ilang-ilang, and pineapples, oranges, mangoes, bananas, and a great variety of other tropical fruits. American potatoes, pumpkins, cabbages, and other vegetables and garden products have been grown successfully.

The province contains large tracts of fine grazing lands, and in former times stock raising was one of the principal industries. I remember when I came through the northern end of the province with the army, in February, 1900, traveling for miles through a most beautiful country where the hills were covered with cattle as far as one could see. Now, however, there are practically no native cattle left in this part of the country, the "rinderpest" which began in July, 1900, having carried off about all the stock. During the past six months quite a number of foreign cattle have been brought in and have apparently thrived, and for a long time have been no reports of plague among the cattle or carabao.

In this connection I desire to state that copies of Act No. 517, together with the proclamation of the honorable civil governor concerning the same, were sent out during the month of December to all the towns. All reports received in reply thereto are to the effect that no danger of famine exists; that all the people not engaged in trade or employed in wage-earning occupations are attending to their farms and have planted sufficient crops to provide for the necessities of themselves and families. There has been no unusual shortage in any crop, except, of course, rice, but fortunately there is an abundance of this staple on the market here at prices that make it easy for the inhabitants to purchase for cash or obtain in exchange for articles of local production. No request has been received for seeds.

#### MINERALS.

In regard to the mineral resources of the provinces, I am not able to furnish much information in addition to that already in the possession of the mining bureau. It is certain that gold, cinnabar, and coal exist, but whether or not in paying quantities has not yet been demonstrated. A number of American miners and prospectors have been in the field during the past year, and most of these profess to have made valuable discoveries. Most of them have filed mining claims under the provisions of the "Philippine bill" and legislation of the Commission thereunder, but up to the present time no definite results have appeared from their work which would warrant one in expressing a positive opinion as to the exact nature and extent of the mining resources of the territory in which these men are working, especially as to gold and cinnabar. There is no doubt as to the existence of at least two large coal deposits, but it is asserted by many that the coal is too soft to have a commercial value, and I am not prepared to either confirm or deny this statement, as I am not aware of any analysis ever having been made of it. I have seen samples of this coal, which to my layman's eyes looked very good, indeed, and I believe it would be well worth while for a representative of the mining bureau to visit and report on these coal deposits, as well as the other mineral lands in this vicinity.

#### FORESTRY.

Most of the 1,000 square miles of the area of this province above classified as mountainous is covered by heavy growths of timber, including about every variety of wood known to the Philippines, and containing a large proportion of the valuable timbers of the superior group, as well as resinous and gum-producing trees of no small value. This great forest area, protected as it is by law and carefully watched over by the government, constitutes one of the strongest reserve resources of the

province, and will certainly in time, when developed within the limits of wise regulations, afford opportunities for the profitable employment of capital and labor and add much to the wealth of the country. An American company has for more than a year been operating at Delapaon, in the jurisdiction of Pasacao, on the west coast; employs a large force of workmen and reports excellent results.

I am now engaged in making a collection of wood samples, which will be placed at the disposal of the insular government, and may be found useful by the exposition board.

#### POST-OFFICES, POSTAL ROUTES, AND TRANSPORTATION.

During the year post-offices have been established in the towns of Buhi, Calabanga, Daet, Iriga, Libmanan, Magarao, Nabua, Pamplona, Pasacao, San Jose de Lagonoy, and Tingaon, which, with the central office at Nueva Caceres, gives us a postal system quite sufficient for the present. As soon, however, as the people become better acquainted with the American postal system, and evince a desire to make use of it, I hope to be able to have an office opened in every town in the province. I have succeeded in making arrangements with the authorities of the towns where post-offices have been established to carry the mails to and from the capital without cost to the government, the only exception being the route to Iriga, which is a long one, where the expense would be too great to be borne by the municipality, and Daet, which has no land communication with the capital and to which mails go direct from Manila and this city by steamer. I believe, however, that no charge is made by the steamship companies for this service.

The postal system as now arranged is working very satisfactorily, with a semi-weekly service to Iriga and weekly to other towns, and touches every section of the province except the extreme northern end, with which land communication is impossible part of the time and extremely difficult all the time on account of there being no roads through the rough, mountainous country north of Daet. The towns thus cut off from the center are Capalonga, Mambulao, and Paracale, places of considerable importance, to which the provincial authorities would like to give more attention and visit more frequently than is now possible. I would therefore request that one of the coast guard and transportation fleet be assigned to the east coast of this province for use in dispatching mails to and visiting the towns named. Such an arrangement would also be most advantageous in facilitating communication with the important district of Lagonoy, containing six populous towns, and which can now be reached only by a long journey over rough mountain trails.

In this connection I desire to mention the Nueva Caceres-Pasacao railway project, which is being promoted by Capt. George Curry, ex-governor of this province. Captain Curry's plan is to build a line of railway from this city to Pasacao, on the west coast, a distance of about 14 miles, and operate a connecting line of steamers from Pasacao to Manila. Over such a route the trip from Nueva Caceres to Manila could be accomplished in about twenty-four hours, avoiding the dangers and delays of the long trip around the southern end of Luzon through the Straits of San Bernardino, a journey which now requires from three to ten days, depending on the weather. The east coast of Luzon, exposed as it is to the northeast winds and the heavy seas of the Pacific Ocean, is not an attractive place for small steamers, especially during the storm season from November to March, and navigation along this coast is at all seasons slow, expensive, and more or less dangerous. It seems to me that all conditions are most favorable for the success of a line of railway such as proposed by Captain Curry, and I know of no public improvement which would result in greater benefit to the commercial and general interests of the country, as well as to the interests of the government and the military administration in furnishing a safe, direct, and speedy line of communication between Manila and the southern end of Luzon. I understand that Captain Curry expects to ask some concessions from the insular government in the way of franchises, timber-cutting privileges, and harbor improvement at Pasacao, and I take pleasure in recommending his plan to the consideration of the honorable civil governor and Commission. Captain Curry enjoys the unlimited confidence of the people of this province, and I consider that his connection with this railway enterprise insures for it the hearty approval of the inhabitants of the territory through which it is proposed to construct the road.

#### SCHOOLS.

The past year has been productive of most excellent results in school work. There are now in the province, under the direct control of American teachers, 28 schools,

with a teaching staff of 27 American and 35 native teachers. The enrollment for the entire province in these schools is 3,079, with an average daily attendance during the last school year of 2,142. The school system at present is mainly, of course, primary, as the English language is the essential point in the education of the native children until such time as they are able to grasp the other branches, and few schools have as yet been organized for a sufficient time for many of the pupils to have made much progress in other studies, as grammar, arithmetic, geography, etc. In some of the schools the more advanced pupils study these subjects, while in Nueva Caceres it has been found necessary to organize both a grammar and high school. The grammar school is on the same basis as those in the United States, being intermediate to the primary and normal schools. It absorbs the more advanced pupils of the primary schools of Nueva Caceres and vicinity and prepares them for the classes in the high school. This grammar school is meeting with marked success, and although only organized a short time it already has a daily attendance of 39. The studies taught are reading, arithmetic, language, geography, and spelling, with some special instruction in singing, writing, and composition.

A permanent provincial high school has been established under the able direction of Mr. Frank L. Crone. This school was opened July 15, with Mr. Crone and one lady assistant in charge, but Mr. Crone's marked ability, zeal, and energy, together with his kindness and patience as principal and teacher, at once made the school popular, and it has grown so rapidly that an increase in the teaching staff has already become necessary, and the end of its success is not yet. The attendance at the close of the year had reached the very gratifying daily average of 185, made up of some of the brightest and most intelligent and representative young men and women of the province. A number of towns, representing every section of the province, have taken advantage of the provisions of Act No. 446 to send students to this school, and through this means the educational department is reaching a class which I consider it most advantageous and important to have instructed in the English language and other subjects having a tendency to develop in their minds respect and regard for our American civilization and institutions.

Mr. W. B. Freer, the present superintendent of the division of Ambos Camarines, is evidently the right man in the right place, and the schools have prospered under his direction as they never did before. He is a hard and conscientious worker and uses great tact and judgment in meeting and dealing with the native people, with whom he is exceedingly popular. Mr. Freer has under him a corps of teachers which I consider at least equal to any in the islands. They have not only displayed a high degree of energy, patience, and skill in the daily work of their schools, but I have been pleased to observe that they have come here evidently imbued with the idea which I consider the very essence of the American policy in these islands, viz, to get into as close touch as possible with the people, and by kind, courteous, and honorable conduct in dealing with them to gain and hold their respect, confidence, and good will. The effect produced in the native mind by this line of conduct on the part of the American teachers has been excellent, and I find in every town that the American teacher enjoys the respect and esteem of the entire community.

#### CONSTABULARY AND POLICE.

The constabulary force in this province is a very efficient, well instructed and disciplined organization, and is commanded by Capt. and Insp. Harry A. Porter, assisted by Lieut. and Insp. John Arthur, both able and worthy officers. Great care has been exercised in selecting men for enlistment, with the result that a good class of men have been secured, and there have been practically no complaints (none of a serious nature) from any source of misconduct or abuse of authority by members of the corps. On account of the peaceful condition of the province the demands upon the force have not been as great as they otherwise might have been. Nevertheless the men have not been inactive by any means, but have been kept well occupied in the work of patrolling mountain districts, guarding the borders and keeping watch of localities where disturbances might arise, and their work at all times has been most satisfactory. At the close of the year 2 inspectors and 51 enlisted men, out of a total force of 5 inspectors and 148 men were on detached service in a neighboring province. Captain Porter has at present only 2 inspectors for duty under him, one of these being stationed away up in Camarines Norte and the other acting as supply officer. In view of the large territorial extent of the province and the fact that important telephone lines are in charge of the senior inspector I would recommend that at least two additional inspectors be assigned to duty under his command.

The municipal police are, as a rule, well organized and render satisfactory service, and in those sections bordering on disturbed districts in neighboring provinces efficient forces of volunteers have been organized for local protection. A system of communication and secret (volunteer) police has also been established in the outlying barrios of the districts above mentioned, by means of which a close watch is kept upon strangers and travelers and suspicious movements immediately reported.

#### ROADS.

At the end of the year 1901 there remained in the treasury, unexpended, from the loan made the province by the insular government under Act No. 196, the sum of \$23,216.18. Of this fund \$20,059.46, together with \$1,269.29 from provincial revenues, were expended in roads and bridges. The results accomplished by these expenditures have been satisfactory and beneficial so far as they have gone, but many needed improvements have been necessarily postponed owing to lack of funds, and there is no immediate prospect of their being made without some additional resources. If the "road-tax law" proposed by the recent assembly of provincial governors receives the approval of the Commission we shall be able to make many much-needed improvements which otherwise could not be made.

I beg to submit the following extract taken from a recent report of the provincial supervisor:

"There are about 135 miles of roads, of which 15 miles are in good condition; the remaining 120, part of which have been lately repaired, still need further repairs, at an estimated cost of about \$400,000 local currency.

"It is urgently recommended that an appropriation be made to build, as soon as practicable, a road from Pili to Lagonoy, via Mabatobato. At the present time only a very poor trail connects these two points, and during the rainy season communication is almost impossible. Except in exceptional cases there is no communication by sea, as no boats ply between here and the Lagonoy district, and travel by smaller craft is out of the question.

"Twenty-five more bridges are needed, of which at least 20 are an urgent necessity. With the exception of two large bridges, I estimate that the required number could be put in at a cost of about 100,000 pesos, with wood as the material. One large bridge over the Pauili River and one over the Argos River, which latter forms the boundary line between the provinces of Ambos Camarines and Albay, are badly needed, and when finished would complete a good continuous road between Nueva Caceres and Legaspi. Their construction from wood is impossible, and either iron or steel would have to be used. I also recommend the renewal of the smaller bridges with iron or steel, as observations during the last year have shown that wooden bridges do not last a reasonable time in this climate. For example, the double Howe-truss bridge of Oregon pine put in over the San José River by a detachment of United States engineers under Lieutenant Kelly only a little more than a year ago, with every care and excellent work, thoroughly painted with wood preservative, etc., had to have the flooring repaired lately with new planking, and shows in parts of the trusses signs of decay. Good native timber of the required grade and dimensions would be preferable to pine, but can not be obtained except at a very high expense, owing to the lack of animal transportation at the present time. While the original cost of iron and steel bridges would be considerably more than that of wooden bridges, they would prove in time to be much more economical and would do away with continuous breaking down and repairs, as is now the case."

The Pili-Lagonoy road, mentioned by the supervisor, is too large an undertaking for the province alone, even with the assistance of the road-tax law, but its importance I believe sufficient to make it worthy the attention of the insular government. The "Partido de Lagonoy" contains 6 towns with an aggregate population of nearly 40,000. It is a very rich hemp-producing district, having exported last year, as shown by figures hereinbefore quoted, 73,710 piculs of hemp. Being shut off as it is from communication with the center of the province and the outside world, places this district under a serious disadvantage and delays development of what would probably become, under favorable conditions, one of the richest sections of the Archipelago. I believe the benefits, not only to this province, but to the country at large, to be derived from the construction of such highway would be amply sufficient to warrant a liberal appropriation of insular funds for the work. If the Commission did not feel inclined to do the work entirely at the expense of the insular treasury, an arrangement might be made to divide the cost between the insular and provincial treasuries, or for the insular government to advance the nec-

essary funds as a loan to the province, to be repaid in annual installments to be fixed in accordance with the financial condition and prospects of the province. If anything is found in this plan as here outlined to commend it to the attention of the Commission I would suggest that an engineer officer be sent here with instructions to, in company with the provincial supervisor, look over the ground, make preliminary surveys, and estimates of the cost of constructing the road.

## FINANCES.

The following statement, taken from the records of the provincial treasurer, shows the financial condition, in United States currency, of the province at the close of the year 1902:

Balance on hand available for expenditure on December 13, 1901.....	\$36,897.81
Due to municipalities December 31, 1901.....	3,807.69
<hr/>	
Total cash on hand December 31, 1901.....	40,705.50
Collections:	
Industrial tax.....	\$17,926.79
Cedula tax.....	14,420.06
Land tax.....	13,045.18
Sales of stamps.....	1,373.03
Registration fees.....	388.49
Cart tax.....	266.98
Rents.....	111.42
Urbana tax.....	110.42
	<hr/>
	47,642.37
Received from insular government for return of forestry and internal-revenue taxes.....	7,841.76
	<hr/>
Total.....	96,189.63
The disbursements have been as follows:	
Paid to municipalities.....	25,973.96
Expended on roads and bridges.....	21,328.75
Salaries.....	\$17,864.27
Purchase of supplies.....	4,302.40
Expenses of provincial board of health, including salaries.....	2,414.56
Traveling expenses.....	2,022.84
Court and prison expenses.....	1,745.63
Repairs of buildings.....	630.85
Rents.....	211.57
Transportation.....	69.09
	<hr/>
	29,261.21
Loss due to depreciation of silver currency.....	7,496.60
Due to municipalities December 31, 1902.....	2,658.39
Balance on hand available for expenditure on December 31, 1902...	9,470.72
	<hr/>
Total.....	96,189.63

Of the balance on hand December 31, 1901, \$23,216.18 was the unexpended balance of the loan made the province by the insular government under the provisions of Act No. 196.

All departments are being administered in the most economical manner possible, and we believe we have succeeded in keeping the cost of running the provincial government down to the lowest possible figure consistent with efficiency.

The affairs of all departments are in good condition, and complete harmony exists throughout the administration. The honesty, fidelity, and efficiency of the Filipino officials, which I took occasion to comment upon last year, I desire to again mention at this time, with special reference to Mr. Ramon Enrile, secretary, and Mr. Fulgencio Contreras, fiscal. These gentlemen are in perfect accord with the policy of the government, are on the most friendly and confidential terms with the American officials, and the value of their services can not be too highly estimated. During the months of June, July, and August, while the writer was absent from the province, and again in December, Mr. Enrile was, according to law, acting governor, and

performed his duties with most creditable tact, skill, and good judgment. In view of their past faithful services and of what is to be expected of them in the future, I recommend that the salaries of the secretary and fiscal be increased to \$1,800 per annum, each.

I have the honor to remain, very respectfully,

JAMES ROSS,  
Governor, Ambos Camarines.

The honorable the CIVIL GOVERNOR,  
Manila, P. I.

#### REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF ANTIQUE.

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF ANTIQUE,  
San José de Buena Vista, P. I., January 14, 1903.

SIR: In compliance with section 7, Act No. 83 of the United States Philippine Commission, and in accordance with the provisions of section 8 thereof, I have the honor to present the following report upon the conditions of the province of Antique for the year ended December 31, 1902.

#### POPULATION.

The total population of the province is 121,376 souls, according to the census recently taken in each of the municipalities. It is distributed as follows:

Antique .....	4,761
Anini-y .....	4,426
Barbaza .....	4,174
Bugason .....	11,412
Caritan .....	3,123
Cagayancillo .....	2,351
Culasi .....	11,443
Dao .....	7,765
Engaña .....	3,079
Guintas .....	3,536
Guisijan .....	2,143
Lauaan .....	2,322
Pandan .....	11,020
Patnongon .....	5,818
San José de Buena Vista .....	5,403
San Pedro .....	7,450
San Remigio .....	4,372
Sibalom .....	12,218
Sebaste .....	3,270
Tibiao .....	6,097
Valderrama .....	4,693

According to the previous census the population was about 114,000 inhabitants; therefore there has been an increase of 7,376 during the year 1902. It is true that cholera—which appeared here September 27—and malaria both exist as yet in some of the pueblos of the province, and these caused many deaths, but this decrease has been offset by the births during the year 1901 and 1902, which, together with the great number of people who escaped enumeration in the year 1901, have caused this increase of 7,376 inhabitants.

To the number 121,376, which is the present population of the province, there must be added certain members of the Ati or Negritos tribes, who live in savagery, scattered along the banks of the rivers of some of the pueblos of the province. The number of these will not at present reach more than 200, including men, women, and children, a great number of them having emigrated to the island of Negros during the last decade. They live in quasi-independence, without political connection with the Christian population, and govern themselves after their own fashion, ruled over by the captain or the elder of the tribe, which is composed of various families, usually descended from a common source.

The Buquidnons, or Mundos, also form a separate, semisavage population within the province of Antique, and these are located in the inaccessible regions of the mountains, without any political relations with the Christian population. They are

of the same race (Visayans) as the Christians, and the larger part of them lives in one of the mountains of the pueblo of Valderrama, known as the Monte de Verdin, separated from the pueblo by a distance of four or five days' travel through dense forests. Their population is estimated at 300—men, women, and children.

## PUBLIC HEALTH.

During the year 1902 there have occurred in all the provinces about 4,523 births and 5,551 deaths, the latter caused largely by cholera and malaria, which were prevalent in the latter half of the year, according to the following statistics:

Pueblo.	Births.	Deaths.	Remarks.
Antique .....	196	352	Up to November, 1902.
Anini-y .....	119	147	Do.
Barbaza .....	110	65	Do.
Bugason .....	394	275	Do.
Cagayancillo .....			
Caritan .....	57	86	Up to September, 1902.
Culasi .....	681	214	Up to November, 1902.
Dao .....	348	269	Do.
Engaña .....	100	314	Do.
Guintas .....	97	246	Do.
Guisijan .....	148	111	Do.
Lauaan .....	83	18	Up to September, 1902.
Pandan .....	509	344	Up to November, 1902.
Patnongon .....	128	196	Do.
San José de Buena Vista .....	195	419	Do.
San Pedro .....	301	352	Do.
San Remigio .....	148	146	Do.
Sibalom .....	496	1,268	Do.
Sebaste .....	110	418	Do.
Tibiao .....	205	135	Do.
Valderrama .....	150	167	Do.

During the period of the cholera epidemic, which, while unfortunately still existing at the present time in certain of the pueblos, shows a tendency to disappear, it has been found that the municipal presidents of health were unable to cooperate with Doctor Montiola, provincial president of the board of health, because the great majority were incapable of appreciating the importance of their duties and were ignorant of the use of medicines in combatting the disease. Therefore, it resulted that nearly all sanitary measures that were taken in the pueblos were especially instigated by the provincial board of health. It may be stated that the efforts of Doctor Montiola and certain municipal presidentes, not the municipal health authorities, were the cause of bringing about success in the campaign against the cholera, as shown by the relatively small mortality during the epidemic. It is therefore recognized as a necessity to displace the present presidents of municipal boards of health and replace them with duly admitted physicians, and to intrust each of them with the sanitary care of five or more municipalities.

Antique undoubtedly is one of the provinces of the Philippines which is favored with the most excellent climatological conditions. The mean temperature is 32° C., the highest during the hot season reaching 37.7° C. The pueblos, which for the most part are situated along the seacoast, form a long and narrow strip, extending from north to south a distance of more than 90 miles. The interior pueblos are Simbalom, Engaña, and San Remigio, and in these, owing to the humidity of the soil, the health conditions are less favorable than are those of the other pueblos. Valderrama, though also an interior town, occupying the central portion of the province and separated from Bugason by a distance of 8 miles, like the coast pueblos, is of quite healthful conditions, owing to its considerable elevation above the sea level.

## RIVERS.

There are numerous rivers bursting from the high mountains and falling in beautiful cascades. After irrigating the fields along the way they mingle with the waters of the sea. The largest, deepest, and most rapid rivers are the Dalanas, between Tibiao and Barbaza; the Paliwan, between Bugason and Guisijan; the Cangaranan, which runs through Valderrama and Bugason; and the Simbalom, in the pueblos of San Remigio, Simbalom, and San Pedro.

During the season of heavy rains the rivers can not be forded, and all means of communication in the province are cut off. Frequently the rivers change their

courses, causing much damage to the fields along their banks. On account of the precipitous course and the frequent variation of the rivers, it is difficult, if not indeed impossible, for the province to construct bridges over the rivers, though they are considered necessary at all times, in order to provide means of communication and transportation.

#### RELIGIOUS CONTROVERSIES.

The Filipino people of this province, as the majority of the people of the islands, are Christians, their religion until now being founded upon the Roman Apostolic doctrines; but it is believed that owing to the unjust attitude of the Vatican toward the Filipino people, the influence of Rome will soon cease to predominate in the consciences of the greater part of the inhabitants of the province of Antique, as shown by the fact that the secular clergy of this place seems to be favorably disposed toward the doctrines of Father Aglipay. This is to be expected, since in the rules of the new church the native clergy has found the consummation of their aspirations. Without any doubt whatsoever, the leading, most intelligent citizens of this place sympathize with the attitude of the secular clergy. This loss of influence by the Pope is due to his uncompromising zeal in supporting the friars in these islands, while they are disliked on account of their history throughout the country as being the liberticides of the Philippines. The enlightened Filipinos of the province of Antique, loving their present political institutions, will compromise with any other form of Christian religion except the Roman, even at the risk of contradicting themselves, if the Roman Pontiff persists in retaining the Spanish friars in this place, for it is believed that as long as there remains a friar in the Philippines there will always be some one to stir up strife between the people and their constituted authorities; there will always be some one trying to sow discord, to place obstacles in the way of the friendly relations of Americans with Filipinos, and then to gloat over the misfortunes of the Filipino people and the embarrassments and difficulties of the American Government in their administration of these islands. For these two peoples, Filipino and American, have accomplished here the destruction, in the interests of humanity and justice, of the secular dominion of the powerful friary.

#### PUBLIC INSTRUCTION.

Due to the former system of instruction, essentially sectarian, under the direction of the very reverend and learned parish priests, the education of the people is exceedingly imperfect in the province of Antique. There are more than 25 per cent who can neither read nor write; 20 per cent who can not write, and less than 5 per cent are educated. There is now among the young a great enthusiasm for learning, and certain youths who have attended the schools where American teachers were employed can already understand and read English. The improvement in this language here, while slow, is quite noticeable. So true is this that I do not think it too much to say that within a period of fifteen years there will be more Filipinos in Antique who speak English than at present speak Spanish. It would be desirable for the municipalities to construct buildings for public schools in the barrios which are at some distance from the central municipality, in order that in this manner all the possible benefits of education might be disseminated. This could be accomplished by reducing the number of municipalities, so that, with a reduction in the number of officials there might accrue a surplus to construct and maintain public schools, which are so necessary for the progress of the people. This is all the more practicable since there is here a superabundance of weak municipal organizations which serve only as a burden to the machinery of administration.

#### AGRICULTURE.

The principal resource of this province is agriculture. The most important product is rice, which is produced in all the pueblos and is the principal food of the people. This commodity is produced in ordinary seasons in sufficient quantity for the consumption of the residents in the pueblos of Pandan, Sebaste, Culasi, Tibiao, Barbaza, Guisijan, Bugason, Dao, and Valderrama; in a quantity sufficient for but two-thirds of the year in the pueblos of Caritan, Patnongon, and Guintas, and scarcely enough for three months in Anini-y and Cagayancillo. But Sibalom, Engaña, San Pedro, San Remigio, and Antique, called the granary of Antique, are the pueblos which produce the greatest quantity of rice, and they are able to feed, in addition to the inhabitants of their own pueblos, the whole province. So it was that in former years rice was exported from this province to the provinces of Batangas and Iloilo. In the entire

province a million and a half "cavanes" of rice, on an average, are produced annually. But last year, 1902, owing to the scarcity of carabaos, on account of rinderpest, and to the drought, the harvest fell short in the pueblos to the northward, amounting to less than one-fourth of a crop, and in the plain of Sibalom and the neighboring fields one-third of the ordinary crop was gathered.

In the pueblos to the north, from Bugason to Culasi, sugar is raised, but war and later, in 1902, the lack of work animals put an end to work upon the plantations, and now scarcely any sugar is raised. However, since 1901 and especially in 1902 great quantities of hemp have been planted in the pueblos of Pandan, Sebaste, and Culasi, whose mountains present excellent conditions for the production of hemp of a superior grade. In San Remigio, Barbaza, and Dao small quantities of this fiber are also produced but of a poor quality.

Copra is produced in all the coast towns, especially in Pandan and Cagayancillo, and the best mango of the Philippines is grown in the pueblo of Tibiao.

Coffee and cocoa are raised also in all the pueblos, but in small quantities, which do not suffice for local consumption; this industry is capable of expansion, however. There are, further, produced corn, sweet potatoes, etc., to such an extent that even though relatively little rice has been gathered during the year 1902 there is a well-grounded hope that we can successfully cope with famine during the current year, 1903, with the assistance of the grain stored up in 1901.

In the whole province there are not 200 head of cattle, those left being the ones saved from the recent epidemic of rinderpest, thousands upon thousands having died in the pastures of Dao. It was possible to save one-third of the carabaos from the disease. At present there are innumerable horses dying from the surra.

#### COMMERCE, FORESTRY, AND "INDUSTRIA."

Commerce and trading show no signs of life, undoubtedly due to the very bad condition of the means of communication, and the resources of the forests are not utilized for lack of transportation facilities.

#### SUGGESTED LEGISLATION.

(a) *Roads and bridges.*—The roads and bridges are in a deplorable condition, despite the efforts made to improve them. Throughout the province one is unable to avail himself of the comfort of traveling in a coach, and even carts and wagons which might be used to freight merchandise can with difficulty traverse these roads. From the year 1897 until after 1900 the roads and bridges were completely abandoned, and by reason of such neglect they of course became destroyed, and nothing was preserved of them except the custom of calling them by the name of roads and bridges. Consequently, the best manner of traveling in the province at present is either on foot or horseback, at times it being necessary to go along the shore.

The provincial government has provided for the repair of the roads from San José de Buena Vista to Sibalom, from San José de Buena Vista to Antique and Guintas, and from Antique to Engaña, under the direction of the former supervisor, T. Hodgson, and they are now in much better condition, compared with former years. Similar work was also done upon the road from San José de Buena Vista to Sibalom in 1901. Also, though on a small scale, as the resources of the province permitted, like work has been done in Culasi, Tibiao, and other pueblos, and a force of about 50 men has been constantly employed upon the provincial wagon road.

About 15 bridges, both large and small, have been built throughout the province; and of these three were built at the expense of the military department, but under the supervision of the province. These are the bridges at Malandog and Bocboc, in the municipal jurisdiction of Antique, and at Calala, in the jurisdiction of Guintas. There is now in course of construction, also at the cost of the military department, another bridge over the river Bungol, in the municipality of Culasi, substituting the one proposed for the river Antique, in the municipality of Antique.

It is not expected that it will be possible to put into good condition all the roads and bridges of the province with the resources of the province itself in a period of less than ten years. This certainly is an evil, and besides affecting agriculture and other prime necessities of the province in a serious manner, would be the cause for the prolongation of the commercial depression, while upon the development of commerce the true success and prosperity of this people, essentially agricultural, justly depends. Wherefore it is urgent, with all the urgency of a great social and public necessity, that the roads and bridges here be put in good condition; and to accomplish this two methods are offered as the most practical: to apply to the central government for a loan, or to impose a special tax for roads and bridges.

But the idea of a loan would not provide in this matter a practical solution, for the reason that later, when the time for the repayment of the loan should have arrived, this obligation would absorb all the funds necessary for the care of the roads and bridges, and naturally the greatest and most substantial work would have to be postponed until the debt should have been paid. In case the roads should be destroyed and the bridges lost, as they might be, in one day, it would be necessary to reconstruct them, contracting new debts. For this reason, between the two measures proposed, the tax for roads and bridges is more acceptable and more in conformity with the present early stage in the life of our provinces. True, such tax can not be imposed without rousing the opposition of many Filipinos, because it was the occasion, in the former régime of government, of great and punishable abuses. But fortunately those times have passed away and the employees of to-day are not those of yesterday. To-day the people have a voice in their own public administration, and the features which caused dislike for the road tax have been abolished. The tax for roads and bridges, like all taxes, is certainly a burden upon the taxpayer, because it serves to increase the load already heavy upon the shoulders of a people debilitated by a series of calamities which have recently befallen them. However, it is an evil that is necessary in order to avoid other evils far greater, which would occur as a result of a continuance of the present condition of distress due to the lack of easy means of communication. Therefore, all opposition to the imposition of this tax is wanting both in reason and foundation, particularly when it is remembered that this tax would be merely temporary or provisional in character, imposed for not more than two years, because it is to be used only for the purpose of hastening the building of the roads and bridges, since the provinces, owing to their recent organization and lack of resources, are unable to carry out these enterprises promptly and thoroughly. In order that the proposed tax may accomplish the purposes for which it is intended, and in order that its history, so odious to the minds of the people, shall be forgotten and no longer occasion opposition to this tax, it is recommended that authority be given the provincial boards in the respective provinces to impose a special tax for roads and bridges, fixing the rate and manner of collection, after securing the approval and consent of the municipal councils of all the municipalities of the province, which shall previously have been called together in assembly by the provincial board. Thus may the consent of the people to this class of taxation be assured through their immediate representatives.

(b) *The fusion of municipalities.*—It is an axiom of government that the success of the provincial officials depends, in the greatest number of cases, upon the efficient assistance of the municipal officials. We have had this assistance from the majority of our municipalities, from those which have sufficient resources to maintain a municipal existence, and from those wherein men of capacity and integrity were raised by popular suffrage to the official positions. In a general way we may state that as time advances our hopes grow stronger in the success of our municipal administration, which should naturally follow upon the daily experience acquired in the performance of municipal duties.

But of the 21 municipalities which compose this province, it may be stated as a certainty that seven of them at least are still far removed from capacity for affording this efficient assistance, because they can not secure good and intelligent men to fill their offices. These municipalities are Caritan, Cagayancillo, Engaña, Guintas, Guisijan, Lauaan, and Sebaste, and, in general, all those municipalities which contain less than 4,000 inhabitants. On account of their slender resources these municipalities are unable to offer a moderately adequate salary to their officials, and for this reason men of intelligence, if there are any, refuse to be elected to the municipal offices, or when appointed to them refuse to accept them, thus making it possible for men of little sense, and, in most cases, office seekers, to fill the municipal positions for the profit they can obtain therefrom. Such men are the causes of much inconvenience, and their stupidity nearly always results in the interruption of improvement in public administration.

During the last fiscal year the following were the total receipts in the municipalities named: Caritan, \$368.39; Guintas, \$348.73; Guisijan, \$300.70, and Cagayancillo, \$120.84 in United States currency, and in the same class are the municipalities of Sebaste, Lauaan, and Engaña. With only such resources as these, it is impossible to believe that these municipalities can support a proper municipal organization, with police for the maintenance of public order, with officials to execute and enforce the laws, and with funds to pay for their public improvements. The facts that public administration encounters in these municipalities such an obstacle to ordinary progress, and that people are living outside the pale of the law, unpunished because of the ignorance or negligence of the officials, suggest to us a remedy which is possibly the only saving measure, and this is the consolidation of these municipalities into

one, or their annexation as barrios to other municipalities. It is a fact that in Cagayancillo, through the ignorance of the officials, the assassins of the presidente Bungcag lived for more than four months in the most scandalous impunity. Since its organization the government at that place has been in the most complete chaos, and there is not a man there with even mediocre intelligence who is capable of applying the law. So in the seven pueblos mentioned we are unable to commend the efficiency of their public service.

(c) *Municipal police*.—Each of the various pueblos of the province has a police force of from 4 to 16 men, according to its resources; Bugason and Sibalom having the largest number, and Guintas and Cagayancillo having the smallest. In certain of the pueblos which have less than 4,000 inhabitants the police service is of scarcely any value, because generally with the small salary, which, as a rule, they do not receive, men do not offer themselves to perform such delicate services, and there is of course no efficiency in this branch. For such reasons as these the chief inspector of the Philippine Constabulary has found himself obliged to disarm the police in Tibiao and Guisijan, and to refuse arms to the police of Cagayancillo. The municipal police is usually armed with revolvers; some, however, have "bolos," and very rarely, in two or three pueblos only, they have two or three shotguns, all furnished with a very small quantity of ammunition.

With such arms it is not to be expected that the municipal police is able to defend their pueblos from the attacks of the bandits, and while it may be stated, in a general manner, that there is no outlawry in the province, nevertheless it is not certain that at some time, especially during the dry season—January, February, March, April, and May—bands from the provinces of Iloilo and Capiz will not attack the central and northern pueblos of the province. The pueblos, for lack of arms (which should be at least equally as good as, if not better than, those of the ladrones), have to fold their arms and abandon their property to the tender mercies of the bandits, allowing them to take possession of their few work animals, the only ones they have left from the ravages of the late pest. So that unless at least half of the municipal police are furnished with good guns, it is absolutely impossible to force them to fight in unequal combat, in the defense of the interests of their municipality against a band of outlaws who usually possess three or more guns, for it would be to require of them a duty which, considering their present organization and equipment, it is impossible for them to perform. Therefore, again we recommend the suppression of the aforementioned municipalities because the interests of the public welfare demand it, and that there shall not exist within the province any municipalities except such as are capable of managing and defending their own interests. In this manner shall municipal autonomy not prove an illusion.

(d) *Justices of the peace*.—There are 21 pueblos in the province, but there are only 20 justices of the peace, as there has never been a justice of the peace in Cagayancillo, because no man capable of performing these duties has ever been found there. The great or small success of the administration of justice in these courts has always been in direct ratio to the great or small knowledge of law possessed by the justices of the peace. But unfortunately, there is but one lawyer in this province, and he is the present provincial fiscal, Señor V. Gella, and there are not four men who have studied law. Consequently, in this province, the duties of justice of the peace devolve upon incompetent persons, as a rule.

In order that the courts of the justices of the peace may be presided over by worthy men, it is recommended that three or more municipalities be grouped into one judicial district, and for each district a justice of the peace be appointed. This province should be divided into seven districts, and it would then be easy to find seven justices of the peace who were capable and who would, without doubt, perform the duties of their office more acceptably than the 20 who hold these offices in the province at present. In each municipality there should then be appointed an auxiliary justice of the peace to take cognizance in matters within the jurisdiction of the municipality, and in the absence of the justice of the peace to hold preliminary examinations in criminal cases, and to perform temporarily the duties of the justice of the peace during the absence or disability of the latter, but always confining his acts to his own municipality. In this manner the justice of the peace, besides being a better man, will have more duties to perform, and the more business that comes before him the more fees he will receive, and he will thus be well paid. He might even be designated a salary by the government, not to exceed the probable fees which he would receive according to the schedule fixed in the code of procedure. The majority of the justices of the peace in our municipalities merely while away the time in their offices, and while they do this they suffer from hunger, so that it is unjust to expect greater assiduousness in attending their office waiting for the public.

(e) *Sheriff*.—The performance of the duties of sheriff is also one of the unsettled questions in the affairs of the justice of the peace courts. This is because frequently after the judge of the court of first instance has closed the session, the acting or tem-

porary sheriff resigns from his office and no one will take his place. Consequently the orders of the justices of the peace are not executed, and the interests and the rights of the citizens who are parties, suffer. We recommend, therefore, that the authority of the sheriff be always conferred upon the provincial governor, as an addition to his duties, and that all the municipal presidentes be made his deputies, *ex officio*.

## PUBLIC ORDER.

Peace and good order prevail throughout the whole province, and thanks to this condition, and despite the lack of capital and work animals, our fields have been cultivated and the farmer has always reaped his just reward. Petty thieving at times disquiets things, but this could be suppressed by the municipal police if each of the municipalities could dispose of half a dozen guns.

There are in this province approximately 159 members of constabulary, and they have detachments in the pueblos of Pandan, Sebaste, Tibiao, Bugason, Patnongon, and San Remigio, besides the general headquarters which are located at San Jose de Buena Vista. This body undoubtedly cooperates with the provincial government in the maintenance of good order and tranquillity in all the province; and it is therefore recommended, as a matter of public policy, that the constabulary should communicate a report to the provincial governor of their location and any change thereof, for his information and guidance, since he is made responsible for the peace and good order of the whole province.

Before concluding this report I should state that the relations between the officials of the provincial government are of the most cordial nature, and courtesy distinguishes all their intercourse. And as long as harmony and fraternity inspire them in the consideration and solution of the multiple duties of provincial government, the complete success of the public administration throughout all the province is assured.

Respectfully,

The CIVIL GOVERNOR, *Manila, P. I.*

A. SALAZAR,  
*Provincial Secretary, Acting Governor.*

## REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF BATAAN.

PROVINCIAL GOVERNMENT OF BATAAN,  
OFFICE OF THE GOVERNOR,  
*Balanga, P. I., January 20, 1903.*

SIR: Under the provisions of act No. 83, of the United States Philippine Commission, I have the honor to make the following report for the year 1902:

The province has not been disturbed during the year by "tulisans," and there are only few instances of particular localities being interrupted by this class of outlaws, the casualties resulting therefrom during the whole year being one policeman killed in Orani, and five shotguns of the municipal police taken from Hermosa. In the west part of the province, in the territory of the naval reservation, one Gregorio Gonzales, with a following of three or four men, having four or five rifles, appeared among the people claiming to be insurrectionists, the reservation being abandoned by order of the President of the United States. The naval garrison at Moron was withdrawn and the constabulary substituted the latter part of November, when, on December 11, Gregorio Gonzales and his brother, Maximo, were killed and their guns captured. Some other captures have since been made, and it is believed that none of this band is left. This, in brief, is the history of ladronism in Bataan Province for one year.

The record of convictions for crimes by the court of first instance during the year would seem to indicate that the people are law abiding and a very small per cent commit acts of violence. There have been only 7 convicted in said court and sentenced to prison for terms longer than one year. The daily average number of prisoners confined in the provincial jail during the year, serving sentence and awaiting trial, has been 87½.

The Asiatic cholera broke out in the province on March 27, a few days after its appearance in Manila—the first cases in Port Rivas, a barrio, the landing between Balanga and Manila. The spread of the disease was held in check at this place, but a few cases continued to develop each day for several weeks. Afterwards Orion was attacked by the disease and then Orani, and finally all the towns became more or less infected, but during all the time the disease was held in check and in a few weeks was stamped out. The towns that suffered the worst were Orion and Orani, each of which lost about 500 people, and the total deaths in the province were from

1,800 to 2,000, among which were two white Americans and one colored American and one Spaniard.

The resources of the province are agriculture, fishing, and timber business. The main products from agriculture are rice and sugar. The production of rice during the year has not been sufficient to feed the entire people, and it is estimated that only about 75 per cent of the amount necessary has been raised. Of the rice lands heretofore cultivated the people were only able to plant about two-thirds in rice, and of this about 20 per cent was destroyed by locusts. The second crop of rice planted by the people under the impetus of the proclamation of the honorable Civil Governor, dated November 19, 1902, will, I believe, more than make up the amount destroyed by locusts. Of the area of land usually devoted to the production of sugar probably not more than 20 per cent has been planted and the production will not equal much more than 10 per cent of the amount produced prior to 1898. The loss in the area in rice and sugar planted is on account of the insufficiency of work animals, and the loss of the growing crops was caused by the invasion of locusts.

Raising and catching fish is one of the most profitable businesses in the province and a great many people are dedicated to this business. At the town of Orion it is stated that it is difficult to get farm laborers for the lands, because nearly all the men are engaged in fishing.

The cutting of timber has not been very extensive during the year on account of the limited number of licenses, and the further fact that the military and naval reservation has covered a great part of the best forestry of the province. The rescission of the order setting aside the naval reservation by the President of the United States has thrown back to the province the towns of Bagac and Moron, which adds greatly to the timber resources of the province.

The constabulary force in the province is a well-disciplined body of men, and has been very successful in keeping the province free from outlaws.

The town governments have been well administered. The extra expense caused the towns by the invasion of cholera has prevented and retarded some public improvements. Complaints against officials of abuses have indeed been rare.

Very respectfully,

J. H. GOLDMAN, *Governor of Bataan.*

MR. BEEKMAN WINTHROP,  
*Acting Executive Secretary, Manila, P. I.*

#### ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF BATANGAS, 1902.

OFFICE OF THE PROVINCIAL GOVERNOR OF BATANGAS,  
*Batangas, June 25, 1903.*

SIR: In having the honor to submit to you the following report relative to the conditions of this province during the year ending December 31, 1902, I would take the liberty to recommend certain measures that in my judgment should be adopted for the improvement of the conditions described.

Having already referred to some of these measures in former reports, I shall deal only with those that during the short period of my incumbency experience has suggested and which I have not yet had an opportunity to mention to you.

I will start in with those affecting the organization of the provincial government, composed of the following officials: Simeon Luz, provincial governor; Florencio Caedo, provincial secretary; R. D. Blanchard, provincial treasurer; Charles Kendall, provincial supervisor; Diego Gloria, provincial fiscal.

Since the inauguration of provincial government in Batangas on May 12, 1901, no changes other than that in the office of governor have occurred. The present governor was appointed on June 23, 1902, and assumed charge upon July 3 of the same year.

The offices of the governor and secretary have 3 clerks, 1 messenger, 1 servant, and a jailer, who has charge of the prisoners in the provincial jail and who was appointed by the governor.

The office of the provincial treasurer has 4 deputies, 1 chief clerk, and 3 clerks; that of the provincial supervisor has 1 clerk; that of the provincial fiscal, 1 clerk.

Military control having ended July 4, 1902, upon peace being restored throughout the province, order is now complete and tranquillity established and the provincial government is running smoothly though work is increasing in all offices.

The supervisor and fiscal, who had no clerks, were authorized by the provincial board to have the assistance corresponding to them, but this authorization was in part disapproved by the insular treasurer, the appointment of one clerk for each being approved.

The accumulation of work consequent upon the removal of military control has placed too much of a burden upon the provincial fiscal. The explanation of this is to be found in the fact that the fiscal acts as prosecuting attorney and that formerly during the Spanish régime there were two courts of first instance, one at Lipa and the other at Batangas, in each of which there was a prosecuting attorney.

#### HEALTH.

The provincial board of health began its operations in Batangas in August, 1902, at which time Doctor Losada assumed charge as president. During the said month municipal boards of health were established in the pueblos of Nasugbu, Balayan, Lemery, Taal, Bauan, Cuenca, Batangas, San José, Lipa, Tanauan, Santo Tomás, San Juan, and Taysan. Municipal boards of health have not been established in those of San Luis, Calaca, Liang, Calatagan, Tuy, Talisay, Lobo, Rosario, and Ibaan, for lack of funds in their respective municipal treasuries with which to pay the salaries of the presidents of such organizations.

I will make no mention of the sanitary conditions of the province as the president of the provincial board of health must have already forwarded his report to the commissioner of public health.

#### PUBLIC EDUCATION.

In addition to the primary schools established in nearly all of the municipalities, the majority of which have American teachers, there is a high school for secondary instruction in this provincial capital.

A division superintendent of schools has just arrived and taken up his work here. As the superintendent has no doubt sent in his report to the secretary of public instruction I shall not dwell upon the matter of the progress of education. I desire to state, however, that in all of the pueblos, the strides made in learning English have been truly remarkable, and I think that I may safely affirm that more persons understand and speak a little English at the present time in the pueblos throughout the province than the number who understand and talk Spanish.

#### ADMINISTRATION OF JUSTICE.

Besides the judge of the seventh judicial district, in which this province is included, the personnel of the court of first instance is composed of 2 clerks, 1 stenographer, and a messenger. The office of sheriff was provided for by the judge.

With relation to the administration of justice, I would recommend, to the end that litigants, and more especially witnesses in criminal cases, may be saved wasteful expenditures, that the court be ordered to sit also in other provincial towns, such for example as Balayan and Lipa. This measure I believe would not result in much expense to the government, while it would greatly facilitate and expedite the administration of justice, besides saving State's witnesses expenses that in the majority of instances they could not bear.

I must also call your attention to the courts of the justices of the peace, that under their present organization do not answer the purpose of the government to provide an efficient local administration of justice for this country.

Unfortunately the ignorant masses in the Philippines are more easily impressed by external forms than by the substance of things. A justice's court invested with a certain amount of formality and show befitting the mission it is called upon to perform in the administration of public affairs would most impress men who have been accustomed most frequently to be guided in their appreciations by the senses.

From my observations of justices' courts in the municipalities, I can state that they are so poorly furnished that they are not only unable to maintain the dignity proper to the administration of justice, but not even that demanded by a due regard for appearances, and for this reason this important branch of the government will never be able to inspire respect with the masses, nor will the lower classes have that respect for justice which it would deserve. Hence I would recommend that the Government provide reasonable salaries for justices of the peace in each municipality in accordance with the importance of the latter.

One of the difficulties met by justices of the peace in cases of homicide, assault, and others of like character which require expert medical testimony, is the lack of persons skilled in medical jurisprudence, who would be called upon to make the examination. This difficulty could be overcome if the Commission were to enact a law authorizing justices of the peace to demand the professional services of presidents of municipal boards of health in all cases where examinations have to be made and in municipalities where no such official exists, those of the local physician or of any expert in the locality. If the financial condition of the municipality would not per-

mit the payment of a reasonable salary to justices of the peace it would be advisable to divide the province into districts, each with a justice of the peace charged with the duty of trying all cases, criminal and civil, within his jurisdiction, arising in the municipalities forming part of his district, and of holding of preliminary examinations in those held over for trial in the court of first instance. The municipalities comprehended in each district would be called upon to pay pro rata the salary of the district justice and expenses of his court.

#### AGRICULTURE.

In dealing with this subject I regret to inform you that this important branch, the sole source of wealth in the province of Batangas, is in a state of complete depression at the present time as the result of innumerable disasters befalling it in the period embraced between the year 1896 and the present time. The loss of more than 90 per cent of its draft animals used in agricultural labor has caused a steady falling off in the amount of the products of the soil of this formerly rich province, that has continued to increase during the past few years to such an extent that it may now be said that they are but a twentieth part of what they were in the years prior to 1896. The small crops of rice, sugar, and other products harvested this year have scarcely been sufficient for the wants of the inhabitants in two or three months. Thanks to sale of rice at cost price by the military authorities and a free distribution of this article to those persons unable to pay for same, the pinch of poverty was not so severely felt, nor have there been any deaths from famine recorded.

To restore agriculture to its former condition in this province with the local elements at hand as factors is a problem very difficult of solution. As stated, 90 per cent of the work animals perished by pestilence, and money—a great deal of money—is needed to restock the province, owing to the fact that their cost has been more than doubled. On the other hand, more than nine-tenths of the landed proprietors have not the means to purchase new animals unless they resort to money lenders and borrow at very high rates of interest and on short loans. This recourse is not only a very venturesome one, but positively foolhardy, as one bad crop for the landowner would mean the loss of his property, that would surely pass to the hands of the money lender. Hence, until agricultural loan and mortgage banks are established, where owners of land can borrow on their holdings and for unlimited periods, it is the general opinion throughout the province that little or nothing can be done to bring about an improvement in the prevailing conditions. The importation of immunized cattle, to be sold at cost price, will benefit only those persons who have sufficient money to buy them, that is to say, about one-tenth of the landholders.

#### COMMERCE AND INDUSTRY.

Due to the crisis in agriculture—of this there can be no doubt—commerce is almost completely paralyzed, being reduced to the importation of rice and other staple articles of food. Local exports are at the lowest ebb, consisting of hemp, hogs, chickens, eggs, and some other articles of but moderate importance.

Industry consists in the manufacture, on a small scale, of sugar, textiles of hemp, silk, and jusi, and the weaving of sugar sacks and mats of the buri palm, and of other articles of small value.

The political aspect of the province is to-day satisfactory. There are no organized bands of armed ladrones, and though some cases have been recorded of theft of animals, it has not been to such a large extent as in the past.

The people are beginning to appreciate the benefits derived from the new order of things, and I think I am justified in hoping that they will sincerely acknowledge the sovereignty of the United States and devote themselves peacefully to the work of restoring to this province its former fame of a rich, industrious, and peaceful community.

I can not finish this report without mentioning the canalization of the Pansipit River, uniting the lake of Taal Volcano with the harbor of Taal. By opening of this canal to navigation coasting steamers will be within easy access of the most important of the towns in the interior that will be able to place their product in any market. The work on the canal will give employment to many poor people, who are so situated to-day that they have no means of livelihood.

I would recommend the enactment of a law by the Commission appropriating sufficient funds to carry out this work, which will be of so much benefit to this province of Batangas.

Very respectfully,

SIMEON LUZ,  
*Provincial Governor.*

The honorable the CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS.

GOVERNMENT OF THE PROVINCE OF BENGUET,  
OFFICE OF THE PROVINCIAL GOVERNOR,  
*Baguio, Benguet, P. I., February 1, 1903.*

SIR: I have the honor to submit a report to you on the general condition of affairs in the province of Benguet during the past year.

I am pleased to be able to state that with the natives my administration has been marked by a hearty and continuous cooperation on the part of the officials, and manifest contentment on the part of the people. In many respects conditions have arisen within the past year that would try the constancy of the people more than ordinarily occurs in a decade.

The requirements of the province necessitated more labor from its limited population than they have ever been asked to perform within the life of the present generation.

I reported a year ago that the best roads were but trails, and most of the trails were impassable paths for mounted travelers. The several pueblos constituting the province have repaired old roads and constructed new ones, involving thousands of days' labor, until to-day I can ride over at least 200 miles of road within the province with perfect safety and comparative ease. This work was done without cost to the government, the project of which at first astounded the native officials, but, being done, brought with it a feeling of content among the laborers which amounts to almost a sentiment of pride, if I may apply the term to so humble a people as the Igorrotes of Benguet. In addition to this labor there were continually employed on the Benguet wagon road from 250 to 500 Igorrotes from this province. These laborers received from 40 cents a day up, insular currency. It was to be feared that they would view with disfavor a change to a government that required so much work, and I looked forward to the rainy season as a period of rest and recuperation preparatory to another season of hard labor.

Just at this time the cholera attacked our borders, swept through the road camp, and from there spread with astonishing rapidity throughout the province. The Igorrotes, having no knowledge of medicine and having no medicine men among them, have always resorted in time of sickness to gathering about the afflicted and holding a feast, sacrificing birds or animals, and believing that in the blood thereof, externally applied to the sick and their relatives, there were curative properties. They took no sanitary precautions whatever, and what they did in this way, thinking it was for their good, resulted in spreading the pestilence. It was, however, a custom—I might say a religious custom—which they had held sacred for ages, and which Spanish rule of centuries had never suspended.

I deemed it most essential for the welfare of the province to stop all such gatherings, to stop the people from traveling from one pueblo to another, from one barrio to another, even from one house to another, and called the presidentes and the cabezas of the different pueblos and the chiefs and headmen of the province at La Trinidad, explained the causes of the spread of the disease, of the sanitary precautions to be taken, of the quarantine to be effected, and promised in the time in which danger was passed to resume for them the customs of the Igorrotes pertaining to disease and death, which were then and there ordered suspended. The promptness and thoroughness with which these natives, and through them the natives of the province, complied with this order, was a most satisfactory proof of their confidence and regard for the American Government, which seemed to be endeavoring to protect the lives of its subjects.

Then ensued a long and tedious fight against the cholera; and when the smallpox broke out, leaving 43 dead in one barrio, it seemed as though the fates were opposing the province and pestilence was victor. During this time 692 men, women, and children died, and not until Thanksgiving Day was the edict against fiestas annulled. During the time that the people were ordered to remain at home they were further ordered to employ their time by breaking more ground for cultivation, and when the order from the governor-general was published to guard against the time of famine, it was a simple matter for the natives of Benguet to continue their labors with good results.

All these conditions have interfered with many plans for the development of the province, and postponed the completion of enterprises already begun. For instance, it has become a positive belief to the Igorrotes—we call it superstition—that the valley of the Bued River is a habitation of evil spirits, and the natives will not even visit it of their own free will, and, except by compulsion, refuse to labor therein. So, while a year ago over 400 Igorrote workmen were employed there, satisfied with their pay and treatment, to-day there are only about a hundred, and this force is kept to that number only by continual effort.

The repairs on the Sablan road, under the charge of Mr. O'Neill, have been made at small expense, entirely with Igorrote labor, with surprising results. About \$1,000

has been expended thereon, and when complete this will be only a trail for horses and packers, and not in any sense a wagon road. From Sablan there is a perfectly feasible route through the foothills, following the channels of the Sablan River to Naguilian, by which a good road with an easy grade could be made for wagons. Sablan is only about 1,000 feet above the sea, and by this route there is no point at which you would have to change an even and continual grade. So far as this is in the province of Benguet, the ground over which it would pass is easily moved, and yet heavy enough to hold its formation. There would be no difficulties with slides, washouts, or bridges.

With a wagon road to Sablan, our base of supplies for the province would be within an easy ride of four hours from Baguio, with the upper trail in its present condition.

In traveling about the province I find new houses, new rice fields, new coffee plantations, larger gardens, and clean yards, all of which indicate that my people consider themselves safe in property and life and content to again begin accumulating property to repay the losses of the last seven years. Again, it is a gratifying novelty to the Igorrote that the white man, especially if it be an official, pays for what he gets, be it produce, curios, or labor.

All the pueblos of the province are in good financial condition; five are building new tribunals. As soon as the others accumulate a sufficient amount of money in their treasuries they will likewise spend it first in this manner. During the time of the revolution these public buildings throughout the province were all partially or totally destroyed, and they have been occupying, since the establishment of the civil government here, only temporary places for their public offices.

As justice of the peace I have had occasion to try only 32 cases, and have been appealed to as arbitrator only eight times by Igorrotes, who were not satisfied with the findings of their native tribunals. Of course, this does not represent the entire criminal calendar of the province, for each pueblo has its council, which sits as a court over petty difficulties arising between individuals in their jurisdiction. From these councils the Igorrote seldom appeals, accepting the decision of their own headmen as just and final.

The border difficulties which confronted us a year ago between the natives and the Busoles have almost entirely disappeared, but new troubles have arisen on the border line of Benguet and Union, in which there is developing more and more rapidly a spirit of robbery and theft. In fact, unless more strict methods are taken to check them this little section of country will be the nesting place for ladrones. They are mostly Igorrotes, and a large percentage of my small criminal calendar comes from this section.

In general, however, all is peace within the borders of Benguet, and there is no necessity, nor is there any sense, in any man going armed among these natives, for, as a rule, they are trustworthy, faithful, and honest.

Respectfully,

WILLIAM F. PACK, *Governor of Benguet.*

HON. BEEKMAN WINTHROP,  
*Acting Executive Secretary, Manila, P. I.*

#### REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF BOHOL.

[Translation.]

TAGBILARAN, BOHOL, *May 14, 1903.*

I have the honor to transmit herewith to you the annual report of my province. As for the data which I secured concerning the mortality of the cattle and horses, I regret to inform you that they are far from accurate, due to the fact that little care was taken by the municipal presidentes of the pueblos of this province to keep a daily record of the cattle which died during the prevalence of the rinderpest, and, further, to the carelessness of the owners of the cattle in appearing at the municipal offices of the pueblos to report to the municipal presidente relative to the deaths of the cattle during each day while the rinderpest was at its height. As for the preservation of public order, I have the great satisfaction of stating that peace and tranquillity reign throughout the province. It is a fact, however, that certain wicked persons, carried away by their vices, have committed numerous offenses in certain of the barrios of some of the pueblos, but they have been unable to organize even a single band of ladrones, properly speaking, and I have the consolation that the pueblos of the province, far from seconding the efforts of these evil doers, report them to the authorities without doing anything to protect them.

Before closing this letter I raise before heaven my fervent prayer for the early and complete restoration of yourself from the illness which you suffer, and that we may have the consolation and satisfaction of again seeing you engaged in the duties of your truly paternal government in these islands.

I believe that I am not mistaken when I assure you that these are the desires of all the provincial governors and of the whole Archipelago in general.

Yours, very sincerely,

ANICETO CLARÍN, *Provincial Governor.*

The CIVIL GOVERNOR, *Manila, P. I.*

OFFICE OF THE PROVINCIAL GOVERNOR, PROVINCE OF BOHOL,  
*Tagbilaran, January 31, 1903.*

SIR: In the first place, I shall speak in this report, though merely in a general way, of the prostrated condition of agriculture in this province at the present time. This is the chief source of wealth, and flourished in former times in those fields which are to-day barren and abandoned because of the multiplied calamities which this province of Bohol has been called upon to suffer from year to year in the past.

The fields were left desolate by locusts and war; rinderpest destroyed the cattle, at that time very abundant upon the island; and the towns have been little less than decimated by the cholera.

Never before in the history of the island have conditions been so precarious. The cultivated fields, formerly so rich and productive, will this year yield scarcely 30 per cent of the ordinary crops. Of work and other kinds of animals, there are but a few left, and these are regarded by their owners as precious as a favorite child. In order that some conception of the number of animals that the province has lost through the rinderpest may be gained, I copy herewith a statement of the approximate number of those that have died on account of this disease, and of the number of those that remain in the pueblos at the present time.

*Number of deaths of animals from rinderpest, and of those which exist in the various pueblos at the present time.*

If the loss which agriculture has suffered on account of so many calamities is great, the want which is threatening and which the people of this province will suffer at no distant date will not be less.

While the people are to-day in a state that may be said to be still a little short of needy, it is due to the other agricultural products which furnish them with sufficient food for their sustenance, but this will unhappily not be the case long, because as soon as the season of curing copra and hemp has passed (and it is now nearly ended) the poor people will find themselves lacking in every resource, and into their homes will stalk the blackest of all wants—the specter of hunger.

It may not be said that the misery which will be felt is due to the laziness of the people, for in the season of planting rice and corn groups of workmen were organized in this province who worked first on one farm and then on another for lack of carabaos with which to plow the soil. So the farmers helped each other to supply the lack of work animals with the labor of their own hands. But all has been in vain. The fields which were not scorched by the drought which followed the planting have been visited by the devastating locusts with a frequency hitherto unknown, and despite all measures taken by the provincial board of health to exterminate them have not been destroyed nor even driven from the island.

To provide against the famine which is approaching, I proposed to the provincial board, of which I am a member, to purchase a certain amount of rice from the outside through the insular purchasing agent. But the other members of the board, confiding solely in the reports they had received from persons without knowledge of nor interest in the fortunes and life of these people rather than in those made by the municipal presidentes, were so strongly opposed that the undersigned had to abandon his purpose.

Although the pueblos have not asked for it until the present, I believe it to be necessary to introduce into this province American or foreign work animals to substitute the native ones for working in the fields, which for lack of work animals are and for the most part must remain abandoned. The former will at the same time tend to improve the grade of native stock now here.

One of the calamities which has contributed to the condition of depression and decadence of this province of Bohol, formerly so prosperous and so happy, is the cholera, which since July of 1902 has been claiming its victims in all the pueblos, bringing panic to the minds of the people and mourning into their homes. It has made impossible every commercial enterprise, and this is the sole means of livelihood left to these people because of the loss of their crops, upon which their best hopes were founded.

#### PUBLIC ORDER.

In spite of the want which threatens so many of the pueblos and is declaring its presence in them, public order is maintained in a most tranquil state, with the sole exception of certain persons of Cebu, and other outside places, who succeed in entering the poorly guarded points of this island. They begin immediately to engage themselves in depredations upon the inhabitants of the interior pueblos and to steal from them the few carabaos which they have left. The Philippine Constabulary would be unnecessary were it not for those people, and expeditions in pursuit of offenders (who, fortunately, with the exception of these few vagrants are virtually unknown in this province) would become unnecessary.

#### COMMERCIAL ORGANIZATION.

Notwithstanding all the calamities which have afflicted and do afflict the inhabitants of this province of Bohol, the spirit of association seems to have awakened in the minds of all; for during the past year the commercial enthusiasm displayed by everybody in securing one or more shares, has been responsible for the formation, in the pueblos of Jagna, Loay, Cortes, and Tagbilaran, and others, of commercial companies, which issue shares within the reach of every grade of fortune. These companies all have a fair capital which they employ, owing to the scarcity of articles of prime necessity in this province, in buying rice and corn, which they sell to the people at prices relatively lower than those of the Chinos, who have monopolized the traffic of this province up to the present time.

This impetus which is being felt for the moral and material betterment of the pueblos of this province would soon be crowned with the greatest success if the people were provided with that principal element of agriculture, the carabao. The transportation of produce from one pueblo to another, that is, to the trading places, becomes more and more difficult and defective; in the first place on account of the lack of means of transportation, and then because of the deplorable state of the communication at this time.

## PUBLIC IMPROVEMENTS.

While considering this subject I shall not limit myself to those works which, on account of their class and nature, are under the Government itself, but I shall also treat of those for whose preservation and support each municipality is responsible; or rather, I shall speak in a general way, though somewhat obscurely, of all public improvements.

In the visits of inspection which I have made to each of the pueblos of this province, I have seen that the majority of the coast towns of the province preserve in good condition the public roads, but not the bridges, the larger part of which have fallen down, due, of course, to the fact that the material which they contain has decayed. The pueblos of the interior are truly in a lamentable state, for nearly all the bridges are actually dangerous to travelers, some of them being in such a ruined condition that they threaten to fall at the first carelessness, and some because of having their floor built of a flimsy mass of bamboos are passable only for foot travelers, and even they have to go carefully and slowly, and in the daytime, for at night it would be temerity to attempt to cross over.

This unprecedented condition of neglect into which the roads and bridges of the province of Bohol are to be found at present is due to the fact that owing to the many occupations which claim the attention of the provincial supervisor at the offices of the provincial government, we have been unable to set apart sums, up to the present time, for repairs on roads and bridges which should be cared for by the province, and further to the fact that the condition of the municipal funds has never been favorable.

In former days it was possible to travel from this provincial capital as far as the pueblo of Anda, in the extreme south of the island, in a vehicle, without encountering any difficulty along the whole road; and likewise as far as Inabanga in the north. Today, to go from this capital to the nearest pueblo in the manner that I have indicated—i. e., in a vehicle, would be to expose the passenger to being left in the middle of the road.

One of the most important enterprises that the Spanish Government had undertaken in this province was to construct an iron bridge over the river Abatan, which flows between the towns of Cortes and Maribojoc, and is some 12 kilometers distant from the provincial capital. The necessary materials were already prepared and the construction begun, when the Spaniards who lived in the island at the time evacuated the same, leaving that work unaccomplished, and the material, through having been exposed to the weather since the time of the change of government has been rendered for the most part unserviceable.

In addition to this Abatan River there are others no less important which can not be crossed without great difficulty, some for lack of bridges, and others, while they have bridges, can not be crossed with any security to the traveler. In this province before the last war there were good bridges, but the war tactics of those who were in arms against the Government of the United States were to burn the bridges, thus causing an injury to their more pacific fellow-citizens, as well as to themselves at the same time.

## PUBLIC INSTRUCTION.

The intellectual development of the people here, without any question, progresses at a rate never before experienced in this province. Children and young men and women are eager to learn in the schools under the direction of competent American teachers, whose method of teaching and above all their sweetness of treatment of the pupils and everyone else have gained for them the confidence and sympathy of those who have come to know them.

In the pueblos where those teachers are located, notwithstanding the short time that they have been at the head of the schools, it is easy to note the advance in the learning of English and the other branches that are taught. It is astounding the number of children and young people who, though in former times were unable to educate themselves, even after many years of continuous attendance upon the schools, or even halfway, to talk the language in which they were instructed, yet at the present time their progress is so excellent that those who are now of mature years feel themselves surprised and at the same time proud upon contemplating the progress of this rising generation. This is a circumstance which augurs well for the future happiness of this province, and is a condition almost unknown on account of its backwardness in all the realms of human knowledge.

The normal school is well attended by young people of both sexes from the various pueblos of the province. It is held in a private house of this provincial capital until the government shall have a building of its own.

For the reasons stated in the paragraphs treating of public improvements, the construction of the college which it is proposed to build has not begun yet; but since the work on the government building is so far advanced the supervisor, at no distant day, will be able to turn his attention to building a college.

#### REDUCTION OF MUNICIPAL GOVERNMENTS IN THE PROVINCE.

The provincial board of Bohol, believing that the greater part of the pueblos were unable (as in reality is the fact) to support themselves, or as a consequence to undertake any kind of improvements in their respective pueblos by reason of their present precarious condition, thought it advisable to recommend to the honorable Commission, by a resolution of October 28, 1901, that a law be passed reducing the number of municipalities composing this province from 35 to 16. This law, number 370, was passed and approved on March 6, 1902, by the aforementioned legislative body. But when its provisions became known to the pueblos which were by it joined to others there were a great number of protests filed, which were founded, among others, upon the reason that since the provincial board recommended such a measure to the Commission because of the belief that the municipalities, owing to the scarcity of their funds, could not provide for their respective personnel and other matters subject to their care; that they would practice the most rigid economy and content themselves with the small revenues produced by their municipality should they be allowed to retain their separate governments. With the exception of two pueblos, all those which were to be consolidated with others under act No. 370 protested in so energetic a manner that the provincial board, in view of the very pronounced opposition of the majority to the provisions of the said act No. 370, thought it best to await a more propitious time, and finding impracticable the proposed consolidation on account of the unfavorable opinion of the pueblos concerned and the opinions expressed by each member of the assembly held by the provincial board on November 6 of last year, 1902, resolved to recommend to the Commission the repeal of act No. 370, as amended by act No. 390.

Herewith I transcribe copies of the opinions filed upon this subject by each member of the provincial board.

"OFFICE OF THE PROVINCIAL GOVERNOR OF BOHOL,  
"Tagbilaran, Bohol, P. I., October 28, 1902.

"The PROVINCIAL BOARD OF BOHOL.

"GENTLEMEN: Theoretically there are great advantages to be derived from the consolidation of the pueblos, but practically nothing could be more disastrous, and as a consequence more undesirable, for the reasons which I now state:

"By the fusion of one pueblo to another the first would be completely abandoned, for while there would remain a councillor in each pueblo reduced to a barrio, yet the said councillor would not suffice to attend to the local interests of his respective barrio (formerly a pueblo), for even now while the pueblo is a municipality the presidentes, some on account of apathy, some on account of lamentable negligence, and others for lack of funds, are scarcely able to perform satisfactorily the duties of their office in the matters of cleanliness, embellishment, and the general care and welfare of the same. Furthermore, the distance there would be between the pueblos reduced to barrios and their central municipality would give rise to many abuses, especially in such offenses as prohibited games and cattle stealing, for the councillors of the barrios, formerly pueblos, not having at their disposal armed forces to execute their orders with regard to offenders their authority would be weakened and ineffective.

"Therefore, I am of the opinion that the pueblos of this province should continue as at present and that the provincial board of Bohol should request of the Commission the enactment of a law repealing act No. 370, prescribing the fusion of pueblos in this province and reducing the number from 35 to 16.

"Very respectfully,

"ANICETO CLARÍN, Governor."

"OFFICE OF THE PROVINCIAL TREASURER OF BOHOL,  
"Tagbilaran, Bohol, P. I., November 5, 1902.

"The PROVINCIAL BOARD OF BOHOL.

"GENTLEMEN: My opinion concerning the proposed reduction in number of municipalities, as prescribed in act No. 370 and amended by act No. 390, is that it would prove a very costly experiment and one which this province can not at present afford to undertake.

"If it is carried out as proposed the province should pay the cost of fixing the boundaries, estimated at \$4,680 in money of the United States, it would lose the services of the supervisor for a year, and cause a reduction of about 25 per cent in the taxes, according to my estimate. And not only this, but the change would entail the loss of the services now furnished by the municipal officers, which, in my opinion, can not be furnished by councillors.

"Even if the province could afford to lose the revenues and expenses, it would probably have this result: During the first year of its existence the revenues of the province in taxes exceeded the expenses only by \$676.53. At the end of the first eleven months the expenses exceeded the revenues in taxes by the sum of \$2,631.52 in money of the United States. Large collections which were made during the last month of the year explains the difference between these two statements.

"During the past year not one costly work was undertaken, and the amount spent may be considered as very small.

"The only advantage that would result from the reduction of the provinces, speaking speculatively, would be the economy. I doubt if it would result in any economy. So, also, the only advantage that would result to the municipalities themselves would be, in theory, the economy. For instead of two officials to do the work, there would be only one. But we should not fail to consider the fact that the territory governed would then be more extensive than could be cared for, notwithstanding the increase in clerks, police, the salaries of officials, etc., for the probability is that the present municipalities of the first class will be passed into a higher grade.

"The pueblos at the present time support themselves, or ought to do so, since the law provides that their expenses shall not exceed their income. They have lived through the insurrection and hard times, and from now on they ought to improve and advance. But if they are to be reduced to barrios it would be a blow to their ambitions, which, instead of making them better, would have the opposite effect. I believe that there are very few pueblos that would gain by being added to others, but, taking them as a whole, the reduction would be a real injury to the province, without corresponding benefit to themselves.

"Very respectfully,

C. D. UPINGTON,  
"Treasurer."

"OFFICE OF THE PROVINCIAL SUPERVISOR OF BOHOL,  
"Tagbilaran, Bohol, P. I., October 9, 1902.

"THE PROVINCIAL BOARD OF BOHOL.

"GENTLEMEN: My opinion concerning the proposed reduction in municipalities of this province is that based upon the probable cost of surveying the dividing boundaries of the new municipalities of Bohol proposed under acts numbered 370 and 390.

"Just at present it is impossible for me to make an exact estimate of the cost of this survey. What I have seen of the island causes me to believe that this work would be as difficult as the survey of the mountainous districts of America. For such surveys the American Government pays at the rate of \$18 gold per mile. It will certainly not cost less here. The total distance to be measured will be approximately 600 miles. At \$18 per mile the cost will be approximately \$4,680 gold. The time necessary to complete the work will be approximately one year, taking into consideration the fact that I can not do the work.

"Very respectfully,

JACOB C. MULDER, *Supervisor.*"

Up to the date of presenting this report the resolution of the provincial board (a copy of which, as well as of the above opinions transcribed concerning this matter, were sent to the honorable civil governor through the executive secretary) had not been acted upon and answered.

In February, 1902 (I do not recall the exact date), and without the knowledge of the officials of this government, I was informed by the provincial secretary that Richard H. Sutherland, who was acting provincial treasurer at that time, as supervisor and at the instigation of one of the employees in his office (as was afterwards determined), without the consent of or consultation with any official of this government, ordered the destruction of the records, which contained nothing less than all the papers referring to this province of Bohol subsequent to the time the Spanish Government was implanted here, and so now the provincial government has only such information as relates to the time subsequent to the evacuation of this island by the Spaniards.

The officials who issued this order respected only one case in which were deposited certain papers relating to unappropriated lands. Everything else was thrown into the sea.

Before concluding the present report I take it upon myself to inform you, as a matter of some moment, that I have noticed that some of the officials of the provincial government, though they have made no complaint as yet, are somewhat dissatisfied on account of the fact that the fixing of salaries has not been made with entire justice; for one of the provincial officials receives a smaller salary than an American clerk in one of the offices of the provincial government, which in truth is somewhat of an anomaly.

With the exception of one who is at present employed in the office of the provincial treasurer, all the Americans who are employed in this province have been perfectly satisfactory up to the present, as far as concerns their treatment of the natives, who are by nature polite and peace loving, and who lavish their noble sentiments upon all, foreign or native, who by their upright demeanor are worthy of them.

Respectfully,

ANICETO CLARIN, *Provincial Governor.*

The CIVIL GOVERNOR, *Manila, P. I.*

#### REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF BULACAN.

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF BULACAN,  
*Malolos, January 15, 1903.*

SIR: Since assuming charge of this office, on March 3, 1902, to which I was elected by ballot on February 3 of the same year, 1902, I have been observing with satisfaction the political condition of the province, as well as the favorable progress of governmental affairs in all branches of administration.

#### PUBLIC ORDER.

The political situation of the province could not be more satisfactory than it is at the present time. Since I took possession of the government there has not been noted the least perturbation of public order, but, on the other hand, I have observed that American sovereignty is now so firmly established that it is reflected in the confidence and faith which the inhabitants feel when they see the efforts which the government makes in carrying out their exceedingly favorable promises.

As an eloquent proof of this we cite the case with which the taxes were collected, especially the land tax, which is so new in this country, and to the payment of which the province responded with such patriotism without offering the least opposition, notwithstanding the agricultural crisis through which it has passed and is now passing; for the province was not slow to appreciate the fact that the government has a heavy burden upon its treasury in carrying out the work of restoring the moral and material welfare in this province. We also mention the frequent surrenders of ladrones with their arms; the vile assassination of the presidente of Meycauyan, on account of his persistence and zeal in performing the duty of maintaining order within his municipal jurisdiction, and who was murdered by the enemies of his country; the discovery of unlawful associations (Katipunan) in certain pueblos of the province, effected by the people themselves. These associations were being carried on by certain impostors from Manila, who, by taking advantage of the simplicity of some of the more ignorant people, wished to make their living by revolutionary measures. Among these men were the so-called Supreme President Sakay, who, with his staff, was apprehended in the barrio of Borol, in the municipality of Bigaa, and also the so-called Minister of War Balahadia, who, with his followers, the lieutenant-colonel and major, were captured also by the police of Balinag and San Rafael under the command of the presidente.

Nevertheless, quite small bands of ladrones, the remains of the past revolution, still exist in the province, engaged in stealing animals, making highway assaults upon isolated roads and settlements, but having, however, no political significance. These small bands are fast disappearing owing to the constant persecution of the constabulary, local police, and the provincial volunteers. A large band from the province of Rizal succeeded one day in penetrating into some of the isolated settlements along the borders of the province, so that I was moved to organize the provincial volunteers to prevent them from overrunning this province. But owing, undoubtedly, to the attitude of the pueblos which refuse to be imposed upon or to give them the least encouragement, those bands have been unable to trespass further upon the limits of the province under my jurisdiction.

To secure the surrender of several evil doers, who with their misdeeds were inspiring terror in the various pueblos, I have adopted the policy of attraction as well as

active operations against them; and in a like manner I have also been able to bring under my authority those poor, ignorant persons who were miserably seduced into associating themselves with the new Katipunan, persuading them not to take to the field with arms, though their so-called chiefs and the documents which had been captured, implicated them.

#### ECONOMIC CONDITIONS.

The economic condition of the province has not been flourishing, the same general causes having arisen which have placed all the provinces of the island of Luzon in a precarious and sorrowful condition.

Agriculture, the sole resource of this province, has suffered greatly, and such a state has been reached that the fields present a sad view with their poor and sparse products. Extensive lands whose production gave evidence of their fertility are converted now into barren wastes by scarcity of water, the cholera, lack of work animals, which are the only means we have up to the present for the cultivation of our fields.

As is already known, the lack of animals is due to the continued plague of rinderpest, which destroyed the cattle, causing the death of 50 or 60 per cent and which is also the reason why they are now so exorbitant in price as to make it impossible for landowners to purchase them for distribution among their tenants or associates for tilling the land.

To these grave causes we must also add the constant presence of locusts, for fields upon which were centered the hopes of the farmers for partially reimbursing them for the lands which were left uncultivated were devastated in such a manner that the unwearied efforts of the farmers and people in every locality were unavailing to stop that destructive plague of locusts and grasshoppers. These insects have not yet disappeared from the province and constantly inspire with fear the farmers who at this time of the year are preparing in the highlands for the planting of sugar cane and corn, which this province of my jurisdiction also raises.

To restore agriculture, which, as I stated above, is the only resource which this province enjoys, in my private opinion, never before has it been as important as it is to-day to establish agricultural banks, either private or government, so that through them, the farmers who are now exhausted in resources on account of their losses, may be enabled again to take up the cultivation of their lands and not be obliged to have recourse to usurers who take advantage of the present circumstances to exploit the people selfishly.

#### COMMERCE AND INDUSTRY.

These branches which have languished on account of past conditions in the province, have to-day gained new strength and are found to be in a more flourishing condition than during last year, 1901. This is proved by the larger number of licenses issued by the provincial treasury.

Notwithstanding the sad economic state which is described in the foregoing paragraphs, the provincial government has been able without great effort, to secure the collection of all taxes, imposts, etc., especially the land tax, and even the smallest details have been attended to. A report of the provincial treasurer is included with the present report.

#### PUBLIC IMPROVEMENTS.

*Bridges.*—The Calante bridge, over the river of the same name, which divides Malolos and Paombong, is 90 feet long and cost \$1,103 Mexican.

The bridge of Santo Niño (Tulay na bató) barrio of Paombong, over the river Paombong, is 126 feet long and cost \$1,500.

The San Isidro bridge (Pantalan), barrio of Paombong, over the river of this barrio, is 190 feet long and cost \$2,690.

These bridges are constructed with timbers of cedar and lumber from Oregon, which, with proper care, should be lasting, notwithstanding the material used. (Opinion of the provincial supervisor.)

In addition to the bridges mentioned, there are at present in course of construction one of timbers, 200 feet long, and three bridges with abutments of stone and braces of timber, each of which bridges is 40 feet long.

These bridges are on the road which runs from this capital (Malolos) to Hagonoy, and when they shall have been completed they will supply greatly needed communication between the pueblos of Malolos, Paombong, and Hagonoy, and will open up land communication between these pueblos, which have long been without communication by land.

The urgency for communication between these towns was the reason for which the bridges already constructed and those in course of construction were not built of first-class material or lumber of the country, or of iron with abutments of stone, so that they would be more durable; otherwise they would have taken more time, in view of the funds which the province had at its disposal.

Besides the bridges named, two bridges with stone arches, in the municipality of Marilao, have been repaired, at a cost of \$800 Mexican.

*Roads.*—The roads situated in the following municipalities have also been repaired:

From the station of Malolos to Quingua, about a thousand feet in length, has been repaired, at a cost of \$1,985 Mexican.

From the same station toward the town of Malolos, about 1,100 feet, at a cost of \$2,399 Mexican.

From the station of Guiguinto to Bulacan, some 5,000 feet has been repaired, at a cost of \$6,292 Mexican.

Stone from Angeles, in the province of Pampanga, and gravel from the municipality of Bocaue, in this province, have been employed in these works, and on account of the great distance of these materials the cost of the construction of roads has been very great owing to the high expense of transportation. (Opinion of the provincial supervisor.)

#### MUNICIPALITIES.

The local governments have been operating in a very satisfactory manner, and it may be said that they are now acquainted with their attributes and duties, which the municipal code to which they owe their organization confers upon them, and while certain of the presidentes and vice-presidentes have been suspended from their offices, they have owed their suspensions to the rigorous sanitary measures which were adopted during the recent cholera epidemic, and those who have been dismissed for infraction of the law were laboring under a misapprehension of the law, not malice, regulating the days for cockfighting and which repealed the Spanish law upon this subject, to which the people were accustomed.

During the recent calamities of the cholera epidemic and the plague of locusts, which have stricken this province, each municipality has striven to furnish complete cooperation in the measures adopted by this government to stay these evils, now by organizing volunteer unpaid sanitary inspectors, under the supervision of their municipal inspectors, also unpaid, now by inciting the patriotism of all the residents in the extinction of the locusts, to which the people responded without accepting the payment offered them by this government.

The municipal treasuries have also been able to satisfy all claims made upon them.

#### PUBLIC INSTRUCTION.

The education of the people, which is the most important and necessary thing in the present evolution and regeneration of the Philippine Islands, I have noticed has not developed as it should during the year 1902, owing to the following reasons which, after close observation, have suggested themselves to me:

1. The scarcity of Filipino teachers, who should naturally be paid by the municipalities. Those which have no funds for this purpose, such as San Jose, San Ildefonso, and San Rafael were the whole year without a Filipino teacher or an American one.

2. The lack of a law compelling the attendance of children upon the public schools when their parents, through apathy or ancient custom, do not wish to send their children to the said schools, or are unable to provide them instruction at some private school.

3. The continuous calamities which have befallen this province during the year 1902, whereby a great part of the time which might have been dedicated to instruction was lost.

4. That by not knowing the language of the locality, and some of them not even Spanish, the greater part of the American teachers which have been distributed among the several pueblos of this province, and who constitute the educators of the children, have so instructed the children, who, as a rule, are but beginning in Spanish or Filipino letters, that except in very rare cases they have not been taught to understand English in any appreciable degree.

In view then of the reasons set forth the attendance of children should be made compulsory, and Filipino teachers should be assigned to assist the Americans in their task of teaching English, especially in those pueblos where they have no funds to provide the proper support.

## PUBLIC HEALTH.

The hygienic condition of the province is highly satisfactory, and this is due doubtless to the persevering and intelligent efforts of the president of the provincial board of health, seconded by the municipalities who enforce the sanitary laws in their respective jurisdictions. In the cholera epidemic just passed the provincial president was found lending his personal aid in the most infected pueblos of the province. There occurred but 1,520 deaths from cholera in the whole province under my jurisdiction, which contains approximately 214,000 inhabitants.

Respectfully,

PABLO TECSON, *Provincial Governor.*

The CIVIL GOVERNOR, *Manila, P. I.*

## REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF CAGAYAN.

[Translation.]

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF CAGAYAN,  
*Tuguegarao, January 2, 1903.*

SIR: The province of Cagayan, situated in the extreme northern part of the island of Luzon, has continued in a peaceful and tranquil condition since the establishment therein of civil government, which was accomplished without the least disturbance or occasion of disorder in September of 1901, when the provincial government became effective, and throughout the time covered by this report, up to December 31, 1902, the most complete peace has reigned, clear and evident proof of the sincere and loyal adherence to the sovereignty of North America and of satisfaction with the present governmental system. Under this peace the people of this province would most surely have enjoyed such prosperity as peace affords, had not unhappy events combined to prevent it, such as the mortality of carabaos, the work animal of the Philippines, by epizooty and other diseases of cattle and horses, diseases which prevail unremittingly throughout the pueblos of the province, in which they seem to have taken up permanent residence, as they have refused to abandon the province since making their first appearance here some years ago. This calamity was followed by unexpected overflows of the river, which inundated lands planted in corn and tobacco; then came the smallpox epidemic, and in its turn the plague of locusts; and, to cap it all, the cholera, which, while it has not wrought great havoc, has greatly unsettled the minds of the people.

The dire calamities already mentioned together with the depression in tobacco, which is the principal product of this soil, place the inhabitants of the tobacco-raising pueblos of the province in a most deplorable condition; for the low price obtained for the little tobacco which is gathered will not suffice for the purchase of the rice necessary for consumption until corn is gathered; and corn, owing to the scarcity of water, has not yet been planted. Furthermore, the price of rice is increasing every day, and not only those pueblos which do not raise rice, but even those which do, their crops having been made food for the locusts, are obliged to buy rice. There is no way to extirpate these locusts after they have laid in a growing field the eggs which produce these insects from which it is impossible to escape. This is proved to-day in certain localities where they have laid waste whole fields of rice. The locust fungus, which the board of health sent for experimentation, would be an efficacious remedy for the extermination of this plague of insects had it obtained the result hoped for by the president of the provincial board of health of this province. But he ceased his experiments for fear of poisoning the people who eat those insects, for they are a dainty morsel for the majority of the country people, who can not be restrained from eating them by any restrictive measures of the local authorities.

Despite the succession of calamities which have befallen the inhabitants of this province and the grave crisis through which they are passing, threatened on all sides with famine, they remain firm and loyal to their sovereign, manifesting their submission by the efforts which they put forth to pay their taxes without so much as a breath of complaint, awaiting that day of complete redemption promised the Filipino people by their sovereign.

## CONDITION OF THE MUNICIPALITIES.

Through the visits to all the municipalities of the province made by the undersigned, in compliance with the provisions of section 7, act No. 83, he has become convinced of the complete tranquillity which exists throughout all the province, notwithstanding that there has not completely disappeared the hateful despotism which the higher classes observe toward the lower classes in nearly all the pueblos, due to the ignorance of the latter. To destroy this power, the education of the lower classes becomes necessary, if not of all of them, at any rate the children and the young, by multiplying the schools. To this end the undersigned has directed his special attention, without neglect of those measures which, owing to circumstances, he may be compelled to adopt, either for the suppression of abuses or for the protection of the downtrodden, that all the pueblos of the province shall be given American teachers, and there shall be established institutions of higher learning, of agriculture, arts, and trades in the provincial capital, for the education of the youth of Cagayan, eager to learn and endowed with that same capacity and intellect with which all the sons of the Philippines are blessed, as may be seen by the aptitude for English of those living in pueblos which already have American teachers.

## PUBLIC HEALTH.

The province of Cagayan, situated in the extreme north of the island of Luzon and protected by a triple range of mountains covered with exuberant vegetation, enjoys a more benign climate than the other provinces upon the same island, but this favorable condition has not been enough to preserve unbroken the public health. Atmospheric changes have caused the province to fall a victim to the diseases which afflict the other provinces, though in less degree. We may mention the smallpox, which appeared in this capital and in some of the pueblos during the first four months of the year 1902, doing some damage in its gradual progress, but nothing appalling considering its long duration and the inefficacy of the means for arresting it. Vaccination was employed promptly and thoroughly, but without the desired result, owing to the poor quality of the vaccine continuously and upon various occasions received by the president of the provincial board of health, which thus turned out useless as a preventative of the smallpox, which overran all the pueblos and still appears in certain localities.

The plague of cholera, which was brought in from China, infested Manila and spread from province to province, finally reaching this one, but it has been comparatively slight in comparison with its effect in the other provinces, in spite of the extreme unfitness of many of the pueblos to combat the epidemic. In many cases the cooking and application of an herb was sufficient to cure a patient, and it may be almost taken as a certainty that the greater part of those attacked had cholera nostras and not cholera morbo. An indication of this is that with a change of weather and the disappearance of harmful fruits these cholera-like diseases have ceased, though in some places they reappear at times.

## AGRICULTURE.

This source of wealth, in continuous decadence for the past two years, has reached the point where, unless energy and capital afford prompt relief, death may be expected with certainty.

Numerous circumstances have combined to bring about this critical condition. In the first place, we may consider the dearth of work animals owing to rinderpest and other diseases, which cause in a very few days the death of carabaos, cattle, and horses. These diseases have been prevalent for several years in the pueblos of this province, and deprive the most industrious farmers of their only means for the cultivation of their fields and the diligent stock raisers of their cattle. To such an extent have these diseases raged that there are towns in which not a horse or a carabao has been left. In the second place may be mentioned the plague of locusts, which in a short time lays bare the fields of rice and corn, blasting the hopes of the farmer, who is surely left desperate through the destruction in a day of the fruits of his labor and toil for many months. In the third place, the continuous epidemic diseases which have appeared and terrorized the people to such an extent as to cause them to abandon their fields. And finally, owing to the lack of water just at the plowing season, the soil resists the plow, and when this difficulty is overcome the seed does not develop for lack of water; if it should sprout it is parched by the excessive heat. These are all causes contributing to the agricultural depression.

Two alternatives are suggested as powerful means with which to counteract these evils: The establishment of an agricultural bank or the intervention of capital. The

bank would provide the farmers with the capital necessary to acquire work animals and to undertake irrigation enterprises. Capitalists would do this work with steam plows and irrigation pumps, contracting with the owner of the land to pay for such services a salary or remuneration in produce if money can not be obtained.

#### SMALL TRADING.

Owing to the depressed and weakened condition of agriculture, small trading is practically discontinued.

#### COMMERCE.

It is not necessary to dwell upon this branch in order that its deplorable condition may be understood, for in this province, whose resources are wholly agricultural, all business and mercantile transactions are based upon these products according to their quantity and quality. Consequently when these products are scarce and of poor quality their depreciation reduces the transactions, as is the case with tobacco, which is the principal product of this province. The depression in price of this commodity is due not only to the low price of the same upon the market of Manila for the last two years, for which there is no explanation except that it was done by the intrigues of the great manufacturers of cigarettes in Manila, who had combined to lower the price of this article in order to weed out the small capitalists who were engaged in buying tobacco in this province and selling it in Manila, or to monopolize the gathering of tobacco in the provinces which produce it to the prejudice of the planters, which it may be said they have accomplished, since only these great manufacturers are buying at the present time; but it is also due to the excessive tariff duties upon the importation of this article, which prevent American merchants from purchasing the same, despite the opening of the port of Aparri. Or it may be due to the poor quality of the tobacco, which, however, is unlikely, or those manufacturers would not come here with their capital to buy tobacco which would serve only to bring discredit upon the products of their factories. In order to combat this monopoly, so highly injurious to the inhabitants of this province, we suggest the remedy of lowering the tariff of import duty upon tobacco to 25 per cent instead of 75 per cent, as it is at present.

#### PUBLIC IMPROVEMENTS.

The density of the population in the two Ilocos provinces, especially in Ilocos Norte, makes their extensive territory insufficient for many of those who have no land to be able to acquire, through energy and labor, or by clearing and breaking up the land, any parcel of land for cultivation by means of which they may end their serfdom and slavery, freeing themselves from the cruelty and unrestrained avarice of the owner of the land which they work on shares, in accordance with the general custom of the country, or under a lease the terms of which are rarely complied with. The contrary is the case with the provinces in the valley of the Cagayan, in which, owing to the small number of inhabitants as compared with the extent of territory, there is everywhere to be found virgin soil which lacks labor only to cultivate it. Well might all those who desire to do so come from the provinces of Ilocos to cultivate these lands, but the difficulty lies in the means of communication, for at present there is no other way than by sea, which is costly whether by sail or by steam vessels, and unfortunately this expense is beyond the means and possibilities of those families whose fortunes would necessarily depend upon such emigration. In order to remedy this difficulty, at present insuperable, a wagon road should be built from Bangui, the nearest pueblo in Ilocos Norte, to Claveria, the first pueblo in the province of Cagayan. With the use of drill and dynamite it would be neither difficult nor expensive to open this wagon road through the mountains which lie between the two pueblos, utilizing the provincial funds of both the provinces of Ilocos Norte and Cagayan and under the supervision of the respective provincial supervisors. Certainly in a short time this road could be opened to use. The opening up of this road would prove a great encouragement to all the people of the Ilocano regions as an incentive to immigration into the Cagayan Valley, and the result would be beneficial to the emigrants, for in a short time they would be liberated from serfdom and become landowners, as it would also be beneficial to these provinces which in a brief period would find their population, wealth, and prosperity considerably increased.

The river is the most frequented route of communication, and, until the road by land is built, will continue to be, and even afterwards, owing to the difficulty of travel upon land during the rainy season. Consequently, the river route will be the more used on account of its efficiency and comfort for passengers, aside from its econ-

omy for the transportation of merchandise. The river route consists of the great river of Cagayan, which flows through nearly all the province of that name and a large part of the province of Isabela, and, owing to the width of the river channel, it forms in many places bars or banks, which increase the force and velocity of the current in the rainy season, as well as present an obstacle during the dry season to the passage of small boats, which are the only ones which can navigate during all seasons of the year. These obstacles would be removed and the river left free for passage by dredging, since cutting a canal would not be practicable on account of its excessive cost. Two dredges with their scows could keep this river open to navigation throughout the whole year. One located at the municipality of Alcala, to operate as far as Tuguegarao, and the other at Iligan, the capital of the province of Isabela, to operate as far as Cabagan Nuevo, cleaning out those places where bars are forming or have already formed.

#### SUGGESTED LEGISLATION.

The organization of certain of the pueblos into municipalities, far from being of benefit to them, is in most cases prejudicial. Many of the pueblos which contain some 2,000 or more inhabitants, in order to meet the expenses of the municipality, levy unjust "arbitrios" (taxes by the municipality upon articles of trades) or employ some other means, such as indirectly obliging the people to pay a fixed tax in lieu of all the "arbitrios" which the municipality might levy. These are taxes upon markets, the slaughter of animals, ferry toll, and others, without having markets, slaughterhouses, or ferries. Even in cases where these do exist, since few of the people are in a condition to make use of them, or are bound to pay such taxes, they also have thus to pay "arbitrios." It also happens that owing to the lack of funds for taking care of the streets and the public buildings, they oblige the people to perform such work gratis or for a very small stipend, usually the half of that customarily paid in the neighborhood for such work. Yet all these acts are unlawful for they require service from a citizen who has paid his legal municipal and provincial taxes. Notwithstanding all this, certain of the municipalities of small population are unable to cover their expenditures with their receipts, however economical they may be.

The difference between the number of inhabitants in some municipalities and in others causes inequality of taxation and forces the residents of one municipality to pay higher taxes than those of other municipalities. This inequality causes dissatisfaction and frequent removals from one municipality to another, and these result in damage both to the municipalities themselves and to the provincial treasury. To remedy this evil, the undersigned suggests uniting the small municipalities to other larger ones, and to this end recommends the annexation of the municipality of Peña Blanca to this capital, Tuguegarao; the municipalities of Iguig and Bagao to Amulung; that of Nisiping to Alcala; those of Gataran and Camalaniugan to Lalo; that of Buguey and the islands composing the group called Babuyanes, known as Dalupiri, Fuga Camiguing, Calayan, and Claro Babuyan, to the municipality of Aparri. These islands were formerly a part of the municipality of Aparri under the Spanish régime, but during the social disturbances which have occurred those islanders have tried, in a peaceable manner, however, to separate themselves from the municipality of Aparri, and the latter says nothing, acquiescing in order to escape what may possibly be a burden to them. The municipalities of Pamplona and Claveria should be united to Sanchez Mira, situated between said municipalities; the municipality of Santo Niño and that of Cordova to Piat; and the municipalities of Mauanan and Malaueg to that of Tuao.

In all the municipalities such municipal revenues as are derived from cockpits, markets, slaughterhouses, ferries, and others, will unquestionably always suffer great diminution, to the detriment of the municipal treasuries, as long as the "arbitrios" are collected by the authorities; for they are not collected by the municipal treasurers but by employees appointed either by the treasurer or by the municipal presidents, and it is difficult to believe that these employees are satisfied with their small compensation and that they do not dishonestly withhold the money collected. In the opinion of the undersigned it would be advisable to authorize the municipalities to let these privileges of "arbitrios," and thus the sums appropriated would be assured, effective, and collectible, and not, as they now are, uncertain and reaching less than the amount estimated.

The islands composing the Batanes group, in the China Sea, which were a separate province during the Spanish domination, are to-day a part of the province of Cagayan, though separated from the mainland by more than 60 miles of water. Three of these islands are inhabited and organized—subsequent to the Spanish régime—into six

pueblos, which, together, contain from 8,000 to 9,000 inhabitants. These islands should have an official, resident therein, to administer their affairs, subordinate to this provincial government, watching over said islands and protecting and defending the inhabitants thereof from any invasion of the pirates. This official should be called lieutenant-governor, and should also be a deputy of the treasurer. He may be designated a salary ranging from 600 to 800 pesos per annum, with two clerks, one at 300 pesos, and the other at 180 pesos per annum, aggregating the sum of 1,080 to 1,280 pesos per annum in salaries. This amount certainly can be paid from the funds of the provincial treasury, at least in greater part, if not wholly, from the taxes collected from those islanders, as soon as their present pueblos shall be organized into municipalities under the municipal code.

As the governor is the head of the municipal police, in all the municipalities of his province, it is his duty to dismiss or discharge the members of this force. This at present is the duty of the inspectors of Philippines Constabulary, and that it should be thus is derogatory to the authority of the governor, the rights of the members of the municipal police, and to the residents of the municipalities. Let the inspectors retain the inspection of the municipal police, their equipment, discipline, and the recommendation of rewards and punishments, but without power to impose these punishments and much less to discharge the police.

The constabulary, whose chief duty is to watch over the good order and security, whenever their services are not required, should limit their operations to the prosecutions of brigands and thieves, and the guarding of the towns in their district from such evil-doers, leaving the protection of the pueblos to the efforts of the municipal police.

With reference to volunteers, in view of the peace which reigns throughout this province, in which there does not exist the least suspicion of revolution nor of insurrection to menace good order, nor any band of brigands operating therein, though at times the non-Christian tribes do commit depredations in the Christian pueblos, the undersigned deems it advisable to keep said volunteers stationed at places in proximity to the localities occupied by the tribes referred to. It was properly decided to station a company of volunteers in the pueblo of Abulug to withstand the Apayan Igorrotes in their incursions against the pueblos of Abulug, Pamplona, and Claveria. It would now be in order to have the other company at present on duty in this capital of Tuguegarao transferred to the pueblo of Tuao, to oppose the Igorrotes of Magogao, who often make assaults upon that town, and upon Mauanan and Malaueg, making thus another wise reform.

It is provided in the seventh section of Act No. 83, relative to the organization of provincial governments, that the governor shall visit all the municipalities at least once in every six months. This is practicable in those provinces where the municipalities are in close proximity or connected by wagon roads or other convenient means of communication, such as is the case in the provinces which are contiguous to Manila and in the Ilocos provinces. But in the province there are municipalities 60 miles from the capital, with bad roads, and no matter how hurriedly made, the visit takes from thirty-five to forty-five days, to say nothing of the Babuyan and Batanes islands.

This obliges the governor while making but these two visits to be absent from the capital three months in each year without visiting the aforementioned islands. Not only should the time taken up in these visits be considered, but also the expenditures which they occasion.

The purposes which make necessary these visits to the municipalities can be served with one visit, because of the essentially agricultural occupations of the province which imbue the people with a character at once simple and peaceful and with customs that are temperate. They have great respect for the laws and submission to the authorities, as well as loyalty to their sovereign. Therefore the undersigned takes it upon himself to recommend an amendment to the seventh section of said Act No. 83, relating to the creation and organization of provincial governments, wherein same refers to the number of visits to be made by the governor to the municipalities of the province, so that it shall be left to the discretion of the governor as to the number of the visits which he shall make each year to the municipalities of the province.

Some doubt arises as to the substitution of the secretary in the office of the governor during the absence of the latter from the provincial capital on official business within the province itself, because section 8 of Act No. 83 and the related section 21 speak of the vacancy or absence of the governor from the province, therefore the undersigned suggests, for the sake of clearness, an addition to the provisions of said section be made to the effect that the provincial secretary shall perform the duties of the governor and sign warrants in event of the sickness or the absence from the

capital of the province of the provincial governor, the clerk of the highest rank in the government taking the place of the secretary without receiving any additional remuneration for such service.

Should this badly written memorial be accepted by the civil government of the Philippine Islands, and should the improvements and amendments therein proposed result in the progress and prosperity of this province of Cagayan, the desires and aspirations of the undersigned would be fully accomplished.

Respectfully,

G. GONZAGA, *Provincial Governor.*

The CIVIL GOVERNOR, *Manila, P. I.*

---

ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF CAPIZ, 1902.

CAPIZ, PANAY, *August 9, 1903.*

The events which have transpired in this province during the year 1902 have been all of a deplorable character.

The inhabitants had scarcely recovered from the effects of the famine of the year 1901 when malarial fevers and the grippe caused such great ravages among them that in some pueblos, like Sigma and Macato, large families fell victims to disease, and there were days when there were not enough people in a town who were strong enough to bury the dead.

During this year an animal plague took away 90 per cent of the carabaos, pigs, and chickens; and in the interior dead bodies of monkeys, deer, and wild boar were observed floating in the rivers and streams, so that these species, as well as carnivorous birds, such as buzzards and what are known as eagles in this country (hawks), disappeared. Subsequently a disease unknown in this country, but known to the Americans as surra, took away 95 per cent of the horses, many of the municipalities being left entirely without these animals. In this provincial capital more than 300 head, including mares and foals, perished.

Such a state of affairs could not but affect the province in an economic sense, making the collection of taxes very difficult, and also making communication between municipalities extremely arduous, the undersigned having been compelled in many instances to travel on foot in his visits of inspection over the worst kind of roads.

This picture of misfortune was darkened by the appearance of cholera during the month of September. From its virulence it is to be feared that it will claim a considerable number of victims during the year 1903.

Skillful measures taken in this provincial capital, where the Asiatic cholera first made its appearance, prevented a recurrence of the great mortality attendant upon the epidemics of the years 1882-83 and 1889-90.

A few months prior to the time when news was received of the appearance of cholera in Manila, a society of the most distinguished ladies of this community was formed, and, thanks to its efforts, 1,600 pesos Mexican were collected, a part of which was invested in the construction of a hospital on an adequate site and the balance used for its maintenance during the months of September, October, and December, the average number of patients being 60 a day. All of the native physicians residing in this provincial capital lent their services to the said hospital, and thanks to their skill in the treatment of the disease the maximum death rate was kept at less than 49, this figure being reached for one day only, after which there was a steady decrease.

The great interest shown by the Commission in combating the disease in all of the provinces where it appeared greatly assisted in the extinction of the epidemic. This province received help, not only in medicines but in the cooperation of a member of the board of health of the islands, who personally lent his valuable aid and counsel in the suppression of the disease.

Once more it was seen that even during times of public affliction persons are not wanting who take advantage of the situation to create a disturbance of the public order so as to reflect discredit upon the civil government in force in these islands and work injury therein. False reports were circulated to the effect that the cholera had been brought about by the poisoning of wells and rivers by the monastic orders. Subsequently the poisoning was laid to the Americans, especially to officers and teachers.

Fortunately, thanks to the active and efficient measures adopted and to the advice given by this government to the people during my visits of inspection to the municipalities, such infamous slanders, which had gained currency among the ignorant people, were checked; but not in time, however, to prevent several acts of cruelty committed against persons seized by the people as poisoners with or without reason. It was generally believed among the lower classes that some 200 persons had come

from the neighboring province of Iloilo with orders to place certain white powders in wells and in cisterns where rain water was kept for domestic purposes. Many averred that they had seen said powders and caught these persons in the act of criminally using them.

But the undersigned is able to say positively that of the substances sent to this office as evidences of the crime of poisoning, not one was proven to be a poison, all of them being simple bicarbonate of soda and other harmless powders.

The belief that the wells and streams were poisoned or might be poisoned served as a very useful purpose to the committee of public health of this provincial capital in combating the epidemic, as the committee was able to tell the people that the only efficient manner of avoiding said poisons (which, as a matter of fact, were really micro-organisms of the virgulate bacilli and not harmless powders) was by boiling the water before using it, a practice greatly recommended in such cases.

At the same time the closing of all wells was recommended and the opening of new ones in adequate sites and under favorable conditions at a distance from dwelling houses which would avoid surface water from draining deleterious matter into them. In all municipalities wells were dug in the center of the public square surrounded by a fence of *caña espina* and guarded day and night by the municipal police in order to avoid criminal acts.

By taking such precautions and by abstaining from any substance not well cooked, and the use of the anticholera specifics best known to science, such as that of Doctor Bautista and Doctor Rojas, as well as of other medicines recommended for this disease, the mortality during the epidemic of 1902 was kept below that of former ones, so that it can be confidently asserted that the number of deaths did not reach 50 per cent of those attacked.

The assistance received from the Civil Commission in the shape of a loan of \$25,000 gold, secured by the provincial board, somewhat relieved the deplorable situation of many municipalities, but unfortunately not all of them were able to get the benefit of the same. The municipalities of Yuisan, Sapián, Jimeno, Balete, Nanga, Malinao, and Pilar were favored with this assistance, for their roads underwent great improvement, but the extent of the work undertaken at such different and distinct places resulted in that none of the work was finished, many of the roads being commenced but not carried through so as to connect any two municipalities. The work was therefore useless, with the exception of that done at Yuisan, which was carried through so as to connect that town with this city. Banga was not connected with Calida nor with Balete, nor the latter with Jimeno, nor Jimeno with Sapián, nor this latter with Yuisan, and the same thing occurred with relation to Pilar, where work was commenced and some five bridges and ten culverts were constructed without the road having reached Pontevedra. This was due, in my opinion, to the bad management and lack of a general plan for the work undertaken by the at that time provincial supervisor, Mr. Thomas Leonard. Unfortunately, the \$25,000 gold was invested in this way, and if the work is now to be abandoned in its unfinished condition it would be a great pity, for the bridges built of unpainted bakhaw timber and which are left without the protection of the nipa roof will be destroyed within three years, and the roads that are to-day clean and graded will be converted into carabao holes and overgrown with vegetation. It is therefore urgent that the honorable Civil Commission, always attentive to the progress of these pueblos, once more extend its assistance to this unfortunate, but always obedient and loyal province, so that the work begun by Mr. Leonard may be continued and a general road uniting this provincial capital with the pueblos of the east as far as Pilar and those of the west as far as Malanao may be finished and business benefited over a large extent of territory. Once this work is completed the road uniting this province with Iloilo and going as far as Passi, as well as the branch roads between Dao, Tapaz, and Jaminan, and the one connecting with Maayon and Pontevedra, may be started.

By doing this a double political purpose would be served: First, the province would be indirectly succored and its inhabitants would learn habits of work, and, second, agriculture would be developed and banditism would be suppressed, it having been observed that so long as people were given work in the several municipalities ladrones and petty thieves disappeared and many people living in the hills came down to the valleys and built their houses.

Fifty thousand dollars gold would be a sufficient sum to finish this work and provide the province with good roads as well as to alleviate all this misfortune and misery.

#### DEMOGRAPHIC STATISTICS.

The following statistics of births and deaths, during the years 1901 and 1902, will give an idea of the mortality of the inhabitants of this province due to malarial fevers, dengue, cholera, and famine.

For the year 1901, from June 1 to the end of December (the provincial government was constituted April 15, 1901), the statistics were as follows:

Births .....	1,819
Deaths .....	9,782
Difference, deaths over births .....	7,963

*For the year 1902.*

Births .....	6,670
Deaths .....	13,695
Difference, deaths over births .....	7,025

It must be borne in mind that the statistics for the year 1901 cover only six months; that is to say, from the 1st of June to the end of December, hence the great difference in the number of deaths as compared with this year, in spite of the fact that during the year 1902 there was cholera; this is due to the fact that in 1901 ravages were made not only by malarial fevers, smallpox, and dengue, but famine was also very prevalent.

CRIMINAL STATISTICS—COURT OF THE FIRST INSTANCE.

During the year 1902 the court of first instance sat from February to April and from August to December, the judge being Mr. Bates and his assistant Mr. Norris.

At the beginning of the year there were 830 cases originating in the time of the Spanish Government in the clerk's office, which were disposed of, the majority of them being dismissed because of the fact that the defendants were not in jail.

Of the new cases, that is, those begun since the institution of civil government in this province, 93 were disposed of as follows:

Manslaughter .....	27
Parricide .....	3
Assault .....	12
Highway robbery .....	8
Robbery .....	14
Abduction .....	7
Theft .....	12
Arson .....	2
Illegal detention .....	1
Arbitrary detention .....	1
Housebreaking .....	1
Rape .....	2
Breaking oath of allegiance .....	1
Perjury .....	1
Trespass .....	1

At the beginning of January, 1902, there were 51 prisoners in the public jail; from that time to December 277 entered, making a total of 328, of whom 252 were released, there remaining 72 in jail on December 31, 1902, and of this number 39 were sentenced and 37 were awaiting sentence.

The judicial procedure followed has demonstrated the great deficiency existing with relation to the summoning of witnesses. The law authorizes the judge to proceed against witnesses by apprehension if they do not appear after the first subpoena has been sent. During the period of the sitting of the court of first instance the sheriff's office summoned 1,591 witnesses, some of them from the farthestmost pueblos, such as Tapaz, Jamindan, and Buruanga, and no witness received indemnity of any sort whatsoever. The majority of these people belonged to the poorer working classes, so that during the fifteen or twenty days that they were absent from their homes and attending court they were liable to die of hunger on the road or their families would suffer from the same fate because of lack of support, for in the absence of a father they are left to live on public charity.

It would also occur that during the trip, generally made on foot, many would sicken and others would fall victims of cholera.

During the month of December one witness, a woman, was attacked with cholera at the door of the court and died three hours afterwards.

If the process were to capture or apprehend the witnesses they would willingly come, if well accompanied, but this system would result in greater expense to the government, and would take the constabulary away from the work of cleaning up the province of ladrones.

It would be highly advisable and more humane to allow each witness 40 cents Mexican per day for traveling expenses and during his stay in this town 20 cents Mexican a day, which for the poor people is sufficient and not a burden to the insular or provincial treasury. The amount should be delivered to the witness when he presents himself in order that he may attend to his wants during his stay in the provincial capital. A certificate from the clerk of the court of first instance should be sufficient for him to collect.

Under the present system, though it is true that the amount for this purpose which would have been paid to witnesses has been saved, on the other hand the government has spent a good deal in the delay of the court of first instance in the disposition of criminal and civil matters. There have been cases which could have been disposed of in three days that have dragged along for a month or more because of the lack of witnesses, to the great detriment of the public service.

#### FINANCES.

During the year 1902 the finances of this province diminished considerably because of the fact that the people had scarcely recovered from the epidemic of cholera and from the losses caused by rinderpest when the former broke out afresh. But in spite of all these calamities there was a good crop harvested of palay, corn, mongo, camote, abaca, copra and nipa spirits, besides those of other tubers necessary for the support of the poorer classes, such as hube, caba, kayus, etc.

During the months of April, May, June, and July, the time for planting palay, the industry and perseverance of the country people was to be admired, for in spite of the lack of carabaos they made every endeavor possible to obtain good crops by the cultivation of their fields.

For the first time the experiment was made of trying to raise palay without plowing the ground. The experiment consisted in cutting off all the weeds and other growths, such as zacate and baki-baki (known to the Tagalogs under the names of balangot and cogon), etc., level with the ground during the latter part of May, allowing same to remain upon the ground until dry. At the same time the seed was sown in the land thus cleared and prepared, the pilapiles, which are a sort of small embankments thrown up around the cultivated plots for the purpose of retaining the water when the land is flooded, were constructed; these embankments are generally about a half a yard high and a foot and a half at the base.

Having arrived at this stage the rains of June were awaited and the lands surrounded by pilapiles were covered over with the half-rotted vegetation spread over the entire area and the seed was allowed to germinate. When the plants have grown to a height of about 1 foot they are called bonton, and transplanted to ground prepared to receive them, which is flooded to a depth of about 1 foot. The water and the rotting vegetation so favor the growth of the rice that two weeks after transplanting a breach is made in the pilapiles to allow the water to drain off and in another two weeks the land is again cleared of the growth of weeds, which are cut down with bolos.

This system, although it does not give as good results as when the plow is used, has exceeded the hopes of the country people who were able to harvest twentyfold of the seed planted; that is to say, that each cavan of seed yielded 20 cavares of palay.

The system known in this country as pugas was also employed. This system consists in clearing off the ground by fire and putting in the seed during the first rains in the month of May. Holes are made with a stake a foot apart at equal distances and five or more grains of palay are dropped into each hole. This system is the one generally used on uplands not irrigated for crops of white or Visayan rice.

To form an idea of the industry and extreme eagerness of the country people in this work of seeding their lands so as to provide against a recurrence of the famine suffered by them in 1901, of terrible memory, it is well to consider cases like the one which occurred at the pueblo of Cuartero, where a poor farmer, not having the carabaos to plow his land, ordered his son to take hold of the plow while he placed a yoke upon his own shoulders and performed the labor of the animal; in this manner he attempted to plow his land, and when overcome by fatigue and covered with sweat

he jumped into the river and he died in consequence of the shock thus received. It is also recorded that a woman 45 years of age in the pueblo of Dao, alone and with the help of a bolo planted and cultivated a piece of ground, gathering a crop of 150 cavanos of palay.

Corn, which used to be sown but once a year, during 1902 was planted as often as a crop was gathered, so that there have been pueblos where three crops of corn have been gathered something never done before.

Owing to the lack of carabaos many have devoted their attention to the planting of cocoanuts and hemp and subsequently of maguey, a large extent of ground in the municipalities of Tapaz, Jamindan, Sigma, Dao, Mambusao, Banga, Madalag, Libacao, Pangalan, and Ybajay having been planted to cocoanuts and hemp, and it is hoped that in two years the production of copra will be greatly increased in this province.

Considering the favorable disposition of the inhabitants of this province toward agriculture, its chief source of wealth, a decided protection on the part of the Government would increase the resources of the same. Unfortunately, the provincial board being deprived of possible revenues until the revival of agriculture will find it impossible to assist, and it is hoped that the honorable Civil Commission will give its attention to this matter, and, so far as practicable, help by furnishing cattle or the most modern agricultural machinery for the purpose of developing farms.

A model grange, where a practical test of steam machinery for plowing and for other agricultural labor could be made, ought to be established. At such a place the handling of this machinery should be taught, as once learned it would do away with the primitive methods of cultivation and the use of the carabao to-day employed by even the richest agriculturists. So long as the agriculturists can not see with their own eyes the benefits from the use of these modern inventions it is useless to hope for a prompt revival of agriculture, which is at present time in a depressed condition.

There are large tracts of land in the municipalities of Tapaz, Dao, and Jamindan where this model grange could be established, and it is not too much to say that the result would be that the products would cover all expenses of running same.

During the year 1902 the revenues and expenses of this government were as follows, according to figures furnished by the provincial treasurer, Mr. William O. Thornton:

1902.	Local currency.		United States currency.	
	Revenues.	Expenses.	Revenues.	Expenses.
Balance, January 1 .....			\$25,940.225	.....
January .....			2,371.939	\$4,988.336
February .....			1,019.613	1,991.565
March .....			682.053	4,715.901
April .....			1,833.837	2,357.086
May .....			1,937.557	7,405.44
June .....			1,383.016	5,025.07
July .....			4,145.031	4,159.034
August .....			2,700.006	3,897.067
September .....			4,902.080	6,646.043
October .....			1,031.051	3,732.019
Total .....			21,464.69	17,935.63
Reduction of amounts received and paid out in Mexican currency and United States currency (difference at official rate this date, \$2.46) .....				3,529.06
Total .....			21,464.69	21,464.69
October .....	\$5,208.11	.....	1,411.94	.....
November .....	5,773.35	\$3,846.99	263.40	1,453.40
December .....	629.63	2,543.92	41.42	.....
Total .....	11,611.09	6,390.91	1,716.76	1,453.40
Balance on December 31 .....		5,220.18	.....	263.36
Grand total .....	11,611.09	11,611.09	1,716.76	1,716.76

As can be seen from this table, all revenues and expenses were kept in gold from January to October; from November on, accounts were kept in both United States and Mexican currency as received and expended. At the end of the year there was a cash balance of \$5,220.18 Mexican and \$283.36 United States currency. Scarcely any revenues were obtained this year from personal registration certificates, and not even half of the land tax was collected.

The following table shows the total area of land assessed in the province and the value of each parcel:

Pueblos.	Hectares.	Amount.	Number of pieces.
Balete .....	8,454.8555	\$21,833.00	451
Banga .....	8,052.3205	62,169.46	1,405
Batan .....	2,546.9638	29,692.54	1,245
Buruanga .....	975.49	25,203.00	860
Calivo .....	2,549.0695	134,268.12	2,861
Capiz .....	4,900.7833	415,348.00	2,031
Casanayan .....	1,146.3908	20,197.85	382
Cuartero .....	1,663.4532	42,885.00	920
Dao .....	4,195.2185	99,593.50	1,817
Dumalag .....	5,834.6512	40,610.26	2,007
Dumarao .....	4,576.5490	38,400.98	1,023
Jagnaya .....	1,424.26	20,800.08	438
Jamindan .....	1,513.6763	15,967.80	380
Jimeno .....	2,740.1620	23,407.50	806
Lezo .....	1,303.0801	33,810.50	1,539
Libacao .....	3,600.9740	57,890.12	544
Loctugan .....	1,484.1359	43,959.50	724
Maayon .....	8,344.9572	35,881.50	606
Macato .....	1,562.6574	36,792.60	1,295
Madalag .....	938.8572	19,585.50	679
Malinao .....	1,578.3354	105,011.00	2,087
Mambusao .....	3,720.9652	105,876.00	1,570
Navas .....	1,665.16	35,675.94	1,346
Numancia .....	1,541.6129	59,756.25	1,814
Panay .....	6,316.4737	221,769.34	2,604
Panitan .....	6,123.4408	94,931.47	1,550
Pontevedra .....	4,363.2131	102,491.90	604
Sapian .....	1,374.2161	21,882.50	380
Sigma .....	4,349.7026	96,851.50	1,635
Tangalan .....	743.5871	18,718.37	441
Tapaz .....	1,542.6088	62,845.70	545
Ybajay .....	3,807.8986	107,820.01	4,558
Yuisan .....	2,351.8176	48,280.00	704
Total .....	100,430.3803	2,361,265.74	42,220

Making a total of 100,430.3803 hectares, valued at \$2,361,265.74 United States currency, divided into 42,220 holdings.

#### PUBLIC ORDER.

During the year 1902 this province has not suffered as much as others from the depredations of ladrones, although it is true that bands existed under Julián in the hills of Pontevedra and Pilar, under Firmalino and Simeón Paduga at Dumalag and Tapaz, under Laureano Lucas at Mambusao, Jagnaya, and Jamindan, and under Omopong at Malinao and Macato. In spite of their presence but few assaults accompanied by murder have been committed in this province. The only cases of robbery recorded have been in the barrios of the municipalities of Batan, Pontevedra, Maayon, Cuartero, Pilar, and Malinao. Last April this government was authorized by the acting governor, Hon. Luke E. Wright, to extend pardon to all those presenting themselves, taking the oath of allegiance to the constituted authorities, and surrendering their arms, and as a result of active negotiations carried on by this Office the following surrendered to the undersigned: Donato Jamison and six other ladrones under him at the municipality of Sigma, with one Mauser rifle, at the hills near Jagnaya, where he had to present himself unarmed and unattended, except by a guide, and negotiate with Laureano Lucas, who surrendered with his companions Pedro Lacana, Policarpo Llorente, Aquilino Aquino, Ciriaco Dapetillo, Estanislao López, Pedro Lucas, and Gregorio Llorente; and Máximo López in Mambusao, together with six companions with all their arms.

These measures, coupled with the active operations of the constabulary of this province, who worked unceasingly, resulted in that the inhabitants were not troubled in their agricultural labor by the said bands of ladrones.

It also happened that while the constabulary were bringing in a notorious bandit to this provincial capital he was killed in attempting to escape. The same thing happened with regard to five ladrones who were being conducted by a constabulary control to Dao and who attempted to escape by running into the woods. In this latter case three were killed and two of them recaptured. This proved a good lesson to the ladrones, who retired to the mountains of Iloilo and very rarely came over to

this province, fearful of like punishment. There is one lamentable incident which occurred in this province in connection with the operations of troops. On November 31 a body of American soldiers, constabulary, and municipal police from Iloilo came over to the district of Dumarao in pursuit of a band of ladrones and upon perceiving a group of men, women, and children working in the rice fields, fired upon them, mistaking them for ladrones, and killed the owner of the field, who was shot through the head.

The above are the principal events and the general condition of the province at the close of the year 1902.

Before finishing I must state the principal reasons for the delay in the making of this report, trusting that the honorable Commission may pardon same in view of the following causes:

In October of this year I received instructions from the honorable civil governor to make municipal maps and give a statement of the personnel suitable for enumeration of the census which was to be taken in these islands during the following April.

In December I was obliged to go to Manila to receive instructions from the director of the census, General Sanger.

Upon my return to the province my time till the end of June was entirely taken up by the census, fearing that same might be a failure—which, I thank God, was unfounded, as our work won the applause of our worthy chief, General Sanger.

From June to date I have been busy in collecting exhibits for the St. Louis exposition, have had to act as president of the assessment board, attend to the accumulation of work in my office, to the licensing of arms, etc., all of which have contributed to the delay in sending this report.

Respectfully,

S. JUGO VIDAL,  
*Provincial Governor of Capiz.*

#### ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF CAVITE.

OFFICE OF THE GOVERNOR, PROVINCE OF CAVITE,  
*Cavite, P. I., October 15, 1903.*

SIR: In accordance with instructions contained in your telegram of the 9th instant, I have the honor to submit the following report:

I assumed the duties of provincial governor on the 17th of July, 1903.

The history of events of the current year prior to that date is such as furnished by the office records or established by statements of those having personal knowledge.

#### RELIGIOUS QUESTIONS.

The new Aglipay movement has made considerable headway in the province, notably in the towns of Cavite, San Roque, Caridad, Bacoor, Imus, Maragondong, Ternate, and some others. The development of this new church party has brought with it a certain bitterness of feeling between the adherents of the new church and those of the Roman Catholic faith. This feeling has shown itself in the management of municipal affairs when the majority of the municipal council, actuated by religious differences, has sought to impose restrictions upon the church of opposite faith. Sometimes this has taken the form of ordinances closing cemeteries; sometimes it has taken the form of placards threatening bodily harm. In one case the municipal president of Bacoor was suspended for having arrested a number of natives who were attending a meeting conducted by some natives of the Presbyterian faith. After investigation the president was removed from office.

The census work was completed in the month of June. The total population of the province is 135,243, distributed as follows:

Amadeo .....	3,771	Naio .....	9,235
Alfonso .....	3,692	Novalete .....	2,362
Bacoor .....	10,998	Rosario .....	6,608
Bailen .....	2,505	San Francisco de Malabon .....	9,673
Caridad .....	4,917	San Roque .....	6,158
Cavite .....	4,495	Santa Cruz de Malabon .....	8,801
Cavite-Viejo .....	6,173	Silang .....	5,643
Perez Damariñas .....	3,047	Ternate .....	2,460
Imus .....	12,970	Corregidor .....	703
Indan .....	11,973	Carmona .....	2,609
Magallanes .....	3,503		
Maragondong .....	7,201	Total .....	135,243
Mendez Nuñez .....	3,741		

## ROADS.

The roads of the province, with a few exceptions, are in bad condition. In the six years from 1896 to January 1, 1903, there has been little work done toward repairing roads and bridges except that done by the military through necessity for transportation of supplies.

During the current year the roads from Naic to Indan and from Naic to Maragondong have been repaired and are now in fairly good shape. The roads from Indan to Silang and from Silang to Imus are now being repaired. The road from Imus to Bacoar is already in pretty fair condition. These, together with the road from Cavite to San Francisco de Malabon, are the principal roads of the province. All told, there has been expended during the current year on road work about 34,000 pesos in cash and rice from the Congressional relief fund to the value of 3,000 pesos. There remains approximately 30,000 pesos in rice to be paid out for work on roads. The work is now being pressed as much as possible at this season of year. In regard to road work in general, I believe that it will be impossible to keep the roads in proper repair with the allowance for that purpose now provided by law. Apparently the only practicable solution is to require from each able-bodied male inhabitant a certain number of days work each year, say five days, or, in lieu thereof, an assessment of one-half peso for each day of failure to perform the required work. The ordinary annual income of the road fund would scarcely avail to purchase the material necessary to repair bridges, etc., and is wholly inadequate to employ the labor necessary to keep the roads in serviceable state.

## ST. LOUIS EXPOSITION.

The work of obtaining exhibits for the St. Louis Exposition has been under charge of a committee headed by Señor Leonardo Ossorio of San Roque. Up to the present time the committee has obtained 255 exhibits of various kinds. The province is one that depends almost entirely on agriculture. It has few manufactures of any kind; therefore the work of Señor Ossorio and his fellow committeemen has been difficult, but they have made up for lack of resources by a surplus of energy and persistence.

## LOCUSTS.

In accordance with telegraphic instructions from the civil governor, based upon Act 817 of the Philippine Commission, a locust board was convened on August 7, consisting of the provincial board and in addition Señores D. Severino de las Alas, D. Feliz Cuenca, and D. Mariano Trias.

The board discussed the method to be pursued and agreed upon the resolution, a copy of which is hereto attached, marked "A."

The people of the province have generally evinced great interest in this work. A consolidation of weekly reports from the agricultural members of the board shows the destruction of more than 5,000 cavanos of locusts since the organization of the locust board. Locusts are still to be found in the province, but in greatly diminished numbers. One thousand piculs of rice from the Congressional relief fund were allowed the province for distribution to natives not able to subsist themselves while employed in destruction of locusts. A part of this still remains on hand for continuing the work.

## MUNICIPAL POLICE.

In accordance with the provisions of Act 781, the provincial board on June 24 adopted resolutions providing for the organization of a municipal police force and fixing the pay of policemen and number of guns for each town in accordance with the schedule hereto attached, marked "B." At the same time the board requested a loan of \$35,000 gold from the insular government to be used in assisting the municipal government in the organization and payment of the municipal police force. This loan could not be granted, and as the towns could not pay the entire expenses of maintaining a police force of the prescribed strength, very considerable modifications in the original scheme were necessary. However, the guns have been obtained and issued to the towns under the prescribed bond. The towns have been required to provide a police force such as they are able to maintain at their own expense. The extra guns have been required to be placed in the presidencia and a volunteer force designated to assist in protection of town or to operate against ladrones when they appeared in the vicinity. Up to this time three policemen have deserted with their guns and joined the ladrones—all of them from the town of San Francisco de Malabon. One of these policemen returned with his gun and presented himself to the president of Malabon. He was tried by the court

of first instance and acquitted on the ground that he had been captured by the ladrones and carried off as a prisoner. A few of the towns, where the president is of exceptional efficiency, have a fairly effective police force. Owing to lack of funds it does not seem possible to greatly improve their condition. On the whole, it can not be doubted that the municipal police have been of assistance in protecting the towns against roving bands of ladrones. In some cases the municipal police have rendered valuable assistance. Since their organization two policemen, one from Mendez Nufiez and one from Maragondong, have been killed while operating against ladrones.

It would be well if the government could in some way provide for the families of those policemen who may be killed or disabled in active service.

#### GENERAL CONDITIONS.

The province of Cavite, under normal conditions, is rich. It has a large area of fertile rice lands. The hemp raised in the vicinity of the mountain towns of Amadeo, Alfonso, and Indan is of superior quality. Coffee and chocolate were formerly grown near Indan, and the fruits of the province, such as mangoes, bananas, and pineapples, are a source of considerable income. Much of the rice land is uncultivated, owing to lack of carabao and the dry weather prevailing during August and September. In the irrigated lands around Naic one very good crop has already been reaped and another is now growing. Around Rosario, Santa Cruz de Malabon, and Imus, as well as in the mountain towns toward the southern boundary, the prospects are much better than they were last year. Within the past few days the increase in rainfall has served to encourage the people over the outlook for crops, and a considerable additional area is now being planted. The order of the civil governor directing the planting of quick-growing crops was very generally complied with, so that the shortage of last year's rice crop did not so seriously affect the people as would otherwise have been the case. The shortage in the rice crop for several successive seasons has served to show the people the advantage of having more than one crop to rely upon. In the hemp-growing district around Indan and Amadeo there have been during the past two years many new plantations of hemp, so that there should be a considerable increase in the hemp crop within the next two or three years. The extensive coast line of the province makes fishing a means of livelihood for many natives who live in the towns and barrios along the coast. The United States naval-yard at Cavite and the private shipbuilding yards at Cañacau and San Roque furnish employment to a great many natives. Their aggregate native pay rolls probably exceed 60,000 pesos per month. This, of course, goes a long way toward sustaining a large part of the population.

During the current year there have been a few sporadic cases of cholera, but there has been no general outbreak, and the provincial board of health has been able to successfully deal with the matter so as to prevent any general spreading of the disease.

In this province there are estates comprising some of the most valuable lands of the province in dispute between the people and the religious orders; whatever the final decision in regard to the ownership of this property, it can not be doubted that the settlement of this matter would go far toward removing a very vexing question, and one that gives rise to much irritating discussion.

The assessments made by the board of tax revision increased the value of the taxable real estate of the province from \$4,400,000, United States currency, to \$5,971,000. There has been considerable discontent manifested over some of the assessments, and of the land tax for the current year only one half has been collected to date. There are doubtless some inequalities in the assessment and the provincial board has referred the matter to the Civil Commission, with recommendation that a new board be appointed to begin work January 1, 1904.

The industrial tax fell from \$10,000, United States currency, last year to about \$6,000 during the current year. The amount received from the cedula tax increased from about \$20,000, Mexican, in 1902 to approximately \$30,000 during current year.

Perhaps the time will never arrive when the people will receive without protest any assessment making an increase. In the present case, however, some of the substantial provisions of law were not complied with, and I believe it would be only fair that the whole matter be brought under review of a new board, when all the requirements of the law should be observed.

#### LADRON SITUATION.

The province of Cavite for generations past has been notorious for the ladron bands that have preyed upon its people. The terrain of the province has much to do with the difficulty of stamping out the pest. Its numerous jungles and ravines make it difficult for troops to move quickly from one point to another, while they offer numerous hiding places for the robber bands. During the months of January and

February of the current year active operations against the ladrones were conducted by the constabulary under Captain Hayson, and volunteers under Governor Trias. Immunity from punishment had been promised to some of the ladrones. Many surrendered under this promise, bringing in a considerable number of guns and revolvers, and a good many ladrones and arms were captured.

At a meeting of presidentes, held about the close of February, the province was declared to be in a pacified condition. When the volunteers had been disbanded and active operations partially suspended the ladrones again appeared in force and became active and troublesome. Several towns were robbed. Animals and other property were stolen and taken away. Early in September the number of scouts and constabulary in the province was increased. An office of secret information was established at Imus, and has proven very valuable. The first assistant chief of constabulary, Colonel Scott, has divided the province into subdistricts, each under control of an officer of constabulary or scouts. This has enabled a far more thorough system of patrol than was possible formerly. The effect has been to distinctly improve conditions. The ladrones are now mostly disbanded and hidden away in the jungles. A good many of them have been caught and are awaiting trial. Since September 1 about a dozen guns have been captured or surrendered. During the past six weeks only a few small bands have been seen, and scarcely any thefts or depredations have been committed.

As long as their leaders remain uncaptured, however, no permanent peace can be expected. New bands under the old leaders will spring up whenever opportunity offers. The disposition of the people is an important factor in the work of suppression. Of late there has been some noticeable improvement in this respect. Some of the presidents, with their municipal police, have actively cooperated in the work, but in the barrios and sitios in the mountains and jungles, where the ladrones have their hiding places, it is not yet possible to get the people to give the information necessary to ferret out the robbers. Some of these paisanos are influenced through fear of the robbers, others through friendship for members of the gangs that live in the vicinity. In my judgment, the course now pursued is that most likely to bring good results. Activity, hard work, and persistence ought eventually to clean up the pest of ladronism and convince the people that the government does not intend to permit this plague to continue.

#### MISCELLANEOUS.

The collections on account of the Rizal monument fund have been small, due to a scarcity of money, and not to lack of disposition of the people to contribute toward this object.

The school attendance has been large; total attendance at public schools of towns and barrios, 3,214; attendance at high school, 166; amount turned over to school fund, \$7,000 gold.

A schedule showing municipal officers is attached, marked "C," and a similar schedule showing officers and employees is attached, marked "D."

On June 21, fourteen prisoners escaped from the provincial jail by bending the iron bars placed across one of the windows. On August 24, the provincial jail, by direction of the civil governor, was placed under administration of the senior inspector of constabulary of the province. On the night of October 2, eight prisoners escaped from the jail, through negligence of the guard placed over them. Some of these prisoners who escaped on these two occasions have been recaptured. There are now in confinement awaiting trial 51 prisoners.

The cost of feeding these prisoners is considerable. Judge Villamor has promised to hold a special term of court within a short time and he hopes to entirely clean up the docket at this extra session.

The shortage of carabaos has materially interfered with agriculture in the province. It will require a long time for natural increase to supply the demand for work animals.

The provincial board has submitted an estimate for 300 carabaos, to be sold under the law providing for their sale at auction. Many more than this will eventually be required to supply the demand, but the board was governed in its first estimate by the knowledge that the demand for these animals would be great throughout the Archipelago.

A provincial pound is being established at Imus, under requirements of the recent act. There are a number of animals to be disposed of under this law—probably more than one hundred—and the number is being constantly increased by addition of animals recovered through operations of constabulary or scouts.

Very respectfully,

The honorable EXECUTIVE SECRETARY,  
Manila, P. I.

D. C. SHANKS,  
Governor, Province of Cavite.

A.

LOCUSTS.

At a special meeting of the provincial board of Cavite, P. I., held at Cavite, P. I., on the 7th day of August, 1903, the provincial governor read Act 817 of the Philippine Commission and the telegram of the honorable civil governor, regarding the destruction of the locusts in the province, to Messrs. D. Mariano Trias, Severino de las Alas, and Felix Cuenca, members of the provincial board appointed by the honorable Civil Commission for this object, and after considering the measures that should be adopted for the destruction of said insects, resolved as follows:

“First. The towns of the province are hereby divided into districts as follows:

District of Señor Trias.	District of Señor S. de Alas.	District of Señor Cuenca.
San Francisco de Malabon .....	Indan .....	Bacoor.
Santa Cruz de Malabon .....	Amadeo .....	Imus.
Rosario .....	Alfonso .....	Perez Dasmariñas.
Noveleta .....	Bailen .....	Cavite-Viejo.
Ternate .....	Mendez Nufiez .....	Carmona.
Naic .....	Magallanes .....	Silang.
	Maragondon .....	

“Second. The members of the locust board will have general supervision over their districts and will see that the requirements of the law referring to the subject are enforced.

“Third. Upon appearance of loctones, or locusts, in any barrio, it shall be the duty of the teniente of the same barrio and also the councilman to inform the municipal president, and he will at once call out all of the able-bodied inhabitants of that barrio and as many adjacent barrios as may be necessary for the destruction of the locusts. Any inhabitant who having received such notice fails to comply shall be punished, after due investigation by the municipal president, with a fine not greater than \$10 gold, or imprisonment not exceeding ten days, or both; provided, that until further notice no citizen shall be required to perform without pay more than six days’ labor in this connection; and provided further, that in cases of necessity the municipal president may be authorized to issue 3 chupas of rice per day to each laborer from the rice provided for this purpose, keeping a list of names, residence, and date of such issue.

“Any failure of a municipal officer to comply with the requirements of this law, or failure to help the municipal president, shall also be punished with the same penalties as above expressed.”

B.

MUNICIPAL POLICE FORCE, CAVITE PROVINCE.

*Resolution of the provincial board on the 24th day of June, 1903.*—The board, after consultation with the chief of constabulary of this province, and in accordance with Act No. 781, resolved to fix the number of police for the towns as below and with the following salaries:

Town.	Police and rifles.	Salary.	Town.	Police and rifles.	Salary.
Alfonso .....	20	\$15.00	Maragondon .....	25	\$18.00
Amadeo .....	20	15.00	Mendez-Nufiez .....	20	15.00
Bacoor .....	25	20.00	Noveleta .....	15	18.00
Bailen .....	20	15.00	Naic .....	20	20.00
Caridad .....	10	20.00	Rosario .....	20	18.00
Carmona .....	20	15.00	San Francisco de Malabon .....	25	20.00
Cavite .....	26	.....	San Roque .....	20	20.00
Cavite-Viejo .....	20	20.00	Santa Cruz de Malabon .....	20	20.00
Perez Dasmariñas .....	20	15.00	Silang .....	25	20.00
Imus .....	30	20.00	Ternate .....	20	18.00
Indang .....	30	16.00	Isla de Corregidor .....	8	20.00
Magallanes .....	20	15.00			

## C.

OFFICE OF THE SECRETARY, PROVINCE OF CAVITE,  
Cavite, P. I., October 14, 1903.

*List of the present municipal officers of the 23 pueblos of the province of Cavite, according to records existing at this date in the office of the provincial secretary of Cavite, P. I.*

## Municipality of Amadeo:

Justice of the peace, Santiago Bayot.

Auxiliary justice of the peace, Primo Villanueva.

Presidente, Feliciano Mediran.

Vice-presidente, Antonio Ramos.

Secretary, Melecio Crisostomo.

Treasurer, Geronimo Bayot.

Councilors (term expires January 1, 1903)—

1. Doroteo Bayot.

2. Macario Baybay.

3. Calixto Bedan.

4. Abdon Ambat.

Councilors (term expires January 1, 1904)—

1. Prudencio Batino.

2. Guillermo Hicaro.

3. Maximiano Villanueva.

4. Sotero Bayot.

## Municipality of Alfonso:

Justice of the peace, Lorenzo Angeles.

Auxiliary justice of the peace, Severino Rosanes.

Presidente, Miguel Pereda.

Vice-presidente, Andrés Herrera.

Secretary, Narciso Pereda.

Treasurer, Gregorio Aviñante.

Councilors (term expires January 1, 1903)—

1. Francisco Aviñante.

2. Hermenegildo Cron.

3. Amado Pegi.

4. Gabriel Mogica.

Councilors (term expires January 1, 1904)—

1. Nazario Liuanag.

2. Agapito Esguerra.

3. Maximino Giron.

4. Francisco Rolle.

## Municipality of Bacoar:

Justice of the peace, Segundo Francisco.

Auxiliary justice of the peace, Romualdo Nazarino.

Presidente, Gregorio de Guia.

Vice-presidente, Elías Guinto.

Secretary, Andrés Costañeda.

Treasurer, Alipo Locao.

Councilors (term expires January 1, 1903)—

1. Paulino Narvaez.

2. Catalino Pagtachan.

3. Pedro Cabiach.

4. Bernardino Miranda.

5. Doroteo de Ocampo.

Councilors (term expires January 1, 1904)—

1. Marcelo Cuenca.

2. Pio Javier.

3. Romualdo Sarino.

4. Gil Ignacio.

5. Dionisio Mascardo.

## Municipality of Bailen:

Justice of peace, Bartolomé Angat.

Auxiliary justice of peace, Aquilino Gloriani.

Presidente, Cirilo Gloriani.

Vice-presidente, Santiago Velustrino.

**Municipality of Bailen—Continued.**

Secretary, Domingo Pofiano.

Treasurer, Espiridion Gloriano

Councilors (term expires January 1, 1903)—

1. Francisco Climaco.
2. Daniel Bautista.
3. Regino Javier.
4. Tito Diaz.

Councilors (term expires January 1, 1904)—

1. Bonifacio Glorioso.
2. Francisco Andaya.
3. Gregorio Malimban.
4. Eusebio Dingco.

**Municipality of Cavite:**

Justice of peace, José A. Reyes.

Auxiliary justice of peace, José Rivera.

Presidente, Catalino Nicolas.

Vice-presidente, Vicente Zalazar.

Secretary, Pedro Lipana.

Treasurer, Nicasio Desiderio.

Councilors (term expires January 1, 1903)—

1. José Rivera.
2. Felipe Cabezas.
3. Coferino Lorenzana.
4. Juan Marcias.

Councilors (term expires January 1, 1904)—

1. Manuel Arco.
2. Julian Felipe.
3. Ramon Maceo.
4. Juan N. Santos.

**Municipality of Cavite-Viejo:**

Justice of the peace, Claudio Tria Tirona.

Auxiliary justice of the peace, Pastor Santi.

Presidente, Benigno Santi.

Vice-presidente, Tomás Vales.

Secretary, Estanislao Reyes.

Treasurer, Julian Legaspi.

Councilors (term expires January 1, 1903)—

1. Pedro Villaneuva.
2. Canuto Samaniego.
3. Victorio Torres.
4. Esteban Camandang.

Councilors (term expires January 1, 1904)—

1. Ciriaco Ronquillo.
2. Agustin Rieta.
3. Pedro Arigo.
4. Eusebio de Castro.

**Municipality of Carmona:**

Justice of the peace, Damian Ermitaño.

Auxiliary justice of peace, Perfecto Mapanco.

Presidente, Juan Papa.

Vice-presidente, Bonifacio Tenedero.

Secretary, Teodoro Quiamson.

Treasurer, Ludovico Realon.

Councilors (term expires January 1, 1903)—

1. Ruperto Loyola.
2. Demetrio Tenedero.
3. Segundo Anulat.
4. Ignacio Mapanoo.

Councilors (term expires January 1, 1904)—

1. Perfecto Mapanco.
2. Evaristo Diaz.
3. Santiago Medina.
4. Pedro Espiritu.

**Municipality of Corregidor:**

Justice of the peace, Isabelo Aguilar.

Auxiliary justice of peace, Mariano Aguilar.

Presidente, Simcon de los Reyes.

**Municipality of Corregidor—Continued.**

Vice-presidente, Teodorico Javier.

Secretary, Juan Medina.

Treasurer, Gabriel Camilo.

Councilors (term expires January 1, 1903)—

1. Gervacio Garrido.
2. Fernando de la Cruz.
3. Nicasio Crisóstomo.
4. Isabelo Garcia.

Councilors (term expires January 1, 1904)—

1. Vicente Magtira.
2. Gonzalo Saenz.
3. Ciriaco Alejo.
4. Pedro Patiñas.

**Municipality of Imus:**

Justice of the peace, José Eliseo.

Auxiliary justice of peace, Inocencio E. Santos.

Presidente, Juan Fajardo.

Vice-presidente, Cecilio Camantiguo.

Secretary, Maximo Abad.

Treasurer, Epifanio Paredes.

Councilors (term expires January 1, 1903)—

1. Felipe Reyes.
2. Candido Sayac.
3. Mariano Dominguez.
4. José Taglo.
5. Doroteo Paredes.

Councilors (term expires January 1, 1904)—

1. Luis Virata.
2. Felipe Topacio.
3. Pastor Monzon.
4. Ignacio Bella.
5. Donato Virata.

**Municipality of Indan:**

Justice of the peace, José Pio de Roda.

Auxiliary justice of the peace, Numeriano Zalazar.

Presidente, Eugenio Zalazar.

Vicepresidente, Francisco Pio de Roda.

Secretary, Fernando Diacno.

Treasurer, Pio Costa.

Councilors (term expires January 1, 1903)—

1. Apolonio Cruzate.
2. Vicente Jociel.
3. José Coronel.
4. Andrés Vida.
5. José Moxica.

Councilors (term expires January 1, 1904)—

1. Juan Moxica.
2. Corvacio del Rosario.
3. Marcelo Basa.
4. Benito Ocampo.
5. Gregorio Moxica.

**Municipality of La Caridad:**

Justice of the peace, Angel de Leon.

Auxiliary justice of the peace, Gregorio Medina.

Presidente, José R. Bautista.

Vicepresidente, Felipe Custodio.

Secretary, Catalino R. Bautista.

Treasurer, Antonio Rivero.

Councilors (term expires January 1, 1903)—

1. Teodorico Gomez.
2. Marcelino Reyes.
3. Rafael Bautista.
4. Juan Mendoza.

Councilors (term expires January 1, 1904)—

1. Catalino Santos.
2. Augustín de la Cruz.
3. José Simplicio.
4. Mateo Santos.

**Municipality of Mendez Nuñez:**

Justice of the peace, Ernesto Ruiz.

Auxiliary justice of the peace, Delfin Aure.

Presidente, Marcelino Aure.

Vicepresidente, Delfin Aure.

Secretary, Balbino Crucillo.

Treasurer, Vanenuto Ruiz.

Councilors (term expires January 1, 1903)—

1. Esteban Aure.
2. Ambrosio Noceda.
3. Roman Rollan.
4. Dámaso Panganiban.

Councilors (term expires January 1, 1904)—

1. Bonifacio Aure.
2. Andrés Perey.
3. Modesto Dimapili.
4. Bernardo Olivo.

**Municipality of Maragondon:**

Justice of the peace, Vicente Riego.

Auxiliary justice of the peace, Manuel Angeles.

Presidente, Joaquin Angeles.

Vicepresidente, Gregorio Francisco.

Secretary, Vicente Cuajungoo.

Treasurer, Exequiel Gimenez.

Councilors (term expires January 1, 1903)—

1. Bibiano Angeles.
2. Filomeno M. Angeles.
3. Augustin Rillo.
4. Eugenio Pareja.

Councilors (term expires January 1, 1904)—

1. José Quisquis.
2. Ananias Mendonez.
3. Isabelo Angeles.
4. Benigno Malimbang.

**Municipality of Magallanes:**

Justice of the peace, Francisco Espinoli.

Auxiliary justice of the peace, Marcelo Villafranca.

Presidente, Juan Bello.

Vicepresidente, Teodoro Moxica.

Secretary, Patronilo Gutierrez.

Treasurer, Agapito Espineli.

Councilors (term expires January 1, 1903)—

1. Anastacio Dionis.
2. Pastor Balugan.
3. Eusebio Panganiban.
4. Quirico Ogot.

Councilors (term expires January 1, 1904)—

1. Lanbero Ocsit.
2. Antonio Espineli.
3. Canon Bello.
4. Clodoaldo Bello.

**Municipality of Naic:**

Justice of the peace, Nicolas Santos.

Auxiliary justice of the peace, Telesforo Oles.

Presidente, Pedro Valenzuela.

Vicepresidente, Pedro Papa.

Secretary, Nicolas Guevara.

Treasurer, Cristobal Bustamante.

Councilors (term expires January 1, 1903)—

1. Potenciano Papa.
2. Simson Arenas.
3. Martin Astuart.
4. Andrés Gonzales.

Councilors (term expires January 1, 1904)—

1. Leoncio Velazco.
2. Marcial Vazquez.

**Municipality of Naic—Continued.**

Councilors (term expires January 1, 1904)—Continued.

3. Cipriano Benedicto.

Justice of the peace: Andrés Diaz.

Auxiliary justice of the peace, Macario Olaz.

Presidente, Pascual Alvarez.

Vicepresidente, Nicolas Ricafrente.

Secretary, Aquilino Cajonera.

Treasurer, Tranquilino Angquico.

Councilors (term expires January 1, 1903)—

1. Lorenzo Cafuir.

2. Florentino Alvarez.

3. Gabino Mediran.

4. Epifanio Agrava.

Councilors (term expires January 1, 1904)—

1. Benito Ignacio.

2. Inocencio Salud.

3. Adriano Olaz.

4. Celedonio Santa Maria.

**Municipality of Perez Dasmariñas:**

Justice of the peace, Felipe Tirona.

Auxiliary justice of the peace, Francisco Cantinbujan.

Presidente, Plácido Campos.

Vicepresidente, Domingo Mallari.

Secretary, Esteban Quiogue.

Treasurer, Francisco Barazaga.

Councilors (term expires January 1, 1903)—

1. Simon Alcantara.

2. Francisco Cantinbujan.

3. Dalmacio Ramirez.

4. Rufino Antonio.

Councilors (term expires January 1, 1904)—

1. Ciriaco Aledia.

2. Marcelo Montemayor.

3. Felipe Tirona.

4. Doroteo Mangubat.

**Municipality of Rosario:**

Justice of the peace, Felipe Abueg.

Auxiliary justice of the peace, Felix Gonzales.

Presidente municipal, Catalino Abueg.

Vicepresidente, Severino Abueg.

Secretary, Ramon Prodigalidad.

Treasurer, Fernando Ricafrente.

Councilors (term expires January 1, 1903)—

1. Tomas Mata.

2. Dionisio Carrillo.

3. Andrés Gionco.

4. Regino Garcia.

Councilors (term expires January 1, 1904)—

1. Esteban Gonzalez.

2. Eleutorio Baza.

3. Florentino Encarnación.

4. Esteban de la Cruz.

**Municipality of San Francisco de Malabon:**

Justice of the peace, Domingo Colmenar.

Auxiliary justice of the peace, Jacinto Genuino.

Presidente, Luis Ferrer.

Vice-presidente, Nicolas Portilla.

Secretary, Celestino Aragon.

Treasurer, Vicente Viniegra.

Councilors (term expires January 1, 1903)—

1. Modesto San Augustin.

2. Antonio Brosas.

3. Quiterio Olimpo.

4. Estanislao Arnaldo.

**Municipality of San Francisco de Malabon—Continued.**

Councilors (term expires January 1, 1903)—

1. Modesto Morente.
2. Gil Potente.
3. Manuel Sison.
4. Benigno Sarayba.

**Municipality of San Roque:**

Justice of the peace, Nicolas Nava.

Auxiliary justice of the peace, Mariano de Vega.

Presidente, Lucio Torres.

Vice-presidente, Basilio San José.

Secretary, Cipriano Arona.

Treasurer, Ladislao Afable José.

Councilors (term expires January 1, 1903)—

1. Teodoro Plata.
2. Simon Litongjua.
3. Gervasio Santos.
4. Juan Martinez.

Councilors (term expires January 1, 1904)—

1. Quiterio Advincula.
2. Macario Ballesteros Santos.
3. Julian Jimenez.
4. Nicolas Aguilar.

**Municipality of Silan:**

Justice of the peace, José Quiamson.

Auxiliary justice of the peace, Epifanio Montoja.

Presidente, Isaias Benjamin.

Vice-presidente, Engracio Zalazar.

Secretary, Nicolas Madlansacay.

Treasurer, Ignacio Ambalada.

Councilors (term expires January 1, 1903)—

1. Francisco Reyes.
2. Severino Gonzales.
3. Bonifacio Fernandez.
4. Marcelo Benitez.

Councilors (term expires January 1, 1904)—

1. José Quiamson.
2. Hipólito Giron.
3. Gregorio Ermitaño.
4. Francisco Girón.

**Municipality of Santa Cruz de Malabon:**

Justice of the peace, Proceso Pulido.

Auxiliary justice of the peace, Adriano Soriano.

Presidente, José del Rosario.

Vice-presidente, Ciriaco Montano.

Secretary, Eduardo Imson.

Treasurer, Juan Dones.

Councilors (term expires January 1, 1903)—

1. Dámaso Fojas.
2. Macario Solis.
3. Aquilino Arenal.
4. Valeriano Nocon.

Councilors (term expires January 1, 1904)—

1. Pio Fojas.
2. Benigno Pulido.
3. Prudencio Cabujat.
4. Raimundo Cenizal.

**Municipality of Ternate:**

Justice of the peace, Anastasio Ramos.

Auxiliary justice of the peace, Ambrosio Nigosa.

Presidente, Agaton Zapanta.

Vice-presidente, Bernardo Ramos.

Secretary, Valentin Nigosa.

Treasurer, Valentin Clano.

Councilors (term expires January 1, 1903)—

1. Hermenegildo Dinglas.
2. Nicolas Islabon.

## Municipality of Ternate—Continued.

Councilors (term expires January 1, 1903)—Continued.

3. Nicomedes Ibañez.

4. Eustaquio Velazco.

Councilors (term expires January 1, 1904)—

1. Lucio Ramos.

2. Marcelino Zapata.

3. Pelagio Ninon.

4. Emeterio Reyes.

CIRCULAR No. 1180.]

OFFICE OF THE GOVERNOR, PROVINCE OF CAVITE,  
Cavite, P. I., August 8, 1903.

THE MUNICIPAL PRESIDENTE OF ———.

SIR: The honorable civil governor has again called attention to the requirements of Law No. 517, a copy of which is inclosed in Spanish and also in Tagalo. After acquainting yourself with the provisions of this law you are directed to at once call a meeting of the people of your municipality and explain to them its meaning. It will be the duty of yourself personally and also of your councilmen to direct the people of your municipality in such a way that every family shall have some crop or other adequate visible means of subsistence.

The prompt fulfillment of the requirements of this order is one of the greatest importance. Each president will make a report within one week from receipt of this stating action taken, and a similar report will be rendered thereafter not later than the 15th of each month.

It will be the duty of the provincial governor during his trips through the province to personally investigate the progress made, and to take action in any case where the requirements of this law have been neglected.

Dr. T. H. Stephens, dentist at Cavite, offers to give rubber plants and seeds to any one wishing to grow them. He is about to plant some on the land of Señor Trias, near Malabon. If any of the people desire to grow these trees, presidentes are requested to report that fact in order that the request may be referred to Doctor Stephens.

I am, very respectfully,

D. C. SHANKS,  
*Governor Province of Cavite.*

---

MEMORANDUM.

The attached report was not received until August 14, 1903, and the complaints therein against constabulary and other officials are undergoing a thorough investigation.

A. W. FERGUSON, *Executive Secretary.*

---

ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF CEBU FOR THE PERIOD JANUARY 1 TO DECEMBER 31, 1902.

[Translation.]

POLITICAL ASPECT AND PUBLIC ORDER.

Since the day that the revolutionary forces in this province surrendered their arms, by virtue of a pact entered into between them and General Hughes, when the last of guerillas, under the command of Señor Melquiades Lasala, gave up their arms at Danao, December 3, 1901, peace and tranquillity have been completely restored throughout this island. This is due to the fact that neither dissensions nor any intents which in the future might have constituted a menace to public tranquillity and order existed in the organized masses of the revolutionists to cause any portion of them to remain in the field, as the discipline to which they had been amenable was adequate, under the circumstances, and had succeeded in inculcating them with a spirit of amalgamation, which effectually unified all of their ideals.

The revolution in Cebu voluntarily surrendered on its own initiative upon being convinced of the straightforward purposes and good faith of the American Government with relation to the Filipino people, which had been demonstrated in the course of political events since the beginning of civil rule to be none other than a steady evolution toward self-government, culminating ultimately in the ideal espoused by them.

The frank and open policy of the sovereign Nation extirpated any misgivings that might have remained in the breasts of those constituting the revolutionary element, who, without reservation of any sort, and with equal frankness and sincerity, responded to that policy by surrendering their arms and willingly acknowledging that sovereignty in a spirit of the most absolute trust.

Unfortunately, certain persons who by the nature of the offices they held would be expected to be the first to labor for the stability of peace recently restored have not taken this view of the matter, or, either through pusillanimity or to work out their own ends, have not wished to take it, and instead of tightening the bonds of fellowship and harmony by reciprocating the sincerity and confidence on the part of those who voluntarily surrendered their arms, and whom it was their duty to protect from any attempt upon their rights or personal security, in their dealings with them did just the reverse. It appeared that the advent of peace, an event as happy as it was unexpected, was counter to their own interests, or rather that it had somewhat upset their nervous system, for their heated imaginations seemed to be peopled with fantastic silhouettes of insurgents, and it even at times must have appeared to them that their own shadows had "insurrected" precisely at a period, too, when the insurrection was dead. They imagined hundreds of guns hidden in the bowels of the Cebuan Mountains, although the quondam revolutionary forces had scarcely 200 in all. Under the influence of this aberration of judgment many abuses were committed under the most flimsy suspicion, either with relation to the hiding of arms or of disloyalty to the constituted government. Such acts, as blameworthy as they were impolitic, perpetrated on no grounds other than those concocted by illegitimate desires, produced,

as a natural consequence, alarm and uneasiness in the minds of all people, introducing intranquillity and fear in the family circle, so that many unable to find refuge in the hills because of the injury such a course would bring to their property interests remained at home in apparent resignation, but secretly nursing in their hearts bitter resentment for the injuries which they had unjustly received.

The stability of a government is founded upon the confidence, satisfaction, and a feeling of sympathy for it on the part of the people, and this foundation is more or less solid in accordance with the degree of reciprocal confidence between the government and the governed. Thus we see that from the very moment the people are provoked to mistrust the government and from the moment that the tranquillity of their homes is disturbed and their dignity offended, they are inwardly vexed and thenceforth must needs hide beneath the mask of hypocrisy that hatred which time increases until it bursts forth under the influence of desperation; when this point is reached the state of insecurity can only be compared to that of a house built on the top of a volcano.

This is a matter that should be borne in mind by all those who by virtue of their office must take a hand in the government of a country in which it is desired to establish peace, order and progress.

The facts upon which the above comments are based follow hereunder. Only those on record in this office are related, no mention being made of others coming from unofficial sources.

When I took charge of the government of this province the corps of Constabulary Police were quartered in the provincial jail, of which they had control. Upon my first visit of inspection I found that two brothers named Mateo and Dionicio Rosaura were locked up in separate dark cells or bartolinas (very small rooms lacking all ventilation) in the said prison, and that they were not allowed to communicate with any one by order of the senior of constabulary in the province. These men verbally made their complaints to me stating that they had been undergoing that process of torment for six days already, and that the purpose was to extort a confession from them as to the hiding place of a revolver. This happened on March 14, 1902. I brought this matter to the attention of the court of first instance, which ordered the removal of the brothers from the dark cells to the rooms occupied by the other prisoners, and prohibited their being kept "incomunicado."

On April 25, 1902, Victor Cugay, a resident of Liloan, filed a petition with this government asking that the senior inspector of constabulary be made to return to the petitioner a bay horse captured by some of his men from a warehouse belonging to Mr. Custodio Mendosa, where it was feeding, on the pretext that the said horse was the property of an insurgent officer. The animal, it was stated, had been in the possession of the senior inspector for three months, and in spite of repeated demands he had refused to return it. The petition further stated that the said inspector had more recently required the petitioner to show his bill of sale. This he could not do, as he had sold the animal to Mr. Custodio Mendosa some time ago, and the only interest he had in his recovery grew out of the fact that Mendosa had demanded the return of his money.

A few days after the receipt of the petition Victor Cugay personally appeared before the provincial governor, accompanied by Mr. Custodio Mendosa and presented the bill of sale of said horse together with a report of the president of Liloan certifying that the animal belonged to the claimant.

All of these papers were sent to the senior inspector together with an official communication recommending the return of the horse, the parties interested being the bearers of both in view of the fact that they possessed all legal and necessary proof justifying ownership. But the former, far from attending to the right on their side, only considered his own interests, and made a proposition to the owners to buy the horse for 50 pesos Mexican, which was one-half of its real value. This proposition was made in the presence of the provincial secretary and in view of the fact that it was not accepted, the inspector made some frivolous excuse for not returning the horse, and coolly took it upon himself to confiscate the animal. One word more: Days before the claim in question was presented, in a conversation with Judge Carlock and the undersigned the said inspector, reference having been made to the horse, stated that he had returned it to its owner, and as this statement was afterwards proven false it is clear that he acted in bad faith in this matter.

On April 12, 1902, the house of Pablo Sosobrado in the pueblo of Dumanjug was twice raided by the constabulary accompanied by enlisted men of the native scouts, named Zoilo Bailon and Lauro Casino. The house was entered for the first time between 9 and 10 o'clock at night and a careful search was made under the pretense of looking for arms belonging to Nicolas Godinez. Unable to find any they seized and carried off several articles of some value belonging to the said Godinez. The second time the thing happened, at about 2 or 3 o'clock in the morning, when the

same parties again entered the house, while the inspector in command ordered the son of the owner, named Andres Sosobrado, and a councilor in the municipality, to come down, which he did and was immediately set upon and cruelly mistreated by sergeant of scouts, Zoilo Bailon. A few minutes after this happened the party went away taking a horse, saddled and bridled, with them.

The same morning and about the same hour the houses of Gervasio Alpuerto and Pio Godinez were also entered and searched. The first of the two named was the victim of an assault at the moment he opened the door of his house for having delayed in doing so. As for Pio Godinez he was taken to the constabulary barracks and afterwards locked up in the municipal jail by order of the inspector.

In the pueblo of Moalboal the house of Norberta Racho was also searched by the said constabulary who carried away a lot of valuable jewelry belonging to Godinez that was deposited with her, according to the story told by the woman.

With respect to these events, the president of Dumanjug, under date of August 4, 1902, sent copies of two resolutions passed by the council of that municipality, which were as follows:

[Resolution No. 20.]

DUMANJUG, *May 9, 1902.*

"At an extra session called by the president at the request of Councilor Andres Sosobrado, said gentleman, after the session was called to order, took the floor and spoke as follows:

"On April 11 of this year and at about 2 o'clock in the morning, I was the victim of an assault. A constabulary inspector said to be of the name of Ross, accompanied by Sergt. Pascual Zafra of the same organization, two Americans and Zoilo Bailon, sergeant of the native scouts garrisoned in the town, came up to my father's house where I lived and asked me for a certain sabre belonging to Nicolas Godines which they said I was keeping; as this was false I so stated to them. The inspector, not being satisfied with my denial, ordered me to come down with the said Zoilo Bailon while he remained behind searching the house. I suspected that they were merely going to imprison me, but when I came down from the house they put a great many questions which were strange to me, and every time I answered, though I spoke the truth, I was struck on the chest, stomach, and back, for not acknowledging the act which had falsely been imputed to me. These blows were continued so long as I continued to deny the imputations against me. Being tortured in this manner, I was obliged to cry out loudly so that my mother and especially my little sisters became apprised of what was taking place in spite of the obscurity of the night and broke into tears, kneeling before the constabulary inspector and crying out for pity. Upon this the inspector came down from the house and toward Zoilo and appeared to reprimand him, and yet this to me seemed but make believe, for as soon as he turned his back and entered the house Zoilo continued his questioning and torture, until after more than an hour of this sort of treatment the entire party tired of it and left our house.

"The council, after having heard the statement of Mr. Andrés, in consideration of the decorum and dignity of the office by him held resolved immediately to send a communication to the commanding officer of the garrison, petitioning that if it were in his power he permit Zoilo to present himself at once before the council and give his testimony in relation to the case, and that such testimony taken should be made a part of the minutes of this session, a copy of which was to be sent to the provincial governor.

"Until nearly 12 o'clock that day no answer was received from the commanding officer, nor did the party summoned appear. For this reason the session was adjourned and these minutes were entered.

"Signed by the president and attested by the secretary."

"DUMANJUG, *July 29, 1902.*

"At a meeting of the municipal council held this day, among others, the following resolution was passed:

"First. That the provincial governor of this island be apprised of the protest formulated before the council by the vice-president of the municipality, Mr. Fabio Beltran, against the inexplicable act which constituted the attack upon his dwelling by an American soldier of the company detached in this locality named Baker, on the night of the 26th instant, at about 10 o'clock, when, as is known to everybody, several shots were heard at short intervals lasting for about a quarter of an hour, more or less, and producing an alarm among the peaceful citizens which was felt even by the company of American soldiers, who had retired a few moments before, and who, upon hearing the firing, quickly distributed themselves at the street corners of the

town as if expecting an enemy. It was soon discovered, however, that the cause of the fear was none other than the said Baker, who was drunk at the time and had been the cause of the alarm by firing several shots from his rifle. Mr. Beltran states that three of the bullets passed through his house, breaking a lantern and a lamp and also grazing the chin of a boy named Antonio Resurrección; that the said American had been calling in a loud voice outside of the house for some time prior to the shooting, demanding an entrance, and that upon it being denied to him because of his apparently hostile attitude he became infuriated and fired upon the house.

"Second. That the statements of Mr. Andres Sosobrado recorded in the proceedings of the session of the council held on May 9 of this year he also communicated to the provincial governor, notwithstanding the fact that the testimony of Zoilo Bailon has not yet been heard because of his failure to appear as expected in the 'tribunal' the day that he was summoned."

Gregorio Padilla, a resident of this city living in the suburbs of San Nicolas, was driving one afternoon in his carriage, and in passing through a certain street saw that Luis Garcia, a corporal of the constabulary, was standing just in the middle of the road, for which reason he shouted to him several times in order to avoid any injury to him, as the horse had become unmanageable; but Garcia remained firm, and, luckily, Padilla was able to pass him without doing any damage.

That night, while Padilla was attending the theater, he was approached by a member of the constabulary and requested to come out and see Garcia, who was waiting for him. He immediately obeyed, and as soon as he saw Garcia, Walter Ray, who accompanied the latter, seized him and snapped a pair of handcuffs on his wrists, taking him immediately to the constabulary barracks, where he remained a prisoner until the morning of the following day, when he was released.

The president of Carcar sent a communication, dated May 5, 1902, to this government, stating that about half past 8 in the morning of the same day a sergeant of the Signal Corps named Collins entered his dwelling and in a loud and angry voice demanded to know where the presidente was. Upon being answered that he was the presidente and awaited his orders, the sergeant started in to reprehend him, insulting him, and calling him a bad presidente and in a rude manner, while kicking the floor in his anger, he said that he wanted to know immediately where the people were who were to work putting up the telegraph poles. To this the presidente replied that he knew nothing whatever about the matter, and, as the sergeant continued vociferating, he was told to apply to the town hall and that he (the presidente) would follow him soon and have the matter properly arranged. Thereupon the sergeant left grumbling.

The presidente of Damanjug, under date of March 20, 1902, reported to this government that a certain Damaso Icong and his wife, residents of that municipality, had appeared before him and asked for his protection for their daughter, named Juliana, a minor, whose presence at home was desired. It appears that this girl had been seduced by Eulogio Emia, an enlisted man belonging to the Filipino Scouts, and that she had obstinately made up her mind to follow him to another place where he had been ordered to go. As a consequence, the presidente sent two municipal police to get the girl and bring her to his house, but while they were taking her and had nearly reached the office of the presidente 8 men belonging to the constabulary captured the girl at the point of their rifles, and the municipal police were unable, because of their inferiority in numbers, to prevent them from doing so.

The last two events above related were subjected to an investigation for the purpose of fixing the responsibility where it belonged and of applying the law, but the procedure started by the military authorities did not result satisfactorily to the persons interested and for that reason they filed their protests with this government.

The municipal president of Talisay reported the death of a person named Matias Baguio, as the result of gunshot wounds, during the month of June, 1902. An account of this case, taken from the records, follows hereunder:

"Matias Baguio died on the 4th of June, 1902, at the age of 20. He was a single man and a native and resident of this town, being the natural son of Damiana Baguio, resident in the barrio of Tanque, and was by occupation a day laborer. Apparently death was caused as the result of a gunshot wound. He was taken at about half past 11 o'clock at night to the municipal building by some residents of the town acting under the orders of Sergeant of Police Alejandro Rosales, and was then in a serious condition. Upon being asked by the municipal secretary why he was in so grave a condition the wounded man replied that while he was by himself sitting in a boat at anchor, his companions having left him to get provisions, he was called by one of the constabulary who was standing on the beach, and upon disembarking the constabulary addressed these words to him: 'You are an insurgent,' to which he replied, 'Sir, I am no insurgent.' Another member of the constabulary standing by then ordered him to run, and as he was loath to do so he was shoved, and

had scarcely started to run, not having gone barely 20 feet, when he was fired upon and shot, the bullet going through his body from the hips to the navel. Five minutes after the taking of this declaration the wounded man expired.

"Testimony: Eusebio Cana, a member of the municipal police, stated that when he heard the shot he ran in the direction of the firing and encountered eight constabulary, one of whom told him that they were under the command of an American named Ross, who was with them. They asked the policeman for the house of the presidente, and as it was quite a distance away they wanted to know where the vice-president lived. The information having been given, the said Eusebio accompanied the constabulary there, and upon their arrival the vice-president was asked by the commanding officer of the party if the president had published an order warning the citizens not to run when they met the constabulary at night, and that they should always carry a light with them on the road when out after nightfall. The vice-president answered that such an order had been issued and published some days ago. Having received this answer the constabulary took leave and went off toward Cebu."

On June 23, 1902, the municipal president of Carcar reported to this government that Inspector of Constabulary Hunt had appeared before him and stated that while coming from the pueblo of Barili he had lost his way, and at a place between Barili and Carcar he had met a native in the field who apparently intended to assassinate and rob him, as he had a bolo in his hand, and that for this reason he was obliged to fire several shots from his revolver at him, and that he had laid him out. The president, upon hearing this, immediately repaired to the scene of the encounter where he found the man stretched out on the ground, face downward, showing some signs of life, though wounded in the calf of the right leg and on the hip. When the wounded man was able to speak he declared that while he was working in the cornfield he was approached by an American on horseback, who, without giving him time to think, fired several shots at him, and that immediately afterwards he was left insensible and had scarcely felt his wounds.

The president of Tabogon, in an official communication dated May 11, reported to this government that a resident of that municipality named Mariano Abayon, who was a prisoner in the constabulary barracks, had been killed by a shot fired by one of the constabulary on guard. In view of a recommendation of this government to the said president to hold an investigation relative to the motives leading up to this event, the justice of the peace of that municipality held a preliminary examination, which showed from the testimony given by the wife of the deceased that her husband had been ordered under arrest by Inspector of Constabulary Mr. Javier for having issued to his laborers, whose names appeared in the license for the industrial tax on the manufacture of tuba, certain papers or certificates, upon complaint of Modesto Gahi, and that on the following day she had been told that he had been shot on the night of his capture. The inspector explained what had occurred, saying that the prisoner had attempted to escape, and for that reason the sentries had been compelled to fire.

The municipal president, as well as the justice of the peace, further explained to this government that the inspector of constabulary overstepped his powers with relation to the municipality and to the court, having constituted himself as the sole and exclusive authority of the pueblo, and that several of the prominent residents of the town had been forced to leave the locality in order to avoid trouble.

On September 30 the president of Danao filed a complaint in the justice's court against the constabulary men named Zoilo Florida, Florentino Ramos, Mariano Cabarrubias, and Leoncio Galan upon the following grounds: That on the morning of the 26th of said month, after there had been an altercation between a member of the constabulary and a Chino shopkeeper named Go-Tenco, the president of the municipality had advised Corporal Alpiche, who was then present in the municipal building, to correct his subordinates, but the latter answered insolently that he could go ahead and complain hereafter as much as he desired. That same night some of the constabulary committed abuses in various Chinese shops throughout the town, stealing bolts of cloth and beating the shopkeepers, at the same time that four others of their number, named Zoilo Florida, Florentino Ramos, Mariano Cabarrubias, and Leoncio Galan, were at the public market talking about their intention to murder the president. The next day the president became aware of this fact, which was told him by some friends.

On the 29th of October of the said year a communication was received by this office from the president of the municipality of Toledo stating that on the 27th of that month two members of the constabulary who were passing through the barrio of Bató made a request upon one of the councilors that they be furnished with saddle horses, and as the councilor of the barrio answered that it was impossible for him to secure the horses, owing to the fact that he was obliged to keep to his bed on account of sickness, he was cruelly assaulted by the said constabulary.

The account of that class of cases which in themselves are characterized by abuses ends here, no mention having been made of those which have not been brought officially to the attention of the authorities, because of the fact that they have been kept secret by the very parties who should have been most interested in denouncing them, owing to the fear that such complaints might bring upon them the vengeance of those whom they had denounced. Such abuses may in time lead to fatal consequences, and the only practical way of curing them and putting a radical stop to them is to be found in increasing the powers of provincial governors in the supervision of all official organizations operating in the provinces.

We present hereunder other cases which though coming under the cover of the law, yet disclose that there are certain prejudices striving to accomplish an end which can not but result badly.

On the 18th of March Mr. Arcadio Maxilom, an ex-general of the revolution, was apprehended by Lieutenant McCarthy of the detachment stationed at Tuburan as the result of charges brought by some of the residents of that town to the effect that the said Maxilom had some guns hidden away. The motive of these denunciations was to be found in the old feeling of enmity against Maxilom, nurtured by certain families in the town who desired to conserve their ascendancy as caciques, so long enjoyed by them under the old régime and which had been taken away from them during the revolution. As a matter of fact, nine or ten guns had been found hidden away in the hills and this was sufficient to make the enemies of Maxilom stir themselves in seeking some means, with the aid of Lieutenant McCarthy, of fastening upon the former the crime of sedition; and in this they were successful to the extent that the court agreed with them. At the same time that the apprehension of Arcadio Maxilom was effected, or a few hours afterwards, his brother Enemisio was also arrested. This latter stoutly protested his innocence. On the 25th the two brothers were taken on board of a steam launch, under a guard of regulars, and shortly after it was noted that Enemisio was suffering from some mental affection which was revealed in his manner of speech and was caused, perhaps, by the extreme feeling of despair which had taken possession of him and which did not take long in making itself more strongly manifest, for without anyone knowing it he threw himself upon one of the guards, and, wrenching his bayonet from his hands, immediately proceeded to make an attack upon every one on board. So furious was his onslaught that some jumped overboard and others hid themselves or ran about the deck followed by the now furious aggressor, whom the shouts of his brother Arcadio could no longer control. The incident finally ended in the death of Enemisio who was shot after having been fired at several times by some of the soldiers who made up the guard, but prior to this he had succeeded in wounding some of the crew. On the 23d of the same month another brother of Arcadio Maxilom, named Samuel, was captured a few minutes after his arrival from Bantayan in a boat belonging to him and in which he used to make frequent trips for business. While this man was held prisoner by Lieutenant McCarthy he was shot and killed in the jail. According to the statement of the said lieutenant the cause of his having been killed was his having overstepped the dead line which was traced on the floor of the prison, the sentry on guard having thought it his duty to fire at him for so doing. This, notwithstanding public opinion declared him innocent and adjudged his death as having been premeditated. The persecution did not end with these three brothers but was continued to their relatives and even to some persons to whom they were bound by ties of affection. Fortunately amnesty was promulgated and formed an impassible barrier between the present and the past against which prejudice and passion could do nothing.

During the first days of April Nicolas Godinez was apprehended in this city, in accordance with all due legal formalities by the senior inspector of constabulary, and taken to Dumanjug by sea in a steam launch where he was kept handcuffed during the entire trip. Upon his arrival at Dumanjug he was made to mount a horse without having had the handcuffs taken off, for the purpose of taking him to the pueblo of Moalboal. The motive of this capture was his having been suspected of hiding guns and cannons at the time of his surrender. It seems strange that having no proof of the crime imputed to him they should have proceeded against him with so much rigor and animosity, he being treated perhaps worse than a convicted criminal. In connection with this matter it is well to state that Mr. P. E. de Rosario, deputy of the provincial governor, was approached by the senior inspector of constabulary who desired that he testify against Godinez. This proposition was rejected by Rosario for the reason that he had no grounds for accusing him. The above is simply an instance which reveals the zeal of some persons in seeking the crime to fit the law instead of the law to apply to the crime.

On the night of February 27, 1902, during a performance at the Junquera Theater, a fight occurred between the municipal police and the Spanish consul, Señor Leyra, who for some time past had made himself very much disliked by the Filipino

element that used to frequent that place of amusement, owing to his brusque manners and pedantic arrogance to such an extent that whenever he found a group of persons in any of the aisles and passages of the theater while going out he would make his way through them by pushing people aside and crying out "Make way for the consul of Spain!" That night there was a dispute between Mr. Vicente Soto, a Filipino, and Señor Moas, a Spanish subject, which came to blows and in which the police intervened, striving to pacify the contendents and take them to the municipal building under arrest, when just at this moment there appeared Señor Leyra, the Spanish consul, accompanied by others of his nationality, and, according to the testimony given at the trial, the said consul interfered by assaulting the police in his attempt to prevent Señor Moas from being taken to jail.

The municipal president, Mr. Florentino Rallos, who was in the theater at that time, came out into the vestibule in order to find out the cause of the tumult, and on being appraised of what was going on ordered, shouting almost at the top of his voice, in view of the difficulty of making himself heard on account of the people who had been attracted to the scene, that the police should take Señor Moas to the municipal building as well as anybody else who attempted to interfere. The question then assumed a political aspect. The Spanish colony went over to the side of their consul and the Filipinos to that of the municipal president, at the same time that the crowd were flourishing sticks, cudgels, and some few revolvers. The conflict was on, some say that the said consul assaulted the police, while others are sure that the police were the first to act, but the result of it all was that the consul fell wounded by the onslaught of the latter. Some American soldiers and foreigners took up the defense of the consul, according to the account given by several persons who are sure that all hands were more or less under the influence of liquor that night.

During the *mélée* Governor Llorente appeared, notifying Mr. Rallos that he was suspended from office.

An institution as important from any point of view as is the insular police, either in a political or in a social sense, and whose mission places it in contact with the people and with the government, must in the nature of things greatly influence by its conduct in a direct manner the prestige of the latter. From this standpoint strict discipline in this institution, more than in any other, should be insisted upon. There should be strict penalties attached to all delinquencies on the part of any member of the constabulary and the personnel of this corps should be selected with extreme care. Such selection should be made solely upon the proven merits and personal qualifications of applicants, and all sorts of favoritism and partiality should be absolutely eliminated, for if it is introduced into this body it undoubtedly would be sufficient to corrupt its entire organization.

We started in by saying that pacification was complete, as it is our opinion that the existence of the few insignificant evil doers who are given to cattle stealing more than to any other crime should not be taken into account. These bands, who formerly were pursued by the revolutionists, were not exterminated because of the fact that soon after this work was started the revolutionary arms were surrendered. Even during the times of Spain, in periods of lethargic peace, when any man could safely travel through the most deserted and isolated spot without taking any precaution whatsoever, cattle thieves were not wanting; but they have never caused any disturbance of public order by their exploits, and their importance is no greater than it formerly was.

In the mountains of the central part of this island a small band of confirmed cattle thieves led by the Tabal brothers and composed of the dregs of the country folk are the constant nightmare of small farmers and stockmen. They have about five guns but, it is thought, no ammunition. The band has never been able to become regularly organized as each member lives separately and in the most inaccessible part of the forests, and only meet in small numbers when called upon by their leaders. Their operations are restricted to the central portion of the province as they are unacquainted with the lay of the ground to the north and south of them. This band has been actively pursued by Inspector Luga and the municipal police of the pueblos of Tuburan and Balamban on the west coast and those of Naga, Minglanilla, Pardo, Mandaue, Mabolo, and Consolación on the east coast.

In the mountains of the extreme north where are situated the pueblos of Tuburan, Asturias, Borbon, and Sogod, and as far south as Carmen and Danao the bands of the fanatics who are the deluded followers of a certain Roberto Caballero, known among the people as Mintong, have so far been taken in by this fellow who claims to be one sent by God and a supernatural being able to perform all sorts of miracles, that he does a good business with them in the sale of stamped images to which they attribute extraordinary virtues. The sale of these images has also been a source of profit to vagabonds and people of evil lives who peddle them from town to town, finding that it is amazingly easy to deceive the country folk and who are nearly

always able to escape prosecution in the municipalities which have lately initiated an active campaign against these impostors and peddlers. These stamps, when first placed on sale were much larger than the present ones, as may be seen from copies annexed to this report. The latter are of two kinds, printed in blue and black ink. The first are known by the name of "ituman," and the second by that of "pulauan," and this probably signifies that of the sect which it is the purpose of these people to establish. There will be two divisions or groups, to be known by the above names. The said Roberto Caballero, during the time of the revolution was hunted by the guerrilla forces for similar misdeeds in the exploitation of the country people and had to take refuge in the island of Negros, where he remained until shortly after pacification, when he returned to his old stamping ground to begin anew his work of fanaticising the people. This was about the middle of June of the year 1902, and during the same month he began the sale of his first stamped images, together with amulets against cholera and plague, taking advantage of the circumstances that the majority of the Pueblos were at that time suffering from an epidemic of Asiatic cholera.

In the mountains of Bogó and Tabogon some groups are to be found under the command of Pitong or Petronilo Esnarto, who acknowledges the leadership of Roberto Caballero. This individual formerly lived in tranquility and peace the life of a tiller of the soil and was compelled to take to the hills in order to escape from the active persecution of the enemies of Maxilom on account of his friendly relations with him, it being their purpose to implicate him in the crimes imputed to Maxilom. This persecution was not confined to one single individual but was made extensive to many other friends of the said Maxilom, the motive being the maintenance of caciquism in the pueblo of Tuburan by their persecutors, and for this reason, among others, many discontented have joined the bands of Roberto Caballero.

Extracts of communications from several municipalities relating to the misdeeds of these bands which may perhaps be termed a sect on account of their characteristics are given hereunder.

Mr. Bard, the division superintendent of schools, appeared before this Government on June 17, 1902, stating that four American teachers, named Clyde O. Tranes, Ernest Hager, Louis A. Thomas, and John Wells, had gone out on an expedition to the hills of Gaudalupe on the 10th of the month, and that nothing had been heard of them or their whereabouts, in spite of the fact that the senior inspector of constabulary had sent out search parties to the said hills. I immediately communicated the facts to the municipal president of this city, to the jurisdiction of which Gaudalupe belonged, and also sent telegraphic dispatches to all of the pueblos requesting that they take active measures to find out the whereabouts of the said teachers and to send out search parties to the hills in their respective jurisdiction. I further summoned the tenientes of the pueblos situated in the hills belonging to the pueblos of Talisay, Pardo and Mabolo, all of whom appeared before me accompanied by their respective municipal presidents, and stated upon being questioned that they knew nothing whatever relating to the teachers, nor had they any knowledge as to their whereabouts. In view of the fact that their respective barrios were near the place where the missing teachers had gone, I gave them instructions relative to measures which they should take in order to procure information regarding them and asking them at the same time that they communicate with me immediately any information which they might thus obtain. After a few days had passed without results, in spite of the efforts of the detectives and other police, I requested the senior inspector of constabulary to place Inspector Luga at my disposal, which was immediately done. When Luga appeared before me, which he did without delay, I came to an understanding with him relative to the manner in which he should carry out his explorations in the mountains, as it was suspected that the teachers might have fallen into the hands of the band under Damaso Tablada marauding in the vicinity of this city. Inspector Luga immediately began operations, and one night surprised the said Tablada in a small house situated in the Guadalupe Mountains while he was taking supper with some companions. Being requested to surrender, he drew his revolver from its holster and fired one shot, which did no damage, while his companions got away through the window. His shot was immediately answered, and resulted in the almost instantaneous death of Tablada. A search being made of the house, several articles were found in it belonging to the missing teachers, which set at rest all doubts relative to their having fallen into the hands of the said Tablada. A few days afterwards the bodies of the teachers were found by spies near the house where Tablada had been surprised. The bodies were taken up and buried with due solemnity in the flat lands of Guadalupe. Some of the persons implicated in the crime were apprehended and turned over to the court for trial.

Damaso Tablada had figured in the revolutionary ranks as a lieutenant of guerillas under Luga. He surrendered and took the oath of allegiance along with the others and had resided since that time in the pueblo of Mandaue, but having gotten into an

altercation with one of his neighbors he assaulted him, and for that reason an order for his arrest was issued by the municipal president which was carried out and Tablada was imprisoned. He succeeded in escaping, however, and then took to the hills with a following that he armed with some guns which he had in hiding.

The senior inspector of constabulary, who apparently was not friendly disposed toward me on account of my action in bringing to the notice of the court the abuses committed by the constabulary, took advantage of this matter by placing me in a very bad light before the civil governor in his report.

The municipal president of Catmon, under date of May 16, 1902, sent me the following communication:

“CATMON, CEBÚ, *May 16, 1902.*”

“THE PROVINCIAL GOVERNOR OF CEBÚ.

“SIR: I have the honor to turn over to the Government under your worthy charge the individuals whose names appear in the annexed statement who were captured yesterday in this municipality as the result of a private complaint filed by Tomas Duop to the effect that these people had formed an association which was of a purely fraudulent character. When I examined the accused relative to the charges brought against them they all stated that their only aspiration was a desire to pray to God that they might not be contaminated by the cholera and that they had fallen victims to impostures practiced upon them by Mauro and Simeon, residents of Danao, who are still at large, who had given them several pieces of paper with the sign of the cross and asked them for alms to the extent of 1 real for each one of the said papers, assuring them that by keeping the said devices in their possession they would never be attacked by cholera.

“Being aware that in the pueblo of Danao the constabulary had made arrests in connection with similar instances and the persons thus arrested have already been sent to the provincial government, I have the honor to send you the said individuals and papers above mentioned for your action, begging that you will be good enough to acknowledge receipt thereof.

“Very respectfully,

“PANTALEON MONTECILLO, *President.*”

NOTE.—The persons sent, to which the above communication referred, were 19 in number. I attach hereto a copy of the stamped papers taken from them which were afterwards reduced in size as their sale increased and they came to be regarded as sort of personal registration certificates which identified the partisans of the “pulahán” society.

“ASTURIAS, *June 12, 1902.*”

“THE CIVIL GOVERNOR OF THE PROVINCE OF CEBÚ.

“SIR: I regret to have to communicate to you that I have just received from the municipal president of Tuburan a communication stating that night before last the tulisanes under the captaincy of Roberto Caballero, alias Mintong, came into the barrio of La Colonia, and that the teniente of the said barrio, his son, and another resident were ignominiously put to death by the said Tulisanes, and that several other people were wounded, and the perpetrators up to the present time have not been captured. As this place is quite near here, and the Tulisanes must have taken refuge in the mountains and will probably resort to rapine for their subsistence, as I understand the band is a very numerous one and easily able to swoop down on any of the settlements, hereabouts, in view of the fact that none of them are provided with arms with which to make a defense, I earnestly request that we be furnished arms in order that we may avoid a recurrence of the above-mentioned deplorable event. I would esteem it a favor if the municipal police of this pueblo were furnished with rifles or revolvers in order to be able to withstand their onslaught, and if they should ravage the district of this town that they might effect their capture. Not doubting that the men making up the police force of this pueblo will merit your entire confidence because of their irreproachable conduct in the past, I send them to you in order that you may know them and provide them with the above-mentioned arms.

“With all due regard and consideration, I place myself at your orders.

“Very respectfully,

“GLICERIO AGUANTA, *President.*”

“ASTURIAS, *September 7, 1902.*”

“THE PROVINCIAL GOVERNOR.

“SIR: The municipal president of Asturias, who subscribes hereto, has the honor to inform you that a policeman named Andrés Masayon, belonging to Granada, in this jurisdiction, has appeared before me stating that late last night his house was

surrounded by a band of more than 50 armed men who were there for the purpose of kidnapping him. Said band was under the captaincy of a certain Efren. Witness said that he did not know the motive for their desire to kidnap him, and that he supposed that these men were henchmen of Roberto Caballero, alias Mintong, with his further statement that he had heard that the said band had the intention of making a descent upon the town. In view of all of the above the undersigned municipal president would beg and implore of you that you be kind enough to furnish this municipality with such guns as you may deem proper for its defense.

"Very respectfully, yours,

"GLICERIO AGUANTA, *President.*"

[Telegram.]

"TUBURAN, CEBÚ, *September 29, 1902.*

"GOVERNOR, *Cebú:*

"Information that at Capayas and Pandong mountains there are hostile people prepared to descend on pueblo under leaders [four names illegible]. Other information received states said bands are under leadership of Roberto Caballero, alias Mintong, and Leon Bató. This office has been requested by citizens to offer you organization local volunteers. Await your resolution.

"PRESIDENT."

(Copy of original text of telegram garbled in transmission.)

"TUBURAN, *October 2, 1902.*

"PROVINCIAL GOVERNOR, *Cebú.*

"SIR: After long continued and judicious investigation for the purpose of discovering the secret and origin of certain disturbances that have altered the tranquility of the residents of this place, I have found, to the best of my knowledge and understanding, that disturbances noted are the result of the folly of certain people marauding in the hills, who go from place to place taking other people's money in exchange for the promise given to their dupes that they are never to be attacked by any sickness. This is simply a ruse on their part to cover their real intentions, which are to make of each of their dupes a sort of a partisan of one of their own number, who is given to them as their leader and whom they obey with the greatest respect and assiduity. It has also been discovered that several residents of the barrio of Carmelo and of the place called Antolayan of this municipality have been cajoled into paying a tax of 1 real apiece. This fact has been confessed by the dupes themselves who, no doubt, have done so through the pressure brought to bear upon them by the active investigation which has been held, and in order to avoid their being further taxed in the future.

"All of which I have the honor to communicate to you for your knowledge and other legal purposes.

"Very respectfully, yours,

"BONIFACIO ALBURO, *Municipal President.*"

#### POLITICAL ADMINISTRATION.

On February 5, 1902, the date set by law, election for the office of governor of this province was held in this capitol by 394 electors. Three days after the result of the election was given out the undersigned found he had been elected by a majority of 249 against 122 in favor of Mr. Julio Llorente, my predecessor. On March 3 of the same year I was sworn in and took charge of the provincial government in the presence of a very large number of people and delivered the following speech:

"GENTLEMEN: I have this day taken possession of an office given to me by virtue of your suffrage, and I realize that I have merited it only through your benevolence, and have no other personal qualifications than those that your friendship for me has created. First of all, I wish to perform the pleasant duty of greeting you with all of the fervor of my heart.

"At this moment, more than at any other time during my life, I deplore my meagre ability, but I am consoled by the confidence that your acknowledged learning will know how to interpret the profuse gratitude which I feel for your most distinguished regard, and I would that I were able to express with the force and allurements of an eloquent speaker my feelings of gratitude, or that I could depict it with the vivid colors seen in the paintings of a skillful artist.

"There is little or nothing that I can point out to you with relation to our duties, individually and collectively, toward the people and toward the sovereign nation, growing out of our oath of allegiance and fidelity, as we have wise and just laws that regulate these duties, and we have also municipal governments made up of the most eminent men in the community who, on account of their knowledge, education, and learning, are in a better position to tell you of them than myself.

"We are celebrating, gentlemen, an act that not only solemnizes the inauguration of a government official, but we are also celebrating the consecration of the rights of a people made by the American nation as sovereign of the people, who for the first time are exercising one of their dearest rights—the right of free suffrage. Aside from the significance of this act, in which the law of the people is obeyed and respected, the intentions and desires of our present sovereign country are made patent; the desire to shortly lift us to the first stage to which we aspire—self-government in its true form—in order that afterwards it may take us still higher, until we shall have reached that point where all of our hopes are centered.

"We must therefore engrave in our hearts that confidence and faith in the promises of the American nation to lead us to the goal of our liberties, for they are sacred promises, formulated by the conscience of its own people and before all civilized nations. They are moreover promises that are intimately bound and firmly united with our oath of allegiance and fidelity, so that it will be impossible to break any of these promises without destroying the whole fabric. From this point of view our loyalty and fidelity are, then, not a matter of convenience, but rather one of conviction.

"In gratefully accepting the administrative powers which your confidence in me has placed in my hands, I am influenced by no other aim or ambition than to respect your will and to be able to comply satisfactorily with your just, worthy, and noble desires, as are all those which are directed to the regeneration and welfare of our people. The path which we must tread will not be free, however, from thorns and roughness to make the journey all the more trying, owing to the prevailing conditions that are to-day similar to those that have always been identified with the first period of regeneration. We find ourselves in a critical condition, because evolution is always laborious and difficult when it takes place under the fatal influence of illegitimate and inflamed passions of opposing and violent ideas. Lest the contemplation of these considerations should to any extent prove a source of preoccupation, we fortunately rely upon the hope that the spirit of the people of this long-suffering and, with very few exceptions, loyal province is still for solidarity, in spite of adversity and misfortune, and that the union and fraternity growing out of that solidarity will assuredly constitute a sure and safe support for the governor, into whose hands the community have confidently reposed their trust so that he might exercise his power by the people and for the people in accordance with the spirit of the broadest democracy, so as to lead them along the path of their aspirations, subject to the restrictions of the law.

"So that, if union and fraternity are necessary to the prosperity of all large undertakings, so also is the maintenance of peace, of a peace that does not offend our honor and our dignity, for without order and tranquility all of our efforts would come to naught.

"By keeping within the law, by its observance and disinterested application, it can be made a protection to the poor and helpless instead of subserving the ignoble ambitions of the powerful, thus doing away with favoritism and nepotism, and forever exterminating caciquism and all of the immoralities and vice reminiscent of the late sovereignty. Favored, as we are, by the protection extended by American institutions, we can be sure of prompt regeneration. Above all, it is our first duty to lift our province from the state of depression, in a material sense, into which it has fallen as a result of past events, and to stimulate its mental development in order that the foundation may be laid for our future social welfare and advancement.

"Public works, especially the building of roads assuring safe, easy, and cheap communication; all industries tending directly or indirectly to favor the development of agriculture that as the source of all wealth in our province demands our undivided attention; the introduction and adoption of modern agricultural machinery apparatus and tools; an adequate postal service in the interior which shall keep pace with the progress of the country, are things, in my opinion, to which we must devote our earnest attention, as they are the principal factors of our future progress. On the other hand we must pay equal attention to the establishment and maintenance of primary and secondary schools, as well as trade schools, where a practical rather than theoretical education may be acquired. The first named should be organized in all the barrios of each pueblo. These remarks can be applied with equal force to scientific and artistic academies and to the press that in their character of propagand-

dists are the most efficacious educational agents among that class of people who are unable to attend schools and centers of learning.

"To realize all that I have sketched out depends solely on the depth of our patriotism, on our steadfast will and the strength of our efforts in contributing to the noble and very excellent purposes of our sovereign country in its desire to grant us the same liberties and equal rights to those of its own citizens until we shall have been elevated to the plane of the most cultured and civilized nations.

"Before I finish, gentlemen, I wish to thank my honorable, worthy, sincere and affectionate friend Mr. Julio Llorente for his attentions and gentlemanly conduct during the elections which have culminated in this act, and of whom we ought to preserve greatful memories because of his having deserved the glory of inaugurating the civil régime in this province.

"The same thing should be said of Messrs. Holcomb and Young, provincial supervisor and treasurer (this latter who has just resigned) for the interest, zeal and solicitude displayed by them during the late elections contributing powerfully to their having been held strictly in accordance with the conditions required by law.

"I also particularly acknowledge a debt of gratitude to the municipality of this city whose ordinances and initiative have increased greatly the solemnity of this act.

"To the festival committee composed of a group of my most cordial friends I wish to express my most profound thanks. I am well aware of the value of its work and of the worth of its generous and enthusiastic attitude, and I find no words in which to express my gratitude to them.

"I also desire to thank all the official representatives who have honored this meeting with their presence.

"People of Cebu, your kindly feelings toward me have given me added courage; your adhesion will make me all the more solicitous of your welfare and advancement. Worthy people your enthusiasm has stimulated me, guided by the best desires I would have you progress onward; if in complying with my duty I succeed in satisfying you, may I count upon your support; but if, as an illustrious Filipino once said, your governor should fall into error, if he deviates from the right path, and does so knowingly, judge him without complaisance, exact strict responsibility of him, and demand that he be punished."

During the present year five municipal presidents were suspended from office for the following reasons:

Mr. Florentino Rallos, of Cebu, was suspended by Governor Llorente on account of certain charges brought against him in connection with the assault committed on the Spanish consul at the Junquera Theater by the municipal police. This suspension took effect February 27, 1902. In the investigation held by the provincial board none of the charges against the president were sustained, and therefore that body recommended to the civil governor that he be reinstated, which was done October 1, 1902. Mr. Rallos was so notified, and took possession of his office on the 9th of the said month.

Mr. Antonio Mangubat, president of Opon, was suspended May 2, 1902, for illegal conduct in the administration of his office. In view of the result of the investigation the provincial board recommended his dismissal, which recommendation was approved by the honorable the civil governor.

Mr. Gorgonio Sagarino, president of Santa Rosa, was suspended May 26, 1902, for a similar offense, and as a result of the investigation held the provincial board recommended his reinstatement to the honorable civil governor, but up to date no decision has been had.

Mr. Justo Lumbab, president of Borbon, was suspended May 26, 1902, for certain illegal acts committed in the discharge of his duties, upon the complaint of several councilors. Up to the present writing no final decision has been arrived at in this case on account of the nonappearance of the accused and his witnesses.

Mr. Onofre Noyano, president of Baljoom, was suspended September 17, 1902, charges having been brought against him by several residents of his town for illegal acts and abuses committed in the discharge of his office, all of them tending to favor the parish friar curate. No decision has been arrived at in this case, either, up to the present time.

In like manner the following municipal treasurers were suspended:

Mr. Montano Lumungsod, treasurer of Opon, was suspended May 2, 1902, at the same time as the president, for complicity in the irregularities causing the suspension of the latter.

Mr. Gregorio Sagarino, treasurer of Santa Rosa, was suspended May 26, 1902, together with the president of said municipality, for a like offense.

The municipal secretary of Opon, Mr. Pedro Putot, was also suspended, May 2, 1902, for having been implicated, with the president and treasurer of the said munic-

ipality, in the offense with which they had been charged. He was removed from office by the honorable the civil governor upon recommendation of the provincial board.

On September 19, 1902, as a result of certain private complaints of irregularities committed by the municipal government of this city with relation to the use and sale of opium, a case was started against President Florentino Rallos which has not been decided up to the present day owing to the fact that all of the evidence has not yet been taken.

In view of a suit brought in the court of first instance of this district by Mr. Escolastico Duterte against the said president of this city, claiming a certain amount of money which was his share as one of the partners of the defendant in the cockpit business in this city (the defendant's name did not figure as a partner he being represented by another person), and which business had prospered for the reason that no competition could be made to it owing to the influence of the president and his copartners in the municipality who were easily able to destroy all competition and did so without considering the harm occasioned to the municipal revenues; and in view also that the municipal treasurer, either to favor the partnership or because he had a share in it, did not close up its accounts within the period fixed by law and the partnership did not pay fees for license which it ought to have done to avoid payment of a surtax. Now, having become aware of all these facts privately, the idea suggested itself to me to recommend to the civil governor at the first opportunity which I might have for an interview, to amend subsection (a), section 28, of act 82, so that its language might be more clear and a greater restriction might be imposed upon those who attempt to make use of their offices for gain. The said amendment might be drawn up as follows:

"No municipal officer shall be, directly or indirectly, interested in any contract work or business of the municipality, including cockpits and other permitted games or amusements, or in the purchase of any real estate or other property belonging to the corporation."

During the period embraced by this report the following municipal officers have died: Cristino Morre, councillor of Compostela, on January 20; Filomeno Veloso, councillor of Cebú, August 15; Licerio Alcomosa, vice-president of Mabolo, August 15; Juan Paciencia, councillor of Tabogon, September 13; Bruno Villarino, vice-president of Aloguinsan, September 19; Feliciano Precillas, councillor of Sogod, December 24.

Two conventions of municipal presidents were held on January 20 and on April 21, 1902.

The following resolutions were adopted at the first convention:

(1) That copies of resolutions adopted at the convention held in October, 1901, be sent to the municipalities.

(2) That the municipal code be translated into the Visayan language.

(3) That the municipal presidents be appointed customs inspectors.

(4) That municipalities be authorized to set aside 2 per cent of their revenues to pay for the education of young men either in Manila, America, or Europe, and that each municipality be entitled to send one or two whose fitness shall be approved by a board after competitive examination.

(5) To reconcentrate all the lepers of the province.

(6) To make clear the powers of municipalities with relation to schools, in view of the fact that municipalities are obliged to maintain them, while on the other hand the division superintendent has all the power with regard to their management.

(7) The teaching of the official language as well as English in the public schools.

(8) The sending of rat poison to the pueblos for the purpose of exterminating rodents.

(9) That gambling and the use of opium be heavily taxed in view of the difficulty, if not the impossibility, of exercising due vigilance over both.

(10) That the petitions made at the former convention be taken into account.

(11) That authority be given for the imposition of the 50-cent tax payable by every individual obliged to secure a personal certificate of registration, under the provisions of General Order No. 40, and that the amount collected from this source be applied to the maintenance of roads outside of inhabited districts but in the pueblo where such tax is paid, and that the expenditure be made in accordance with the recommendations of the provincial supervisor.

(12) That the tax for the sealing of weights and measures be revived, and that the superior authorities be petitioned to suspend the land tax for some further time in view of the critical state of the province.

(13) That all of the pueblos be united by telephone, and that all operators be Filipinos, or, at least, skilled employees.

(14) That the provincial supervisor shall supply stationery and other necessary office supplies to the municipalities.

At the second convention the following recommendations were passed:

- (1) For the establishment of an agricultural loan and mortgage bank.
- (2) For the establishment of a high school to be maintained by the municipalities of the province if possible, and, if there are not sufficient funds, to negotiate a loan in order to carry out the plan.
- (3) For the establishment of a university in Cebú.
- (4) To allow the municipalities power to dispose of their funds as they see fit in times of public distress.
- (5) To prohibit mother-of-pearl fishery at Bantayan by the use of the diving dress.
- (6) For the repair and arrangement of roads in the northern part of the province.
- (7) For the suspension for the present of the land tax, and if this is not possible, that only cultivated lands be taxed.
- (8) To prevent the return of the friars to their former parishes.

None of these recommendations have been acted upon yet by the superior authorities, not even those recommended by the provincial board. It has been observed that the presidents are loath to attend these conventions, their disinclination to do so being augmented through the fact that they have experienced great delay in getting back their traveling expenses.

The introduction of the new system of municipal government in the pueblos has worked a radical change in their administration and it is for this reason that the municipalities have acted in the first few days of the régime in the hesitating and uncertain manner, as is the case with every novelty; they are not, even at the present writing, fully cognisant of the system as organized. It has been for this reason that many irregularities in administration have been noted. Many ordinances have been passed which were an encroachment upon the rights of the people, instead of a protection to them. They are deficient and at times contradictory to the existing laws. The people as well as the municipal government should be imbued with the spirit of the law regulating their rights and duties in order to avoid deplorable consequences. If the people are ignorant the municipality will be despotic and arbitrary, converted into an autocrat by the great autonomy which the law concedes to it, and vice versa. If the municipality does not know its rights and duties the people will be given free rein and sink into anarchy, and will be split up into as many factions as there are caciques to impose their will.

In this city, under the presidency of Mr. Florentino Rallos, we have seen a practical example of the first condition—that is, of the municipality made up of councilors who were bent to his will, some through complacency and for the sake of comradeship existing during the late sovereignty, and others through apathy and lack of strength of character. This state of affairs resulted in that all of the propositions extended by the president were always approved by the former and tacitly by these latter. Although it is true that the masses here are not ignorant—they are an excessively prudent people, of the prudence that borders on pusillanimity—they prefer to suffer abuses of power than to make themselves liable to become the victims of vengeance. In the first case it would be necessary to seek out measures which would restrict the actions of the municipality in order to protect the people; in the second, an equal measure that would back and direct the municipality in its government of the people. Bearing in mind these circumstances it would be advisable to pass a law compelling municipalities to submit ordinances or resolutions approved by them to the provincial board before being put in force, leaving the matter open to the civil governor in case of disapproval by the provincial board. It is true that this would be a measure restricting the autonomy enjoyed by the municipality, but it is necessary to defend the interests of the people when we find that they are the victims of their representatives.

#### FINANCIAL ADMINISTRATION.

The depression of agriculture, which is the chief source of wealth in this province, has deeply affected its present economical condition. Its evil influence is to be seen in all of the pueblos, so that taxes, however light they may be, are an oppressive burden—a force that saps the little strength they have left after having passed through the terrible pangs of famine.

However, the people have paid their taxes, though it has been to them extortion and anguish equivalent to the taking of bread from the mouths of their children, who perhaps are lying in a critical condition with the mortal and icy breath of famine upon them. They pay their taxes on land that is both uncultivated and bad without a hope of having all the sacrifices which they may make recompensed by its product, and they are therefore obliged in order not to die of hunger to wander

about the forests and mountains in search of roots with which to feed their families. What other recourse is left to poor people in a locality where the landed proprietors can give them no work because of the lack of money and cattle? Nor can they emigrate to other points in search of work, as in order to do this it would be necessary for them to have a little money to leave with their families and for traveling expenses in case that they take them with them in their migration.

It has been for these reasons that collections have been delayed, and this has also been the motive of the government having adopted a good political measure and at the same time done an act of charity in having postponed the date when taxes are delinquent, as often it has been necessary in view of the fact that intransigency and rigor under such circumstances would be equivalent to driving the people to despair.

Municipal revenues and expenses during the year 1902 have been as follows:

	United States currency.	Local cur- rency.
<b>REVENUES.</b>		
Local imposts.....	\$27,954.71	\$16,670.52
Land tax and cedula, part corresponding .....	48,067.29	86,464.43
Total.....	76,022.00	53,134.95
<b>EXPENSES.</b>		
Salaries, including police.....		278,795.20
Schools, including construction and repair of buildings .....		7,218.00
Public works, including material .....		29,275.27
Total.....		315,288.47

Of this sum total but \$29,275.27, local currency, have been used for public works, while the amount employed for the payment of salaries absorbed nearly the entire balance. We ought, therefore, not be surprised at the deplorable state of the roads in the pueblos, nor can we hope to secure an improvement of same with such small revenues.

By comparing the total of revenues with that for expenses a deficit will be noted which represents delay in the collection of taxes or delinquency on the part of taxpayers.

The provincial revenues and expenses during the same period are those following hereunder:

	United States currency.	Local cur- rency.
<b>REVENUES.</b>		
For personal cedula, part corresponding to province and land tax at ½ of 1 per cent.....	\$27,836.74½	\$232,666.64½
Industrial taxes.....	12,605.99	1,419.51
Total.....	40,442.73½	240,086.15½
<b>EXPENSES.</b>		
Salaries and supplies .....	40,136.57½	25,951.73
Public works .....	13,433.30	.....
Provincial jail .....	1,809.25½	1,373.44
Total.....	55,379.12½	27,325.17

Here, as in municipal expenses, the greater part of the revenues was absorbed by salaries, particularly by those connected with the provincial treasury which has 33 employees, with salaries ranging from \$15 to \$100 gold, while the office of the governor and of the secretary have only 4 clerks, with salaries ranging from \$12.50 to \$20 gold. These latter clerks work eight hours nearly every day on account of the many and divers duties to which they have to attend.

The system of bookkeeping and accounting used by the provincial treasurer has proved very deficient on account of its complexity, due to the excessive amount of red tape which an almost absolute centralization imposes. For this reason people are rather shy about entering into contracts or accepting any sort of work from the province, and if they do it is nearly always at an exorbitant price on account of the long time they have to wait for their money. Even the employees of the govern-

ment themselves have to wait three or four months before they are reimbursed for traveling expenses incurred when traveling on official business, and this constitutes a real hardship to those who receive only from \$25 to \$30 a month and who are compelled to invest the greater part of these small salaries in their trip, which the character of their duties makes them take very frequently; specially is this true of collectors and deputies of provincial treasurers, whose families are often left in want.

The method pursued in the collection of provincial and municipal taxes results in great detriment, as much to the municipality and the province as to the taxpayers' interests. The reason of this is to be found in the fact that the provincial treasurer alone is empowered to collect taxes, a share of which goes to the provincial treasury, for example, as those for personal registration certificates, the land tax, etc., and to the further fact that this power can not be deputized to the municipal treasurers, but only to expressly appointed agents. The provincial treasurer appoints his own deputies, each one of whom has a certain number of pueblos and certain dates set for visiting in order that he may be able to visit all of those in his jurisdiction prior to the last day before taxes become delinquent. Suppose, that under these circumstances a deputy is obliged to remain four or five days, which is the maximum period that can be fixed for making collections, in a town of some importance, and that the pueblo covers a very large extent of territory, some of its barrios being one or two leagues distant from the municipality. This, taken in connection with the bad state of the roads, especially during the rainy season, generally results in that all of the inhabitants of that pueblo either are not notified or do not hear of the presence of the tax collector in the municipality until after he has gone to another pueblo, or until he is just about to leave. In this latter instance, if the residents of the outlying barrios go to the municipality with an earnest desire to pay their taxes, even if they have the good fortune to arrive there before the departure of the tax collector, they may find that there are such a lot of people waiting their turn to pay that in spite of all the collector can do to attend to all it very often happens that the date set for his departure arrives before he can do so, and then these people who have been waiting so long are obliged to return to their homes without having been able to pay their taxes and with the disagreeable prospect of having to make another trip to the municipality when the collectors come around again.

Practical results could not be any worse for the taxpayer, for after having traveled over one or two leagues of bad roads and of having to wait and pay out for his subsistence for the two or three days he remains in the town and of having to leave his interests he is, moreover, liable to have to pay a fine for delinquency in spite of the fact that it has been through no fault of his that he is delinquent. The system works an equal harm on the municipality and on the province by reducing their revenues, for if all of the taxpayers willing to pay their taxes had been able to do so at the time that they first presented themselves they may not, when the tax collector returns, having spent the money they had laid aside for the purpose for other necessities of an urgent character at a time like this, which is one of scarcity and of famine. The provincial treasury suffers the most because of the fact that the salaries of deputies and collectors and their traveling expenses amount to a large figure, and to increase them would be an impossibility, because an increase would mean that they would absorb most of the collection.

This system could be reformed and cured of all of its defects by appointing the municipal treasurers, the deputies of the provincial treasurer exacting a larger bond from them and giving them a percentage on collections. This plan would be very much more economical than to have to pay deputies and their traveling expenses, and it would have the added advantage that taxpayers could pay their taxes at any time. If this plan would be adopted, the provincial treasurer would simply have to pay for two deputies for purposes of inspection in a province of this size, the most populous in the Archipelago. These deputies could make more frequent trips to the municipalities for the purpose of turning over to them the part of the taxes corresponding to the municipalities under the law, in order that they might better be able to comply regularly with their obligations than as now happens, when two or more months often pass without the possibility of the municipalities meeting their obligations, specially those with relation to the payment of salaries, on account of having no money in the treasury through the delay experienced in the transfer of funds belonging to them from the provincial treasurer.

#### PUBLIC WORKS AND IMPROVEMENTS.

In none of the pueblos of this province have there been any considerable public works started, either in the erection of buildings or the opening of roads or repairing same. For this reason all of the roads are in a very bad state, and the same thing may be said with regard to schoolhouses in the municipalities.

The cause of all this is to be found in the meager revenues of the municipalities that are not permitted to include larger appropriations in their budgets.

The municipality of this provincial capital is almost the only one that has been able to invest a little money in the repair of streets, and yet there are many that are in a very deplorable state. The dust of many of the streets during the dry season is almost choking, and during the rainy spell the streets are flooded, owing to the fact that most of the sewers are choked up and that the sewerage system is very defective. There is an estuary which crosses this city and which is nearly filled up, and that it would be advisable to fill up altogether when a good sewerage system could be put in, as it is a danger to the public health.

The sum of \$4,830.53 gold and \$21,787.83 Mexican has been used from provincial funds in the repair of the wagon roads leading from this provincial capital to the pueblo of Carmen, on the north part of the east coast, and from there to Carcar, a distance of some 60 kilometers. The work has not been very satisfactory to the public, as there have been a great many complaints that wagons sink almost to the axle into the mud, which has been formed of the loose dirt which was used for the said road, which was not macadamized, and that therefore the road is converted during the rainy season into a spongy, loose, and glutinous mass.

Many pueblos in this province are not yet connected by wagon roads, there being simply bridle paths between them. Of the roads running across the island—that is to say, from coast to coast—there are but two which ought properly to be termed bridle paths. One of them connects Silbonga with Dumanjug and the other Carcar with Barili. The rest, of which no mention is made, are nothing more or less than trails.

The agricultural lands of the west coast are very much more fertile and extensive than those of the east, but only one-fourth of their area is cultivated owing to the bad roads. Once that good crossroads are established, we would say between Naga and Toledo and another from Sogod to Taburan, agriculture would prosper greatly in that region owing to the ease and cheapness of transporting the products of the soil to the markets of this provincial capital. An appropriation of \$25,000 gold would be sufficient to open these roads.

With regard to the improvements, the only progress which has been noted in the municipalities is the establishment in the central part of this city of the electric light and the neatness in the construction of fences, which have greatly improved the appearance of the streets. In this city a considerable advance is to be noted in the construction of private buildings, their architecture being modeled upon the modern style. The increase in building is due to the high rents, which have been quadruplicated in the last few years. The appearance of the city would be greatly improved by finishing the construction of Lutaw street, and at the same time it would be a great benefit to commerce, as it is in the central part. But a great many difficulties have been found in carrying out this plan, which consists in the question as to whether the municipality has a right to dispose of property which it has reclaimed in exchange for that which it acquired by condemnation, resorted to in widening the street. On the 7th of December, 1902, there was a fire on Alcarazo street, which is parallel and contiguous to that of Lutaw or Escolta, which was a great loss to business men of this community for the reason that it was the business center of the town for the Chinese.

When the proposed works of the port shall have been completed and the two above-mentioned streets shall have been finished, this capital will indisputably be the second in the Archipelago in commercial importance.

#### HEALTH.

The sanitary condition of the majority of the towns is good, although there are some pueblos, especially those far removed from the seacoast, where intermittent fevers are prevalent. In spite of this fact, after the ravages caused by the rinderpest, malarial fevers appeared in nearly all of the pueblos, even in those where this disease had never been known, and in some localities caused as many deaths, if not more, during the year 1902 than the cholera. At the provincial capital many cases of malaria were recorded in spite of the comparative dryness, but, on the other hand, there were but few cases of rinderpest, which up to that time had never been known in this province.

On July 9, 1902, cholera appeared in the city of Cebu and a few days after was prevalent in nearly all of the pueblos. At first the number of cases per day numbered between 10 and 15 up until August, when they increased, reaching a maximum of from 30 to 43, which lasted for one week. The mortality was from 40 to 50 per cent.

The measures adopted by the provincial board of health, and which were put in force without there having been others for putting same into practice determined

upon, with relation to the compulsory quarantine of houses and removal of cholera patients to the hospitals, provoked the animosity of the people against Mr. Mascuñana, at that time the president of the said board, because these rigorous means brought a great deal of suffering and hardship upon them, especially upon the working class. As an example, when a case of cholera occurred in any house the patient was carried to the hospital and the police kept a strict watch over his house with instructions to allow none of the inhabitants to pass out nor anyone to enter from outside for a period of five days. It is true that the municipality furnished rice and meat at 12½ cents Mexican for each person, but water, fuel, and other articles absolutely indispensable for the preparation of this food, and as they could not be secured, owing to the impossibility of any person leaving a quarantined dwelling, not even for the purchase of medicines, there was a great deal of suffering in such cases. Moreover, during the quarantine nobody paid any attention to the removal of garbage from infected houses, which made of them centers of infection for the other inhabitants. So severe were these measures thought to be that many people hid their sick and denied them professional attendance so as to avoid their being reported, or else, when they found that the patient was in a grave condition, abandoned their houses, and this explains why many dead bodies were found in vacant houses some two or three days after the death of the patient.

For hospital purposes a house was selected in a central part of the city in the district of San Nicolas, situated on a much-frequented street. This gave rise to an energetic protest on the part of the residents of San Nicolas to the board of health. The stretchers on which cholera patients were carried to the hospital had to be carried through the busiest part of the town; and the same thing may be said with respect to the removal, to the cemetery for burial, of the remains of those who died from the disease when in the hospital. As a consequence of this, as the stretchers referred to were never disinfected, they were the means of propagating the epidemic wherever they were carried, whether empty or not. What gave most horror to the people in connection with the obligatory removal of sick to the hospital was that most of the sick died before reaching it or arrived there in such a low state that they survived but a few minutes; especially was this true when carried a long distance. All of this was not to be wondered at in view of the fact that there were not sufficient means at hand to administer the first help to those attacked by the disease, and the large mortality of those removed from their houses may also be ascribed to the bad effect that forcible separation from their families had upon them and to the fear they felt of the hospital.

The board of health was unable to come to an understanding with the municipality for the reason that they ascribed to one another a defective administration of sanitary affairs. In consequence of this the people held mass meetings, one of which was gotten up by the initiative of the undersigned, for the purpose of bringing about a definite understanding between the board of health and the municipality, as the situation was daily growing worse and the people were becoming exasperated. A large meeting was held at the Junquera Theater by the people of this city, who adopted a resolution and marched to the town hall and to the government building, headed by a band of music, and made a peaceable and solemn demonstration for the purpose of bringing the attention of the authorities to the following resolutions:

"1. We demand that the forcible removal of the sick to the hospital shall cease. People having sufficient funds to pay for a physician's service and for medicines and who live in their own houses, though it be but a nipa one, if in good sanitary condition, are not to be removed to the hospital. Only those who are helpless and who live in unsanitary and ill-conditioned houses may be taken to the hospital, but even in the latter case one member of their family shall be permitted to accompany them.

"2. We request the free distribution of medicine to the poor for the purpose of combating the disease at its inception, and the free distribution of food to the poor, for famine and epidemics always go hand in hand.

"3. We request that quarantine be abolished, as we have observed that the measure compelling families of persons attacked by cholera to remain in their houses has resulted in the abandonment of the sick. On the other hand, we recommend the disinfection of the sick room and of all persons coming in contact with the person attacked by the disease."

The sanitary measures relative to the port were also not in accord with those adopted by the provincial board. Vessels coasting between this city and other ports in the province had to make a five days' quarantine, while no restriction whatever was placed on travel by land; for this reason a quarantining of ships was ridiculous, because what was to be avoided by sea was propagated by land, much to the harm of other pueblos; and, moreover, trade in the province suffered through this measure.

After the cholera had almost disappeared and but few cases were recorded, beriberi appeared in the province and caused a great many deaths. After it in turn had dis-

appeared, the grippe became prevalent, taking some 90 per cent of the inhabitants, but fortunately no deaths resulted. Though its effects were felt for from two to six weeks, the fever caused by the grippe only lasted from two to three days. The beriberi appeared only in this city, unlike the grippe, which, as we have stated, took 90 per cent of all the inhabitants. The localization of the beriberi was no doubt due to the fact that people of this city have rice as their principal item of food, while in all the other pueblos corn takes its place, and it is a well-known fact that beriberi generally attacks a rice-eating people.

#### POSTAL SERVICE.

Complaints from the public and from the press are very frequent with relation to the poor postal service and the delay in the transmission of the mails. Every effort has been made, however, to improve the service within the restrictions imposed by the insufficient funds possessed by the municipality. In spite of the fact that each municipality has been compelled to note on the mail schedules the day and hour of their receiving and dispatching the mails, for the purpose of ascertaining where the fault lies in cases of complaint, this plan has not been successful, as the deficiency is not in the system but in the way it is worked. Bearing in mind this condition, I recommended the following reform upon which no action has been taken that I have been apprised of to date:

"The mail is carried at present from one pueblo to another on foot. Each mail carrier is provided with the schedule of his route, in which are noted the hour of the arrival and the departure of the mail from each pueblo, and the number of pieces received and sent out, so as to account for any loss of mail matter should such loss occur.

"The defects of this system are the following:

"1. Insecurity and bad handling of the mail, which often reaches the hands of the person to whom it is addressed broken and generally in a bad condition, caused by constant handling from pueblo to pueblo in adjusting and classifying it, and also by the carelessness and inexperience on the part of the mail carriers selected by the municipalities, who are usually temporary men, owing to the inability of the towns to have a permanent carrier because of lack of funds.

"2. The delay which is caused in the transmission by carriers on foot and that incident to its notation in the several pueblos through which it passes. A great deal of time is also lost in having to search for a person to carry the mail each trip.

"The advantages to be derived from the reorganization recommended are as follows:

"1. The security and care in handling all mails, which are not to be subjected to continual handling in each of the pueblos through which they pass, as it is proposed to send the mail out from each station in packages to each one of the pueblos in lots where addressed. The mail carriers being salaried men and holding permanent positions will better comply with their duties and exercise greater care, and in time acquire the necessary experience.

"2. It is proposed to have the mails carried in light vehicles from the provincial capital to Carmen and Carcar, and to all of the other stations on horseback. This will be a saving of time and money, so that instead of it taking from eight to nine days to carry the mail from Cebu to Daan Bantayan by this system they can be carried there, during the rainy season when the roads are in bad condition, in four days.

"3. The expense for supplies and maintenance, as shown by the annexed statement, will be insignificant when the benefits accruing to the public are considered. Expenses for maintenance will amount to \$624, Mexican, and all other expenses, \$2,560, Mexican.

#### "EXPLANATION OF THE SCHEME OF REORGANIZATION.

"A central station of the first class will be established at the provincial capital, with 1 postmaster, 12 horses, 4 vehicles, and 6 mail carriers. Second-class stations will have 1 postmaster, 3 saddle horses, and 3 mail carriers each. From the central station at Cebu there will be a daily service, starting at 6 o'clock in the morning, by vehicle to Carmen, in the northern part of the province, and to Carcar in the southern part, where they will arrive at from 4 to 5 o'clock in the afternoon of the same day, and where they will stay overnight to return the next morning early to the point of their departure. The service established between this city and Carmen on the uptrip will leave the mail at the following pueblos: Talamban, Mandaue, Consolación, Liloan, Compostela, and Danao, and will take up all of the mail from those points addressed to stations farther on, where they will be delivered, except those

that are to be delivered to the postmaster at Carmen. From this point on the down-trip they will collect all mail addressed to pueblos between Carmen and Cebu, and those addressed to the southern part of the province and to the eastern coast, as well as those to the western coast from Barili to Santander. The mail carrier on the Carcar route will follow a similar route, and will also take up all of the mail addressed to the northern part of the province, to the eastern coast, and to the western from San Remigio to Daan Bantayan, as well as that to the Camotes Islands and to Bantayan.

"From Carmen to Carcar the service can be made on horseback the same as that on all routes designated on the accompanying plan by broken lines. From Carmen to the north the route is to the station at Borbon, passing through Catmon and Sogod and thence to Bogó, passing through Tabogon. It shall be the duty of the station at Bogó daily to collect and forward all mail from San Remigio, Medellin, and Daan Bantayan, as well as that from Bantayan to any of the latter pueblos. From Carcar, on the southern route, there shall be two carriers, one to Barili across the island, and another to Sibonga, Argao, and Dalaguete, and from this latter point to Alcoy, Boljo-on, Nueva Cáceres to Oslob, which is the last point on the route.

"From the station at Barili there shall be two mail carriers, one to Aloguinsan, Pinamunjan to Toledo, and from there to Balamban, Asturias, and thence to the end of the route at Taburan, and the other for Dumanjug, Ronda, Alcantara, Moalboal, Ginatilan, Samboan, San Sebastian, to the end of the route at Santander.

"The three pueblos of the island of Bantayan shall keep up one station at Santa Fe to receive and dispatch mail to San Remigio or Daan Bantayan, by a boat to be furnished by the provincial government. The Camotes Islands shall also establish a station at Poro and a route from this point to Carmen, communication being had by means of a boat at the expense of the provincial government.

"The time taken for making the trip between any two stations will be, during the rainy season, from six to ten hours, the smallest distance being 16 kilometers, between Carcar and Barili, across the island, over a rough and tortuous road, which is in a bad state during the rainy season, and the greatest distance between any two stations is 47 kilometers, over a good road and level ground. The municipalities of Taburan and San Remigio in the north will see to it that there is a service established over the route, which is not designated on the annexed map, and to establish a mail service between their respective barrios, so as to place both of these pueblos in communication. The same course will be taken by the municipalities of Oslob and Santander to the south of the island.

"It is recommended that in view of the fact that the insular treasury bears the expense of distributing the mail to the provinces, it would be just and equitable that the distribution of mail in the pueblos of the interior of this island shall be done at the expense of the provincial treasury, as the municipalities are obliged to pay for the distribution of the mail in the barrios and places of their separate jurisdictions. Therefore the expenses connected with the proposed reorganization it is recommended be borne by the provincial treasury.

Station.	Class.	Personnel.	Monthly salary (Mexican).	Plant.	Cost (Mexican).	Maintenance.
Cebu ....	First class ....	{ 1 postmaster .....	\$30.00	2 vehicles.....	\$200.00	\$18.00

## AGRICULTURE.

This province is exclusively agricultural and its vitality depends upon it. Its principal products are the following, placed in the order of their importance:

Sugar, cultivated principally in the following pueblos: El Pardo, Talisay, Minglanilla, Naga, Carcar, Sibonga, Danao, Bogó, Medellin, Daan Bantayan, Tuburan, Asturias, Toledo, and Balamban. In nearly all of the rest of the pueblos sugar is cultivated but on a small scale. The pueblos on the western coast export this article to Iloilo, where they get a better price than at Cebu, the cost of transportation being the same on account of the distance, which is also almost the same. Before the year 1898 there were 14 steam mills in the province and 3 moved by hydraulic power, aside from a great many smaller ones moved by animal power. We have yet to make mention of the fact that in many very small plantations the old traditional wooden mill still exists. The total amount of the production of this article throughout the island prior to the year above mentioned fluctuated between 400,000 and 500,000 piculs.

Corn, which is the principal article of food in all of the pueblos of this province, particularly for the laboring class that prefer it to rice even when the price is equal, as it is considered by them to be more nutritious. It is produced in all of the pueblos, but more especially in Carcar, Barili, Dumanjug, Aloguinsan, Toledo, Balamban, Asturias, Tuburan, and Bogó, which are wont to export their surplus in important quantities to the neighboring islands. There has never been an estimate of the total production of this article. Its price prior to 1898 fluctuated between 1 and 2 pesos the cavan.

Tobacco is grown in nearly all of the pueblos, but principally on account of the nature of the soil in those of Barili, Dumanjug, Pinamungajan, Toledo, Balamban, Asturias, Tuburan, and San Remigio. La Compañía General de Tabacos has almost a monopoly on this island, having 10 agencies established throughout the pueblos. The production of this article during the year 1902 is calculated at 30,000 quintals, which is approximately the same as in former years.

Hemp, copra, cocoa, and potatoes are produced in some of the pueblos, but in such small quantities that they are not more than sufficient for home consumption, with the exception of copra and hemp, that are exported in small quantities.

All of the products above enumerated, except tobacco and copra, have suffered greatly in consequence of the revolution and of the rinderpest that has destroyed the work animals in the province. The production of sugar prior to the revolution reached a figure of from 400,000 to 500,000 piculs, as has been stated, while in the year 1902 it scarcely amounted to 100,000 piculs.

There is a great future in this province for cotton, as there is a great deal of land suitable for its cultivation, but in order to find favor with the farmers they must have some market where they could sell at a good price. The establishment of cotton mills would be very beneficial to the farmer as well as to industry.

The extreme depression of agriculture can not be overcome by the efforts of the people unless they have the support and assistance of the government that could come to their aid in establishing agricultural loan banks to lend money to the farmers at a small rate of interest, and by taking off import duties on agricultural machinery and implements. Such banks should have branches in all of the provinces. The establishment of experimental farms and agricultural colleges in several important provinces, where the theory and practice of the science could be acquired, would be very beneficial, as it would teach modern methods of cultivation to replace the rudimentary system now in vogue.

## MANUFACTURES.

Manufacturing is carried on in this province at the present time mostly in small household industries, with the exception of a few establishments in this city. It has been observed that the production of manufactured articles has increased during the past years, no doubt owing to the depression in agriculture.

Abacá textiles of different kinds, from the finest to the coarsest, for lining and other uses, are manufactured in all of the pueblos of this province. The price has risen during the last few years, approximately, 40 per cent.

The pueblos of Argao, Sibonga, Dalaguete, and Boljo-on supply the neighboring provinces as well as the Manila market with fine textiles made of the fiber of certain species of plantain, of which the textiles known as "tinampipi," "saba," and "sinamay" are made. Their production, as well as the price, have increased during the year 1902.

The fine, delicate, gauzy textiles of piña, with their fancy and beautiful combinations of colors, combined with silk and cotton threads, are made in the pueblos of

Bantayan and Santa Fe, where they form the principal industry. These towns also find a source of wealth in their fisheries, as they can not farm their barren lands. The prices of these textiles have risen about 40 per cent, and production has greatly increased in these last few years.

In the pueblos of Argao, Sibonga, Boljo-on, and Oslob cotton textiles are made for this market, their best manufactures being those of tablecloths, napkins, coverlets, and towels, which are sold to the people of small means, being rather cheap and coarse. Hammocks of cotton are also manufactured in the pueblos of Malabuyoc, Samboan, and Ginatilan.

This branch of industry has a good future before it, as the raw material can be easily procured in the necessary quantities in the place of manufacture. There are large tracts of land which are as yet uncultivated which could yield all of the raw material necessary to constitute an increasing market.

In order to avoid entering into too detailed a description of the manufactures of this province, we shall only state those that are of some importance at the present time and the production of which has increased up to 1902.

Hardware: Edge tools, machetes, bolos, gunas, and others. The guna is an instrument which looks like the bolo, but with a broad, sharp point; it is used mostly for weeding and grubbing, being an indispensable tool to the farm laborer. Some tin articles are also made.

Carpentering and cabinetmaking: Beds, tables, canes, and other furniture are made, as well as string instruments, such as guitars, violins, bass viols, etc.

Chairs of bamboo and cane as well as cane hammocks.

Gunny sacks for packing sugar, textiles of buri, which are reputed to be better quality and stronger than those manufactured in Capiz and other provinces:

Mats of buri and of ticog.

Baskets of cane and bamboo.

Pillows and bedquilts of cotton.

Saguranes, that is, textiles made of the leaves of the buri palm, which are used for packing purposes.

Rope of hemp and other fibers.

Shell work made up into frames and other knickknacks, the most artistic being those made in the pueblos of Argao and Dalaguete.

Shoemaking by hand.

Tailoring.

Embroidery and lace making.

Toy making.

Artificial cloth flowers.

Hats made of buri and of straw.

Native hats, called salocot and sarok.

Fine cheeses produced in the pueblos of Danao and Liloan.

Pastry, in which great strides have been made.

Brickmaking and earthenware for domestic utensils.

During the year 1902 industrial licenses have been issued as follows:

Lime factories.....	2	Soda-water fountains .....	2
Candle factories.....	7	Gilders establishment.....	1
Shoemaking establishments.....	12	Brickyard.....	1
Furniture factories.....	6	Dyers.....	2
Bakeries.....	9	Pastry shop.....	1
Lumber yards.....	21	Saddle makers .....	3
Carriage-making establishments.....	2	Pickle factories.....	2
Tailor shops.....	14	Foundry and machine shop .....	1
Soap factories .....	2	Hemp presses.....	5
Barber shops.....	4	Ice factories.....	2
Tinsmith shops.....	3	Distilleries.....	2

#### COMMERCE.

During these latter years commerce has made great strides. Prior to the revolution there were only three foreign commercial houses that deal in the various products of this country for export and import foreign merchandise.

The commercial importance of this province is principally due to its geographical situation. Products from other provinces flow into this market, and for that reason the port of Cebu is always animated by the coming and going of coasting and deep-sea ships. When the new works for the port have been completed and agriculture shall have been lifted from its present state of depression the city of Cebu will be second to Manila in commercial importance, and will fear the competition of no other ports

in the Visayan Provinces. At the present day it is in the number of inhabitants and in the character of the buildings of greater importance than Iloilo.

The products exported through this province to foreign countries are as follows, given in the order of their importance: Hemp, which shows an increase over former years; sugar, which has diminished; copra, which is increasing; coffee, which has diminished; mother-of-pearl, which has diminished; hides, which have increased; balate, which has diminished.

Of imported articles, those which have shown the greatest increase have been rice, textiles, petroleum, mineral water, and beer.

The value of imports was much greater than that of exports for the year 1902, but if we were to eliminate the largest factor—rice—the exports would be very much greater than the imports, and this will be the case when agriculture is again normal and this province can produce sufficient rice for home consumption.

There are at present in this province 1 bank, 8 commercial houses, and 166 shops, stores, and bazaars.

JUAN CLIMACO, *Governor of Cebu.*

## REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF ILOCOS NORTE.

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF ILOCOS NORTE,  
*Laoag, April 2, 1903.*

The CIVIL GOVERNOR, *Manila:*

SIR: I have the honor to submit to you the following report of the conditions in this province of Ilocos Norte, as set forth under the respective heads, during the period covered by last year, 1902.

### GENERAL CONDITIONS.

In the measure that peace and tranquillity became general in the provinces of this Philippine Archipelago, the civil government was extended to them, the honorable Commission proceeding for that purpose to the capitals of the provinces. That government with its civil régime was organized in this province upon September 1, 1901, the officials being installed the next day.

The new government so fervently desired by the residents of the province, already wearied with the military control to which they were not accustomed, was received with enthusiasm and with delight; and that peace and tranquillity which already reigned in the province, became more and more consolidated, for the character of the very people themselves is pacific and tranquil. In the year covered by this report the peace and tranquillity of this province could not be improved upon, despite the occurrence of a few acts, which, while their character may seem to have been alarming, were truly isolated cases, repudiated and despised by the people who themselves went about providing a remedy for their suppression.

One of the deeds referred to was that of the bandit called Basilio Esperanza, formerly a member of the revolutionary troops. He betook himself to the pueblo of Piddig and was forced to flee from the persecution of justice on account of his disorderly conduct in that pueblo. At that time he desired to capture or kidnap by force certain persons and went about robbing the people in the barrios, naturally raising a great alarm. But this did not keep up long for the very people whom he had captured made the attempt, and with success, to kill him with his own weapon, of which they slyly took possession at an opportune moment.

The other misdeed mentioned is that which relates to a disquieting movement of the constabulary who captured and imprisoned the residents of the pueblos without previously presenting proofs of their delinquency. However, this was corrected through the recommendations of the assemblies of municipal presidentes and steps taken also by the provincial government before the civil governor of the islands.

With the exception of these two isolated cases the province preserves complete tranquillity and peace, and this could be established in a most secure manner if the people should arrive at a proper understanding of the advantages of their present new organization, and that this becomes perfect with the exercise of its two great fundamental principles of liberty and equality, and which are but the right of each and every one to do good.

Undoubtedly the progress of the Philippines encounters a great obstacle in that the Filipinos being accustomed to the teaching that a life of despotism is their heritage, the practice of those two great virtues of the municipal organization is not easy. A

remedy for this evil will have to be found if the early progress of the country is desired, and this remedy can be no other than intrusting as far as possible and practicable the representation of the pueblos and provinces to those persons who, to the satisfaction of the people and of the government also, are able and willing to appreciate the true advantages of the municipal organization, and to practice and enforce the practice of the great and leading attributes of the same.

It is not my purpose to state here that the popular election of municipal and provincial representatives is unfavorable in its results, for it is not. Popular election is a consequence of the municipal organization. But such election if effected without the intervention of the government can not be taken as sufficiently trustworthy.

So it is that at least for such reasonable time as may be necessary for the mass of the electors to be able to understand, at any rate to a reasonable degree, the municipal organization which they desire to enjoy in order to profit by its advantages, it becomes necessary that popular elections be held under the supervision of persons authorized by law, for their approval or modification, not only with reference to whether or not the proceedings were carried out in a proper manner and in accordance with the requirements of law, but also as to the determination of the necessary greater or less merit and legal capacity of the persons elected.

I shall conclude this subject by saying that the announcement shortly before the end of the year of taking the census of the Philippines, and that all of the provincial governors were expected to proceed to Manila, was taken in this province as a sanction of the fact of the existence in truth of peace and tranquillity in the country, and the withdrawal of the garrisons of troops from this province to the port of Salomague should be taken as another.

#### PUBLIC HEALTH.

In what pertains to public health, this province has in this year, suffered more than ever before from dire calamities. It was invaded by the Asiatic cholera, which appeared first upon the steamer *Salvadora*, anchored at the port of Laoag; a member of its crew having been attacked succumbed upon March 24. It then appeared in the pueblo of Bacarra on July 25, and later successively, with more or less virulence, in the other pueblos of the province, with the exception of Nagpartian, where not a case of cholera appeared either during this epidemic or during the former; this heaven-sent immunity being attributed to the topographic situation and the altitude of the pueblo, as well as the healthfulness of its water.

The havoc created by the cholera was so great that there were in all 5,412 stricken of which 3,844 died. The pueblos which suffered the greatest number of victims were Laoag, Batac, San Miguel, Dingras, Bacarra, and that of Bangui which was the last pueblo stricken.

The cholera was not only remarkable and fearful on account of the great number of its victims, but because among these there were included some of the most important citizens of the pueblos; the provincial governor, Señor Elias de Villanueva; the first governor of this province, Señor Agbayani; the provincial supervisor, Mr. Danzil Taylor, and various other leading citizens of the pueblos and many young people of both sexes. The epidemic lasted until December, though in the pueblo of Bangui alone, for in the other pueblos of the province they had been for some time declared clean.

The efforts of science have been able to accomplish very little or nothing, against the inroads of the cholera.

Smallpox also visited this province and seemingly desires to establish an intimacy herein; for since it first began to appear in the pueblos of Batac and Paoay in the month of March, with slow step and but few victims, it is making its way through the pueblos of the south and east of the province. The smallpox is considered here almost as a household complaint and it is not feared like the cholera.

Another disease even more common but very much milder than the two former was prevalent in the year covered by this report in all the pueblos of this province. It is a malady heretofore unknown, and consequently it has no name nor has it been possible to give it an appropriate one. It consists in that a person, however well he may be, feels pains in his joints, especially those of the foot; these suddenly extend all over his body, and finally with intense suffering they leave him without power to move. So strange and peculiar did that disease prove that not only could no remedy be found for it, but when the victim of it was attended and remedies applied, the cure became more delayed and difficult. But when the malady was left to itself it abandoned the patient of itself upon the third day, leaving him as well as though he had not been sick and with no period of convalescence at all. Not only all the people, but it may be even the animals, have suffered from the disease; but it is not known that any animal or person died of it.

Fevers have also been common, but since they are well known to be but the effect of a change of weather or season, they deserve no mention because they are considered ordinary.

#### AGRICULTURE.

Owing to the calamities which it has been said were suffered precisely during a large part of the season of cultivating the land, and to the scarcity of work animals on account of the rinderpest during former years, agriculture would not have amounted to anything if the people of this province were not so fond of farming that they can not abandon the fields, so long as their health permits them to work, despising bravely the dangers to which they are exposed. So it is that while for the reasons expressed the crop of rice during the year under discussion has fallen considerably short, and moreover also on account of the locusts which have so invaded the fields of the pueblos to the north of the province, yet only those pueblos such as Pasuquin, Nagpartian, and Bangui have suffered from the scarcity of rice because of the shortness of the crop. For if there was also felt a want of grain in the other pueblos, without any doubt whatever, it was the result of imprudence and lack of foresight or of the charity of the people who were led to sell their rice to the people of Ilocos Sur, who nearly throughout the whole year, with the exception of the time during which communication was interrupted by the quarantine, came and went in this province for the purpose of buying rice. The horses and mules of the American troops stationed during the year in this province have consumed no less.

#### PUBLIC INSTRUCTION.

Since the military government was established in this province and the officers manifested interest in the education of Filipino youths, especially in the learning of English, such an interest for study has been aroused among the young that it has become necessary to construct more schools in the pueblos, because those that existed already, only to the number of two, were not enough. This fondness for study continued to increase to such an extent that during the year of which this report treats numerous youths of both sexes were far advanced and able already to read, write, and carry on conversation in the English tongue.

So great is the interest of the government in perfecting this branch of instruction—an interest which is matched by the application of the young—that American male and female teachers have come from America. And in the year of which we speak the normal school was held in the capital of this province for the instruction of Filipino teachers of both sexes at determined times, which were one month in each six months. The provincial high school for secondary instruction was also started. But even thus the desires of many families are not satisfied, for they desire to send their sons to America to be educated, and have not the means for their support during the time they are studying in that great nation. It is necessary, then, for the heads of families to find some remedy, and that soon, because should they not, while they are seeking and perhaps without success, time passes and their good intentions are frustrated.

#### ECONOMIC CONDITIONS.

Since it is certain that the peculiar conditions of each pueblo are what determine its resources or means for obtaining the funds necessary for its support, it results that since the conditions are not the same throughout all the municipalities of the province their resources can not be the same. And since this is true, the municipalities which are lacking in those resources, or certain of them, are not in a position to support themselves. But at the same time, by granting them the permission to utilize those resources which they have at their disposal their support, while perhaps not entirely assured, is nevertheless not impossible.

#### PUBLIC IMPROVEMENTS.

In the year which we are reporting public improvements have been of no value whatever.

The majority of the roads have nearly always been impassable, even during the life and after the death of the provincial supervisor above referred to. The said supervisor opened up a wagon road between Laoag and Bacarra which turned out to be useless and impassable; the same being the case with two enormous wooden ferries across the rivers Laoag and Dingras, which were absolutely useless, the money therefore being wasted which was expended for labor and wooden and iron materials for these ferries.

And while stating that the public works of this province do not require any special skill nor a scientific knowledge of engineering, and that said improvements and roads were formerly preserved and attended to under the supervision of persons of ordinary intelligence, but experienced and practical; it is now opportune to claim that these works may also be entrusted to such persons (for there are some in this province) in order to secure greater economy of expenditure, and consequently advantage to the treasury. But it should not be understood from what is said that the special knowledge of more skillful persons may not be required when there are such works as demanded.

#### INDUSTRY AND COMMERCE.

The people of this province are industrious and commercial; but since there is no great amount of capital to encourage this spirit nor facility of communication for the transportation of their effects, they are, to put it so, merely circulating in a quiet way within the province, and the movement is barely felt outside the same. A secure and good harbor is desired in this province, and then Ilocos Norte will surely display its industrial and commercial importance in competition with others of its class in the Archipelago.

#### SUGGESTED LEGISLATION.

In consideration of the foregoing it would be desirable, and the undersigned provincial governor can do no less than recommend:

1. That section 14 of Act No. 82, the Municipal Code, be so amended as to increase the required qualifications of the municipal presidente, vice-presidente, and councilors by requiring them to possess ordinary intelligence and capacity for understanding and teaching the present organization of the municipalities and the provisions of the Municipal Code.

2. That paragraph (b) of section 13 of said Act No. 82 be amended to provide that the provincial board be also empowered to make their investigations and reports concerning the capacity or lack of it, in their opinion, and based upon pertinent and just information, of those who may be elected by popular suffrage to the offices of municipal presidente, vice-presidente, and councillors.

3. That section 42 of the said law be amended to add the words "in so far as may be possible" after the word "uniform" in the second line thereof.

4. That in section 43 of the said law the word "only," in the second line thereof, be omitted.

5. That section 44 of the said law be amended to begin as follows: "The municipal council, with the approval of the provincial board, shall have the power to impose other taxes, in addition to those described in the preceding section, whenever it shall deem such action wise."

6. That section 10 of Act No. 83 be amended by adding after the words "and the barrios thereof," in the fourth line, the following: "and the provincial board is hereby empowered to entrust the said supervision to such persons as it may deem capable of performing the duties connected therewith when the provincial supervisor shall be absent or otherwise incapacitated, or whenever the position shall be vacant."

Respectfully,

JULIO AGCAOLI,  
Provincial Governor.

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF ILOCOS NORTE,  
Laoag, April 2, 1903.

The CIVIL GOVERNOR, *Manila*.

SIR: In compliance with your circular of November 20 last I have the honor to inclose with the present annual report a number of photographs, among which is one of the undersigned with the municipal presidentes of the province of Ilocos Norte, and the others are representative of certain typical scenes and views of domestic and rural occupations, and also of certain of the more important buildings, and of a cotton mill in the pueblo of Piddig.

I have the honor ever to remain your most humble and attentive servant, who desires for you the most perfect health, and who, awaiting your further orders, salutes you

Most sincerely,

JULIO AGCAOLI,  
Provincial Governor.

## REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF ILOCOS SUR.

OFFICE OF THE PROVINCIAL GOVERNOR,  
 PROVINCE OF ILOCOS SUR,  
*Vigan, April 6, 1903.*

The CIVIL GOVERNOR, *Manila.*

SIR: Complying with the provisions of section 7 of Act No. 83 I have the honor to present to you the following report concerning the situation and general condition of this province during the year 1902:

## POLITICAL SITUATION.

Since the surrender of the insurgent forces which were operating in this province in the month of April, 1901, and up to the present date, the public order of this province has not been disturbed in the least particular, if the false alarm raised by certain members of the constabulary be excepted. During that period in all of the pueblos complete tranquillity and personal security have been enjoyed.

## PROVINCIAL ECONOMIC CONDITIONS.

	U. S. currency.
Collections from all sources for the province during the year 1902.....	\$48,788.42
Expenditures made by the provincial treasury during the year 1902.....	41,030.95
Balance in treasury January 1, 1903 .....	7,757.47

As is seen from the above statement the finances of the province in its first normal year have but just balanced; that is to say, the ordinary revenues scarcely sufficed to cover the expenditures during the year 1902. For while it seems that there exists a surplus of \$7,757.47, this amount should be considered as a revenue of the present year of 1903, because of the fact that the value of the property assessed in the pueblos of Candon and Santa Catalina was mistaken, the figures expressed in Mexican currency being taken as gold, which caused the amount collected in those pueblos to be double what it should be. As these pueblos entered their protest the provincial board decided that the amount paid above the correct amount (which was a little more than the balance stated above) should remain on deposit in the provincial treasury as a guarantee of the payment of taxes for the present year, 1903. For this reason the provincial treasury is at present far from being in a position to undertake public improvements of any considerable importance for the betterment of the general conditions of the province, and all that has been done up to the present time are ordinary works, rather for the sole purpose of preserving those already built.

## MUNICIPAL.

	U. S. currency.
Collections from all sources for the 24 municipalities of this province ...	\$49,682.53
Total transferred to municipalities.....	49,540.71
Balance in favor of municipalities on January 1, 1903.....	141.82

Although the land tax has slightly increased the ordinary revenues of the municipalities, it turns out, however, that the financial condition of the majority of them is quite similar to that described in my last year's report. That was, that with the exception of Vigan and Candon, the others live merely from day to day, as is commonly said, and they are in no condition to better the present situation of their people, especially the needs of the young.

## PUBLIC IMPROVEMENTS.

1. Amount appropriated by the provincial board during 1902, for the repair of roads and bridges, \$18,311.22 Mexican.

2. Amount appropriated for the repair of the provincial buildings and offices of the government during the same year, \$4,318.12 Mexican.

The work done by the provincial supervisor up to June of last year, in the repair of roads and bridges, succeeded in putting them in fair condition, so that it was possible to travel, without great difficulty, the whole length of the public wagon road of the province, from north to south. But the rainy season came and destroyed a large portion of the work done upon the roads, and as for the bridges, a few of them were also destroyed.

The construction of roads in such a strong and lasting manner as to resist the destructive action of the rains is an unsolved problem as yet in the Philippines. Even during the time of the Spanish domination, when the provincial governments had at their disposal the personal labor of the residents, this matter was one that was closely studied, but a satisfactory solution was never reached. At that time all the pueblos worked their roads by means of the so-called personal labor each year without any expenditure upon the part of the provincial treasuries, because the action of the water and the wheels of the carts destroyed the best of roads.

The Spanish system if followed at present would result to be very expensive, for the expense annually of \$18,000 to \$20,000 for repairs of roads which last usually a year, or more accurately, from one rainy season to the next, I take it that such a system would be of no practical benefit. In order to remedy this evil I shall suggest to the supervisor that he investigate and experiment with a view to determining some method that he shall decide to be efficient and serviceable in this climate for making the roads and bridges permanent. And when he shall have found this method he will arrange some method of dividing the work into sections, to be completed in four or five years, if the province is to depend upon its own regular revenues, or by means of a loan if it is preferred to do all the work at one time.

#### PUBLIC INSTRUCTION.

In this province there are 81 public schoolhouses, 5 female and 28 male American teachers, and 157 Filipino teachers, male and female. In each of the pueblos there are at least 2 schools, one for boys and one for girls, and in the more important there are more, as many as 10. The number of children who attended the schools during the last scholastic year was between 16,000 and 17,000, twice as many as attended during the preceding year, 1901-2. According to verbal information which I have received from the division superintendent of this province, G. R. O'Reilly, and from certain teachers, the public instruction in this province is carried to quite an advanced grade. In all the pueblos where American teachers were stationed for some time there is already a number of boys and girls who can understand and speak English more or less correctly, and in the high school and normal school, which are in operation in this province, we have had a daily attendance of more than 200 pupils, many of whom are able to converse in English. Such a flattering condition is due without any doubt to the indefatigable labors and the truly paternal zeal of the American and Filipino teachers.

#### PUBLIC HEALTH.

This province, like many others of the archipelago, was visited during the past year, from July until October, inclusive, by the Asiatic cholera. According to data taken from the register of the office of the provincial board of health, the number of cases was 12,388, and the deaths 7,689.

The total number of deaths from all diseases during the year 1902 reached the figure of 12,497. Taking from this number 7,689 who died from cholera, it seems that 4,808 died from other diseases.

The maladies which were most prevalent in this province in the year 1902 were chronic intestinal catarrh, whooping cough, summer complaints, dysentery, bronchitis, intermittent fevers, meningitis, and malaria.

As for the terrible smallpox, fortunately the province has been free from it, for while in the pueblo of Santo Domingo there were found two cases of this dread disease, brought in from the province of Ilocos Norte, where it was prevalent during last year, it was unable to spread here, thanks to the energetic measures adopted opportunely by the president of the provincial board of health.

As a preventive measure against the said disease, 12,199 persons were vaccinated with variolous lymph, sent out by the bureau of government laboratories. The vaccination was effectual upon only 5,148 persons, not having taken on the other 7,051.

#### AGRICULTURE.

Agriculture is beginning to look up from its past condition of prostration, caused by war and rinderpest. The number of work animals is gradually increasing, and in the majority of the pueblos there are at least enough for farming purposes.

The principal products of this region are rice, sugar, maguey, and indigo.

The crop of rice in 1902 was in general only fair. According to estimates, 30 to 40 per cent was lost. This was due to many causes; for example, unfavorable climatic conditions, the cholera which raged in the province in the very months when the

tasks of the fields are undertaken for the cultivation of rice, and in some places the lack of work animals.

The sugar crop was quite good, if the area under cultivation is considered, for in the whole province it is calculated that there was a return of 80,000 to 100,000 piculs.

The maguey crop has been of greater consequence, not only on account of the increase of the crop, which was much greater than in previous years, but also the favorable prices which this commodity reached on the foreign markets to which it is exported. It is calculated that the five or six pueblos which have cultivated and treated this plant rather more extensively have produced in the year from 30,000 to 35,000 piculs.

Undoubtedly upon this product the future of this province depends, not only for the high prices which it has brought upon the Manila market during these three or four last years, but also on account of the ease with which it is raised and treated, and also the exceptional advantage that no special quality of land is needed for this plant, for it appears to grow to best advantage in ground entirely fruitless for the cultivation of other plants.

For this reason those who engage in the treating of this plant are very desirous that competent persons, employees of the bureau of agriculture, shall study and experiment with a new method more effective and rapid for the better treatment of the textile.

The production of indigo decreases each year because of the small sale which it finds upon the Manila market. For this reason its cultivation is being abandoned, though the product was of great importance to the province in former years.

Finally, as an important fact concerning this branch, I shall add that this is the smallest province, with regard to its area, of its class. For according to official data which I have at hand, it comprises only 491 square miles, while its estimated population reached some 170,000 inhabitants. Because of this disproportion between the number of inhabitants and the superficial area of its territory, it comes to pass, even in the years when the crops of rice and corn are very good, there is scarcely enough for half a year. The province of Pangasinan provides us with rice each year.

#### INDUSTRY AND COMMERCE.

Industry and commerce have also made some progress during the year 1902. The largest manufactories representing the industry of this province are La Union Ilocana, a stock company engaged in making cigars and cigarettes by machinery, the purchase and sale of leaf tobacco, and other business; four alcohol factories, one in Santa and three in Candon; the other branches of industry being of small importance.

Commerce is represented by retailers of the native products exported to Manila, and by those who import into the province foreign goods consisting in cloths of all kinds, hardware, peddlers' articles, utensils, etc. The Chinos have acquired a large part of this business of exporting and importing, and certain foreign houses of Manila have representatives here for collecting the products of the locality.

#### FORESTS AND MINES.

The forests in this province are found in the range along the coast of the same. Naturally they are already well cut out, for they are the ones which first provided for the necessities of the inhabitants of the plains, and their replanting never having even been thought of, it is but natural that they are now in their present condition. Therefore these products are of small importance either in quantity or quality, and this province is lacking in interest so far as the forestry branch is concerned.

A similar condition exists in the matter of mining, for while I asked in 1902 for information from all the municipalities relative to this resource, the only result obtained was that in four of the pueblos there seem to be beds of clay, and it is also claimed that in four other pueblos there are indications of the existence of gold mines, and, finally, one shows indications of sulphur.

It is reasonable to suppose, however, that if expert prospectors should make minute investigations deposits of other minerals might be found, although should this be the case they would be of no importance.

#### SOCIAL CONDITIONS.

Due to the rather weak development of industry in this province the support of the inhabitants depends principally upon agricultural pursuits, commerce, and retail traffic, to which the more opulent of the citizens dedicate their efforts.

The average daily wages of the common laborer—that is, those who have no special trade—fluctuate, according to the time of the year and the prosperity of the pueblos, between 20 and 40 cents, local currency; while the wages of those who have a trade range between 50 cents and \$1, local currency.

As is seen, the ordinary wages of this province are very small; nevertheless, thanks to the pacific and docile character of the Ilocano people and to their admitted industry, we have not been called upon to suffer any of those crises which have produced and still produce disturbances and other calamities to which the other provinces are subject, though the great majority of the people are still far from enjoying real prosperity.

In conclusion, and as an item of social statistics, I add here the following statement of births and marriages for the year 1902: Births, 8,011; marriages, 1,718.

I have no legislative measures to propose in this report.

Within a few days I shall have the honor to send you a number of photographs, as called for in your letter of November 20, 1902.

Respectfully,

M. CRISOLOGO,  
Provincial Governor.

---

REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF ILOILO.

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF ILOILO,  
Iloilo, January 15, 1903.

The CIVIL GOVERNOR, *Manila*.

SIR: In compliance with the provisions of section 7, Act No. 83, I have the honor to transmit the present report covering the general conditions of the province of Iloilo during the past year of 1902, as well as the noteworthy events which took place during that period.

ECONOMIC CONDITIONS.

The economic conditions of the province of Iloilo, like those of all the provinces of the Archipelago, are most dejected and critical. Rinderpest and malaria, which appeared here in 1901, and continued during 1902, and which still exist, have had the natural and unavoidable results. Unprovided with work animals, and with the majority of the working men sick, I may state as a certainty, without fear of being termed a pessimist, that seven-tenths of the land has been left unplanted during the year just past, and consequently the crops are very much less than those of 1901. It is also necessary to remark that while this planting was small in the extent of land planted, the crops were also poor because of the lack of water, and as a general rule, for one reason or another, they have been late.

What produce has been harvested will hardly last for the consumption of two months, and it is not therefore unreasonable to assume that a rather difficult and critical situation will follow during these months that intervene between one crop and another; at least it will prove so to the country people and those of the lower classes, to whom the scarcity of rice, their article of greatest necessity, will be productive of grave results. Therefore, the action of the Commission, in securing this commodity abroad to furnish it at a reasonable price to the provinces which need it, is worthy of every encomium, and it is the only means for liberating the poor from the avarice of the merchants.

The present condition of the province has necessarily had its effect upon the economic situation of the municipalities, whose sources of revenue, such as markets, slaughterhouses, cockpits, and others, have necessarily fallen off, some of them disappearing altogether. This state is due to the lack of work animals and the critical condition of affairs in general. Wherefore, in order to provide for this condition as long as it shall last, the provincial board made the suggestion to the honorable Commission on May 21 of last year that a reorganization of the municipalities of this province be made, so that the 51 of the present time shall be reduced to 16, and in this manner it is expected that the item of salaries alone will be reduced in the amount of 42,000 pesos, without counting the economy which would result in the saving of materials, all of which sums could be expended in improvements in the pueblos themselves.

This fusion of municipalities, I believe, would secure important and palpable results for the good of these municipalities at the present time, and I do not hesitate to recommend it to the chief executive, seconding thus the recommendation of the

provincial board. This reform and the granting of a loan to the provinces which in reality need it, the purchase of rice in the exterior to be sold at reasonable prices, and the introduction of cattle for the same double purpose, we consider to be measures which satisfy the natural as well as reasonable necessities of the moment, making the situation more tolerable.

In its political aspect the condition of the province can not be improved upon. In our report corresponding to the year 1901, we said that the pueblos, thoroughly convinced of the advantages of the new régime, scarcely retained even a memory of the past, but attended only to their intellectual, material, and political progress under the direction of the great North American Republic. That political situation not only has not varied in the least particular, but it has become more and more firmly established, owing to the measures adopted by the American Government. The Philippine bill enacted by Congress, which provides for the taking of the census, is a patent proof that the promise of a full self-government will soon be consummated. That bill is an irrefutable proof of the good intention of the American Government to grant at the proper time and opportunity all the prerogatives and inherent rights of a free people. That bill, then, and the truly democratic and liberal policy adopted by the insular government and the Commission, constitute a certain guaranty of this position.

Moreover, as the pueblos become imbued with a knowledge of the municipal code, they appreciate the advantages of the municipal autonomy therein established. I trust that the municipal elections, which were postponed until next May on account of the census, will be a fair indication of the progress of the people in the exercise of the right of suffrage.

#### PUBLIC ORDER.

As far as the tranquillity of the province is concerned, there is still left much to be desired. Due to various causes well known to every one, and among which figures in first place the misery which followed the war, as well as to the calamities of which this province has been the victim, outlawry, though not in alarming proportions, is still working its pernicious effects upon the unarmed residents in all the barrios. The avarice shown by a few unscrupulous merchants, contributes not a little to the increase of outlawry, for the outlaws are sure of finding buyers for the products of their rapine.

With this fact in view, the local presidentes, in their assemblies, have given their attention principally to discussing and suggesting measures which will tend to the restraining in so far as possible the conveyance of animals of doubtful origin, and exacting the most minute details for the purpose of substantiating the legitimacy of their title. The constabulary, it must be stated, has manifested an activity worthy of all praise, not only in the persecution of the outlaws, but in discovering their accomplices and those who buy and authorize the sale of animals with doubtful or no titles. The cases now being prosecuted in the court of first instance here against persons accused of selling stolen animals or those of doubtful origin prove the activity which has been displayed. This campaign has been vigorously undertaken and prudently carried out by the municipalities and the constabulary, so that I have no doubt that the results will be beneficial to the tranquillity of the province. This office is resolved also, on the other hand, to cause the weight of the law to be felt by every municipal official who shall be guilty of favoring such transactions or of being negligent in the compliance with their duties merely, as has already been done upon more than one occasion.

One of the difficulties met with in stopping these transactions in ill-gotten animals is the difficulty found in watching the coast for their embarkation to other provinces, particularly to the island of Negros, and also to the ease of conveying animals stolen in Iloilo to Capiz and Antique, transferring them from there to Negros. For this reason it is recommended to all the municipalities to observe strict vigilance in order to prevent the embarkation, within their jurisdiction, of animals whose origin is not properly substantiated.

One of the greatest difficulties encountered in the persecution of ladrones in this province is that since those who are true ladrones are so few in number, they separate into bands of 15, 20, or 30 men, at most, and these are continually on the move, going from north to south in the province, and when they find themselves hard pressed they scatter, usually without offering any resistance, and with no other tactics than attacking the barrios and pueblos which have no detachment of constabulary or whose police are not efficient. For this reason I have always been of the opinion that the municipal police should be given good arms in order that they may serve as a nucleus for the operations of the constabulary and be able to defend their pueblo in case of an attack when the constabulary is away.

It is true that the municipal police in some of the municipalities have lately been provided with shotguns and revolvers; but it must be remembered that the ladrones

are armed with some arms of precision, and though they have very few (in all, they scarcely have 20 guns), the situation of the municipal police may be imagined in case of an encounter, when they find themselves confronted by an enemy having not 15, but even 3, guns of greater range and precision than their own shotguns. And if to this be added the fact that to each of these shotguns there is assigned but five cartridges, the true situation of the municipal police, in cases of such encounters, is understood.

I take it then that the important thing in combating outlawry and providing protection for agriculture is either to furnish the municipalities with good arms, and in sufficient number according to their location and upon their own responsibility, or to augment the number of constabulary, so that they may have detachments in each of the 51 pueblos which make up this province.

#### PUBLIC INSTRUCTION.

Notwithstanding the truly calamitous conditions to which this province has been subjected, public instruction has not retarded in the least, as would have been expected to be the case. According to information received in this office from the division superintendent of schools, there are in attendance upon the schools of this province 5,000 boys and 3,000 girls. The progress in learning English in those pueblos which have American teachers of either sex is notable.

As another result of the work of instruction in this province during the last year, 1902, there was founded in this city of Iloilo a teachers' normal school, conducted by American teachers, in which are taught the proper courses for teachers, and recently classes of stenography and telegraphy have been added in that school.

In spite of the short time that the school mentioned has been running, there is a daily attendance of 225 male students and 75 female students of this province and other nearby provinces. We would call attention to the fact that the school is now conducted in a house rented by the provincial government at \$150 United States currency, and the building will be insufficient to hold the number of youths who will attend this school in search of education.

But while the establishment of the normal school supplied one necessity, it would be advisable also for the government to establish a school of arts and trades, which is a necessity no less felt by reason of its importance to the province, and this school might also be attended by the youths of other provinces. The aptitude of the Filipino in these branches of learning is well known, and it is to be regretted that there is no educational institution in which they may improve their talents.

#### PUBLIC IMPROVEMENTS.

During the first months of the year 1902, the provincial board, utilizing the loan of \$50,000, which was granted by the honorable Commission, undertook with great activity the construction and repair of the principal roads of the province, with the double purpose of providing good roads and of furnishing work to the common people, under the immediate supervision of the provincial supervisor. However, these works were stopped in the month of August owing to the appearance of cholera, because the government was in need of funds for combatting this new and urgent evil. So that only the road from Jaro to Santa Barbara has been completed, and the others were left incompleated, though well under way in their construction. There has been expended approximately 75,000 pesos in these works.

#### PUBLIC HEALTH.

The epidemic of cholera, so justly feared, appeared in this province in August, 1902, the first case registered being that which took place in a small boat anchored in the river of this city. After the official declaration of the presence of cholera by the board of health, every sanitary precaution known to science and to hygiene was taken, as well as every means considered by the board of health to be conducent to the prevention of its propagation in the city and in the neighboring towns. Nevertheless, all was in vain. The disease was propagated in Iloilo, neighboring towns, and in the interior, claiming numerous victims, more especially among the lower classes.

From the very beginning of the epidemic, the provincial board of health is worthy only of our commendation for its efforts in combating the evil with the very limited resources at its command, and equal commendation is due Doctor Winslow, sent by the commissioner of health for the purpose of assisting the board. The actions of the board of health were hampered by their inability to count upon physicians, nor did they have at their disposal even "practicantes" (students) to execute their

orders by attending the hospitals and administering the remedies in the pueblos. In the pueblos of Iloilo, Jaro, and Molo cholera hospitals were established under the supervision of the municipal physicians, and also in La Paz, and Oton, under the direct orders and supervision of the president of the provincial board of health, Señor Araneta. To the other pueblos, where for lack of physicians it has been impossible to establish hospitals, there were sent "practicantes" for distributing and administering the remedies previously prepared by the president of the board of health.

The cholera which began in August did not disappear completely until the closing days of December, 1902, causing, according to data on file in the office of the board of health, 30,998 cases, and 19,813 deaths, in all the province.

Some days after the appearance of cholera, there was current through the pueblos of Iloilo, Jaro, and Molo the report that certain men were engaged in the poisoning of the wells. At first no importance was given such reports nor any attention paid to them. The rumor, however, gained strength; actual cases of poisoning were reported; apprehensions of alleged poisoners were made; and the public took as a reality those poisonings and attributed them to elements at variance with public order.

In the face of such excitement of the public mind, which might produce fatal results, the government could no longer remain indifferent. So it was, that while counseling prudence and moderation, through the provincial fiscal minute investigations were made in order to ascertain the truth or falsity of the report. The provincial fiscal, Señor Ruperto Montinola, displayed an activity and zeal in the matter worthy of all commendation, and also a prudence which proved his appreciation of the delicacy of his mission. He asked for the arrest of certain individuals upon whom fell suspicions of being poisoners of wells and in whose possession were found substances apparently poisonous, for when given to dogs death ensued. Owing to the lack of some place for analyzing these substances there was no way to determine the matter scientifically, and therefore the provincial fiscal sent the alleged poisonous substances, secured from various prisoners, to the attorney-general for analysis.

Since this question is still sub judice it would be unwise to state a formal affirmation as to the truth of these poisonings, and also as to who were the true instigators of such an attack upon the public health, and while the Spaniard, Eduardo Olivares, has been indicted, accused with furnishing the poison, the case is still before the courts and no sentence has been passed. There is no other evidence at present concerning such important matters except that collected by the fiscal representing the government, and which seems to indicate that such poisonings did actually take place, or at any rate that it was desired to use this as a means of causing ill feeling between the Filipino and the American. Father Juan Fernandez, priest of Iloilo, is at present charged with sedition for having told certain persons that the Americans were poisoning the Filipinos.

#### RELIGIOUS CONTROVERSIES.

The religious schism which has arisen in the folds of the Apostolic Roman Catholic communion in these islands and which has recently been attracting public attention, has also been felt in this province, owing chiefly to the feeling of hatred and aversion which is felt for the friar; and while this movement is not as strong here as in other places, especially in Manila, it has still shown its existence here in the formation of committees in the city of Iloilo and a few other pueblos. But if this dissenting communion known as the Independent Filipino Church shall gather force in this province, our attitude and conduct are already decided upon. Upon the fundamental principle of the absolute separation of church and state, this provincial government will not favor, directly or indirectly, either one or the other of these religious communions; it will abstain absolutely from intervening in their controversies, so long as order and tranquillity of the public do not demand such intervention.

#### PROVINCIAL JAIL.

One of the principal needs of this province is a provincial jail, with the proper hygienic conditions and capacious enough to hold the necessary number of prisoners. There are at present in the jail 175 prisoners, accused of various crimes, and these it has been necessary to distribute around in three different buildings, because the provincial jail is not large enough to contain them. This jail is in the lower floor of the municipal building of Jaro, and is certainly lacking in hygienic conditions, especially for holding men. Since, moreover, the state of the finances of the province prevents it from erecting a provincial jail at the present time, it is thought that for some years this province will lack for a penal establishment, which is so necessary an institution

in all governments. To care for this necessity, and due to the lack of means upon the part of the provincial board, I take upon myself the liberty of suggesting that the Commission grant the province a loan for the construction of a jail, capable of holding from 150 to 200 persons, this loan to be payable yearly, or in the manner to be determined.

Respectfully,

MARTIN DELGADO,  
*Provincial Governor.*

---

REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF ISABELA.

OFFICE OF THE PROVINCIAL GOVERNOR, PROVINCE OF ISABELA.

*Ilagan, April 8, 1903.*

The CIVIL GOVERNOR, *Manila.*

SIR: Complying with the provisions of section 7 of Act No. 83, which says, "between the 1st and 15th of January of each year he shall make a report of the conditions of the province for the year ending on the previous 31st of December to the chief executive of the insular government, recommending therein such measures, executive or legislative, as may seem to him best for the betterment of the conditions in the province," the undersigned has the honor to make the report which follows:

I. I congratulate myself upon being able to state and to set forth in this report that the civil government has been in operation with complete regularity since March 3, when I took possession of the provincial government, and until the end of the past year of 1902.

II. The municipalities advance with at least ordinary progress, with promise of steps of triumphal advancement in the future, as they increase in the true and faithful comprehension of the provisions of the municipal code.

III. Means of communication, both by land and water, are quite difficult. Land travel is at this time passable, while in the rainy season it is almost impassable. The present condition of the provincial treasury does not make it possible to remedy the notable defects of land communication, and as for the rivers there are no means for improving them, and they are navigable only in the rainy season.

IV. The civil and military authorities in this province maintain the best of relationship, leaving nothing to be desired in any respect by anyone.

V. There is no outlawry in the province, and there are now in the provincial jail but two prisoners, and they are sentenced for ordinary offenses. The stealing of cattle, particularly of work animals, places certain of the municipal presidentes somewhat mysteriously under suspicion, and for this reason I am attempting to obtain information of a truthful character with which to incriminate them. Should this result I shall immediately place them in the hands of the proper authorities, and the continuous disappearance of animals will cease, and the tranquillity of the owners, recently so outraged and disturbed, will revive.

VI. This province being anxious for the culture and civilization of the children between 8 and 12 years of age, by attendance upon the municipal schools of the pueblos, which are the agencies of the development, advancement, and progress of the country, for without these agencies the longed for progress will ever be a myth; and having observed, moreover, that in the pueblos where there are American teachers, the children, which in small numbers attend the schools, are advanced in English; therefore, the honorable commission should enact a law granting to each pueblo of the province an American teacher, and establishing in the capital of the province a normal school, such as that in Tuguegarao, in order to satisfy the pitiful desires of the children who are so ambitious to reach that degree of American civilization which is the theme and longing of our tender youth to-day. This law should compel all children of school age to attend the municipal schools daily, for if this should not be done, it would be of no advantage nor benefit to have a teacher in each pueblo, because they would never voluntarily go to school, on account of the accustomed observance by the majority of the people of the monkish practices of the former domination, when a knowledge from memory of the Christian doctrine in the Ilang, or local dialect, sufficed. Furthermore, during those times some parents paid certain sums to the authorities of the pueblo so that their children should not be obliged to attend school, and certain vestiges still remain of this practice of the people.

VII. For the right and prompt administration of justice in this Cagayan Valley there should be appointed for the provinces which lie in the said valley a judge of first instance, residing in (Ilagan, Isabela) the center of the three, for nearly all cases, criminal and civil, in the municipal courts are at a standstill. In this manner would be suppressed the abuses and negligence of municipal officials, as well as those of

private individuals, in those cases which do not lie within the jurisdiction of the provincial board.

VIII. Since the month of April last there have appeared in certain pueblos and barrios of this province a certain considerable number of grasshoppers or locusts, both creeping and flying, which destroyed nearly all the crops of corn and rice. The people mourned the appearance of this plague, because by it they were deprived of needful support. Therefore the Commission is requested to enact a law ordering the inhabitants of the locality where these destructive insects appear to dedicate themselves exclusively, at that time, to catching and killing them without any remuneration whatever, since it is a service for the common welfare. The respective municipal authorities should be charged with enforcing this law and should take charge of the excavation where the said insects are buried, prohibiting absolutely the eating of them by the people.

IX. Since it is of the utmost importance and propriety to the province to continue the existence of community fences in all the pueblos of the province, because they are life itself to all the crops, and it is of prime necessity to pass a law to be applied to the municipalities of this province, instructing the municipal presidentes to give strict orders to the councilors of the respective municipalities to build a solid fence along the line formerly drawn for the community fence of the pueblo, or to build up those which are torn down leaving open spaces, in order that the animals which are loose within the fence can not go through or enter the fields and injure them; and if by reason of the negligence of any of the said municipal authorities any part of their duties as prescribed by the said law shall not be complied with by them, it shall be sufficient cause for removal. This legislation is necessary because in the pueblos where the community fences were neglected in the year 1902 the people were threatened with a famine. This unhappy catastrophe, however, was averted by those pueblos which succeeded in gathering good crops because of always keeping their community fences solidly built, and they succored the threatened pueblos with food. Toward the middle of last January, my worthy predecessor, Mr. William H. Johnston, called the attention of the municipal presidente of this provincial capital to this matter and explained to him the advantage which accrues to owners of cultivated lands for the pueblo to have community fences, because should they fail to have them, as was the case in the three former years, all of the planting would come to naught as before, when the crops were destroyed by the loose animals, and during which time want was felt in the province. For the owner of a field instead of fencing his land, which for example consists of 200 meters square or a total of 800 meters around, would have to build as his share in the community fence only three or four yards, with a little cane or bamboo at a small cost of money and labor; whereas should it not be done in this way, the owner would have to employ much money and labor. To this the said presidente replied that there existed no necessity for following the methods and procedure of former times and that each owner should look out for his own field.

X. On account of the repeated murders committed annually to the number of 15 or 20 by the non-Christian Gaddanes in different pueblos of this province of Isabela, merely to satiate their savage instincts, a law should be enacted providing that the whole constabulary force of this valley should make an active expedition to punish the Galingas of the Gaddang tribe, because every one of them, without an exception, is a criminal, and they should be made to live or remain among the pacific inhabitants of the municipality nearest to their settlement, and those who should thereafter be arrested for such a crime, once their criminality is established, should be made to suffer capital punishment without any display of mercy, and should be executed in the public view of their tribe in order that it might serve as a general example to them.

XI. The municipal funds collected by the pueblo of Cordon being insufficient for the expenditures originated by reason of its municipal government, owing to the small number of inhabitants—790 in all—this pueblo should be annexed to Carig, the adjoining pueblo, and be consolidated as one of its important barrios. Because should it be continued as at present as one of the pueblos of this province while being unable to defray the expenses of its own municipal government, it would prove injurious to the people on account of the high rate of taxation which would be imposed upon them by the municipality for its support.

XII. The revenues of the treasury of this province for the year of January 1 to December 31, 1902, amount to the sum of \$39,021.87½, and the expenditures for the same period amount to \$49,263.72; the difference of \$10,241.84½ being covered by a sum received from the insular treasury.

The reason why this annual report was not submitted at the proper time, is, that having been in Manila on official matters, I returned to this capital of my province

on the night of January 14 with the papers and affairs of the census, and the next day I began to give the instructions that had been intrusted to me by the director to the municipal presidentes and members assembled together for that purpose. Moreover, the delay had been augmented by the manifold duties which devolve upon the undersigned by reason of the affairs of his office, as well as by the exposition matters, the papers concerning them having been brought from Manila also; and now by the assessment in addition, for as president of the revising board I have to attend to it, while the law designates a very limited period for its completion. Furthermore, the municipal presidentes have not submitted their annual reports to this office, as prescribed by section 18, paragraph (n) of the municipal code, despite the fact that during my recent visit through the province, supervising the work of the census and the organization of the exposition committees, I verbally notified the said presidentes to present to this office, as soon as it was possible, their respective reports, in order that with them before me I might prepare my own, as I have this day the honor to do.

I beg, therefore, in view of the reasons just set forth, that you will pardon the delay.

Respectfully,

FRANCISCO DICHOSO,  
Provincial Governor.

#### ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF LA LAGUNA.

[Translation.]

OFFICE OF THE GOVERNOR, PROVINCE OF LA LAGUNA,  
Santa Cruz, January 15, 1903.

The CIVIL GOVERNOR OF THESE ISLANDS, *Manila*.

SIR: In compliance with section 7 of the Act No. 83, entitled "A general act for the organization of provincial governments in the Philippine Islands," I respectfully submit the following report, embracing the period from the 1st of July to the 31st of December, 1902:

#### GENERAL CONDITION OF THE PROVINCE OF LA LAGUNA.

Upon the implantation of civil government in this province the conditions had undergone a change, and the inhabitants greeted the new government with joy, as, in view of its democratic and liberal spirit, it stands for equal rights for everybody, and the laws emanating from it have left the field open to reason and to the defense of the personal rights, to attain which so much blood has been spilled in this world. Since the memorable 1st of July, 1902, the entire province has worked and is still working for its aggrandizement under the protection of the civil government, stimulated by the good policy of the United States Government to protect industry, commerce, and civil and religious liberty, and guide the Filipino people on the road to peace, prosperity, and self-government. The people are satisfied and grateful, and loyally recognize the sovereignty of the United States, which has fortunately been implanted in these islands, liberating the same from slavery and giving them the benefit of a liberty the like of which they had never before enjoyed.

#### ORGANIZATION OF THE MUNICIPALITIES AND OF THE MUNICIPAL POLICE.

The first work which I undertook was to organize municipal governments in several pueblos of this province under the provisions of the municipal code, the others having been organized previously, in harmony with the laws passed by the honorable Civil Commission. When I left these pueblos, I was agreeably impressed, as I had seen that the inhabitants of this section understand popular suffrage as granted them by the laws, and had voted for persons who were worthy of being their representatives with the public powers.

The next was the organization of the municipal police, which perfectly answers the purpose; but I am of the opinion that the arms with which they are supplied are inefficient for serious disturbances, which might occur in any municipality.

On my last tour of inspection through the several municipalities I found that they fully understand the ample form of self-government which they enjoy, all the ordinances, executive orders, and resolutions adopted by the municipal councils being within the powers granted them by the municipal code.

Of the 30 municipalities of the province of Laguna, many, as Rizal, Santa Maria, San Antonio, Longos, and Alaminos, are not self-supporting, for which reason it is necessary that they be annexed to other municipalities with greater revenues.

## PROVINCIAL BOARD AND EMPLOYEES OF THE GOVERNMENT.

The provincial board, wisely created by an act providing for the organization of provincial governments, is performing its functions, and greatly facilitates the working of the administrative machinery of the provincial government. It holds ordinary sessions weekly and extraordinary sessions whenever the needs of the provincial government require it.

The provincial officers and employees are loyal and addicted to the government, and their conduct leaves nothing to be desired. Each of them is performing the duties imposed upon him by his official position.

By virtue of recent legislation the provincial secretary acts as secretary of the provincial board of health and of the board of assessment revision, and as registrar of mining claims, without an additional compensation, his present salary being \$1,400 gold per annum.

The work with which the offices of the provincial government of Laguna are burdened is so enormous that the scant personnel over which it disposes has to make superhuman efforts in order to overcome it, and has to work outside of office hours and on legal holidays.

This personnel is composed of the governor's clerk, who has passed the civil-service examination, and is the one who works most, as all papers are first acted upon in the office of the governor, whence they are indorsed to other offices or ordered filed in the office of the secretary; of a clerk in the office of the provincial secretary, who is also kept very busy by the large amount of work performed in that office, and a clerk for the office of the president of the provincial board of health, who sometimes helps out in the office of the governor or the secretary, and who has also passed the civil-service examination. These clerks receive each a salary of \$300 gold per annum. The excessive amount of work which these clerks have to perform is not in proportion with the scant compensation paid to them, and I therefore deem it just that the salaries assigned to them be increased, especially as far as the governor's clerk is concerned. There is also an interpreter who receives a salary of \$600 gold per annum.

The Constabulary stationed in this province is conducting itself well and renders good services, especially the commanding officer, who is very brave and takes special care that his subordinates do not commit abuses. He has also shown much tact in eliminating disagreements between the municipal police and the Constabulary, and has severely punished all abuses committed by his subordinates.

Amongst the work of urgent necessity there is the reconstruction of the provincial jail, in which there are on an average 35 prisoners confined for various crimes. The majority of these prisoners are accused of robbery and "fraud," these crimes being most frequently committed here.

## ROADS.

The roads from Santa Cruz to Pagsanjan have been repaired, but the others, as for instance those from the last-named pueblo to Luisiana, are in such a bad condition that it is of urgent necessity that they be repaired, in view of the considerable traffic between the several pueblos. As good roads are a factor for the promotion of agriculture, commerce, and industry it is necessary that additional wagon roads be constructed between certain pueblos of Laguna Province. This would also give employment to the laborers and ward off the famine which is liable to befall the province on account of the scarcity of work cattle and of different plagues, as for instance the locust plague.

## SCHOOLS.

I take great pleasure in describing in this report the great progress which education has made in Laguna in such a short time. I have noticed that the pupils of the schools, of the superior as well as of the municipal, speak English and are very anxious to perfect themselves in that language. In their discourses and in their social gatherings they prefer the use of that language to the use of Spanish and of the native dialect.

The superior school which has been established in the provincial capital is under the direction of the superintendent of the division and of several professors. It is frequented by about 200 scholars from the several pueblos of the province, the pueblo of Pagsanjan furnishing the largest number of pupils. In view of the methods used in this school, the same will not only make the English language more popular, but will make useful and practical knowledge common property of the inhabitants of the pueblos and promote their progress and advancement. It pleases one exceedingly to hear the beautiful English language spoken in the remotest corner of this fertile

region, and causes one to be confident that at a time not so far distant the intelligence between the Philippines and their sovereign country will be perfect, as a common language is one of the strongest bonds.)

The building occupied by the aforesaid school is the property of a private citizen, and I am of the opinion that the provincial board should construct an adequate building for this important establishment.

#### AGRICULTURE AND INDUSTRY.

Notwithstanding the disastrous consequences of the late war, of which the province has not yet fully recovered, harmony, peace, and order prevail throughout the same, and the inhabitants are engaged in agricultural and industrial pursuits, which have prospered as never before. However, the rinderpest, which raged among the work cattle during the last six months of the past year, has been a great obstacle to their progress.

The harvest of rice, which cereal constitutes the customary food of the inhabitants of this province, has been almost nil during the last three years. The same has been the case with the sugar cane. Coffee, cocoa, hemp, and bananas are also raised in Laguna Province, but not on a large scale. The principal and most important product is the cocoanut, from which the famous Laguna oil is extracted; the copra having been exported to several places in Europe for some time past. The cocoanut tree is extensively cultivated throughout this province, and forms its principal source of revenue. In view of the favorable provisions of the bill passed by Congress on the 1st of July, 1902, the inhabitants of Laguna have hastened to break extensive tracts of uncultivated land in the hills, the property of the government, in order to plant cocoanut trees thereon.

The industry of the pueblos of Laguna consists in the manufacture of hats of buri, buntal, pandan, and matting, woven by hand.

In closing this report, I have the satisfaction of being able to state that although Laguna Province is, in view of its situation, between two fires, as one might say, for the reason that it borders on Rizal, Cavite and Batangas, where brigandage is rampant, the peace becomes more of a fact here every day.

I inclose 16 photographs, illustrating the agricultural and industrial resources of the province. Among these there is one which illustrates the manner in which the cocoanuts are gathered. This operation is performed by a skilled man with a long and thin piece of bamboo, to the end of which a hook of sharpened iron is attached. This hook is applied to the stem of the bunch of cocoanuts, and a slight vertical pressure is sufficient to cause the latter to fall. This is the method generally used, and a person can gather a daily average of 3,000 cocoanuts. The pay for this work is one Mexican dollar per thousand. Among these photographs there is another of Mr. Rose's cabinet-making shop and spring factory in the pueblo of Paete, which is provided with modern instruments, imported from America, and with a machine for sawing and drying wood, the motive power of which is steam.

Very respectfully,

JUAN CAILLÉS,  
Provincial Governor.

#### REPORT OF THE PROVINCIAL GOVERNOR OF UNION.

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF UNION,  
*San Fernando, January 10, 1903.*

The CIVIL GOVERNOR, *Manila.*

SIR: In compliance with the duty imposed upon me by section 7, Act No. 83, passed by the legislative commission of the United States in the Philippines, I have the honor to submit to you the present report of the province of Union, corresponding to the year 1902.

In my report for 1901, covering the first year of the civil régime in this province, I made a general report covering these pueblos, with data relative to their topographical and geographical situation. In the present report, therefore, I shall confine myself to a discussion of the conditions reigning in this province during the year ended December 31, 1902.

#### PUBLIC ORDER.

The present conditions of the province relative to its political condition could not be improved upon. Peace and tranquillity reign in all their splendor. Nor has the

slightest rumor or indication been noted that would tend to impeach the pure loyalty of the inhabitants of Union to the sovereignty of the United States and the constituted government.

On December 31, 1902, there were, in the the provincial jail, 18 prisoners, 7 of whom were of the military authorities, and had been turned over to the civil authorities, as they were not included under the terms of the amnesty proclamation. So that there were only 11 prisoners from the whole province, since upon that date not a single person was under arrest in the municipal jails. The population is calculated at 131,000 inhabitants, and as the prisoners number 11, the average is one prisoner for every 11,910 persons. These figures reveal clearly the present condition of the province, due, without doubt, to the harmony of relations and the unity of purpose existing between the civil and military elements, and between the civil authorities of the insular, the provincial, and the municipal governments, and the harmony among the people themselves and between the authorities and the people. This condition constitutes in truth the special predominating characteristic of the province of Union, whose inhabitants are known for their honesty, their industry, and their gratitude, for they have responded with enthusiasm to the suggestions, the efforts, and the wise counsels of their authorities.

#### AGRICULTURE.

Agricultural production has suffered enormous loss. This is especially true with reference to the rice crop. The average loss is calculated at 60 per cent of the ordinary crop, and is a result of three principal causes, to wit: (a) The cholera epidemic: The transplanting of rice comes in July and August in these pueblos. Precisely at that time the cholera epidemic started, and the people through fear of the disease, or, rather, the sanitary measures, almost completely abandoned the fields and all farming. (b) The drought: From the month of September until the present date (January 10, 1903), it has not rained in this region. By reason of this terrible drought, the few fields of rice that were planted have withered. The rice gathered was not cut in season, for the ripening of the grain has been hurried and artificial, due solely to the effect of the sun. (c) The scarcity of work animals: Before the recovery of the province from the privations of war, rinderpest made horrible inroads upon the work animals, in 1900. Then before there was time to recover from this loss, the disease appeared again, 1901. In the following year, 1902, the disease developed in alarming proportions in some of the pueblos of this province. It seems, however, to have completely disappeared at the present time.

*Tobacco.*—The crop of this valuable plant in 1902 has been comparatively large and of good quality. It is calculated that the province has produced 80,000 hundred-weight, or 320,000 "arrobas" (25 pounds). On the other hand, the coming crop of 1903 will be exceedingly small, because, due to the scarcity of rain, it has been impossible to prepare properly at the right time (the month of November) the lands hardened by the drought. Few, very few, plantings of tobacco have been made, and only upon irrigable lands in proximity to the rivers.

The crops of other minor products have been of average quality.

*Means taken to provide for the scarcity of food.*—By the circular order of the honorable civil governor to the municipal presidentes an effectual impulse was given to the planting of corn and potatoes and other alimentary tubers. Assemblies have been held by all the pueblos, which were attended by all the leading residents and a majority of the farmers. Various resolutions of importance in the matter were proposed and acted upon. Certain owners of irrigated lands have ceded them to others for cultivation; some furnished work animals, and others who had no animals furnished their own personal services both in the work of planting and of fencing the cultivated lands, agreeing to share the proceeds proportionally among each other. Others, owners of carabaos, after cultivating their own lands, have let those who have no work animals have their's for a share in the crops. Finally, certain owners have ceded their lands without any remuneration whatever, and some have ceded their lands already prepared, to needy persons, also gratuitously.

#### DEPARTMENTS OF PROVINCIAL GOVERNMENT.

*Provincial board.*—This board has held regular and special sessions throughout the year, many and important actions having been taken. Three municipal presidentes were suspended from office, as follows: Teodórico Asprer of Tubao, was sentenced last March by the court of first instance to six months' imprisonment for "estafa" (swindling). The preliminary investigation was made by the provincial board, and when the offense was found indictable, the fiscal presented the proper complaint before the court. Bartolomé Ostrea, of Balaoan, was tried by the court and sentenced

to four years' imprisonment; this case being now pending before the supreme court on appeal. Against the third, Vicente Dumpit, of Bauan, charges were preferred by the deputy of the provincial treasury, charging him with the misappropriation of 1,000 pesos which were taken from the municipal treasury during the time of the military government, this sum having been set apart for the reconstruction of the municipal building. In addition to these, 2 cases of "estafa" and illegal extortion resulted from the investigations practiced by the provincial fiscal. These cases will be tried at the next session of the court of first instance. The 1,000 pesos were repaid into the municipal treasury by the said Presidente Dumpit.

*Provincial governor.*—According to the records of this office, 1,594 matters have been received and disposed of during the year in this office. One of the most important actions has been the reorganization of the municipal police of the whole province, through a board of police commission, similar to those which exist in some of the principal cities in the United States. The said board drew up the organic regulations of the municipal police force, and these were submitted to the approval of the provincial governor. The said regulations contain 22 sections, and the text is based upon the recommendations or suggestions of the provincial governor. Further, the governor, as sheriff, has performed all his duties as such official relating to the courts of first instance.

*Provincial treasury.*—Collections have been made with all proper regularity. It is a fact worthy of note that only six complaints against the assessment have been registered from the whole province. Of these, two asking for exemption and two for a reduction of taxes were considered favorably, and two others requesting exemption were disallowed. In statement A will be found the report of revenues and disbursements during the year 1902. The estimated expenditures and the disbursements balanced, and therefore the extraordinary expenditures to which the provincial treasury was subjected, and those which were occasioned to the municipalities during the cholera epidemic, have produced a deficit. For work and repairs on the provincial building, roads, and bridges there has been expended the sum of \$7,927.04 U. S. currency.

*Provincial fiscal.*—This office has disposed of the following business: Complaints, 122; sentences in criminal cases, 377; sentences in civil cases, 18; miscellaneous cases, 21.

*Provincial supervisor.*—The work accomplished by this office during the year 1902 was the following:

Roads: (a) The road from Bauan to Naguilian along the side of the mountain has been rebuilt. Subsequent to 1899 this road has been impassable. It has now been widened greatly, and in some localities the side of the mountain has been cut down as much as 2 to 50 meters. (b) The road from San Fernando to Bauan has been repaired. The rainy season interrupted this work, but it has been taken up anew. (c) In general, repairs have been made upon nearly all of the principal wagon roads of the province.

Bridges: (a) In April the "Ortega" bridge was finished. This is the bridge over the river Baroro,  $1\frac{1}{2}$  kilometers south of the pueblo of Banoctan. It is 643.3 feet long and 21.8 feet wide. (b) In May "Worcester" bridge over the river Pagdalagan, 4 kilometers south of San Fernando, was completed. Its dimensions are 166 feet in length and 22.6 feet in width. (c) In July the bridge "Paraoir" was finished over the river of the same name, which is 8 kilometers south of the pueblo of Namaopacan. It is 83.4 feet long and 20.4 feet wide. (d) In December the bridge "Adalin" was completed over the river Payocpoc, 5 kilometers south of the pueblo of Bauan. It is 126.8 feet long and 20.6 feet wide.

Repairs: In December the repairs upon the provincial building were entirely completed.

*Boards of health.*—In the month of February, 1902, the provincial board of health was organized in San Fernando in accordance with an Act of the United States Philippine Commission. The following month the local boards of health were established in the pueblos of San Fernando, Bauan, Naguilian, Aringay, Agoo, San Juan, Banoctan, Namacpacan, and Santo Tomas. In the pueblos of Bangar, Cava, Balaon, and Rosario, being municipalities all of slender resources, their respective local presidentes assumed the office of the president of health without remuneration. The work accomplished by these boards is worthy of special mention, especially that done during the cholera epidemic in this province. For assistance to the board of health in their work during that season, there were employed 10 Americans at \$50 per month and 25 Filipinos at \$12.50 per month. A cholera hospital was built in San Fernando. There were employed in the said hospital 1 "practicante" (student) in charge at \$17.50, 2 assistant "practicantes" at \$7.50, and 8 nurses at \$7.50, all of which salaries were paid monthly. There were 78 patients treated, of which 39

were discharged cured, and 39 died; the number of deaths being, therefore, 50 per cent of the whole. The general rate of percentage throughout the province resulting from cholera was 71 per cent deaths of those stricken. The boards of health are also intrusted with vaccination. During the year there were vaccinated 15,600 males and 17,052 females, a total of 32,652. (See Statement B.)

*Municipal police.*—Under the new organization of this force, approved by your office, the municipal police of Union consists of 7 tenientes, 8 sergeants, 23 corporals and 188 members, making a total of 226 persons. This local force is under the immediate orders of the superintendent of municipal police of Union, who is the captain-inspector of constabulary of this province. As an assistant to this officer there has been appointed a captain assistant, with a salary of \$240 per annum. The reorganization of the municipal police was effected by a commission consisting of a captain of constabulary, the provincial treasurer, and the provincial secretary, the first named being the chairman of the commission. The positions have been filled by examination. In addition to the requirements of honesty and morality, it is required that the tenientes of police shall know how to speak and write either Spanish or English, or both languages, as well as the dialect of the locality; and also to possess a general knowledge of grammar, geography, history, and arithmetic. In the last mentioned he is required to know at least the four principal rules; that is, how to add, subtract, multiply, and divide. As for the police, in addition to the general requirement as to honesty and morality, they are required to know how to write at least the dialect of the locality, and also to have a stature of at least one meter, sixty centimeters. This last requirement is not necessary in order to be a teniente or the chief of the said body. My main object is to be able to count upon a body in the province which will be a real guaranty of peace and public order. For this reason I suggested to the organization commission the conditions mentioned, in order that the police shall possess those two qualifications of so great importance; these are moral force and physical force. The police of Union is a properly organized, uniformed, and equipped body.

*Constabulary.*—The constabulary in this province consists of 75 men, officers and soldiers, under the command of a captain-inspector, 2 third lieutenants, one in charge of the commissary, and one subinspector; and there is also one third lieutenant in charge of telegraphs. This force is distributed in detachments; one in the pueblo of Namaopacan, under the subinspector; one in Naguilian, under the command of a third lieutenant; one in Santo Tomás, under the command of a sergeant; and finally, one at this provincial capital, with the offices and quarters. I consider it of absolute necessity to establish in the pueblo of Rosario, in the extreme southeast of this province, and contiguous to the pueblos of Alava and Pozorrubio in the province of Pangasinan, a detachment composed of 25 men, under the command of an American officer who can speak Spanish or the local dialect, or of a Filipino who can speak English. At present there is no possibility of establishing this post on account of the small number of the constabulary at the disposal of this province, and therefore I suggest the propriety, or rather the necessity, of raising to 125, or at any rate 100, the number of constabulary in the province, in order that they may perform their duties effectively.

#### PUBLIC INSTRUCTION.

There are at present 89 schools in the entire province, attended by 5,652 boys and 3,265 girls, a total of 8,917. These schools are under the direction of one division superintendent, who has under his orders 14 American male teachers, 3 American female teachers, 66 Filipino male teachers and 12 Filipino female teachers. The provincial high school will be opened within a few days. More than 100 children of both sexes, from the schools of the various pueblos, whose advancement requires a higher course of study, will attend the provincial school, and I trust that this number will greatly increase. Thus you will see that the enthusiasm of the young for learning fully matches the efforts of their teachers, the high purposes of the government, and the interest of the Filipino people.

#### PHOTOGRAPHS.

In a separate package I send you photographs of each of the municipalities of this province and of each of the schools established in the pueblos. These photographs were taken at the beginning of last year and are mounted on cards. Herewith I send you some which I have accidentally come across. I should like to send you photographs of all the agricultural and industrial products, as well as of the means of transportation, rivers, bridges, and other objects worthy of mention, but I have not the means to do so at my disposal, for there is not in this province a photographer nor the materials necessary for photography.

## SUGGESTED LEGISLATION.

First, that the honorable Commission pass a law regulating the use of arms by private persons. In granting these licenses the report of the provincial governor should be considered as an essential, and the licenses should be registered in the office of the captain-inspector of constabulary of the respective provinces. That at the present time license to carry arms shall only be granted by the civil governor of the Philippines, or by the chief of constabulary of the archipelago with the approval of the civil governor.

Second, that after the enactment of the said law the provincial governors shall be authorized to give public notice of the same, setting a definite period for those who have arms and are provided with licenses issued by the provincial governor to have them approved, and for those who have no licenses to be able to apply for the same in such manner as the law may provide. After the expiration of the time fixed the provincial governor, through the constabulary or the municipal police or both bodies, shall have the authority to order the search for and confiscation of arms in possession of private persons unprovided with the proper license.

Third, owing to the stress of work weighing upon the justices of the peace, and since the municipal funds of the respective pueblos are not sufficient at the present time to warrant the remuneration of the said justices of the peace, it is suggested that the justice of the peace of the provincial capital at least be designated a salary of not less than 50 pesos Mexican per month, to be paid out of the insular treasury. I believe this request to be just and equitable, both because of the fact that the justices of the peace of the provincial capitals generally take cognizance of a great number of cases, more than those of any of the other pueblos, and also because the qualifications of the former are more ample than those of the pueblos.

Trusting confidently that this report may prove pleasing to you, and that it will fully meet your approval, I reiterate that I am

Respectfully,

J. ORTEGA, *Provincial Governor.*

ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF LEPANTO-BONTOC FOR THE YEAR  
ENDING DECEMBER 31, 1902.

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF LEPANTO-BONTOC,  
*Cervantes, January 17, 1903.*

Hon. WILLIAM H. TAFT,  
*Civil Governor of the Philippine Islands, Manila, P. I.*

SIR: While, by provision of law, the provincial governor must submit an annual report to the honorable civil governor by January 15 of each year, I beg leave to state that I am not able to comply intelligently with the law, owing to the brief period I have held the office of governor of this province, and further to the failure to find essential records in the office for compilation.

## GOVERNMENT.

The law in force in the province of Lepanto-Bontoc at the present time (with the exception of Cervantes, otherwise provided for) is a modified form of Act 387, sections 1 to 67, put in force by former Governor Thomas I. Mair, and provisionally approved by the honorable secretary of the interior, at my request, on January 1, 1903, or until such time as I should submit full recommendations to him.

The officers of a district are a president, vice-president, secretary-treasurer, usually two principal councilors over subcouncilors from each barrio, and a local police force. The first three are chosen by the people without formal election, with the consent and approval of the provincial governor. The councilors are selected by the president, and the police by vote of council. All district ordinances and taxes are passed by a majority vote of the council, and become law on the approval of the provincial governor.

The district governments were inaugurated during August, 1902, and, upon entering office, the district councils promptly voted relatively large salaries to the presidents, vice-presidents, and secretary-treasurers, as well as policemen; some presidents figuring at 60 pesos per month. The disproportion will be appreciated when it is stated that the wage scale here averages between 10 and 20 cents Mexican per diem, and that few adults ever have opportunity to labor for wages. Governor Mair cut down these salaries, so that to-day presidents receive from 10 to 20 pesos per month, vice-presidents hold honorary positions without salary, secretary-treasurers average 8 pesos, and policemen 2 to 6 pesos.

## TAXES.

The average expense of maintaining a district official household, including cost of stationery, is 45 pesos per month. However, light as this expense may seem, but three districts out of fourteen (not including Bontoc, from which there are no reports) have ever been able to collect sufficient taxes to pay operating expenses.

I. The greatest revenue-producing tax so far levied has been one for the killing of hogs, sheep, goats, caribao, horses, and cattle, which was done by interpreting the clause "slaughterhouses" in the law to be so applicable. The rate has been 25 or 50 cents per head. Also there has been a tax for certification and transfer of large cattle of 50 cents per head, a peddler's tax of 5 cents per man-load and 12 cents per pack-pony load, and a license tax in three districts for the selling of vino and other spirituous beverages.

At the meeting of the presidentes of Lepanto, on January 15, 1903, at Cervantes, they spoke against the killing tax, explaining that they believed it an unjust levy, in view of the fact that the animals were not killed for sale or for market, but were intended solely for home consumption and for their friends (their friends meaning the celebration of the canao or native feast). They were perfectly willing to pay such a tax where the meat was sold, and also the tax for the certification and transfer of large cattle.

In view of the protests I found in this office upon taking charge against the killing tax, and the unanimous claims that the meat was not sold, but used for personal consumption, and, further, that the law did not seem to permit of construing the words "slaughterhouses" to apply to such killing of animals, I repealed the tax in so far as it did not relate to animals killed for sale or market.

II. Again, I find no provision for a peddler's tax in the form it is now collected; that is, causing every vendor coming from another district to pay a specified sum of money for each load and upon each occasion. This I have not touched, as the presidentes seem helpless to enforce the law, there being no penalties provided for its infraction.

III. All the presidentes of Lepanto and two from Amburayan have asked for a cedula tax, stating that the people have long been accustomed to this form of taxation and are quite willing to pay it. At the meeting of the presidentes on the 15th this subject was discussed, and the presidentes, vice-presidentes, and secretaries agreed that a cedula tax was the simplest and most satisfactory to collect in the province, and, further, that an annual road tax might also be easily collected of 1 peso a year from each man between the years of 18 and 55, and 50 cents from boys who are laborers between the years of 14 and 18.

## REMARKS AND SUGGESTIONS.

It is my opinion—without having had time to study the problem carefully—that any complicated form of taxation will be very difficult to enforce, and that attempted collection of the same by the presidentes and secretary-treasurers may result in more or less oppression, not to say abuse. For example, I have recently received delegations from Sigay in Amburayan, complaining that the secretary was collecting 25 cents from every house for a killing tax, whether animals had been slaughtered or not, and 2 cents' worth of rice, which is not, so far as I know, provided for in local legislation.

Again, it is my opinion that if these people are ever to learn self-government from our standpoint (they have a communal government of long standing) and are to become really self-respecting, industrious, and desirous of securing the material comforts of life, they must be made to pay a certain amount of taxes, and to that end one and all become either wage-earners or the sellers of a surplus of agricultural products. Further, taxation permits of definite district organization, which creates closer union between the people and the provincial government and a community of interest not to be gained in any other way.

If the honorable civil commission see fit to make the law so read that an annual cedular tax of 1 peso a year for men between the ages of 18 and 55 years and 50 cents for boys between 14 and 18 years, and an annual road tax of 1 peso for men between the ages of 18 and 55 years and 50 cents for boys between 14 and 18 years, or in lieu thereof ten days' work on the road; and, further, that this money shall be paid into the provincial treasury, to be disbursed by the provincial treasurer, for all lawful and conservative expenses of the districts, it is my opinion that the salaries of all district officials and contingent expenses can be met thereby. Further, that the supervisor be furnished with lists of all persons failing to pay the road tax, so that he may from time to time call upon sufficient numbers of men to work the road gratuitously under his supervision.

As additional taxes, I have the honor to suggest that a quarterly license fee be placed upon peddlers regularly engaged in peripatetic vending, whose stock in trade shall amount to more than 20 pesos' worth; that a heavy license tax be placed upon the selling of vino or spirituous liquors in any quantity whatsoever, or, even better, that it be a punishable offense to give, barter, or sell vino to an Igorrote; that a house tax and possibly a land tax be collected, although, to collect such a tax, the law would have to read for very small values, or be graduated from the runo house, averaging from 10 to 20 pesos in cost, to the large wooden structures valued at from 50 to 300 pesos.

#### FEELING AGAINST THE ILOCANO.

In most of the districts the Igorrote apparently has considerable dislike for the Ilocanos, and, if he was given a free hand, would undoubtedly squeeze most of them out of the province. In the district of Concepcion this bitterness was specifically brought to my attention. A delegation of Ilocanos or "Cristianos" waited upon me in Cervantes and stated that they represented 68 Ilocanos in that district, making a plea that they be allowed representation in proportion to their numbers in the district council, they having already elected their consejal and 3 policemen. They stated, further, that though they were friendly to the Igorrotes, they refused to permit them to be present at the council meetings, that they persistently taxed them, made them keep their hogs confined, and took every means to make it difficult for them to live. I made a trip to Concepcion and called the Igorrotes and Cristianos together. The Igorrotes admitted that they would not have an Ilocano in the council, but denied that they abused them in any way. I pointed out to them that the council meetings were open to the public and that they must not prevent Ilocanos from being present if they so desired, the Igorrotes promising to admit Ilocanos to the chamber in the future. I asked them if they did not think it was fair that these people should have some voice in the council—at most it would be only one vote, and that would be about a proportionate representation; but they held that one Ilocano could generally outvote the rest of the council, and that, as they settled all their affairs by a unanimous vote, and when there was a dissenting vote a measure did not pass, the Ilocano was a very uncomfortable element, as he always disagreed. The explanation that the majority ruled was useless, as they contended that their fathers and grandfathers had always settled the questions under discussion by unanimous agreement. I discovered that no question came up in council in this district of any considerable importance without the entire population's taking part in its discussion, and all the old men talked whether they belonged to the council or not, the issue being settled by general acclamation for or against. One could not desire a more purely democratic form of government.

The feeling here—and I suspect it also exists elsewhere—against the Filipino comes from the fact that under Spanish régime he was a Christian protected by the church, given special privileges, and relieved from the burden of taxation borne by the Igorrote, and was vested with official authority, which he abused by petty oppression of his heathen brother.

The Concepcion people talked so to the point and their past grievances were so vivid that no further attempt was made to secure official recognition for the Ilocano. The Igorrotes, however, promised to treat the Ilocanos with impartial fairness and justice.

#### CONDITION OF THE PEOPLE.

The people of this district are hard workers, living in a rough country, with every foot of the bottom lands, along the waterways, and in places 500 feet above the main valleys, upon spur rivulets, terraced into cultivated palay fields, which evidenced much skill in irrigation methods. The land passes from father to son and is seldom sold. The women are cleaner, better clothed, and more healthy looking than any Igorrotes I have so far seen in the province. They wear their hair carefully done up and wound with heavy strings of beads. Their rice crop this year is undoubtedly larger than that of any other district, but they fear to admit that it amounts to much lest some new tax be imposed. The presidente and all other officials serve without salary, and prefer to do so, stating that their ancestors always filled positions of honor and trust gratuitously, and that while occupying such places their rice fields were worked and all their food supplied them by the people. The chief difficulty with this system is that they want rotation in office every month or two.

The presidente writes and speaks very good Ilocano, but no Spanish, and the district has an Igorrote secretary-treasurer with no greater linguistic abilities. I have made no attempt to place a Spanish writing secretary-treasurer in the district, as we are dependent upon our Ilocano interpreter at Cervantes in any event.

The Concepcion presidente is the only Igorrote whom I have so far met who seems to have executive ability, though a vice-presidente of Sabangen was bright of face and energetic in manner. They all have very primitive ideas of equality and justice. The presidente of Concepcion, for example, wanted the Ilocanos to furnish their quota of cargadores when supplies were brought from the coast, and could not see at all that a pack pony furnished was the same thing as actually carrying a load on the shoulders with a pole. Again, the vice-presidente of Sabangen urged me to send over to Talubin, in Bontoc, and kill off the people because they were "bad." It appears that the Talubin people are preventing them from growing crops and harassing them by planting bamboo spikes and making pitfalls in the grass and paths. This matter has been taken up with the constabulary, and it is trusted that they may soon be made good friends again.

## CONCLUSION.

Next week I begin a systematic tour of the province, first visiting Mancayan and meeting Governor Pack on the Benguet line at his request, and then helping out for a day Collector and Mineralogist Wright by making photographs of the topography and mines of this region for the St. Louis Exposition. On the completion of this trip I hope to be able to make a fairly comprehensive and classified report.

I shall esteem it a great favor if some action can soon be taken on the question of taxation herein presented.

Yours, very respectfully,

WM. DINWIDDIE,  
Governor of Province Lepanto-Bontoc.

## REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF LEYTE.

OFFICE OF THE PROVINCIAL GOVERNOR, PROVINCE OF LEYTE,  
Tacloban, December 31, 1902.

Mr. BEEKMAN WINTHROP,  
Acting Executive Secretary, Manila.

SIR: I have the honor to submit the following report to you on the general conditions in the Province of Leyte. My last report was dated December 19, 1901.

The abandonment by the military of some 12 or 15 towns in Leyte during the months of December and January of 1901 and 1902, respectively, combined with energetic military campaigns in the islands of Samar, Cebu, and Bohol (at that time under military control), caused large numbers of insurgents to seek safety in Leyte, where all military operations had ceased, and resulted in a renewed activity among the Leyte insurgents not experienced since the organization of civil government in the province. The general commanding the military forces in Leyte at that time did not consult me as to the advisability of withdrawing troops from the province, nor did he notify me of his intention of doing so; and several towns were actually abandoned and telegraphic and telephonic communications between such towns and the capital of the province were removed before I knew of such withdrawals. This action on the part of the military commander resulted in the following correspondence:

PROVINCE OF LEYTE, OFFICE OF THE GOVERNOR,  
Tacloban, December 12, 1901.

Gen. J. H. SMITH,  
Commanding Sixth Separate Brigade, Tacloban.

SIR: I have the honor to inquire whether or not the troops have been withdrawn from the town of Burauen? If not, I respectfully request that I be given a few days' notice before they are withdrawn.

I regret exceedingly that this courtesy was not shown me before the troops were ordered out of the other towns, in order that I might have made some provision for their protection.

Experience out here has taught us that whenever our soldiers have once occupied a town and are then withdrawn it always invites an attack from those who are opposed to them, and it is also an injustice to those who are friendly and loyal to our cause.

I also regret the withdrawal of these troops from the island of Leyte just at this time, and especially at Malitbog, where, as I understood, we were to prosecute a vigorous campaign against the insurgents occupying that part of the island, where the only armed resistance to constituted authority in this province really exists. Only two or three weeks prior, in consequence of this understanding, I dispatched all of my available constabulary force to Bato and Sogod, and only a week prior you had

promised me to send a gunboat to Malitbog Bay, and had sent a detachment of native troops to Liloan, to cooperate with troops stationed at Malitbog and the constabulary at the other points named.

Under existing conditions, I have been compelled to break up my detachment of constabulary and occupy the towns that have been left absolutely defenseless and unprotected; while Capili and his followers are left just as strong and just as aggressive as they were the first of November. I had also succeeded in arousing the active cooperation of the municipal authorities in all the towns on the western and southern coasts, with the understanding that a vigorous campaign was going to be instituted, which I understood from your further statement to me that you were going to put another battalion in this province.

I feel sure that you have some good reason for the withdrawal of these men, but I fear that their withdrawal, and especially the manner in which it was done, will be productive of bad results, while the breaking up of Capili's band of robbers will be postponed until I can secure a large constabulary force.

Within the last few days one of your officers remarked to me that, if his town were to be evacuated the friendly natives would have their throats cut within forty-eight hours; so you can understand my anxiety about these towns until I have sufficient arms to supply the municipal police and until my constabulary force is organized.

Of all the towns in the province Malitbog, Cabilian, and Hinunangan should have remained garrisoned.

Very respectfully,

J. H. GRANT, *Governor.*

---

HEADQUARTERS SIXTH SEPARATE BRIGADE,  
*Tacloban, Leyte, P. I., December 13, 1901.*

Hon. J. H. GRANT, *Tacloban, Leyte.*

MY DEAR GOVERNOR: Replying to your inquiry of yesterday I have the honor to inform you that no orders for the withdrawal of any of my troops from Burauen have yet been given. And I am surprised at the tone of your letter hinting of lack of courtesy and breaking of faith on my part.

Please remember that the island of Leyte is supposed to possess a self-sustaining civil government, with all the powers and all the responsibilities which this implies.

Please remember also that I am sent here to prosecute a war in the neighboring island of Samar, and that orders or news received may compel me in a moment to change every plan formerly made.

Very respectfully,

J. H. SMITH,  
*Brigadier-General, U. S. Army, Commanding.*

---

PROVINCE OF LEYTE, OFFICE OF THE GOVERNOR,  
*Tacloban, December 14, 1901.*

Gen. J. H. SMITH,  
*Commanding Sixth Separate Brigade, Tacloban.*

MY DEAR GENERAL: Replying to your favor of even date, I have the honor to assure you that there was no intention in my communication of yesterday to charge you with a breach of faith in the withdrawal of troops from certain towns in this province. I simply expressed my regret that you found it necessary to change what I conceived to be your plans for instituting a vigorous campaign in the southern part of this province, with a view of putting an end to the operations of Capili and his band of robbers.

I desire to say, however, that the withdrawal of troops from any towns in this province and the severance of telegraphic and telephonic communications between such towns and the capital of the province, without previous notice to the provincial governor, can not be viewed by him in any other light than as a lack of courtesy toward himself on the part of the military commander, and especially in view of the exceedingly pleasant relations which have heretofore existed between the civil and military authorities in this province; and I assure you that the withdrawal of troops from these towns and the removal of telegraphic connections between the same has surprised me more than my hinting at a lack of courtesy on the part of the military commander could possibly have surprised him.

The provincial governor feels that just as soon as the municipal and insular police are properly armed and equipped the island of Leyte will possess a self-sustaining civil government, ready to exercise the powers and to incur the responsibilities which devolve upon it as such.

Very respectfully,

J. H. GRANT, *Governor.*

HEADQUARTERS SIXTH SEPARATE BRIGADE,  
*Tacloban, December 14, 1901.*

My DEAR GOVERNOR: Replying to your two letters of yesterday, I desire to assure you of my regret that you have taken my actions as a discourtesy to you. Such they were not intended to be, and such I can not now consider them. During a lifetime spent in the Army I have never known notification of proposed military movements to be made to civil authorities. Neither in orders, regulations, nor customs of the service do I know of anything calling for such a course on my part.

I assure you Governor, I shall do nothing to break the harmonious relations which have thus far existed between the civil and military in Leyte. But as a matter of duty I am unable to subscribe to your position that courtesy to you requires me to inform you what I am doing with the force and materials under my command, any more than such courtesy requires you to make to me like report of your plans and purposes within your own sphere of action.

Very respectfully,

J. H. SMITH,  
*Brigadier-General, U. S. Army, Commanding.*

OFFICE OF THE GOVERNOR, PROVINCE OF LEYTE,  
*Tacloban, December 18, 1901.*

Gen. J. H. SMITH,

*Commanding Sixth Separate Brigade, Tacloban.*

My DEAR GENERAL: Replying to your communication of the 14th instant, which reached me yesterday, I note with much pleasure that your action in the withdrawal of troops from certain towns in Leyte, was not intended as an act of discourtesy toward the provincial governor, and he has the honor to assure you that it will no longer be considered as such.

I dare say, however, that during a lifetime of service, General, which has been alike honorable to yourself and to your country, you have never had the conditions presented to you that confront us out here; that you have never exercised, under any form of civil government, the powers you have exercised in this province. So the regulation customs and courtesies, ordinarily exchanged between the respective branches of our government at home, can not be laid down as a precedent for our actions in the pacification and establishment of civil government in these islands.

The occupation of these towns and the protection of their inhabitants is our imperative duty, and when that branch of government which first occupied them and which has been affording them this protection, finds it necessary to withdraw its protection, our common interests, it seems to me, would dictate the necessity of giving timely notice to some other branch of the government charged with the duty of furnishing further protection.

The disarming of the citizens and the withdrawal of all kinds of armed protection from many of our frontier towns in the United States even to-day, would be a dangerous proceeding; therefore, it must appear to you that the withdrawal of the only armed protection in towns as newly occupied as these in this province, and in a newly occupied country like this, is fraught with much more danger.

If you do not think that courtesy demands that you give me a few days' notice before removing troops from the towns of this province, why, I'm certainly not going to take issue with you on that point; but I respectfully request that, if it is practicable, you furnish me with this information, and oblige.

Yours, very respectfully,

J. H. GRANT, *Governor.*

As a matter of fact, a number of these abandoned towns were entered by the insurgents, several people killed, while others were brutally beaten and robbed, and in some instances their homes destroyed by fire. As a result of this the people lost confidence in the ability of the civil government to afford them protection; and, believing that all the military forces were to be withdrawn from the island, they sought the friendship of the insurgents, and Capili proceeded to organize municipal governments in several of these towns, from which he afterwards drew recruits and supplies.

About this time, also, the military authorities further aroused the resentment and indignation of the people by the arrest and sending to Samar, without warrant or other process, quite a number of Leyte municipal officials and other prominent citizens, charged with aiding and abetting the Samar insurgents. This action was preceded by the wholesale arrest, in the same manner, of about 150 residents of Tacloban, during the month of October, 1901, who were subsequently released on the protest of the provincial governor. Through the action of the acting civil governor those who were sent to Samar were also released and returned to Leyte. After their

return to Leyte the provincial governor requested that the military commander furnish him with copies of the charges and the evidence upon which these people had been arrested, that he might have complaints filed against them in the civil courts, but he was informed that the character of the evidence was such that it was not considered sufficient upon which to base prosecutions.

These and other minor abuses and indiscretions on the part of the military authorities aided largely in producing a state of demoralization and unrest among the people of the province which afterwards necessitated a large force of constabulary to restore peace and order.

On January 1, 1902, there had been enlisted in the province less than 100 men for the constabulary, and these were distributed among the towns that had been abandoned by the military and were not strong enough to take the field against the insurgents; consequently during the months of January and February, with but one or two exceptions, the insurgents were not disturbed in any of their operations and they were in undisputed possession of all the southeastern part of the province from a few miles south of Abuyog, including all the rich territory around Malitbog Bay (except the town of Malitbog), to and including the entire island of Panaon.

During the months of March, April, and May constabulary forces from Manila and other provinces were sent to Leyte under the command of Assistant Chief Taylor, who instituted and prosecuted a vigorous campaign against the insurgents, which resulted in the surrender of all armed forces in the island, with the exception possibly of some 8 or 10 guns. These surrenders took place during the latter part of June. Prior to this time many captures of both men and arms had been made by the constabulary, who were so active and aggressive in their operations that the insurgents were kept on the move constantly and only surrendered to keep from being killed or captured.

I desire to commend in the highest possible terms the work of Chief Taylor and his energetic and able subordinate officers.

Their campaign was remarkable for the high plane upon which it was pitched and the clean manner in which it was prosecuted. I visited every coast town in the province during the latter part of June and July, immediately after the surrenders, and in every town I made it a point to invite criticisms and complaints (if any existed) against the constabulary, and was very much gratified to find that there had been no abuses committed and that there were no grounds for complaints.

During the year 1902 the constabulary have captured and had surrendered to them 144 rifles, 75 revolvers, 4 shotguns, 1 cannon, and 134 spears, bolos, and other weapons, and have killed 447 ladrones and captured 412.

I desire to especially commend Senior Inspector Peter Borseth for the faithful and efficient work done on the island of Biliran, where he had almost exclusive direction of the campaign, and where the conditions and obstacles to overcome were peculiarly difficult. In addition to the insurrecto element he had to encounter, he had to combat some three or four hundred of the malcontents and desperate ladrones and religious fanatics, called "Dios-Dios," of Samar, who had refused to surrender with Guevara and had sought safety in the island of Biliran. This latter class, when fired by fanaticism, are the most desperate, bloodthirsty, cruel, and barbarous fighters encountered in the southern islands, sparing neither women nor children in their mad frenzy. All who refuse to embrace their doctrines are regarded as enemies, and are, therefore, their legitimate prey; their property is confiscated, such of it as can not be appropriated being destroyed, and their lives forfeited. Their leader claims to make spiritual visits to Rome, nightly, to confer with the Virgin Mary and receive his daily orders. Each convert is required to purchase an "anting-anting," which is supposed to render him invisible to his enemies and invulnerable alike to bullets and bolo thrusts. An "anting-anting" may be a small piece of wood, carabao horn, piece of paper with some curious characters inscribed on it, or, in fact, anything which the leader may sanctify and give to them. The price of one of these valuable charms depends upon the ability of the purchaser to pay.

An "anting-anting" is supposed to retain its efficacy for about one month, but if you are supplied with a certain liquid, which may be bought of the leader, you can renew it yourself by applying this "holy ointment" to the charm, but if you haven't it then you must seek the leader to have it renewed.

It was this class of people who attacked and killed on the northern coast of Biliran the gallant and heroic Joseph R. Neddo, third-class inspector of Constabulary, than whom no braver soldier ever drew blade or shouldered musket in defense of his flag. Though mortally wounded from the rear, he rallied his men and drove his assailants from the field. Thirty-five silent forms scattered around through the grass bore testimony of Neddo's valor. The fight over, he embarked his little band of brave men in small boats and started for Carigara, and for twenty-four hours, without medical

aid, his wounds undressed, tossed hither and to by the angry waves, he fought his last battle—for life—but alas! when the boat grated on the beach at Carigara the spirit of the brave Neddo had taken its flight.

Although Biliran had suffered more severely, from the effects of fanaticism and ladronism, than any other part of the province, the end of June saw the island completely pacified; Inspector Borseth having captured and killed or driven back to Samar the entire band that had sought safety in the rugged mountains of Biliran.

Thus the beginning of July saw the end of all armed resistance to constituted authority in the province, which was the first time it had been pacified since the American occupation, and for more than three months we enjoyed perfect quiet, there being absolutely no disturbance of any kind throughout the province.

In the early part of October, however, ten large bancas carrying from 10 to 15 men each, crossed over from Samar and landed more than 100 Dios-Dios on the island of Biliran. The people fled, panic-stricken, from their homes, some seeking safety in the towns where there were small detachments of constabulary, while others fled to Leyte towns. The invaders burned, pillaged, robbed, and killed to their heart's content, and then made a determined attack on the small detachment of constabulary stationed at the town of Naval, hoping to capture their arms, but they were repulsed with considerable loss. The attacks were kept up for several nights in succession; and although the constabulary had lost several men, in killed and wounded, they held the band off until Mr. Borseth arrived on the scene with reinforcements. A vigorous campaign was again instituted, in which the towns cooperated heartily, and after about six weeks' work the island was again cleared of these religious fanatics. This time, however, those that were not killed or captured, instead of returning to Samar, made their way across to the island of Leyte, and working along down the coast arrived in the vicinity of Ormoc, where on the 18th of November they attacked the inhabitants of a barrio of that town. There were no constabulary in Ormoc at that time and the municipal police had only four or five shotguns, without ammunition, except two or three rounds, but they went out in search of the band and in an encounter which followed four policemen were killed. I was then notified and made a strong effort to obtain arms for the municipal police, or to have constabulary sent there; but, unfortunately, no constabulary arrived there until the night of the 28th. By that time the leader of the band had, by intimidation and force, attached to himself a considerable following, which he constantly increased by issuing manifestoes and proclamations to the effect that he could cure cholera, and by prophesying the total destruction of the town of Ormoc by a great tidal wave. Cholera was raging in the town at that time and the municipal authorities had established a cordon around the town and would not permit the people in the town to go out into the barrios nor allow the people outside to enter the town, which measure had tended to embitter the people in the rural districts, and possibly helped the Dios-Dios leader to recruit his forces.

For more than a month fanaticism and superstition held high carnival in the rural districts of the town, and the inhabitants murdered, burned, and pillaged each other's homes through a spirit of mere wantonness, inspired by fanaticism. This disturbance on the island of Leyte has been confined to Ormoc exclusively except on two or three occasions when they have raided other towns, and in such raids they have not received sympathy or support from the adjoining towns.

All the rest of the province is absolutely quiet, there having been no disturbances of any kind since the general surrenders in June. All the southern part of the island, where Capili held sway when civil government was established, and where he continued to exercise control of several of the towns and all the interior part of the island, is now peaceful and undisturbed by ladrones or fanatics.

Future disturbances of any magnitude in Leyte need not be apprehended, as the more intelligent class of people will readily lend their influence and assistance against any attempts at violence, while the great mass of the people are contented and satisfied. There are, however, those who have been living for the past three or four years by robbery, who will seize every opportunity to band themselves together for that purpose, and unless the municipal police of every town are armed, that such bands may be dealt with summarily, the rural districts and the smaller towns will suffer greatly from the depredations of this class of people. To this end I recommend that every town in the province be given arms, first requiring a bond of 200 pesos per arm to insure the employment of reliable and trustworthy policemen.

#### AGRICULTURAL CONDITIONS.

With the exception of a few towns on the west coast of Leyte, and Alang-Alang and San Miguel in the interior, where corn, sugar, and rice are cultivated, there are practically no food products produced in the province, the agricultural class devoting their

time almost exclusively to the cultivation of hemp, which requires less labor and brings quicker and better returns. The advanced price of hemp since the American occupation, and the death of more than 75 per cent of the carabaos, have of course helped to bring about these changed conditions, and as long as hemp continues to bring present prices and rice can be purchased for from 5 to 8 pesos a picul, I can not hope to see agricultural conditions improve. What effect the introduction of improved machinery and American methods of farming would have remains to be seen; but at present those who are able to experiment along these lines are exceedingly wary on account of the great risk they run of losing all the money they invest in live stock.

However, so long as hemp brings good prices and food stuffs do not become too dear, Leyte people will not suffer, and they realize this and are not much concerned over a threatened famine. To arouse them from this indifference, is almost, if not quite, impossible.

#### ROADS AND BRIDGES.

The roads and bridges of the province are in a deplorable condition, and with the exception of the road from Tacloban to Palo and Tanauan, a distance of about 12 miles, the repair of about 4 miles of which cost the province more than 20,000 pesos, the remainder of those on the east coast are practically impassable, except on horseback during dry weather. This is practically true of all the other roads in the province; hence, communication with the towns is exceedingly difficult, and can only be accomplished by means of boats during the greater part of the year. There are no roads crossing the island connecting the two coasts. The municipalities have expended but very little money in the construction and repair of roads and bridges, and what has been expended has been within the limits of the towns proper, while those in the barrios have been allowed to go from bad to worse, the towns depending on the province to make these much-needed repairs. This is not the result altogether, however, of a lack of interest or willingness on the part of the municipal authorities to make these improvements, but is principally the result of a lack of means with which to make them. Various causes may be assigned for this, such as the necessity of building tribunals, school buildings, the maintenance of large police forces, etc., all of which most of the towns have had to do. Another reason is that the municipal council in almost every town in the province has voted to the officials the maximum salaries prescribed in the municipal code. The only remedy which suggests itself to my mind is the reduction of the number of municipalities and the enactment of a law prescribing a special road tax, of so many days' labor per year, or its equivalent in money; this labor to be utilized under the general supervision of the supervisor, in order to get the best possible results.

I recommend also the construction by the insular government of one good road across the province, connecting the eastern and western coast, preferably from Abuyog to Baybay, as this is nearer the center of the province. The detailed report of the supervisor is hereto attached, marked "A."

#### MUNICIPAL GOVERNMENTS.

Forty-seven out of the 51 towns in the province have been organized and in operation, in accordance with the provisions of the municipal code, for more than a year, and have as a whole been administered very satisfactorily. Prior to June 30, it had been impossible to organize the others on account of the disturbed condition of affairs in their vicinity. During the first part of July the provincial board visited these towns, and in consequence of the then approaching general elections in December, it was deemed best not to hold special elections as provided by Chapter VIII of the municipal code, and temporary appointments were made, which have proven very satisfactory.

In view of the reasons set forth under the head of Roads and Bridges, I deem it absolutely necessary to consolidate some of the smaller towns as they are not strong enough to support municipal governments. The provincial board will make recommendations along this line as soon as the census work is completed.

The end of the year found most of the towns with deficits, some of the causes for this have already been mentioned, others that might be mentioned are the delay in the collection of the land and other taxes, and the failure of some of the towns to collect all the taxes they are entitled to collect under the provisions of the municipal code.

#### HEALTH AND SANITATION.

I have not yet received the report of the president of the provincial board of health, the delay having been caused by the former president of the board, Doctor

Santos, having kept no records from which the necessary data could be obtained. This report will be forwarded as soon as received.

I might say generally that we still have a little cholera in Ormoc and Baybay, but in no other towns. During the summer it was quite prevalent throughout the province, but the death rate was not so great here as it was in some of the other provinces. This I believe to be due, in a great measure, to the energetic and vigorous manner in which the municipal authorities adopted and enforced the preventative measures recommended by the health boards. The province is deeply indebted to the military authorities, especially the medical department, for their hearty and active support in the suppression of the disease. The officers detailed for this work were active, energetic, faithful, and untiring in their efforts to save human lives.

The sanitary condition of most of the towns is very good. I have made it a special point to call the attention of the municipal authorities to the great importance of this work, and have been much gratified at the very marked improvements that have been made.

A few towns have suffered quite severely from smallpox, but as a whole, the province has been spared the ravages of this disease, which is more or less prevalent in the island every year.

#### PROVINCIAL JAILS.

The province owns no buildings either in Tacloban or Maasin that are suitable for jails, and has therefore been compelled to rent buildings in both places. The municipal jails in each place seemed to be the only available buildings that were at all adaptable, and were therefore secured from the municipalities. In Tacloban we secured three rooms, underneath the tribunal, in which board floors were placed and everything possible done to put the building in a sanitary condition. Owing to the crowded conditions, however, which have prevailed all the year, the mortality among the prisoners from Beri-Beri and other diseases has been very great. The president of the provincial board of health advised that they be given exercise and sunshine, and they are now given from one to two hours exercise each day.

The necessity of a provincial jail building is very urgent, and I called the attention of the provincial board to the matter in the early part of the year; and in the month of July the board passed a resolution instructing the supervisor to prepare plans and let the necessary contracts, immediately, for the construction of a jail. Subsequently, however, the treasurer reported that the province did not have sufficient funds with which to do this work. I hope that we will be able to construct this building during the early part of the coming year. As the military authorities occupied the tribunal in Maasin, the prisoners were placed in the jail adjoining military prison, but as there were certain abuses being committed, I deemed it best to remove them, and they were confined underneath the rented building occupied as a tribunal. On the night of November 11, two of the municipal police, who were on duty as guards, assisted 16 of them to escape and fled to the mountains with them. As soon as the tribunal was vacated by the military the prisoners were transferred to the prison underneath it, which is a very strong building.

Inasmuch as the Constabulary have trained and disciplined men, in whom more confidence can be reposed than can be in the average men that can be secured as provincial guards, I have the honor to recommend that the jails and the custody of the prisoners be turned over to the senior inspector of the province.

#### FINANCE.

I have the honor to forward herewith the report of the provincial treasurer, marked "B," which shows the total collections and total expenditures during the current year, as well as the balance on hand January 1, 1903.

The collection of taxes in the province has been very much delayed during the current year, on account of the disturbed conditions during the first half of the year, and the lack of transportation with which to reach the south and west coast towns. This can be better appreciated when you take into consideration the fact that all the trade of north and east Leyte is with Manila, and that of south and west Leyte with Cebu, so that there are very few opportunities of reaching west Leyte on commercial boats.

While the provincial treasurer has worked hard and faithfully, I do not believe that he has systematized his work as he might; nor, do I believe that he has required as strict compliance with existing laws, with reference to the collection of taxes on the part of the municipal treasurer, as he ought. Many of them have sent out delegates into the barrios to collect taxes giving provisional receipts, which has opened up all kinds of opportunities for the practice of fraud. These things are now being

corrected, but they should never have been permitted. I do not think, either that he has kept in as close touch with the financial conditions of the towns as he might, if he had required the municipal treasurers to have remitted their monthly reports regularly.

In this connection, I desire to invite your attention to the attached copy of a letter addressed to him October 3, 1902, to which I have as yet received no reply. Letter is marked "C."

I respectfully recommend that, until the roads of the province are repaired and communication with the south and west coasts of the island is made possible by land, the province be furnished with a boat with which to make at least quarterly trips around the island.

Respectfully submitted.

J. H. GRANT, *Provincial Governor.*

#### EXHIBIT A.

TACLOBAN, *January 15, 1903.*

The Honorable PROVINCIAL BOARD,  
*Province of Leyte, Tacloban, P. I.*

GENTLEMEN: I have the honor to submit the following report of the work of this department for the year ending December 31, 1902.

#### HISTORICAL.

*Engineering work under Spanish and military rule.*—The engineering work carried on in Leyte under Spanish régime must have been considerable judging from the ruins remaining. On the coast road leading from Tacloban south there are traces of permanent construction in the shape of small stone sluices and small bridge abutments, all with elaborate approaches. The most extensive work of this nature is located at Palo, on the main road leading into the town, and consists of two stone abutments with central piers, all faced with cut coral blocks. The foundations rest upon a ledge underlying the river and directly over a cascade of some 8 feet fall. The bridge is of the stringer type, corbelled at the ends by timbers extending over the tops of the piers and abutments. Owing to the age and neglect the superstructure is now in very bad shape and needs immediate renewal.

On the north coast also traces of Spanish work are to be found on the roads leading from Carigara to Jaro direct, and also from Carigara to Jaro via Barugo, in the shape of stone arches of small span and bridge piers and abutments, but the bridge superstructures have long since fallen into decay.

On the west coast road there are several examples of stone arches up to 15-foot spans, notably near Ormoc and Maasin and near-by towns. All are doing service, but some are in poor repairs.

On the more important roads much has been done in the way of grading and refilling, but it seems in most cases to have been done without intelligent direction.

The natives have some examples of engineering work mainly in the shape of bridges. All of these have been built by the cut and dry method and are of sultry design. However, they have served and show considerable ingenuity in their execution.

Under military régime about \$35,000 United States currency, were expended upon the roads of the province, mostly in the northeastern portion of the island. The work, however, was of a temporary nature, consisting of cocoanut bridges, etc., which have either rotted out or been carried off by floods. In the town of Tanauan the main street was hardened with broken stone and is still in good condition. In Tacloban many streets were hardened with coral, and at Dulag a short piece of road was constructed leading toward Burauen, and in many towns much was done toward cleaning up the streets and placing them in good condition.

Through age and neglect the road work of former times has fallen into such a state of ruin as to be of little value at the present time. The roads graded were never hardened and the soil is of such nature that unless they are thoroughly drained and the roadway surfaced with good suitable material a rainy season renders them impassable and the cocoanut bridges have been destroyed, rendering all wagon traffic impossible.

#### PRESENT CONDITION OF ROADS.

*Road from Tacloban to Palo.*—This road has been entirely reconstructed during the past year and hardened with coral and bridges rebuilt, and it is passable at all times for carriages and other traffic.

*Road from Palo to Tanauan.*—The roadbed is in fair condition, but the bridges are poor. There are two ferries, one at the San Joaquin River near Palo and one at the Binahaan River near Tanauan, both constructed of barotas covered with a bamboo flooring. The road is passable for all ordinary traffic.

*Road from Tanauan to Tolosa.*—The roadbed is in fair condition, but most of the bridges are washed away. The rivers can be forded at low tide along the beach; passable for teams with difficulty.

*Road from Tolosa to Dulag.*—The roadbed is in fair condition, but all bridges washed away; passable for horses only by fording along the beach.

*Road from Dulag to Abuyog.*—From Dulag to the barrio of Mayorga the roadbed is very bad, consisting of a succession of carabao wallows, but from this point to Abuyog is in fair condition. There are no bridges upon this road and the several large rivers must be crossed in barotas and horses swum over. Passable by horses only.

*Road from Palo to Alang-Alang.*—This road is under construction at the present time, and from Palo to the barrio of Marirong some 2½ miles has been regraded where necessary and bridges replaced. From Marirong the road becomes constantly worse and consists for the most part of a series of carabao wallows. It leads through a flat country very difficult of drainage and will be expensive to rebuild. There are many streams difficult of crossing and the bridges have mostly been washed away or rendered unsafe. It is passable in the dry season for pack animals.

*Road from Alang-Alang to Jaro.*—The road is fair most of the distance, having been surfaced with gravel from the river beds. The bridges are unsafe or destroyed and the road is passable only for carabao carts with great difficulty.

*Road from Jaro to Barugo.*—This road shows many traces of former work, but nearly all the bridges are in such condition that it is impassable except for horses and pack trains.

*Road from Barugo to Carigara.*—This road leads along the coast and is in poor condition and the bridges are unsafe. It is passable for horses only with difficulty.

*Road from Jaro to Carigara direct.*—The road is very poor, having been filled for the greater part of the distance with large cobbles thrown into the roadway helter-skelter. The bridges are mostly destroyed and the route is passable for pack animals only.

*Road from Tanauan to Dagami.*—At the present time this road is being reconstructed and the roadbed as far as the barrio of Kiling has been regraded. The bridges are of cocoanut and poor and will be replaced as soon as funds for the work are available. It is passable for wagons with light loads.

*Road from Dagami to Burauen.*—There are many deep ruts and wallows in this road in those places where it leads through low land, and after rains they are very difficult to either get through or around. The bridges are of cocoanut and poor. The road lies in the hemp country and is much used by the carabao drivers, for whom it is passable with difficulty.

*Road from Burauen to Dulag.*—This road is very bad and practically impassable except for pack trains.

*Road from Dagami to Tabon-Tabon.*—The roadway leads through much low land and the bridges can not be crossed except on foot. Passable only on foot and for carabao.

*Road from Dagami to Pastrana.*—This road lacks bridges and is passable for horses and carabao only.

*Road from Ormoc to Macrohon, west coast.*—This road leads through a country where gravel is easily obtained and was well constructed formerly. Now it is much overgrown, but besides clearing needs few repairs. The bridges, however, are practically all destroyed and the numerous streams are hard to ford. Some short sections near the larger towns are passable for wagons, but on the whole it is passable for horses only with difficulty.

*Summary.*—In the Province of Leyte it is estimated that there are 400 bridges of an average span of 30 feet needing immediate renewal, at least half of which are impassable at the present time. Besides there are some 200 miles of roadway which must be regraded and surfaced before they can be used for wagon traffic. The estimated cost of this work is \$800,000 United States currency.

The problem of road improvement in the province is not one of repair, but of reconstruction. The question has rather been, upon what road the limited funds available could be spent with the most advantage. A division of the money, with the expenditure of a few hundred dollars at locations scattered over the province, while perhaps affording some temporary relief, would have been to waste the whole amount in the end. The plan followed has been to concentrate the work and to have such roads as were improved from a continuous whole leading from Tacloban to the more important towns. It has been the aim also to improve first those roads leading into the interior, in order to afford at the earliest possible time an outlet for

the hemp and other products. For the purpose of construction it has also been necessary to work from the coast inland, because supplies can only be purchased at Tacloban and transported overland. Various attempts have been made to secure timber, etc., nearer the site of the work, but without avail.

*Plan of work.*—The first road selected for improvement was the one leading from Tacloban to Palo, thence inland to Alang-Alang, Jaro to Carigara on the north coast. This road leads into an important commercial district, and when improved will throw open the whole northeastern portion of the island.

#### CONSTRUCTION.

*Palo road.*—This road extends from the barrio of Sagcajan, at the southern edge of the población of Tacloban, to the barrio of Sambualuan at the northern edge of the población of Palo, a distance of about 4 miles. The work of reconstruction was started early in February, 1902, and completed early in December, 1902.

At the beginning of the year the road was practically impassable for wagons, there being many sloughs and the bridges dangerous. The work of reconstruction has included the entire regrading of the road, hardening the surface with coral to a width of 16 feet, and rebuilding the bridges.

The amounts expended are in detail as follows:

Regrading: Labor, teams, and materials, \$3,485.40 local currency; total distance, 19,950 feet (3.8 miles); cost per mile, \$917.31 local currency.

Surfacing: Materials and cartage, \$155,442.61 local currency; total distance, 18,410 feet (3.5 miles); cost per mile, \$4,440.64 local currency.

#### Bridges.

	Local currency.
Bridge No. 4, 16 feet 4 inches over all, standard stringer.....	\$246.00
Bridge No. 5, 10 feet 4 inches over all, standard stringer.....	170.50
Bridge No. 6, 6 feet over all, standard stringer.....	112.75
Bridge No. 7, 20 feet over all, standard stringer.....	404.70
Bridge No. 9, 37 feet over all, standard stringer.....	769.07
Bridge No. 10, 27 feet over all, standard stringer.....	578.31
Bridge No. 11, 6 feet over all, standard stringer.....	112.75

Total for bridges ..... 2,394.08

The prices paid for labor per day, etc., for the above work, are as follows:

	Local currency.
Laborers.....	\$0.50
Natives:	
Foreman .....	1.00
Carpenters .....	1.00
Carpenters, foreman.....	1.50
Teams, including cart and driver .....	2.50

Timber, from \$0.50 to \$0.70 United States currency per cubic foot, cut to size.

Throughout the year the transportation of materials has been difficult. For a short time the army quartermaster was able to furnish a team for hauling timber. This aided greatly in starting the work. When this aid could no longer be furnished a truck was constructed from two carabao carts and utilized. At the present time the supervisor has, on memorandum from the quartermaster, four wagon trucks which have been fitted with shafts for carabao, and these are being used in hauling timber inland.

For the regrading and hauling coral for surfacing the native carts and carabao were used. The province has had wagons and horses ordered for a long time, but has so far been able to secure nothing more promising than some harness and a bin of oats. The work carried on, except as noted above, has been entirely dependent upon such native transportation as could be secured. On account of the scarcity of carabao and the natural aversion of the average native to work, the teams needed have been difficult to obtain and have been secured at all only at an excessive cost in time, energy, and money.

*Alang-Alang road.*—This road extends inland from the población of Palo through the barrios of Malirong and Santa Fe to the town of Alang-Alang.

Work was started on the Palo end of this road on September 1, 1902, and is being continued at the present time. It has consisted mainly in replacing the bridges and in regrading at such places as were necessary to render the road passable for wagons.

The amounts spent in detail are as follows:

Regrading: Laborers, etc., \$635.60 local currency. Total length graded, 1,400 feet; cost per foot, \$0.454, local currency.

*Bridges.—*

	Local currency.
Bridge No. 1, 43 feet 4 inches over all, Howe truss.....	\$2,617.61
Bridge No. 2, 33 feet 4 inches over all, "A" truss.....	2,064.75
Bridge No. 3, 70 feet 4 inches over all, Howe truss.....	4,029.66

**NOTE.**—Bridge No. 3 is incomplete, erection having been delayed on account of high water.

These bridges are about 10 miles from Tacloban, and it has been necessary to haul all materials for their construction over this distance with carabao, it having been found impossible to purchase timber, etc., nearer to the work.

**Dagami road.**—This road extends inland from Tanauan to Dagami, a distance of some 10 miles. The work was started September 1, 1902, and is at present being carried forward. It has consisted of regrading over about half the distance and in keeping the existing bridges, which are of cocoanut, and poor, passable. The work of renewing these bridges will be taken up as soon as funds are available.

The amounts already spent are in detail as follows:

Regrading: Labor, teams, etc., \$1,776.60 local currency.

Bridges: Materials, labor, etc., \$318.30 local currency.

**CHOLERA HOSPITAL.**

At the outbreak of cholera at this port the board of health selected an island about 1 mile up the harbor as a site for the cholera hospital and detention camp, there being no suitable buildings in the town or its outskirts which could be utilized for this purpose. All patients and suspects were at once dispatched to the island, although at the time it was covered with brush and there was no shelter of any kind. The work of constructing suitable buildings was turned over to this department. Building supplies were purchased at once, men secured, and during the first day a small clearing was made at the southern end of the island and a temporary shelter erected for those patients already at the island. In the three succeeding days the upper half of the island was cleared of all undergrowth and a hospital about 40 by 20 feet, a detention building about 70 by 30 feet, a house about 12 by 12 feet for the guards, outbuildings, etc., were constructed, all of bamboo and nipa, with board floors well up from the ground. During the remainder of the epidemic all cases and suspects were taken at once to this hospital, where they could be cared for and completely isolated from the town.

**PROVINCIAL RESERVATION.**

Under Act No. 244 of the United States Philippine Commission the province of Leyte has purchased a tract of land, known as the Provincial Reservation, for the sum of \$5,515 United States currency. Owing to the increased land values in this section, this property is now worth from two to three times the purchase price.

**PROVINCIAL BUILDINGS.**

The provincial buildings stand upon the above tract, and consist of two frame buildings with galvanized-iron roofs, occupied as office and as a residence for the provincial governor, and two small buildings, constructed mainly of nipa.

**LABOR PROBLEM.**

On the Palo road labor has been secured without much trouble, but on the Alang-Alang and Dagami roads it has been very hard to secure. In Tacloban the price of day labor has risen within the past year from \$0.50 local currency per day to \$1 and \$1.50 local currency, and in the hemp fields the return for work is such that about two days' work a week suffices to keep a family. The remaining days of the week the men use for resting, and can not be induced to work by any known system of moral suasion. It seems to be not entirely a question of pay, but rather of indisposition.

Since doing away with compulsory labor the towns have done very little work upon their portions of the roads, and the province has no means of securing labor other than "persuasion," money being not a sufficient inducement to work.

It would relieve the situation very much, I think, if law were enacted by which every able-bodied man should be liable for work upon the provincial roads for a period of fifteen days per year at a rate of pay to be determined by the provincial board. I would suggest that a money equivalent for this labor should not be accepted, for the reason that the money so collected would not materially assist in the problem of securing men. A man who did not care to perform this work himself would then be under obligations to furnish his own substitute.

WORK FOR 1903.

The province has now on hand shovels, picks, etc., for regrading, and also bridge timber, etc., to the amount of \$4,000 United States currency. The provincial treasurer estimates that from the land tax and general funds \$25,000 United States currency will be available for road work during the coming year. The work will be carried forward on the Palo Alang-Alang road, the Tanauan-Dagami road, the Dagami-Burauen road, and the coast road from Palo south mainly in the shape of bridge renewals and such grading as is necessary to render the roads passable at all times for wagons.

PROPOSED ROADS.

Excepting only the towns of Palo, Tanauan, and Dagami, which can be reached by wagons, and Tolosa, Burauen, Tabontabon, Pastrana, Alang-Alang, and Jaro, which can be reached by pack animals, the only means of communication between Tacloban and the remaining towns of the province is by boat.

The coastwise trade on the east coast of the province is with Tacloban, but the entire west and south coasts trade only with Cebu. There are no commercial boats plying between Tacloban and the west coast, and the only means the provincial officials have of reaching those towns is by a trip to Manila and return via Cebu or by a coast-guard boat sent especially for the purpose.

Between Abuyog on the east coast and Baybay on the west coast the island of Leyte is quite narrow, and there is a trail leading between the towns. The province will in a few years be able to complete the coast road to Abuyog from the ordinary revenues, but on account of other pressing work it would be unable for a long time to undertake a road across the island. Baybay lies about the center of the west coast, and from that town a road leads north to Ormoc and south to Macrohon. A road from the east coast entering Baybay would place the whole east and west coasts in communication, and would be of great assistance and benefit to the government. The provincial board has already taken the matter under consideration and framed a resolution asking for an appropriation of \$30,000 United States currency for the construction of the above road, and I believe the money could be used for no better purpose.

Following is a statement showing the amounts available and their sources, and the amount expended for road and bridge work during the year ending December 31, 1902:

Amount expended from January 1, 1902, to December 31, 1902, province of Leyte, P. I., roads and bridges.

EXHIBIT B.

OFFICE OF THE GOVERNOR, PROVINCE OF LEYTE,  
Tacloban, October 3, 1902.

Mr. W. S. CONROW,  
Provincial Treasurer, Tacloban, P. I.

SIR: I have the honor to inform you that this office is in receipt of complaints from a great number of municipal employees of the various towns in the province, to the effect that their salaries are due and unpaid for periods ranging from one to six months. When the municipal officials are asked why these salaries are not paid promptly they invariably reply that there are no funds available with which to meet said liabilities. The object of this communication is to ascertain, if possible, why such conditions exist. That they do exist is conclusive evidence, to my mind, that there is something radically wrong, the immediate correction of which is imperative if we would make municipal governments a success in this Province, for the very life of a municipality depends upon its resting on a sound financial basis.

Section 47, Municipal Code, reads as follows:

“(a) During the month of January of each year the council shall prepare in duplicate a report giving—

“(b) An inventory of all buildings, lands, and other property, real and personal, belonging to the municipality.

“(c) An itemized estimate of the revenues of the municipality from all sources during the current year, with a statement opposite each item of the amount realized from that source during the preceding year.

“(d) An itemized estimate of the ordinary expenses of the municipality for the current year, with a statement opposite each item of the corresponding expenses for the last preceding year. The estimated ordinary expenses shall not exceed the estimated resources. This estimate shall include a statement of outstanding indebtedness, if such exists.

“(e) An estimate of such extraordinary expenditures, if any, as may be required through unusual necessity or to make permanent improvements. Such estimate shall state the approximate total expenditures by reason of such necessity or improvement, the amount which it is expected to expend during the current year, and the

source or sources from which it is proposed to secure the necessary funds; also an itemized statement of extraordinary expenditures for the last preceding year. The report hereinbefore provided for shall be in such form as may be prescribed by the provincial treasurer.

"(f) Such report, when approved, shall be attested by the president and municipal secretary and shall be forwarded in duplicate to the provincial treasurer for his action. If the provincial treasurer shall, upon consideration, find that the taxes levied will produce the estimated revenue and that the actual expenditures will not exceed in the aggregate the estimate thereof, then he shall approve the same and shall forward one of the copies of the report, with his approval indorsed thereon, to the president, to serve as a guide to the municipality in the administration of its finances. If, after the provincial treasurer shall have begun the collection of taxes, he finds that the amount to be actually collected will fall short of the estimate, he shall certify this fact to the council, with a statement of the probable shortage, and it shall be the duty of the council to reduce its subsequent expenditures so as to bring their aggregate within the available income as reported by him.

"(g) Expenses not provided for in the annual estimate can only be incurred and paid upon the authorization by the provincial treasurer at the request of the municipal council."

Information is requested as to whether or not you have prescribed a form upon which these estimates are made? If so, please furnish me with a copy of same. If not, have any of the towns in their estimates, either by items or in the aggregate, showed what their revenues were for the last preceding year (or fractional part of the year they were organized), and what their expenses were for the same period? If they have not, in what way do you determine whether or not the municipality, whose estimate you are considering, will realize the amount estimated? Since beginning the collection of taxes for the current year, have you found that the actual collections of any town would fall short of the estimate furnished you for that town? If so, have you certified that fact to the municipality? To what towns, if any, have you given authorization to incur expenses not provided for in their annual estimate, and what was the nature of said expenses? If all the municipalities have furnished these estimates and you have approved them, how do you account for the lack of funds, in the majority of the towns, with which to meet their ordinary expenses?

Section 21 (c) reads as follows:

"He shall (the municipal treasurer), on or before the third day of each month, make out in triplicate a full and complete statement of the receipts and expenditures of the preceding month, together with a statement of the cash actually on hand in the municipal treasury. He shall deliver two copies to the president, who shall verify them and certify upon the face of each to the correctness thereof, and shall then immediately cause one copy to be posted at the main entrance to the municipal building and send the other copy to the provincial treasurer."

Do these reports reach you regularly? If not, what measures have you adopted to insure a compliance upon the part of municipal officials with this requirement of law? If these reports reach you regularly, you ought to be able to tell whether or not the municipal employees are receiving their salaries promptly, and how their monthly expenditures correspond with their respective estimates. These reports should also show whether or not the municipal treasurer is complying with subsection (d) of the last-quoted section, which provides that warrants shall be paid in the order of their presentation, which, I am informed, is not done, but that the municipal officials are paid from month to month as long as there are any funds available, and that the warrants in favor of the employees are allowed to accumulate. Have you any information in regard to such discriminations in the towns?

I desire to call your attention to the report required under section 46 of the municipal code, and to inquire whether said reports have been rendered by all the municipalities? I desire especially to invite your attention to the latter clause in said section, which makes it your duty to institute proceedings against the municipal treasurer, or the council, or any member thereof, for unlawful expenditures of municipal funds. I take it that expenditures unauthorized by you are all unlawful, and may or may not be recovered by you for the benefit of the municipality, according to your discretion.

Section 67, municipal code, reads as follows:

"Within ten days after the passage of the ordinance by the council for the payment of licenses or privilege taxes, the president and municipal treasurer shall prepare a list of the names of the persons whose business, if continued, would render them liable to the licenses or tax, and they shall transmit such list at once to the provincial treasurer to enable him more readily to detect persons failing to pay the licenses and privilege taxes for which they shall have become liable."

Section 71 (b), municipal code, reads as follows:

"At the termination of the period of collection as fixed by this act, the provincial treasurer shall return to the municipal council an account of those taxes that could not be collected, and such treasurer will not be held liable for the uncollected portion unless because of negligence or bad faith on his part or on the part of his deputy or deputies."

Have all the municipalities furnished you with these lists? If not, what percentage of them have, and what steps have you taken against those that are delinquent? How will you know when you will have completed the collection of taxes in the several municipalities if no such lists are furnished you?

Section 87, municipal code, reads as follows:

"Any officer charged with the duty of assessing real property who shall wilfully omit from the tax lists real property which he knows to be lawfully taxable, shall be guilty of a misdemeanor and punishable by a fine not exceeding one thousand (1,000) pesos, or imprisonment not exceeding two (2) years, or both, in the discretion of the court."

Section 88, municipal code, reads as follows:

"Any officer charged with the duty of listing or collecting license or privilege taxes, who shall wilfully omit to list or collect the same or any part thereof, shall be guilty of a misdemeanor and subject to the penalties provided in section 87."

In my opinion persistent neglect and failure of municipal officials charged with listing of both real property and the names of persons who are liable for licenses and privilege taxes is a wilfull omission, as contemplated in sections 87 and 88, and subjects the officials to the punishments prescribed in said sections, and proceedings should be instituted against them.

I desire also to invite your attention to the amended section 72 of the municipal code, as amended by Act 303, United States Philippine Commission, and to inquire to what extent you have been able to comply with the requirements of said section. If you have been able to comply with said requirements fully, please state to what extent you have been able to comply, and I respectfully request that you make a full and complete statement as to why a complete compliance has been impossible.

Any suggestions which you may be able to make in reference to the collection of taxes or the subject-matter upon which taxes are levied, or any other matters in connection with your department which will facilitate the collection of said taxes, and assist in putting the municipalities of the province on sound financial footings, is respectfully requested, that such executive assistance may be rendered you from this office as is necessary to insure a full and complete compliance with existing laws upon the part of municipal officials.

Also, such suggestions and recommendations as may require legislative action, that they may be forwarded to the proper authorities for their action.

Very respectfully,

J. H. GRANT, *Governor.*

#### ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF MASBATE, 1903.

OFFICE OF THE GOVERNOR, PROVINCE OF MASBATE, P. I.,  
*Masbate, June 30, 1903.*

The EXECUTIVE SECRETARY, *Manila.*

SIR: Having submitted to your office my report dated the 30th of June, 1902, I believed that I was relieved from making a report in the month of January of the present year for the year which had just past, as provided by section 7 of the provincial act numbered 83.

#### CONDITION OF THE PROVINCE.

The peace is so firmly established in this province that not a single case of raids by outlaws is to be reported for the year 1902. The number of constabulary stationed in this province at the beginning of 1902 was 110, more or less, the great majority of them being natives of the pueblos of this province. Forty of these were sent to Leyte, commanded by an inspector, and 20 were sent to Sorsogon in April of the aforesaid year. Last November 26 enlisted men and an inspector were sent to Calbayog, and last December 15 enlisted men and a sergeant went to Albay, pursuant to orders received from the headquarters of the organization, for the purpose of assisting in the pursuit of outlaws in those provinces.

Thanks to the efforts of the municipal officers of the pueblos of this province, who have endeavored and are endeavoring to keep their respective municipalities free

from malefactors, the province has enjoyed uninterrupted tranquillity until the present writing. To their efforts is also due the surrender to the municipal officers of Palanas of the 21 persons who were seduced by the alleged assassins of the Echevarria family, whose names are Melchor de la Cruz, Eugenio Gallardo, and others, and who are said to have gone to one of the islands situated between Masbate and Samar. The municipal officials of Palanas are still working, in order to secure reliable information regarding the whereabouts of these men.

In order to prove once more that the residents of the pueblos of this province are working in the interest of the affirmation of peace, I would cite the capture of Bernardino Baldomar, Bernardo Manlambus, and Crisóstomo Concordia, made by the constabulary of this province in December, 1902, in the barrio of Mintac, of the municipality of Cataingan, which is situated in the southern part of the island of Masbate. With them the constabulary seized the sum of \$891 Mexican, and papers containing acts signed by the outlaws of the province of Samar, and instructions for the mission which the person captured was to fulfill in Manila. They were brought to the provincial capital and placed in the provincial jail on the 25th of December, 1902.

On the 10th of January of the present year I received a telegram from Governor Llorente, of Samar, asking me to send those persons to the president of Calbayog, who was to make the preliminary investigation in the case against them for depredation committed in the mountains of Calbayog. In compliance with this telegram I remitted the aforesaid sum of \$891, the papers captured, and the records of the preliminary investigation held by the president of Masbate to the senior inspector of the Philippine Constabulary, and placed the persons captured at his disposition for embarkation on the first steamer bound for Calbayog which might call at this port. On the 24th of February, 1903, they had not yet been sent, no steamer having arrived on which they could have been embarked for Calbayog. On that date six prisoners made their escape from the provincial jail; their names were Leon Arco and Melchor Ablinde, both under death sentence; Andres Villasis, their accomplice; Bernardo Manlambus, Bernardino Baldomar, and Crisóstomo Concordia. Bernardo Manlambus and Bernardino Baldomar were recaptured on the 25th of February, 1903, as I reported to your office on the 28th of February; but until the present writing Leon Arco, Melchor Ablinde, Andres Villasis, and Crisóstomo Concordia have not been recaptured, in spite of the efforts made by the constabulary and the municipal police of this province. It is not even known if they are in the mountains of Masbate.

On the 22d of March of the present year Bernardo Manlambus died in the provincial jail from meningitis, according to the certificate of the president of the provincial board of health.

#### AGRICULTURE.

The increase in the plantation of hemp and cocoanut trees during the year of 1902 is not inconsiderable, and will doubtless add to the industrial and commercial wealth of the province. Nevertheless much land has remained uncultivated, as the intense drought which destroyed the crops of quick-growing plants also prevented the planting of cocoanut trees and hemp. The only resources left to the pueblos are therefore the natural products—those for consumption as well as those for commerce—the principal of which, the cutting of timber, deserves special mention.

#### CUTTING OF TIMBER.

The cutting of timber on public lands, besides being the principal agent to counteract the influence of the prevailing scarcity of foodstuffs, as has already been mentioned, prevented brigandage from gaining a hold here, as it gave employment to all able-bodied persons not engaged in other work. Any person acquainted with the province will not fail to see that it is the principal source of revenue at the present time, and that as such it should be given all the facilities and franchises which can possibly be granted, if it is not desired that famine and other calamities befall this province.

#### FINANCIAL CONDITION.

During the closing fiscal year the financial condition of the province has considerably improved, as the tax on forestry products has been a good source of revenue for the provincial treasury, and as a considerable saving was made by abolishing the office of supervisor. To prove this, I would state that on the 31st of May, 1903, the funds in the treasury and on deposit with the New York Guaranty and Trust Company amounted to the considerable sum of \$57.81, United States currency, and \$5,882.59, local currency. It will be seen that this sum is more than sufficient to enable the province to employ a provincial fiscal; this officer being badly needed for the pre-

liminary investigation of judicial matters and for other work of his incumbency, in his capacity as legal counsel of the provincial government and of the council and the president of each municipality, as required by the existing legislation.

#### STOCK RAISING.

The epizootic or rinderpest, which ceased in April, 1901, reduced the beef cattle and carabaos enormously in numbers; but fortunately this plague has not returned, and the few cattle which survived have increased considerably. The fecundity of these animals is such as has never been seen before, and barring unforeseen calamities, the province will within three or four years have no reason for complaining about the scarcity of work cattle.

#### PUBLIC HEALTH.

The cholera having broken out on the coast of Capiz, which faces these islands, and in the province of Cebu, which is the market for the dried fish and other products of the pueblos of the southwest coast of this island, it was carried by a parao (small sailing vessel) into the municipality of Milagros, a pueblo which has frequent communication with the aforesaid provinces, end of 1902, notwithstanding the precautions which had been taken. In order to isolate the epidemic, suitable measures were taken, as the establishment of quarantine by land and by sea, the killing of dogs and pigs, the cleaning of public and private places, and the isolation of infected houses, but they were not sufficient to prevent the cholera from spreading. During the same year malarial fevers became epidemic, the principal causes therefor being the lack of nutritious food and the noxious effluvia which arose from decaying animal matter, the victims of the rinderpest.

#### PUBLIC INSTRUCTION.

Only eight of the seventeen pueblos of the province have schools, in which American and Filipino teachers are employed. It will be seen that the number of public schools is insufficient for the province; the same being the case with the supplies. Even these are superfluous if radical reforms are not made in the personnel, the salaries, and the system of education. Each pueblo should have a school-teacher with a reasonable compensation who should be able to express himself in an intelligible manner in the local dialect, or at least in Spanish. The parents are very anxious to give their children a real and solid education, and the children are anxious to learn; but these desires are in vain on account of the absolute lack of the real educational establishments in this province. At the beginning both adults and children were very anxious to study English, but later icy indifference followed the unusual animation. To this there also contributed the cholera and the malarial fevers, of which we have already spoken.

#### RECOMMENDATIONS.

The posts of the telephone lines to the pueblos in the southern and western part of this island being decayed, they have broken off, and the wire is lying on the ground. I have, therefore, the honor to suggest that a sum not exceeding \$1,000, money of the United States, be appropriated to be employed in the purchase of new posts. There is the advantage that the pueblos of the south have offered to place the new posts on the spots where the old posts were standing, without compensation. It would be a pity to allow the lines to remain in their present condition, as the telephone facilitates rapid communication, and as the investment of a little money would greatly benefit the speedy transaction of official business.

There is no need for wagon roads in this province, as the communication is mostly by sea and river, and I would therefore suggest that instead of being furnished rice for the repair of the roads, the province be granted about 500 piculs of rice for work on the telephone lines and for the establishment of telephone lines between the pueblos.

There has been a vacancy in the office of provincial fiscal of Masbate since last December, when the person who held that office was transferred to Bataan, and I would ask that when you appoint his successor you have him assume at the same time the duties of provincial secretary, in order that he be able to act as substitute of the provincial governor in the absence of the latter from the provincial capital, thus avoiding delay in the transaction of official business of an urgent nature.

Very respectfully,

BONIFACIO SERRANO,  
*Provincial Governor.*

ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF MINDORO FOR THE YEAR ENDING  
DECEMBER 31, 1902.OFFICE OF THE PROVINCIAL GOVERNOR,  
*Calapan, Mindoro, P. I., January 5, 1903.*The EXECUTIVE SECRETARY, *Manila, P. I.*

SIR: I have the honor to submit the following report for part of the year ending December 31, 1902:

Civil government was extended to the island of Mindoro June 23 last, by virtue of Act No. 423 of the honorable Philippine Commission; under the provisions of which act the island of Lubang was detached from the province of Cavite, attached to Mindoro and the whole annexed to the province of Marinduque, Mindoro to have a governor "who shall be an officer of the United States Army, detailed for the purpose by the major-general commanding the Division of the Philippines."

In compliance therewith, and based on the request of the honorable vice civil governor, Capt. Robert S. Offley, Thirtieth U. S. Infantry, was detailed to that duty by paragraph No. 1, General Orders; No. 144, Division of the Philippines, dated June 29, 1902.

The provincial treasurer of Marinduque, Mr. C. H. Lamb, reported in person August 22, and the work of organization began the day following; which, owing to many vexatious delays due to absence of transportation or means of communication on the island, was not completed until October 16, 1902.

It was found impracticable to reorganize the towns, or pueblos, as existed under Spanish régime—23 in number—many of which had been destroyed during the late insurrection, others almost depopulated by the ravages of cholera, and still others where the ignorance of the people made organization under the municipal code an impossibility. On the island of Semirara, to which it was hoped to attach the islands of Caluya and Sibay as barrios, the people were found clothed in nature's garb only, and but one man who claimed to be able to "read and write"—his knowledge, when put to the test, extended to reading and writing his own name.

I have been unable to get to the islands of Caluya and Sibay, but I am assured the same conditions exist as at Semirara.

As to ignorance, almost the same conditions exist on the southern part of this (Mindoro) island. By uniting Mansalay, Ticling, and the three islands above referred to, to Bulalacao, all with their former barrios, and stretching the code somewhat, a so-called municipality was organized; while the uniting of the former pueblos of Ylin (island) Magaran or Iiron, Caguray, and Pandarucan to Mangarin failed to bring forth the requisite number of qualified "consejales." Here, as at Bulalacao, the code had to be stretched; a presidente was appointed (who can neither read nor write), ordinances were drawn up by myself and the provincial treasurer, the same read to the presidente and the councilors—or, more properly speaking, "tenientes of barrios"—and the presidente directed to enforce the same. (This same presidente has the best-regulated municipality on the island to-day, all credit for which is due to him.)

Owing to the nearness of the elections, which were then to be held on the first Tuesday in December, no changes were made in the organization of the island of Lubang, though nothing whatever had been done for that island by the province of Cavite, nor ever visited by the officials of that province. The pueblos of Lubang and Looc were organized under General Orders, No. 40, I believe, some time in 1900 or 1901, by Captain Brown, of the Fourth U. S. Infantry.

The residence of two members of the provincial board of Mindoro, a majority, being in the town of Boac, province of Marinduque, where, owing to the uncertainty of transportation, most of the business relating to Mindoro had to be transacted, resulted in the governor of Mindoro being nothing more than the deputy of the provincial treasurer, and supervisor, of Marinduque; to remedy which, and with a view to making legal what had to be done illegally—the organization of Mangarin—the honorable civil governor and the members of the Commission were appealed to, resulting in Act No. 500, which gave Mindoro-Lubang a provincial form of government of its own on the same basis as Nueva Vizcaya, a form of government which, with a few amendments to be hereafter recommended, in my humble opinion can not be improved upon. The people lose none of the rights given them under the municipal code; in fact, those rights are guaranteed them by making it the duty of the governor, where the municipal council fail to enact "such measures as are necessary and proper to provide for the health and safety, promote the prosperity, improve the morals, good order, peace, comfort, and convenience of the township and the inhabitants thereof and for the protection of the property therein," to issue suitable orders for securing these ends, "which orders shall have the effect of law."

Mr. C. H. Lamb, formerly treasurer of Marinduque Province, was appointed

supervisor-treasurer, and Señor Fernando de San Agustin, formerly presidente of Calapan, appointed provincial secretary.

Owing to the pending census, no reorganization has yet taken place under this act.

The following is a list of the municipalities of the province organized under the municipal code, with the population, estimated, of each:

Abra de Ylog.....	828	Pinamalayan.....	3,114
Bulalacao.....	2,877	Pola.....	1,900
Calapan.....	5,656	Puerto Galera.....	1,140
Looc.....	2,254		
Lubang.....	4,780		29,808
Mamburao.....	1,929	Mangarin (special).....	1,188
Naujan.....	4,330		
Paluan.....	1,000		30,988

deducting the island of Lubang, an area of 63 square miles, a total Christian population for Mindoro and its adjacent islands of, in round numbers, 24,000, extended over an area of over 4,000 square miles, or about 107 acres for every man, woman, and child. (The non-Christian tribe, Manguianes, are not considered, as they do not live in houses nor till the soil, being dependent on wild sweet potatoes, "camotes," and roots for food, moving camp as the supply becomes exhausted.)

That Mindoro Province will prove to be one of the richest provinces, if not the richest, is my firm conviction.

Of the minerals, gold, copper, and coal are known to exist. The bottom lands are capable of raising "palay" for ten times the present population. The hemp, particularly that grown at Puerto Galera, has been pronounced by experts as equal to, if not better, than any grown in the Archipelago. The mountains are a vast forest, where, among numerous other species of trees, are to be found the rubber tree, ylang-ylang, cinchona or quinine, and the beautiful red "narra." Many of the streams, particularly noticeable near Pola and Bulalacao, are coated with petroleum, so rich finds in this direction are probable. The people are in perfect ignorance of the value of these products, and did not know they possessed the rubber tree until shown by Americans.

A survey has been completed for a railroad of about 10 miles in length, with a view to opening up the coal mines near Bulalacao. The same company, a Spanish concern, owns coal lands on the island of Semirara.

The island of Lubang has almost every physical feature of our own Territory of Oklahoma, and I do not doubt but what every cereal grown in that Territory can be grown here. Reports have been received that American miners have discovered copper near Looc, and good indications of gold.

I believe a truck farm near the town of Lubang for supplying the Manila markets would prove a success. Arrangements are now being made to start an experimental garden, or farm, there, under the direction of the provincial board.

Mindoro was virtually surrendered to the insurrectionary government in July, 1898, when the few Spanish soldiers holding the island surrendered to Gen. Alfonso Panopio, of the insurrectionary forces. The history of Mindoro from that date until American occupation (July, 1901) is better told in the records of the court of first instance for this district—a history of assassination and destruction.

American occupation found the island controlled by armed bands, chased hither from nearby provinces, noticeably Batangas and Cavite. It is true the island had a governor, appointed by Malvar, and the records captured would indicate organization, but, in my opinion, this did not exist; unless a dozen or more generals, each styling himself "gobernador," can be called organization.

Under threat of death, too often carried out, the people were compelled to furnish food to these bands, and refrain from giving information or other assistance to the Americans.

Some more than 300 "insurrectos," so-called, were captured or surrendered to me and, it is not an exaggeration to say that the native of Mindoro, or Mindorinian, among them was under 5 per cent. However, the people refused to give information, as a result of which, and as a military necessity, all the peaceably inclined were ordered to congregate in the towns and bring all movable property and supplies with them—ample time to accomplish which was given them. Every precaution was taken to secure them against suffering and want while so congregated. Then followed the destruction of everything outside of the towns that would afford shelter or food to those bands, the food stuffs always being brought into town where possible to do so.

These restrictions were removed in ample time to plant the crops for the coming year, but hardly had the work begun when cholera appeared; then followed rinderpest, which latter disease has carried off nearly all the carabao, as a result of which,

planting, if any, was late an , though a famine is not anticipated, it is feared that there will be some suffering, though every effort is being made to avert it.

No armed band of ladrones is known to exist, though one of the former insurgent chiefs, Valeriano Gasic, is still out and is supposed to have 12 rifles. Unfortunately, this man is very popular among his people and connected with some of the best people on the island, thereby making his capture a difficult matter. He has never been accused of any crime, other than hostility to the United States Government, and that evinced only in his nonsurrender.

So far as I am able to judge, the unsanitary condition of Mindoro has been greatly exaggerated. The military official records will, I think, show that the health of the troops compares most favorably with that of any other of the provinces or islands of the Archipelago. The interior, among the mountains, may be unhealthy, owing to the dense foliage, etc. The healthy appearance of the Americans on the coast will go far to disprove that Mindoro deserves the sobriquet of "The White Man's Grave."

The mountains of Mindoro are inhabited by a tribe of semibarbarians, known as "Manguianes." They are non-Christian, but not savage by nature or habit; will run at sight of a white man, if his coming and intentions have not been previously announced. Their dress consists of "gee-string," and their habitation a hollow tree or brush lean-to.

They are divided into several tribes, chief among which is the "Buquid" and "Bangon;" roam in bunches or groups, the oldest man acting as leader; are willing workers and make nearly all the bancas used on the island; have no knowledge whatever of agriculture, and do not know the value money, of which fact Mr. Filipino hombre avails himself, by giving a handful of salt for a banca. The price of a small working bolo to a Manguian is ten years' servitude.

These are all the facts I have been able to glean, so far, of this strange and interesting people. I am making every effort to win their confidence, and in this way hope to gradually apply the provisions of Act No. 547, "An act providing for the establishment of local civil governments for the Manguianes in the province of Mindoro."

Section No. 43 of Act No. 387, applied to Mindoro by Act No. 500, provides that "The revenues of the township shall be devoted exclusively to local public purposes," and sections Nos. 44, 54, and 55 of the same act prescribes from what sources such revenues shall be derived.

From this it will be seen that the townships or pueblos are to bear no part in the expenses of the provincial government.

I believe the townships should bear a portion of this expense, and taught from the beginning that government is not a toy; that a government worthy of the name is worth the purchase price.

For sometime to come Mindoro will need the assistance of the insular government—until roads and other means of communication are constructed—but this should be in the nature of assistance not support. Mindoro is able to bear a large share of this burden, and should be compelled to do so. All financial assistance from the insular government should be for public improvements, roads, telephone lines, etc., which, when completed, will make Mindoro the flower of the Philippines.

An amendment to section No. 44 (h), Act No. 387, is also recommended. To escape the tax therein imposed, a sled, "cafiga," has been improvised. This sled is most destructive to roads, and the owner, the destroyer, bears no part in its repair. This sled should be taxed heavily, so much so as to make it almost prohibitive.

A road law is recommended, a law compelling every able-bodied man to put fifteen days' labor on the public roads annually, or pay the cost of such labor—3 pesos—under the direction of the provincial supervisor.

Very respectfully,

R. S. OFFLEY,  
*Captain, Thirtieth U. S. Infantry, Governor of Mindoro.*

## ANNUAL REPORT OF THE GOVERNOR OF THE PROVINCE OF MISAMIS FOR THE YEAR 1902.

OFFICE OF THE GOVERNOR, PROVINCE OF MISAMIS,  
*Cagayan de Misamis, September 8, 1903.*

HON. WILLIAM H. TAFT,  
*Civil Governor, Manila, P. I.*

SIR: In compliance with the explicit order contained in the cablegram addressed to me by your honor under the 28th of August that I remit to your office my report for the year 1902, I have the honor to annex the said report, although it is still unfinished. Nevertheless I intend to continue to work on it, but am frequently

interrupted by the manifold occupations with which this provincial government is burdened, and therefore ask you kindly to pardon this delay, which is not due to my will.

Very respectfully,

MANUEL CORRALES,  
*Governor of the Province of Misamis.*

CAGAYAN DE MISAMIS, *September 8, 1903.*

THE CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS.

SIR: In compliance with the provisions of the provincial act, No. 83, I respectfully submit my annual report of the province of which I am in charge.

The elections having been held in all the municipalities in the last months of 1901, the pueblos of the province enjoyed the benefits of civil rule at the beginning of the year 1902; but there still remained an obstacle to the satisfactory progress of the municipalities in the western section of this province, comprising the pueblos of Misamis, Loculan, Jiminez, Oroquieta, and Langaran. I refer to the insurgent general, Rufino Deloso, who had not yet surrendered. Although his followers had been greatly reduced in numbers (there only being thirty or forty of them), and were hiding in the mountains and barely giving signs that they existed, their presence did not fail to cause trouble and alarm, because the military garrisons still continue to control matters, sometimes with useless rigor, which compelled me to file a complaint with the honorable the civil governor of these islands. This complaint was acted upon, and the question which had arisen was soon afterwards settled by the withdrawal of the military garrisons of those pueblos.

Beginning with that time Mr. John W. Green, the senior inspector of the Philippine Constabulary in this province, took charge of the public order in that section, although his force had not yet been completely organized. He made all possible efforts to bring about the surrender of the aforesaid insurgent chief, and asked me for letters of recommendation to several presidents of those municipalities who were not yet acquainted with the new institution, the Philippine Constabulary, in order to inspire them with confidence and induce them to use their influence to further the endeavors of the inspector, because at that time the natives were estranged from the military element. I complied with his request, and later I received a communication from Inspector Green, dated Oroquieta, the 14th of March, 1902, and informing me that the last insurgent chief in this province would soon surrender.

The surrender took place shortly afterwards, and was hailed with enthusiasm by the people, who were anxious to have peace. The presidents of that section, accompanied by the other municipal officers and by bands of music, assembled at Oroquieta, where banquets were given, the expenses for which were paid by public subscription. This gave rise to the filing of a complaint some time afterwards by Vice-President Vicente Fortich, of Oroquieta, with the provincial board against President Telesforo Porques, of the same pueblo, whom he accused of having compelled the people to pay this subscription. An investigation was held by the board, which is still awaiting the final decision of the supreme authority.

[Copy of the letter addressed by me to the president of Oroquieta.]

CAGAYAN, *January 15, 1902.*

MR. TELESFORO PORQUES, *Oroquieta.*

DEAR SIR: Captain Green is coming to establish his headquarters at your pueblo, as you already know. I recommend to you to have confidence in him and to inform him confidentially whenever you hear anything regarding the whereabouts of Rufino Deloso or other news of interest. Assist him in an efficient manner by giving him information and cooperating with him, in order that he will not repent his having reposed confidence in the people.

If you learn the whereabouts of Rufino Deloso, you must try and have a talk with him and induce him to surrender, by explaining to him how the insurrection is declining everywhere and that his best companions have abandoned him. Tell him that if he delays his surrender he will not be given the consideration and the advantages which the authorities can give him now. Do not take any steps in this matter without first consulting the competent authorities.

While the military force remains in your pueblo try to conduct yourself in such a manner that the civil authorities be as much in harmony with the military element as possible, in order to avoid all contention and friction.

If you desire, you can embark on the steamship *Victoria* to attend the convention on the 20th instant, but do not bring the band along, as the voyage is difficult. When the launch, which we have been promised for the use of the civil authorities, arrives here we shall not have this difficulty. Let us wait until election day.

Your obedient servant, etc.,

MANUEL CORRALES.

[Copy of the letter which I wrote to Mr. Isidro Rillas, an influential person, who used to be colonel under Rufino Deloso.]

CAGAYAN, January 15, 1903.

MR. ISIDRO RILLAS.

DEAR SIR: Constabulary garrisons are to be established now at several pueblos of this range, whose inspector, Captain Green, is the bearer of this letter.

The aim of this institution is to maintain the public order throughout this province, and especially in this section, by means of the civil force. I have given him favorable information about you, and therefore recommend that you and all the principal citizens of your pueblo repose your entire confidence in this gentleman, who is anxious to work for the pacification of your section. For this reason I would kindly ask you to communicate to him any information which you may receive regarding the whereabouts of the chief Rufino Deloso, in a confidential manner. You need not entertain suspicion or fear, as long as his actions are sincere and loyal.

Endeavor to find some means for inducing Deloso to have an interview with you, taking, of course, all precautions necessary to prevent treachery, and convince him that to continue in his refractory attitude would only have bad consequence, because soon orders will be issued for his capture in a manner which will not prove very honorable for him. All his best companions having surrendered to the constituted authorities, and the majority of the people having abandoned him, it would be much better for him to surrender while the authorities are still disposed to treat him with consideration, and while he is still able to preserve his honor.

There being no time for further remarks, I remain your obedient servant, etc.,

MANUEL CORRALES.

[Copy of the act inviting the insurgent chief, Rufino Deloso to surrender with his men and arms to Inspector John W. Green, resident in the pueblo of Oroquieta.]

Municipality of Langaran, province of Cagayan de Mindanao, Philippine Islands,  
the 20th of February, 1902.

ACT.

The peace committee of this pueblo, composed of the municipal council thereof and the late insurgent officers, who have already surrendered and taken oath of allegiance before the United States military authorities of Misamis, having assembled for a meeting, upon the invitation, with the presence and the approval of Inspector John W. Green, in order to discuss the complete pacification of this zone, to achieve which it is very necessary that the insurgent chief, Rufino Deloso, be requested to surrender with his men and arms, the chairman called the meeting to order and read aloud a communication addressed to him by the inspector in charge of this province, Mr. John W. Green, of which the following is a verbatim copy:

*"To the peace committee of Langaran, Langaran, the 20th of February, 1902:*

*"I have just received a communication of the inspector in charge of this province of Misamis, of which the following is a copy:*

*"President of Langaran.*

*"I have the pleasure to inform you that if Rufino Deloso surrenders with his men (excepting the American deserters), I promise to give them their liberty immediately upon their surrender, to allow them to follow their usual vocations, and to protect their lives, as peaceful citizens. They will be free to choose the place where they desire to reside.*

*"Respectfully,*

*"JOHN W. GREEN."*

*"I have the honor to transmit the above communication to the peace committee of the pueblo of Langaran, for its information and action.*

*"Yours, respectfully,*

*"REMIGIO BERGADO, Municipal President."*

The chairman thereupon laid before the meeting his opinion regarding the matter at issue, and after the proper discussion the meeting adopted the following resolution:

*Resolved, That in harmony with the favored communication of Mr. John W. Green, the inspector in charge in this province of Misamis, which the chairman has just read in this hall, we, the undersigned, with all respect and affection, and in good faith, address the following invitation to our compatriot, the insurgent chief Rufino Deloso, and his armed forces:*

*"To the insurgent chief, Rufino Deloso, in the mountains of this zone of Misamis.*

*"DEAR SIR AND COMPATRIOT: Since the municipal government has been organized in this pueblo under the new laws passed by the Philippine Commission, we and the*

other pueblos are enjoying many and great privileges and liberties, the municipal officers and peaceful citizens as well as the late officers and other members of the insurgent army who have surrendered, laid down their arms, and recognized the sovereignty of the United States. Such liberty and privileges we never enjoyed under the Spanish régime.

"In the second place we would inform you, according to our sincere opinion and understanding, in what situation you and your reduced forces are at the present time. Although you may perhaps not suffer want, we would inform you, as your brothers and compatriots, that the time has come for the insurgents who desire to surrender to do so, because the military government has ceased in this province, tranquillity has returned, and we are governed exclusively by the civil laws, which are the most beneficial and reasonable.

"Therefore, we, who truly love peace in the interest of the public best, invite you and your men to surrender as soon as possible, with your arms, to the inspector in charge in this province of Misamis, Mr. John W. Green, resident in the pueblo of Oroquieta, a gentleman who is well known in this province, is a man of good character, and desires nothing better than peace and harmony between Americans and Filipinos. He wants us to lead the life of law-abiding citizens, thus enabling everybody to proceed in accordance with law and reason.

"We, the members of the peace committee in this pueblo, earnestly beseech you to convince yourself of the truth of the arguments contained therein, and send your reply as soon as possible by conduct of the swiftest messenger. It will not be necessary for you to inform us of your whereabouts, if you do not care to do so. We, the undersigned, will be responsible for the lives of you and your men from the moment of your surrender until the proper formalities mentioned in the letter of Inspector Green, of which we have inserted a literal copy, have been complied with. If this is not done we disclaim all responsibility for your lives, and you and your armed men would lose all right to the ample privileges which the American authorities intend to grant you, and they would be compelled to adopt different measures. In that case you could not blame us, your brethren, as we have fulfilled the principal brotherly duty, which is to endeavor to induce you to surrender.

"In closing this letter we hope that our requests will not be disregarded, and we anxiously expect the time when we will be able to meet in this pueblo and celebrate the happy day of general peace by a special banquet which we are preparing in honor of this peace, with the help of the Grand Architect of the Universe.

"REMIGIO BERGADO, *Municipal Presidente.*

"LORENZO CLARET, *Member.*

"MELCHOR BANGUIS, *Member.*

"GUALVERTO TACLUB, *Member.*

"NICOLAS CLAVANO, *Member.*

"DOMINGO MILITANTE, *Member.*

"LINO BULAUIN, *Member.*

"ISIDRO RILLAS, *Member.*"

[Seal Province of Misamis, Langan.]

[Copy of the letter of Senior Inspector John W. Green, of the Philippine Constabulary.]

OROQUIETA, *March 14, 1902.*

The PROVINCIAL GOVERNOR OF MISAMIS, *Cagayan.*

DEAR GOVERNOR: I entered into negotiations with Rufino Deloso regarding the surrender of himself and his men. A copy of the letter sent to him is annexed hereto. My superior officers have authorized me to use any means for reestablishing peace in this province, and have assured me that the government at Manila would approve of everything done by me.

After all the disturbances of the last three years and all the abuses committed by the army I consider it no more than just that Rufino be pardoned. Rufino's friends, who had a conference with him in the mountains, told me that he will accept my conditions. They have gone back to have another conference with him, and I am awaiting their return.

If you can possibly come, I should be pleased to see you in Oroquieta, as your presence would have a good influence on the people.

I shall comply with your wishes and send Jimenez to Dalinding.

Respectfully,

JOHN W. GREEN,  
*Senior Inspector, Philippines Constabulary,  
Oroquieta, Misamis (Mindanao, P. I.)*

P. S.—Please wire to all the presidentes to assist me in the discharge of my duties.  
GREEN.

## REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF NUEVA ECIJA.

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF NUEVA ECIJA,  
*San Isidro, January, 1903.*

SIR: In compliance with section 7 of Act No. 83 of the United States Philippine Commission, I have the honor to present to you the following report, covering the conditions of this province, for the year ended December 31, 1902.

On March 2, 1902, the provincial government was headed by the following officials: Epifanio de los Santos Cristobal, provincial governor; Roman Roque, provincial secretary; Amzi B. Kelly, provincial treasurer; A. H. Higley, provincial supervisor; Ramon Mañalao, provincial fiscal.

From March until May, 1902, and for some months subsequent the provincial government and the situation of the province could not have been worse.

A band of evil persons, the dregs of the late Spanish administration, believing their future to be menaced by the present personnel of the administration, wished to take unawares certain provincial, insular, and even military officials, in order that the present provincial officials should be substituted by others unknown in the province of whose ignorance they might easily take advantage.

The result of their schemes was public disorder, the impoverishing of the province, and discord among the officials.

The government was obliged then to choose between the people and the poor officials, and it did not hesitate in the choice, laboring energetically until it accomplished the transfer or dismissal of some of the provincial and municipal officials and the incarceration of certain members of the constabulary.

With the change in personnel the economic situation was raised from its prostrate condition, discipline was established in the constabulary and public order was secured to such an extent that the security of person and of property was guaranteed to a degree unknown in the past.

This office was forced to work somewhat roughly at that time, but, in compensation, all the arms which were found in the possession of evil people were taken, all the ladrones were captured, and every kind of prohibited game was stopped without the expense of a single cent to the provincial or insular treasuries, solely with the assistance of the people and the municipal police.

To maintain order it was not necessary to call upon the constabulary, but their presence served as moral support to the government, and they were available should any possible necessity for their services have arisen.

During my absence from the provincial capital on business of the census there were some cases of thievery in the pueblo of Santa Rosa, toward the close of December, 1902, and certain important prisoners escaped who were in the care of the constabulary in Cabiao on January 4, 1903, but up to the present time they have not caused any trouble in the province. Authority has been requested to offer rewards for anyone capturing these prisoners, not because they actually caused any trouble, but to make sure of their recapture and to reward the persons accomplishing it, thus avoiding any possible perturbation in the pueblos and barrios of the province.

So that as for the public order, games, and discipline among the provincial and municipal officers for the present there is nothing to be desired, but not so with reference to the economic situation and the sanitation of the province.

✓Agriculture is prostrate by reason of rinderpest, locusts, and worms, and the crop of the present year is less than the ordinary in most of the pueblos. The price of unhusked rice fluctuates between \$2.75 and \$3.37½ Mexican per cavan, and it would be difficult for the province to support itself if it were still obliged to export the little rice which was gathered. Industries are so insignificant as to merit no mention at all.

The evils of the situation have become aggravated by the expenses of sanitation and sanitary officials during the cholera epidemic, together with the salaries and the furnishings of the public schools and the maintenance of prisoners, which last amounted approximately to \$1,000 Mexican per month, to say nothing of the damages caused to the province by the hurricane of November 8, 1902, which were considerable.

There is much complaint upon the part of property owners concerning the assessment and taxation of property, but I believe that Act No. 582 of the Commission will solve this question quite satisfactorily.

There is also a great demand for a new registration of animals, especially at present, when the insular government expects to provide for the shortage in carabaos by purchasing them in neighboring countries. But I believe that the Commission will very soon legislate concerning this particular, if it has not already been done.

The roads and bridges of the province, with the exception of that which leads from Arayat, Pampanga, to San Isidro, Nueva Ecija; that from San Isidro to Cabanatuan; that from San Isidro to Peñaranda, and that from San José to Lupao, are all in their primitive condition, very bad. The amount of funds collected for roads is \$1,789.72 United States currency and \$3,078.82 local currency.

For the present the province is in no need of costly engineers or professional men as far as roads are concerned; builders for the municipal works are all that are needed.

The total amount collected for the assessment is \$18,171.84 United States currency; uncollected, \$8,010.02, including \$3,897.86 of one resident alone of San Juan. Probably 50 per cent of the balance uncollected can not now be collected. The collection or the consequent levies can be made up to March. Approximately the monthly expenses of the provincial government amount to \$1,300 United States currency, and it is feared that in February the government officials will remain unpaid unless part of the road funds be dedicated to this purpose or the balance of the assessment can be collected in time.

As to the public health, everything possible has been done, but the lack of capable personnel causes this branch to be deficient.

With respect to public instruction, the personnel is capable, and everything possible for the education of the people is being done. But the local system of education is deficient. The American teachers, all capable in their own language, have no knowledge of the local dialect, which is the only means for the communication of ideas here; the Spanish teachers, one or two or three of them, speak the dialect partially. It is desired that more Filipino teachers be furnished and that the American teachers learn the local dialect, and if not, at any rate they should all be brought together in the provincial capital, with a knowledge of Spanish. Thus time and money would be saved, and the most beneficial results in the education of the masses would be secured.

Consequently I have the following recommendations to offer:

1. That telegraph lines be established throughout all the province. The present line includes only the pueblos of Cabaiao, San Isidro, Cabanatuan, Songabon, and Pantabangan. It is of imperious necessity to do this, owing to the enormous distance from one pueblo to another in this province, of so vast extent and of such impossible communication in the rainy season.

2. That besides the post-offices at San Isidro and Cuyapo others be established at Cabanatuan, San José, Aliaga, and Bongabon. With the present system official correspondence is delayed at times even two months.

3. That, owing to the lack of funds in the municipalities, the Commission appropriate a sufficient sum for the purpose of constructing a schoolhouse in each municipality, pay the salaries of the teachers and the furnishings of the schools, such sums to be repaid, in long periods, by the municipality; that, so far as possible, the teachers be Filipinos; that the Americans shall know the dialect, and if not, that they be gathered at the provincial capital, with a knowledge, at any rate, of Spanish.

4. That the office of provincial supervisor be abolished, and that in his place be appointed a builder acquainted with the locality, with an annual salary of \$900 United States currency. The present office costs the government of the province \$2,620 United States currency per annum; consequently there will be a saving to the provincial government of \$1,720 United States currency per annum, with the further advantage of having the work better done, as well as more cheaply. The works which require a technical knowledge may be placed under the supervision of the bureau of engineering, created by Act No. 584 of the commission.

5. That the justices of the peace be paid salaries proportionate to the importance of their municipalities and from the insular treasury. The present system has a deplorable effect upon the administration of justice and the municipal treasuries of provinces like Nueva Ecija. Owing to the lack of adequate remuneration, it is not possible to select justices of the peace; few will accept the offices and those who do accept have to commend themselves to the hands of unscrupulous persons to the detriment of justice. The municipalities pay out considerable amounts, and the fines which should serve to repay them amount to nothing. Certain of the justices of the peace, to whom their office is a burden, act in such a manner as to secure their dismissal, which is a favor to them when they have no justifiable motive for presenting their resignation.

6. That while I am of the opinion that the provisions of act No. 190, which refer to the particular, are applicable to the payment of the traveling expenses of the prosecuting witnesses in criminal cases, nevertheless it would be well for the Commission to legislate upon this point, indicating from what funds these expenses should be paid. On account of this omission witnesses avail themselves of every imaginary excuse to avoid making the journey; criminal cases are thus delayed, and the pris-

oners are left forever imprisoned in the provincial jail, to the serious detriment of justice and the provincial treasury.

Finally, I have the honor to inclose five photographs, as requested in your circular of November 20, 1902, the only ones which I have secured up to the present. By reason of waiting for these photographs this report has been somewhat delayed. When the other photographs illustrating the forest products, agriculture, commerce, typical scenes, etc., of this province shall arrive, I shall embody them in an additional report to be made to the insular government.

Respectfully,

EPIFANIO DE LOS SANTOS CRISTÓBAL,  
Provincial Governor.

The CIVIL GOVERNOR, Manila, P. I.

BAYOMBONG, NUEVA VIZCAYA, January 10, 1903.

SIR: As required by act 337, section 6 of the law establishing the provincial government of Nueva Vizcaya, I have the honor to submit the following annual report covering the year 1902:

The province of Nueva Vizcaya was established by law under civil government on January 29, 1902, but it was not until April 9 that the honorable Commission passed act 387, defining the municipal organizations and establishing a system of local taxes.

My predecessor arrived in April and proceeded to hold elections for municipal offices and to collect the cedula tax. This was in substance all that was done when I arrived on August 14 to take over the office of provincial governor. A meeting was immediately called of the presidentes and local officials to formulate township ordinances and a schedule of local taxes, which was held on September 6. Up to this date no local tax schedule existed, and it appears that every township treasurer collected what taxes he liked and apparently disposed of same as agreed between the township officials.

The taxes collected and disbursements of same since September 6 have been in accordance with the provincial law and have barely met the local expenses, all provincial expenses being paid entirely out of insular funds.

Two "Igorrote commissioners" were appointed without salary to promote friendly relations and commerce with the non-Christian tribes, but the results have not been very satisfactory.

There were no municipal police organizations when I arrived and no funds to pay same. In fact, none of the township officials had received any pay at all nor had the amount of their salaries been decided. So little was done, in fact, that there was no opportunity to give attention to the isolated non-Christian tribes until the latter part of October.

We have now passed 39 local ordinances regulating matters not provided for in the general laws. They are uniform in all townships. Also, we have 35 uniform police regulations setting forth the duties of the municipal police. There are 6 police organizations, as follows:

Organization.	Popula- tion.	Number.	Pay per month (each).
			<i>Pesos.</i>
Aritao.....	605	4 police.....	6
Dupax.....	2,000	7 police.....	8
		1 sergeant.....	12
Bambang.....	1,800	7 police.....	8
		1 sergeant.....	12
Bayombong.....	8,700	11 police.....	8
		1 corporal.....	10
		1 sergeant.....	12
Solano.....	5,000	16 police.....	8
		2 corporals.....	10
		1 sergeant.....	12
Bagabag.....	2,000	7 police.....	8
		1 sergeant.....	12
			<i>a 9.71</i>

*a* Average.

Total force, 59.

The whole of the municipal police are uniformly armed with Remington single barrel, 12-bore shotguns, and each policeman is allowed two cotton uniforms per year, which cost about 4.50 pesos each.

We have had a continual fight with the local officials to secure a real police force. It has been the custom of years for the local police to exist on paper only and at a salary of from 1 to 2 pesos per month. The force consisted (on paper) of 12 to 25 men in each small township. When the governor came unexpectedly to inspect the police the officials sent to their houses and dressed up their servants in uniforms, kept for the purpose, and also sent hurry messages out through the town and into the rice fields, finally rounding up the police force, which required from thirty minutes to more than an hour. Not a single police was actually on duty very frequently, and they were used as servants and laborers by the township officials. The pay was raised to the lowest wage at which they could live and devote all their time to their duties as police; and while a certain amount of the old abuse still exists the conditions are greatly improved, and we have a real police force in each township, which is inspected by the constabulary officers as regards their arms and the use and care of same, and by the governor as regards their duties as policemen. They are able to pass a fair oral examination along the lines of the police regulations and local ordinances, and the arms are usually fairly well kept.

#### CONSTABULARY.

The constabulary organization of this province consists of 162 men and 5 officers. They are on the whole a very creditable native organization, generally clean and neatly kept. They are usually respectful, and rarely commit abuses against the residents of the province. This is due to a great extent to the fact that they are recruited here in this province. The Spanish practice was to send up native soldiers from other provinces, mostly Tagalogs, who were as foreign here as the Spaniards themselves and spoke a different dialect. These soldiers uniformly abused and robbed the people, and were greatly disliked and feared. The present organization is largely related to the residents and are liked by all. Having their families here and speaking the local dialects, they are a part of the community and in sympathy with the residents. There is, however, too much lack of discipline between some officers and men upon the part of the soldiers themselves.

I would likewise suggest for the good of the service and government that a greater effort be made by the officers to deliver the money for payment of the soldiers more promptly. The native of the soldier class is very improvident, and spends his money as soon as received, and when they have to wait three months and more for another pay day they are induced to steal and commit abuses which they would not think of if it were not for the straits they are put to for want of money and food. Cases have been brought into court here which could be attributed directly to the above-mentioned causes.

#### TAXES.

The natives of this province have universally expressed themselves as dissatisfied with the tax schedule. They do not complain of having to pay too much tax, but too many taxes. They prefer to pay an increased cedula of even 3 or 4 pesos and abolish the dog tax, slaughtering tax, market tax, and cart tax. The reason for this appears to be that under the present system the tax collector is always present to bother them, and tax collecting never ceases. They wish to pay all their taxes in lump sums once or twice a year only and then be done with taxpaying. The present system, so they claim, lends itself to abuses. For example, the market tax is used to hold up a man and collect a percentage of the money realized on the sale of any product at any place, whether sold in a public market place or not. I can not too strongly recommend the simplifying of the tax schedules, and that more taxes should be collected by the provincial treasurer; that taxes be limited to cedula, land, and personal-property tax, licenses regulating liquor traffic and cockpits, registration fees for the titles and transfers of live stock, and that a public road labor law be enacted and the cart tax abolished. We have not found that there is much corruption in the disbursement of local public funds, but there certainly is in the collection of the taxes by municipal officers. If it is not practical to make a uniform law abolishing a certain kind of tax unsuited to certain localities—such as the cart tax, for example—could not the local government be extended to make it optional in the different provinces whether such a tax as the cart tax, for instance, be applied or not? Here in this province the farmer can not hire out his cart, but keeps it for his own use, and it earns him very little. On the contrary, I understand, in Albay carts engage extensively in hauling for others, and earn as much as 40 pesos per day. The people here offer to work eight days per year on the roads and bridges if the cart tax be abolished.

## ROADS AND COMMUNICATION.

The maintenance of roads in this island will always be extremely expensive and difficult on account of the heavy rain season and the broken formation of the surface caused by volcanic disturbances or seismic influences. The trails (for there are no roads in the interior) in this province are in a deplorable condition. The main trail from Nueva Ecija to Pangasinan, through the heart of the island to Isabela and Cagayan, is about 68 miles long from boundary to boundary of this province. The temporary bridges, where any exist, are generally constructed of bamboos for want of money to construct more permanent culverts and bridges. Fifty thousand pesos are needed to restore the roads and bridges, and thereafter 10,000 pesos per year to maintain same. Also better ferry facilities are badly needed for crossing the river Magat at Bayombong and Bagabag, which would require an outlay of some 6,000 pesos.

The old military trails of the Spanish Government, about 90 miles in length, passing through all the Igorrote settlements of the Quiangan Valley and connecting with the trail through the province of Lepanto to Ilocos, will require 6,000 or 8,000 pesos to restore, and thereafter about 3,000 pesos per year to maintain. Also an easier trail from Bambang, via Aritao, over the summit of the mountains to San Nicolas, Pangasinan, existed in 1897, and was a day and a half shorter to the railway from Bayombong than the present trail through Nueva Ecija. This trail is now completely impassable, and I am unable to examine it. The restoration of this San Nicolas trail is of the greatest importance for the prosperity of this province.

Under present conditions there is no money to repair the roads and bridges. While we have a good supervisor of the province, he is limited in his work to that of a provincial property clerk, and not able to do any engineering work for want of any funds.

The government may spend ever so much money, however, on roads and trails, but the province will never be self-supporting nor of any practical benefit to the Philippine government without railways.

## LABOR AND WAGES.

There are about 13,000 Christian people in this province who live almost exclusively by agriculture, the chief industry being the raising of rice. It is almost impossible to hire a man in the whole province to do a little work by the day for wages. When they do work for wages the pay is about 20 cents per day Mexican and their food when they work for a native, and about 40 cents per day without food when they work for a foreigner. They do not work with any regularity, and are extremely slow and perform very little work in a day. There are perhaps 20 men in the province who call themselves carpenters, but they are unworthy of the name. They receive about 40 to 50 cents per day Mexican for their work, and only do 40 or 50 cents worth of work, and are extremely wasteful with the wood given them for use. There are perhaps 25 other artisans of different classes, such as blacksmiths, bakers, etc., all on a par more or less with the carpenters.

The Igorrotes are more inclined to work for wages, or the equivalent in cotton cloth, etc., and if the government ever expects to carry out any important public works in this part of the island it is most important to improve the relations and encourage intercourse with the Igorrotes of the Quiangan Valley, some 28,000 in number, who can put a large number of workman into the field if they wish to do so. An Igorrote works for 20 cents per day Mexican, and does as much or more than a Filipino.

## COST OF LIVING.

The province produces everything needed by the people for food. Only clothing has to be brought in. The cost of living is very cheap, as there is no market for the products outside of local consumption. When the natives wish to buy cloth or clothing they pack a little rice or other product of the province on their carabao or pony, or on their back if they have no animal, as is frequently the case now, and cross over to Isabela Province or Nueva Ecija, where they sell or trade their produce for cloth or clothing. Also, when it comes time to pay the taxes they do the same in order to raise money to pay public taxes. Outside of the above they do not care about money.

Rice here is worth about 2.50 to 3 pesos per picul (133 pounds), chickens 20 to 40 cents Mexican, each according to size, eggs 20 cents per dozen, coffee 20 cents per pound, potatoes 4.50 pesos per carga of 125 pounds. Deer and wild pig abound, and may be had for the catching. The food of ordinary natives of the province consists

of rice, beans, egg plant, squash, corn, sweet potatoes, fish, venison, and pork. Most of them are content, however, with rice and a little vegetable and one or two bananas, and are too indifferent to a variety and better food to go out and take the trouble to look for same. Clothing costs about 2 pesos per month and food about 3 pesos; tobacco is grown locally very cheap. Six pesos keeps one native a month as comfortably as the average cares to live here, but the standard of living is certainly very low.

#### HEALTH OF THE PEOPLE.

This is a fairly healthy climate during eight months of the year, but during November, December, and January chills and fever are very prevalent and the natives suffer considerably on account of the poor houses in which they live and the lack of ordinary comforts.

There is also much consumption, but this I attribute almost entirely to the poor living and insufficient clothing, and not so much to the climate. During March, April, May, June, and July there are bowel troubles among the natives, but not worse than other parts of tropical Asia, and smallpox is present nearly every year. The only other disease is various forms of skin disease.

#### RAINFALL AND CLIMATE.

The rainfall is erratic, and ranges from 60 inches per year to 120 inches. The rain season may continue from May to February. March and April are the months which are always dry, and generally February. All the other months may be either wet or dry, except September and October, which are always wet. The rains generally begin in May and continue with more or less regularity until December or January. The temperature varies according to season and elevation. In the valley of Magat River, estimated to be about 800 feet above sea level, the minimum temperature is about 50° and the maximum about 98° in the shade. January and February are the coldest months, and April and May the warmest. There is a marked difference between the temperature in the day and night, which amounts at times to over 30°. The province reaches an elevation of from 4,000 to 7,000 feet above sea level in places, and at 5,000 feet I am told the temperature goes down to 40° at times. There is also a vast difference in the rainfall, according to elevation. The least rainfall is down in the valley and the greatest in the summits of the mountains.

#### SCHOOLS.

There were 16 schools established in the province during the year 1902, and a total enrollment of about 2,100 students, or an average of 131 students to each school. The Christian population of the valley is estimated at 13,000, so there was an enrollment of 1 student to every 6 inhabitants. The average attendance at school was about 93 per cent of the enrollment. There are 5 American teachers supervising the instruction of an average of 420 students each. There was a total of 40 teachers, native and American, being an average of 1 teacher to every 53 students enrolled and every 48 in daily attendance. The school buildings are of the flimsiest construction for the most part, being only rough sheds made of bamboos, and in many instances no seats at all, the children sitting on the floor. The cost of an average school of this kind does not exceed 100 pesos Mexican. The wages earned by native teachers is from 8 pesos to 20 pesos Mexican per month, being an average of about 12 pesos per month, as the 8 and 10 pesos teachers are more numerous than those having higher salaries. The studies are the English language, written and spoken, nature study, arithmetic, geography, United States history, and the provincial and municipal law; also singing. The progress made by about 5 per cent of the students was good, 20 per cent fair, and 75 per cent poor, as they will not study outside of school, and not a great deal in school. They do not compare with Chinese and Japanese as students. Outside of the poor buildings and seats the schools are splendidly equipped, in fact the best I have ever seen anywhere in Asia. The English, Dutch, and French school of the Asiatic colonies have nothing to compare with our books and school equipment. The schools are popular with both children and parents.

#### RELIGION.

The religion of the province is Roman Catholic among the Christians, and I can not find that the non-Christians have any religion at all. They have superstitions about evil spirits, but no idea of a Supreme Being nor a hereafter, so far as I have been able to learn from them. There are two native priests in the province, while

all towns and some barrios have churches of either brick, stone, or bamboo. The people are very devoted to their religion, and would like very much to have really good native priests. They keep up their religious observances and forms most faithfully in isolated places where no priest has been for over five years.

#### IRRIGATION.

The rice and other lands in the valley of this province can be irrigated so as to depend very little on the rains for their plowing and crops. There are hundreds of small mountain streams which come down from above and empty into the river Magat, many of which could be very easily and cheaply diverted into the valley lands and used for irrigation purposes. One hundred thousand pesos Mexican would irrigate lands to support 100,000 people in this valley, and it would not cost over 6,000 pesos per year to maintain such irrigation works in good condition. It is another such place as parts of Mexico, where the people themselves could carry out extensive irrigation almost without the aid of engineers, as no single works of any magnitude are required, but it is only necessary to lead the small mountain streams down into the valley lands wherever the water is needed.

#### NATURAL RESOURCES, AGRICULTURAL, FORESTAL, AND MINERAL.

The natural resources of the province are of the first order. The country lends itself to the growing of rice and tobacco, also to field corn and almost every known garden vegetable; also coffee and cocoa thrive almost wild. This land will produce a greater variety of products than any tropical place I have ever known, and I have visited many. Among the vegetables which do well are several varieties of beans and sweet potatoes, tomatoes, cabbage, eggplant, okra, green peas, radishes, lettuce, beets, onions, squashes, watermelons, muskmelons, pumpkins, and other products. The coffee and cocoa is planted and then allowed to take care of itself. It produces so abundantly that only a portion of the crop is gathered, or whatever the natives want for their use. Cotton does well, although cultivated in a careless manner. Fruits produce abundantly, and there are several varieties of oranges, pomeloes, lemons and limes, "custard apples," mangoes, bananas of different kinds, and enough guavas to make guava jelly for the whole of the islands. Other fruits would do well if cultivated. The trouble is, nothing but rice is cultivated—other products take care of themselves, and grow the best way they can. Probably not over 6 per cent of the land in this province is cultivated or used in any way.

The most discouraging phase of the agricultural prospect of this province is the general tendency of the native to interpret the present policy of personal liberty to mean it is not necessary and is degrading to perform labor, and there is in consequence a yearly falling off in the acreage cultivated, which is not more to be attributed to the loss of animals than to the disinclination of the natives to go out and work the soil. The canals and dams are falling into disrepair and then abandoned, and no one thinks of repairing or restoring one of the old irrigation dams and canals once it becomes obstructed or broken down. Formerly, they say, the priest made them go out and perform this semipublic work, but now there is no one to make them work, and their neighbor will not go and do the work, so they all decline to move in the matter.

A few of the useful forest products are gums and resins used for torches, magnificent bamboos 100 feet long, various kinds of fibers, "bejuco" or rattan, beeswax, and many others.

A conservative estimate of an average of good forest timber is 25 to 30 trees to the acre of from 5 to 18 feet in circumference, and from 25 to 90 feet high without scarcely a branch. Probably one-half of this is good, serviceable timber for building purposes and the balance only for firewood. Also there is another 20 trees to the acre measuring from 2 feet 10 inches to 5 feet in circumference and from 20 feet to 50 feet high, also one-half good for timber. Some tracts will saw up fully 100,000 feet B. M. of good timber per acre. It will be nothing out of the ordinary to find 50,000 feet of good timber to an acre on most of the wooded hillsides. There are single trees which will cut up 8,000 feet B. M.

These forests compose 50 to 60 per cent of the total area of the province, and occupy the higher land and more rugged mountain slopes and summits. The growth of trees is always dense and many attain a great size and height. Among the more valuable woods are narra, male and female both in considerable quantities. Molave, pine, ipil, amuauan, and tagaat, all of superior class, and dulauan and baticulin of second class; also many other kinds which are durable and useful for building purposes, the names of which I am unable to learn, all untouched and unused, and will remain so until arrival of railways for want of any means of transportation.

There are also vast areas of splendid pasture land in the province suitable for the raising of cattle, horses, carabaos, and goats. Certainly it is no exaggeration to say there is range for 300,000 animals, and if the various diseases prevalent among almost all animals can be guarded against, successfully treated, or prevented by inoculation it is the only business which appears practical to engage in here, as the animals can be cheaply bred and reared, and it is the only industry which will stand the heavy cost of transportation to the market, as the cattle can be driven to the markets very cheaply.

Formerly there were 15,000 cattle and horses in this province, but the war broke out, and first came the insurgents, who killed what they did not require to use or eat and could not sell; then came a series of disasters and diseases, until to-day there are only about 500 carabaos, 50 ponies, and 200 cattle in the whole province. It is estimated that over 700 ponies died in the past year.

Little or nothing is known of the mineral resources of the province, and so far as one can judge it is not rich in precious metals, although the truth is that the richest copper mines in the world might exist 30 miles away from Bayombong, and no one be the wiser, so dense is the general ignorance for want of proper prospecting and exploring. The natives know nothing about the country 8 miles back in the mountains. They know nothing about minerals at all, and while the Igorrotes of Benguet appear to know something about minerals and mining, those of this province are totally ignorant on the subject.

The only known deposits are gold prospects in the southwestern part of province bordering on Benguet; saline deposits about three hours above Bambang in the mountains, where the Igorrotes condense the salt from the salt water which flows out from the mountain and sell it for 5 pesos per carga of 125 pounds to the people who live in the valley. The whole of the salt supply for the province is obtained from these saline deposits. Also some coal outcroppings are found 5 or 6 miles from Bayombong, along the bed of a small stream on the mountain side. The thickness and extent of the deposits is unknown for want of prospecting. The coal appears to be lignite of recent formation. There are also large deposits of kaolin, or potter's clay, all over the province of a more or less good quality. It is used by the natives for whitewashing instead of lime wash and paint.

#### PUBLIC LANDS AND POSSESSORY RIGHTS.

When the first meeting of the presidentes took place on September 6, I tried to impress upon them the necessity for registering their rights to the lands and property they occupy or claim and to urge them to encourage the people to establish definite limits to their land and mark out their claims. These efforts have been without result and not a single person has presented himself to register his property. There are not 15 people in the province with titles to their property. There are only about 2,000 acres of land registered under the Spanish law out of over 10,000 or 12,000 in cultivation and use. This extraordinary situation induced me to inquire into the matter with the following result: After examining some of the declarations which the property owners are required to make each year of their real property for purposes of taxation, I then went out into the country with the residents and had them give me information regarding land claimed by themselves and other old residents and with the result that they claimed large tracts of land which are not down in the declarations at all and upon which they are not willing to pay taxes. I then ascertained that the reason they do not want to register their lands, which they claim, is fear that they will have to pay taxes on same if it is registered by them. In other words, they wish to deny ownership for purposes of taxation and still hold certain possessory rights, real or imaginary, claiming that either he or some relative some years ago cultivated a part of the land or used it for a pasture. That is their only title and they will keep this up as long as they can without paying taxes, hoping some day to be able to sell or do something with it. I fear the result will be that it will make the new land preemption law impractical, as no one will know which is public and which is private land. They do nothing with the land, but if some one stakes out a section or two for bona fide cultivation and use there will be immediately several claimants with not a vestige of title, but a claim of possessory rights. To remedy this it appears to me that the new land registration law should go further and make it obligatory for every man within certain limits to mark out what he claims, define his boundaries and register same, paying taxes according to its assessed value, as I understand the new law is optional, not obligatory, in which case I fear few natives in the provinces will take advantage of its provisions.

## IGORROTES AND ILONGOTES.

The great majority of the population of the province consists of Igorrotes in the northern part and Ilongotes or Ibilao in the southeastern part. The former are a hopeful race, for the following reasons: They have fixed places of abode and permanent residences of wood, also granaries. More important still are the extensive works they have carried out. Large tracts of mountain sides are terraced for cultivation from top to bottom and small mountain streams laid on for irrigation purposes, so they are quite independent of the rains and raise their crops whether it rains or not. These Igorrotes, called by the Spaniards "Quianganes," are composed of about 13 or 14 distinct districts, with several different dialects. Each tribe or district is composed of from 6 to 25 families or settlements, called "rancherias." The total population of the Quiangan country is estimated at about 28,000, as follows:

First. Magulang district; population about 3,000 and composed of about 20 rancherias.

Second. Nangana district; population about 3,000, composed of about 15 rancherias.

Third. Banaue district; population about 2,500, composed of about 10 or 12 rancherias.

Fourth. Ayangan district; population about 3,000, composed of about 18 rancherias.

Fifth. Sabangan district; population about 3,500, composed of about 23 rancherias.

Sixth. Mayoyao district; population about 4,000, very hostile and little known. Their district is very isolated and extends partly into Isabela Province.

Seventh. Bungian district; population about 1,500, composed of about 10 rancherias.

Eighth. Alimit district; population about 1,500, composed of about 10 rancherias, located near Oscariz Isabela and extending partly into the province of Isabela.

Ninth. Santiago district; population about 1,500, composed of about 10 rancherias.

Tenth. Boloc district; population about 1,500, composed of about 10 rancherias.

Eleventh. Boco district; population about 2,500, composed of about 20 rancherias or more.

Twelfth. Asin district; population of about 1,600, composed of about 12 rancherias.

Thirteenth. Sapao district; population of about 2,500, composed of about 20 rancherias.

Fourteenth. Banao district; population of about 2,500, composed of over 10 rancherias.

The Spaniards wrote that these tribes were ruled by chiefs called "tenientes," who were absolute rulers. This I deny from my personal observation, as I find they are not always agreed as to who is their real chief, and that the chief finds it as necessary to consult the wishes of the leading men of his tribe as the political bosses in civilized countries. And, moreover, the Igorrote frequently refuse to obey the so-called chief. This does not constitute an absolute ruler.

The occupations of these people are: First, agriculture; second, hunting and fishing, and third, fighting with their neighbors. Each tribe is at enmity with his neighbors, especially his immediate neighbors, and when two tribes are found to be at peace with each other, it is most always with a tribe living at a considerable distance. They dare not go out of their houses after dark, unless in large numbers. They go armed day and night, their arms being chiefly spears and bolos. They also have about 100 firearms, distributed among the various tribes, which they captured from the insurgents or bought during the war from the Christian natives. The usual plan was to wait until the insurgents were asleep and then slip up and steal their arms and escape. They are also, unfortunately, able to get ammunition from the constabulary and scouts of Nueva Vizcaya and Isabela, who steal same and sell it to the Igorrotes. Three miles is as far as any Igorrote will venture from his village alone in the day time, for fear of the other tribes. They are not head-hunters, like the Ilongotes, but simply engage in constant tribal feuds, and keep a strict account of deaths on each side. Unfortunately, they seem never able to balance the account and declare peace. Should such a happy state of affairs come about, it is never long before someone's father or son dies, whereupon the family attribute the death to the evil influence of some member of another tribe, generally someone they have a private grudge against, and this is an excuse for reopening the feud.

It is most difficult to get information from them about themselves, as from ages of abuse and trickery they have come to believe that no one can have an honest intention, and that every question is veiled in some desire to injure or swindle them, and without knowing just what the form of the swindle or abuse is going to be they give a false answer on general principles hoping to throw you off the scent.

They do not seem to care so much about killing foreigners as they do their own people first, and the Christian natives next. The only case I have been able to learn of where they killed an American was one soldier who was found alone, having fallen

behind his company on the march, and the only object they seem to have had in killing him was to get his gun and cartridges. They are not afraid of work and can be brought around to be useful citizens, but I believe there is only one way to do it and that is by means of telegraphs, telephones, railways, and cart roads, forcing them into communication with the outside world. Once gain their confidence and protect them against each other and they can easily put two or three thousand workmen in the field to help build roads and railways. They are moral in their social and family relations. Polygamy is not practiced, and adultery is punished by death or heavy fine. The heads of their victims are exhibited in front of their houses.

I have little hope, however, for the Ilongotes or Ibilaos of southeastern Nueva Vizcaya. They have no permanent settlements, moving from place to place, and rarely remaining in one settlement longer than one year. They have no houses worthy the name, living in miserable shacks, as the natives construct for themselves for one night's use when they camp on the trail. They scratch the surface of the soil and sow a few seeds, rarely planting twice in the same place. They have no such works and irrigation canals as the Igorrotes, but are like gypsies or animals wandering about in the forests. It is almost impossible to do anything with them as their country is so large, rugged, and sparsely populated that to get them together and keep them in one locality would be much like trying to herd a drove of wild monkeys. Then their barbarous practices, such as requiring every male to present his intended wife with a human head before he can marry, is a practice so vicious and on a par with so many more of their savage customs that there appears to be little hope for them. There appears to be only one sensible custom in vogue among them and that is doubtless a mere accident. They have a superstitious idea that when cholera or smallpox breaks out among them it is the doing of some evil spirit, so they break up the settlement, temporarily, and scatter all through paths with brush and thorns, and travel zigzag through new and untrodden places so as to confuse the evil spirits, who can not follow in consequence. The practical result is that it beats quarantine badly in stopping infection, because there is no communication among them for the time being, and the results are excellent.

#### PRESENT CONDITIONS OF PROVINCE.

The conditions of peace and quiet in this province, with exception of the Igorrote fueds, etc., referred to, are all that could be desired. Only some thirty criminal suits in all came before the court during the past year, and not more than seven civil suits, out of an estimated Christian population of over 13,000. If the native Filipinos could only be induced to greater industry and were willing to perform a greater amount of labor with more regularity, it would be an ideal place. The general indifference for the future and tendency to be satisfied with a roof and enough to eat for twenty-four hours ahead, and almost universal disregard for thrift or accumulating property, if doing so will require any extra exertion, is the most discouraging phase of the situation for the government of this province.

I have the honor to be, sir,

Yours, respectfully,

L. E. BENNETT,  
*Provincial Governor.*

Hon. WILLIAM H. TAFT,  
*Civil Governor, Manila, P. I.*

#### ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF OCCIDENTAL NEGROS, 1902.

PROVINCE OF OCCIDENTAL NEGROS,  
OFFICE OF THE GOVERNOR,  
*Bacolod, August 29, 1903.*

SIR: I have the honor to send you my report for the year ending December 31, 1903, greatly regretting that owing to the great amount of work accomplished by this office since October, 1902, it has been impossible to avoid delay. I have dated the report January 1, 1903, in order better to make it accord with the period of which it treats, as nothing therein related took place during the present year 1903.

Very respectfully,

L. LOCSIN RAMA,  
*Provincial Governor of Occidental Negros, P. I.*

Hon. A. W. FERGUSON,  
*Executive Secretary, Manila, P. I.*

BACOLOD, P. I., *January 1, 1903.*

SIR: The year 1901 ended leaving us in comparative tranquillity and in the expectancy of greater peace and prosperity for the year 1902 that was begun in the midst of difficult problems arising in the provincial board and in a coolness between the civil and military authorities. In what manner some of our hopes were confirmed, while others met with disappointment, will be told in the following narrative of the principal events which took place during the year 1902. It will be shown from the measure of success and the failures which have attended our efforts that there has been some progress made in this province and among its inhabitants.

#### GENERAL CONDITIONS.

The new year found the gangs of bandits somewhat more daunted and apprehensive, it is true, but not a whit less mettlesome or inactive, due to their expecting that evil results to them would follow lack of vigilance. "Papa" Isiú and his band of "babaylanes" held the territory included between Canlaon and the hills to the north of the pueblo of Cabancalan, "Prince" Rufo was through the extreme south, and the bands of immigrants from Panay and Cebu were to the extreme north. The constabulary was under the senior inspector, Maj. H. B. Orwig, who made the most of the means at his disposal in coming to the aid of the pueblos, centralizing his forces at this place, deploying back to that place, and always keeping on the move in order to lend the assistance required by the municipal authorities, in spite of the small number of men at his command and the imperfections characteristic of all organizations at the beginning of their existence, from which the constabulary was no exception. There were detachments of this establishment at San Carlos, Sagay, Cadiz, Manapla, Guimbalaon, Bacolod, Murcia, and Himamaylan that, with the military at Escalante, Silay, Bacolod, La Castellana, Valladolid, Isabela, and Cabancalan ought to be sufficient to withstand more formidable attacks than those which could be made by the bands taking refuge in the hills.

Not more than seven days of the new year had passed, however, before the babaylanes, taking advantage of the first breach, sacked the pueblo of Soledad, burning the barracks, the municipal building, and other houses. From that time on, as if in obedience to a watchword, assaults were renewed from north to south all along the lines, and the news brought by the telegraph and messengers from presidents were very disheartening. On the 19th of January Major Orwig had a conference with Col. C. W. Minor, as the result of the letter from General Chaffee, commanding the Division of the Philippines, which resulted in their coming to a mutual understanding that the military forces should begin an active campaign against the babaylanes, while the Philippine constabulary took the field against the remaining parties of bandits in the northern part of the province from the pueblos of Maa and Bago to San Carlos, the southern being turned over to the inspector of the constabulary of the pueblo of Himamaylan, who was to confer and come to an understanding with the army officers with relation to all operations carried on by him. This understanding was put into effect and the constabulary displayed praiseworthy activity in the hunting down of bandits, succeeding in its efforts by chastising some of their bands as well as in avoiding assaults and preventing the sacking of the pueblo of Calatrava, that the chieftain, Dalmacio el Negro, threatened on the 7th of February, and which the president and townsmen had held in check by their determined attitude. In the south the situation was not so satisfactory. Reports were received from the offices of the military operations carried on successfully against the babaylanes, but these cheering accounts frequently varied by disheartening stories of assaults on pueblos. The pueblo of Isabela appeared to be the objective point to which were directed all of the assaults and designs of the henchmen of "Papa" Isiú. Captain Atkinson, commanding the military garrison of the said pueblo, said with regard to this particular, the following:

[Telegram.]

ISABELA, NEGROS,  
March 17, 1902—3.08 p. m.

There was no fire at the hacienda. Last night some 40 ladrones assaulted the place called Antolanga, demanded and took rice, sugar, and vino. No report received relative to the number with rifles. Believe it is the band under Marcello. This band has from 25 to 40 men and I am positively certain that they have but 15 guns, one of which can only be used to frighten people with. Members of this band have only from 5 to 10 rounds of ammunition each. Balance are armed with bolos and lances. This is the same band I have been hunting for several weeks and which I engaged in a skirmish on January 11. Since orders were issued prohibiting my hiking, the ladrones have taken to robbery with perfect impunity in this district but have caused no damage

to plantations. There has been no arson, only robbery of supplies, carabaos, etc. A platoon of cavalry stationed here could easily frighten off this band.

ATKINSON.

The orders issued prohibiting Captain Atkinson from operating in the field were due no doubt to the plan of negotiating for the surrender of the leaders of the babaylanes. As a matter of fact, Col. C. W. Miner spoke of these negotiations to him on February 4, stating that if they did not meet with the desired success a vigorous campaign would be commenced against them. The acting civil governor, Luke E. Wright, when in Bacolod on March 14 gave his assent to this plan, stating that any action which I might attempt to bring about the surrender of "Papa" Isiú and "Prince" Rufo would meet with his approval. At the beginning the army officers, who had already taken the first steps in the matter, met with difficulty in dissipating the doubts of the babaylanes leaders who were rather apprehensive with regard to their obtaining forgiveness of the past from the civil authorities as promised by the military. Relying on the acquiescence of the civil governor I gave commissions to several persons of La Castellana and Cabancalan to enter into negotiations with "Papa" Isiú and "Prince" Rufo, promising them pardon if they surrendered with their commands and armament, instructing these commissioners to arrive at an understanding in this matter with the military officers who were directing the negotiations. Having taken this step things went on rapidly; Rufo Oyos surrendered with 73 men, 60 bolos, 5 rifles, and 4 shotguns on the 15th of April, while "Papa" Isiú, who with his followers had reached the immediate vicinity of the pueblo of Isabela in order to make it appear that his promised surrender was about to take place, suddenly disappeared just prior to the time when the second period for parley granted him by the army officers was about to expire.

Although about that time we were to lose the aid of the military forces that were preparing for their transfer to barracks in Iloilo, we did not become discouraged, but, on the contrary, the feeling of duty in the face of the sole responsibility which now lay on the shoulders of the civil authorities brought forth new energy which made them feel capable of annihilating all disturbers of the public order, trusting to establish a complete tranquillity in the near future. The Philippine Constabulary was continually on the move in search of the bandits in their lurking places. The success of their expeditions has been demonstrated by the tranquillity that has reigned during the greater part of the year throughout this province.

On the 14th of August I received a copy of a telegram addressed by a scout officer in this city to the adjutant of the Fifth Separate Brigade, at Iloilo, in the military headquarters in Bacolod, which reported the landing of a band of 50 men, provided with 30 rifles, in the northern part of this province, and stated that it was feared that the detachments of constabulary in the pueblo of Guimbalaon and Eustaquio Lopez would be taken by surprise. Four days afterwards, and as a consequence of the alleged landing, I received a letter from Capt. H. B. Wells, commanding officer at Bacolod, who, in the name of Brig. Gen. Frank D. Baldwin, expressed the following instructions:

"The general has directed me to tell you, with his compliments, that he thinks it is part of the mission of the military to aid the civil authorities in the suppression of such bands as the one reported to him, and that if you should at any time desire the assistance of the troops stationed at Bacolod he would be greatly pleased to place them at your disposition, providing that you would indicate your desires in writing, addressed to him, specifying service required of them."

The confidence reposed in the Philippine Constabulary and the reliance placed upon the military authorities, taken in connection with the fact that the investigations conducted through spies sent out by the presidentes and by the Philippine Constabulary to ascertain the facts with relation to the alleged landing, giving no results, prompted me to decline the gallant offer of Gen. Frank D. Baldwin.

About a month after this my confidence in the constabulary was vindicated. About the end of October the bands in the north joined the babaylanes and dared to threaten the pueblo of Murcia, where the worthy president of the municipality gave added proof of his valor and zealous spirit by making preparations, together with some few constabulary, municipal police, and townsmen, to defend the lives and interests of his people. The constabulary of Bacolod immediately went to the rescue, and by the execution of an ingeniously conceived plan severely chastised the bandits in a brilliant action, leaving 27 dead upon the field and bringing into Bacolod, as a trophy of their well-earned glory, General Dalmacio and some edged weapons, firearms, and the amulets belonging to the party. This action, which led to the surrender of other chieftains of "Papa" Isiú, whose forces are to-day almost entirely dispersed, and which was one of the most important steps taken toward the extinction of bandits in this province, was due to the skill of Senior Insp. Jno. R.

White and Insp. Walter A. Smith, whom, by this act, worthily crowned the great efforts brought into play during the year 1902, under the command of the senior inspector, Maj. H. B. Orwig.

Although at present nothing is heard of "Papa" Isiú or of any of his bands, it is to be supposed that some of them must still be scattered among the hills, and their complete extermination can not be long delayed. The most important point to look after and the greatest difficulty to overcome can be met by exercising due vigilance of the coasts so as to prevent the landing of fugitive bands from Panay and Cebu. In connection with this matter I have issued a circular letter directing all municipal presidents to exercise the greatest care in watching the coasts within their respective jurisdictions.

It would not be discreet to attempt to predict the date when the complete extermination of brigandage will take place in an island so prodigiously fertile and rich and surrounded by others as this is where the hope of extermination of this plague is as yet remote. It can, however, be assured that the public order was never better guaranteed than at the present and perhaps sooner than it is possible for us now to suppose, our woods may offer to tourists a more agreeable and interesting place in which to roam than the public squares and streets of our pueblos. I am led to make this assertion because of the character of the people of this province, which is hostile to brigandage and outlawry and amenable to education, and by the fraternal harmony existing between the provincial authorities and the officers and men of the constabulary who, according to the statement of the present senior inspector, have never held as one of their principles that they must be looked upon here as having the exclusive glory for what has been accomplished in this province.

On two occasions rumors were rife that the "Katipunan" society had been organized in this provincial capital by the most prominent people thereof. In August the major of the constabulary and the military headquarters received anonymous communications, stating that a secret society had been organized against the Government of the United States, and in December the commanding officer of the scouts stationed at Bacolod spoke to the provincial secretary of the existence of a conspiracy of the same character. Fortunately these manifestations of ill will toward the peaceful situation in this province, made with the deliberate intention of creating an anomalous state of affairs, and of disturbing the harmony which exists between Americans and Filipinos, are refuted by the circumstance that they point to persons of well-tryed loyalty as disturbers of the public order, and refer to a province the stable judgment of which has been well established since the critical and turbulent times of 1899. It would be bold to attempt to form an opinion relative to the origin of these denunciations; but I believe that the facts that the persons denounced belong to the cream of society, which has demonstrated its antipathy toward the friar, and that the house of a distinguished citizen of this capital, known for his radical antifriar sentiments, and the Bacolod drug store, the place where the antifriar element meets, were designated as the places where the alleged secret society held its meetings, would be of service to a person in attempting to guess the origin of these evil reports.

#### PROVINCIAL ADMINISTRATION—RESOURCES OF THE PROVINCIAL GOVERNMENT.

The resources of the province are satisfactory and it is evident that it is able to support itself and to introduce improvements, if its general financial conditions were only in a state of prosperity. However, in view of the decadence of agriculture, the income of the province has considerably decreased, and the improvements, as public works and public buildings, etc., can not possibly be made, or proceed slowly, I annex hereto a statement showing the receipts and expenditures during the year 1902.

The services rendered by the deputies of the provincial treasurer in the collection of provincial and municipal taxes are very good, as I can affirm without hesitancy; but in view of the fact that the municipal treasurers have conducted themselves very well until the present writing and have proved to be faithful and honest, and that they furnish a bond, approved by the provincial treasurer, I deem it very proper that they be granted more power than they have at present, which would make it much easier for the taxpayers and would involve a greater saving for the provincial treasury. It is very advisable that the provincial treasurer retain about two deputies for the inspection of the work of the municipal treasurers, in the same manner as the accounts of the provincial treasurers are now being inspected by the insular treasurer.

#### ROADS AND BRIDGES.

The work on roads and bridges has advanced sufficiently, notwithstanding the present poor financial condition of the province and the difficulties which were at

first experienced in connection with the labor question. At the beginning the prisoners of the provincial jail were employed in the work on the roads, but in view of the slow progress of the work and of the circumstance that the prisoners used the occasion to make their escape, the provincial board believed it more of advantage to pay laborers instead of guards to watch the prisoners.

In view of the ancient custom which prevails among the working classes in this province, who never agree to have their wages paid weekly, as the usage of drawing their wages in advance from the planters is almost traditional here, it was difficult during the first weeks to find the number of laborers required. However, they soon became used to the new system of paying wages, and it is now possible to find as many laborers for public works as necessary at 40 cents Mexican a day. I greatly desire that the road work be taken up at the same time along the entire length of the highway, and that the largest possible number of workmen be employed; because it would not only cause the repair work to proceed with more rapidity, but I also hope that if the government pays the laborers not more than it owes them, that it will have a great influence on the customs of the laboring classes, and will help to solve the problem which has for so many years occupied, and is still occupying, all the persons who have studied and are studying the improvement of the service of the laborers on the plantations.

The most important section of the public highway of this province is that situated between Bacolod and Silay, the first pueblo of this province on account of its commerce, where steamers from Iloilo call periodically, and where all the people going from Iloilo to Bacolod have to pass on their voyage. Even the inhabitants of the southern part of the province find it more convenient to go to Bacolod by the way of Iloilo and Silay, instead of traveling on the long highway of the south by vehicle. The provincial supervisor has devoted his attention especially to the road from Bacolod to Silay, a distance of about 15 kilometers, and we have there at the present time a beautiful wagon road, with four new and well constructed stone bridges. Three bridges have also been built south of Bacolod, and bridges and roads have been repaired at those places where, in view of the intransitable condition of the roads, it was impossible to wait for the general repair. The provincial supervisor, Mr. J. D. Fauntleroy, has demonstrated tireless activity and doubtless honesty in all this work, and is entitled to the sincerest applause.

Much work still remains to be done and its progress has to be adjusted to the not very abundant funds available for public improvements. If the loan of \$25,000 requested by the provincial board on the 4th of April, 1902, could be granted, the road and bridge work would doubtless proceed more rapidly and the highways of this province would be placed in an excellent condition in a much shorter time than if this work has to be executed gradually, as the annual revenues of the province permit. If on the other hand we take into consideration the great mortality among the carabaos, the high prices of land transportation, due to the scarcity of draft animals, and the poor condition of the majority of the roads, besides the other advantages of making the work general, as I have already explained, to the end of educating the poor classes and of furnishing means of subsistence to the workmen, who will be out of work between the grinding seasons, during the famine which has been announced in view of the failure of the corn and rice crop, there is no doubt that the loan solicited by the provincial board deserves to be granted by the civil commission.

#### PROVINCIAL JAIL.

The province has a penal establishment, which is the only public building now owned by the same. This establishment, which was constructed a long time ago by the Spanish Government, consists of four buildings—one for the offices, the guards, the sick ward, and the storerooms; two for the prisoners, and one for the kitchen. The building was well constructed for its object, but its present condition leaves much to be desired in view of the considerable damage which the same has suffered in the course of years. This makes considerable repair work necessary, and the provincial board has already resolved its execution and directed the provincial supervisor to purchase the materials.

The daily average of prisoners confined in the jail of this province during the year of 1903 is the following:

January .....	106½	July .....	86½
February .....	85	August .....	72
March .....	87	September .....	58½
April .....	86½	October .....	52
May .....	127	November .....	52
June .....	100	December .....	64

Most of the prisoners were charged with the crimes of robbery, assault, highway robbery, and others of this kind, and the figures above set forth are a true barometer of the state of tranquillity of the province, which is rising rapidly. They also demonstrate the work done by the Philippines Constabulary and the municipal police, more especially by the former, in the prosecution of the outlaws for the purpose of obtaining this tranquillity. The increase of the averages in the months of May, June, and July is the result of the special activity of the Philippines Constabulary in the pursuit of the babaylanes and other outlaws upon the expiration, end of April, of the time designated by the army officers for the surrender of Papa Isiú, his men, and arms.

For the custody of the jail I have a delegate, who is the warden, and two corporals and twelve guards of the provincial police, who are under the direct orders of the warden. As I have already stated, the prisoners were at first employed in public works, besides the work with the establishment itself, but later on the provincial board considered it more advantageous to reduce the provincial police in numbers and to have the prisoners make furniture, rope, baskets, hammocks, etc., which are sold to the public at moderate prices or used in the provincial offices.

I deem it very important and necessary, and at the same time beneficial, that the workshop which the establishment now possesses be improved, and that a patient teacher be employed whose duty it shall be to teach the prisoners to write and to read and explain to them the principles of sound morality. To perfect the workshop it is necessary that a person be employed to teach trades, even if it be only that of carpenter, and that the jail be provided with more material. The prisoners should be given a portion of the proceeds of their work upon obtaining their release, in order to stimulate them and to prevent them from thinking that the Government is exploiting them, and also to furnish them means of subsistence during the first days following their release. On the other hand, it having been demonstrated that the rude and imperfect system of education which had been in vogue in the Philippines for such a long time has produced in the pupils deep disgust and an irresistible aversion to studying, it is necessary that the teacher to be appointed for the school of the penal establishment be one who has taught together with the American teachers, it being impossible to ask that an American teacher be chosen, for the reason that he would not understand the local dialects. Now, the laws passed by the Commission only provide for the appointment of employees for the custody and care of the prisoners. There is no doubt that if the Commission would authorize the provincial boards to empower the governor to provide for the positions aforementioned it would do an immense amount of good to that unfortunate class, wiping out their illiteracy, affirming them in the principles of morality, and causing them to become accustomed to honest work, in order to convert them afterwards into worthy artisans.

#### REGISTRATION OF ARMS.

Since the 6th of November, 1899, when the semimilitary government of the island of Negros was organized, the registration and granting of licenses for the use of arms was attended to by the military offices, and although since the 1st of May, 1901, the province of Occidental Negros has been under the auspices of the civil government the aforesaid offices continued to exercise these functions, until on the 8th of January the acting civil governor stated in an indorsement to Maj. Gen. Adna R. Chaffee, commanding the Division of the Philippines, that licenses for the use of arms should be issued by the provincial governor. This indorsement having arrived at my office, I furnished a copy thereof to Insp. H. B. Orwig, who had a conference with Col. C. W. Miner, then commanding officer of the military post of Bacolod, and obtained from him that the registration of arms be transferred to the civil authorities in the pueblos of the north as far as Bago at the beginning, and later on in all the pueblos of the province.

In accordance with Senior Insp. H. B. Orwig, I published on the 25th of January an order compelling all owners of arms to provide themselves with licenses therefor, to be obtained from the senior inspector of Philippines Constabulary in this province in the following manner: The applications should be filed with the president of the municipality, who should indorse them and transmit them to the constabulary officer in command of the district to which the said municipality belongs. This officer should make his report and forward the application through the senior inspector to the provincial governor for approval. Upon being approved or disapproved, the application should be returned to the senior inspector, who would either issue the license or seize the arm, as the case might be.

In the approval of a license the following circumstances are taken into consideration: The character and the financial responsibility of the applicant, and if he is a

planter, the area of his plantation and the distance which he is living from the town proper. As to cutting and pointed weapons, the use of the dagger is strictly prohibited. I might almost say that no limit has been established as to the number of arms for which licenses can be granted. Generally persons who possess two or more arms intrust them to persons of their confidence, they being held responsible nevertheless. Planters who have rural guards regularly organized have been required to place them under the supervision of the officers of the Philippines Constabulary in the province; besides, these guards are obliged to assist the constabulary if necessary.

Until the 1st of October, 1902, applications have been filed for licenses for the following arms:

Rifles.....	170	Bolos.....	89
Shotguns .....	118	Lances.....	40
Revolvers.....	322	Daggers.....	5

Besides the arms aforementioned there must be others, licenses for which have not yet been applied for. It is not easy to estimate their number, but there can not be many.

#### WITNESSES FOR THE GOVERNMENT IN CRIMINAL CASES.

These illustrate the submissive obedience of the inhabitants of this province to the established government, and their faithful compliance with the orders of the authorities. Speaking of the witnesses which the provincial fiscal needs in criminal cases, it has been observed that many of them, belonging to the poorer or middle classes, make real sacrifices in order to come to the court of first instance at the first summons, to the end of testifying as required, covering on foot the long distances which separate their pueblos from the provincial capital. There are cases of laborers who have contracted debts in order to leave some money with their families, and have abandoned the work which furnished them with their daily subsistence, and who, after a voyage full of hardships and privations, during which they have sometimes been compelled to work on plantations in order not to die of starvation, have finally arrived in Bacolod, where some of them have had to remain for several days, if it was necessary to wait for other witnesses who could not come in time. There are others who leave their small business, or their agricultural work, in order to appear before the judge, incurring more expense than their scant means permit. When the judge is compelled to enforce the compliance with this necessary personal duty by means of the constabulary, the aforesaid circumstances which prevented the witnesses to answer the first summons are still more serious and critical. I would therefore beg leave to suggest that the witnesses for the government in criminal cases be granted a reasonable fee, wherewith they would be partly compensated for the prejudice caused to them by the requisition of their services. This would be an act of justice which would greatly please the submissive people of this province, and would promote expediency in the transaction of judicial matters.

#### THE SCOUTS.

The soldiers known as "scouts" have left a very disagreeable recollection in this province. Detachments of scouts were stationed at Bacolod and Cabancalan, and the provincial governor frequently received from both pueblos complaints against the conduct of the scouts toward the ignorant residents, the municipal police, and the constabulary. Clashes between the scouts and the constabulary and municipal police occurred repeatedly at Bacolod, and on two or three occasions the scouts and the constabulary joined forces for the purpose of assaulting the municipal police, without distinction of person, and armed members of those organizations went along the streets of the town, searching every place and looking into every corner, without even respecting the homes of the persons whom they were persecuting. This was solely due to personal disagreements, or to the action of the municipal police in attempting to enforce the ordinances. It would be difficult to explain the reason for the repeated occurrence of these abuses, which gave rise to a real public disorder, and filled the people with unrest. It must however be stated that in these cases the senior inspector of the Philippines constabulary and the municipal president of Bacolod each took suitable measures to avoid such occurrences, settling the situation by means of agreements with the army officers. The idea that members of the Regular Army can not be tried by civil courts and by the municipal president for infractions of ordinances has had something to do with these disorders. Moreover, how could the matter be prevented when the general impression was that the adoption of extreme measures on part of the civil authorities would result in a rupture of a more serious nature? This fear of the danger of a rupture which was, as one might say,

suspended by a hair, contributed not a little to the repetition of these abuses. Fortunately the scouts have been withdrawn from this province, and the inhabitants have thereby been relieved from the burden which seemed to weigh upon their mind upon seeing in the scouts such an obstacle to the efficiency of the civil government.

#### MUNICIPAL ADMINISTRATION—FINANCIAL CONDITION OF THE MUNICIPAL GOVERNMENTS.

I annex hereto a statement showing the receipts and disbursements of each of the municipal governments of occidental Negros during the year 1902. Of the 34 pueblos of this province those of Bacolod, Silay, Ginigaran, La Carlota, Cadiz, Isabela, Talisay, Bago, Saravia, Cabanacalan, Manapla, Himamaylan, and San Carlos should be mentioned in the first place, because of their resources and of their conditions, which make them capable of great future improvements. In the second place there should be mentioned the pueblos of Pontevedra, Valladolid, Maa, Victorias, Pulupandan, Sagay, Ilog, Binalbagan, Escalante, San Enrique, and Murcia, which are self-supporting, but lack the means for making important improvements in their municipalities. The remaining pueblos, Suay, Sumag, Soledad, Eustaquio, Lopez, Guimbalaon, La Castellana, Calatrava, Guiljungan, Isiu, and Granada, are the poorest, and there is little hope for their future. It should be mentioned, however, that the pueblo of Isiu, being the southernmost in this province, embraces a vast area, the extensive plains of the extreme south, and among its barrios there is that of Sipalay, which is entitled to be organized as a pueblo within a short time, because of its wealth of forestry products and its fertile lands. At the present time the largest part of this land is not under cultivation; only a narrow belt along the coast, interrupted in many places, has been cultivated, but is now almost abandoned, in view of the critical situation which prevails throughout the province.

#### THE FUSION OF THE PUEBLOS.

The provincial board immediately saw that the best solution of the question of the poverty of many of the municipalities would be their consolidation, fusing as large a number as possible. This measure, like every measure which affects the customs of the people, met with much opposition and energetic protests on the part of the pueblos which it is intended to consolidate, not because they were opposed to the system, but because they objected to the removal of the seat of the municipal government outside of their own pueblo, as if the removal of the municipal offices would curtail their rights as citizens. Nevertheless I am convinced that the commission will appreciate the justification and necessity of the consolidation proposed by the provincial board at its true value, and will see that this measure is the only way of effecting the discontinuance of the perennial mediocrity or abject poverty of those municipalities. The question where the seats of the municipal governments thus formed are to be located is of secondary importance and can be decided in an equitable manner.

#### ELECTORS.

The inhabitants of the pueblos are gradually awakening to political life, and acquiring the knowledge of their rights and duties as citizens. According to the data furnished by the presidents, based on the registers for the elections held in December, 1900, the number of electors was then 3,600: this number has now increased to 5,390, according to data based on the registers for the suspended elections of December, 1902. Any person who has traveled through the pueblos during the elections in former years, and who has traveled through them during the last quarter of the outgoing year, will doubtless have observed that the factional strife which used to prevail formerly, although it has not completely disappeared, has subsided sufficiently to leave room for the peaceable discussion as to who is the candidate whose election would be of most benefit to the pueblo.

#### THE MUNICIPAL OFFICERS.

The municipal officers, generally speaking, are performing their duties in a satisfactory manner, and although some of them are not as yet thoroughly imbued with the spirit of the new government, yet they understand the needs of their pueblos and are working for the best of the citizens. Since the municipal code became extensive to this province, on the 1st of June, 1901, several municipal officers of six pueblos have been suspended, the officers of one having been reinstated and those of the other five removed from office by recommendation of the provincial board.

Occasionally personal disagreements develop among the municipal officers, or between them and the justice of the peace, and instead of their official position causing them to end or suspend their personal quarrels, they utilize the same for the purpose of base reprisals, causing a painful impression among the citizens of their pueblos, an anomalous situation in the same, and a large amount of work to the provincial board and the court of first instance. This demonstrates to a certain extent the lack of experience of the people in the election of their authorities. The governor and the provincial board have jointly endeavored to correct such abuses in a radical manner, and have attended to justified complaints filed with them, and suspended the guilty officers, recommending to the civil governor that they be removed from office. This system has produced good results, because in the pueblos whose officers have been subjected to such measures peace is reigning supreme now, and the officers show desires of maintaining harmony and avoiding serious disagreements, which might again unbridle the passions. There are some officers of this class, but fortunately very few, who disregard all advice to manage their municipalities peaceably and equitably, and I fear that if their repeated abuses are submitted to the governor and the provincial board for action both will be compelled to take the energetic measures required by such cases. I repeat that in other respects the progress of the administration of the municipalities is satisfactory, so far as the municipal officers are concerned, as they are always ready to work for the best of their pueblos.

Speaking of the municipal treasurers, an anomalous situation is created in cases of the temporary absence of the said officer on account of illness or for other reasons. The Municipal Code is not very explicit as to the number of municipal employees, and it seems that it contains no provision authorizing the municipal treasurer to have a bonded delegate, who could act as his substitute and draw his salary in cases of temporary disability or absence. On the other hand, the municipal treasurer is required to execute a bond, approved by the provincial treasurer, for the faithful performance of the duties of his office, and his appointment, made with the consent of the council, must be approved by the provincial board. (Act No. 374.) The result of this is that when a treasurer absents himself nobody can act as his substitute unless the council appoints an acting treasurer, in which case it has to proceed as if it were appointing a new municipal treasurer, and has to apply to the provincial treasurer and to the provincial board for the approval of the bond and of the appointment. This causes obstacles to the satisfactory progress of the administration, and it has happened that in pueblos distant from the provincial capital the president and the council have permitted a private person, who enjoyed the confidence of the treasurer, to take the place of that officer on certain occasions. I would therefore suggest that authority be given for the appointment of a delegate of the municipal treasurer, who should be required to execute a bond in the same amount as that of the treasurer, in favor of the latter, with the consent of the council, and who should act as treasurer whenever necessary.

#### MUNICIPAL POLICE.

The municipal police leaves much to be desired; excepting that of eight of the pueblos. This is due to two reasons, the first of these being the lack or scarcity of means of the local governments, and the second the lack of discipline, because the inspectors of the Philippines Constabulary have been constantly on the move on account of the active campaign against the bandits, and have therefore not had time to attend to the discipline of the municipal police. Nevertheless the municipal police has rendered efficient services in several pueblos, both in the pursuit of bandits and in the enforcement of the ordinances. I annex hereto a statement showing the present condition of the municipal police of this province. This statement was furnished by Senior Inspr. H. B. Orwig in September, and the data contained therein has undergone slight changes in the last three months of the year.

#### JUSTICES OF THE PEACE.

It is very remarkable how the justices of the peace continue to tender their resignations. The provincial board has always endeavored to propose persons worthy of this delicate mission to the Civil Commission; but unfortunately these have successively resigned, until the provincial board finally found it necessary to ask the municipal councils to propose those persons for justices of the peace who were willing to accept the appointment. To anybody who is acquainted with the duties of a justice of the peace and with the scant salary assigned to him, it is not difficult to explain this phenomena, which has deplorable results for the pueblo, because the elements of a municipality are not inexhaustible, and it is therefore very natural that with

each resignation and new appointment the standard of the qualification required for the office is lowered, and finally the functions of the court and the conduct of the justice leave much to be desired, as has happened in certain cases. It is true that there are some persons who sacrifice their own private interests for the benefit of the pueblo, and devote the greater part of their time to the work of the court, although their little income is barely sufficient to pay the clerk who assists them; but this is not the rule.

It is very difficult to find a solution for this problem, which has been often discussed. Some suggested to me the idea that the office of justice of the peace be abolished, and that the president be invested with his duties; but this reform must be rejected for the reason that the presidents have a considerable amount of work to perform, and that in case of the frequent disagreements of a personal nature there would be no power in the pueblo to counterbalance the almost absolute power of the president. More feasible appears the plan of uniting several pueblos into one district in charge of a justice of the peace; but another objection to this exists, at least in this province, in the long distances from one pueblo to the other, the bad condition of the roads, the scarcity of means of transportation, the lack of facilities for bringing cases into the court for trial, and the love of home, which is such a deeply rooted custom with us. These circumstances would constitute as difficult a problem as the one which it is intended to solve, and, besides, the fusion of the pueblos would make the creation of such districts unnecessary. All propositions for the solution of this problem which are related with the amount of the fees, unless the latter be paid from insular funds, are doubtful, and could only be accepted on trial. For this reason I would mention the idea suggested by some presidents that a fixed compensation be assigned to the justices of the peace, and that they be furnished with a clerk. This compensation could, for the present, be the same as that of the municipal president, who receives twice as much as what the justice of the peace is gaining now. In view of the increase in the resources of the municipal governments which will follow the fusion of the pueblos, this reform becomes feasible, and will perhaps remedy our present difficulties by making the office of justice of the peace more acceptable.

#### GAMES.

The games generally played in this province, as I suppose they are in all the others, are cockfighting, panguingue, and burro. All the laws passed by the Commission until the present writing with respect to cockpits and cockfighting are evidently restrictive, and I am therefore convinced that the Commission is opposed to this vice. The plays known as burro and panguingue having been tolerated by the Spanish Government, and no prohibitive legislation in the premises having been passed since, these games are now considered as permitted games, although they are clearly games of chance, especially because a tax of 12 pesos per annum is collected on each panguingue or burro game in accordance with the tariff of the industrial tax. Section 43 of the Municipal Code, which gives the only sources of revenue which are permitted, does not mention the tax on permitted card games, but mentions the tax on billiard tables, billiards being a much more cultured game and having more advantages than panguingue and burro.

During the reign of the provisional government of the island of Negros, in the year 1900, the legislative council absolutely prohibited all card games, and this prohibition was approved by the military governor, Gen. James F. Smith, who is kindly remembered by everybody. In spite of its radical nature this measure was recognized as just and good by the people, even by those who were passionate gamblers, and the people commenced to accustom themselves to refrain from gambling, to the great delight of husbands, wives, and children, and to the satisfaction of the planters, who observed that many of the laborers discontinued their custom of gambling away their means of subsistence, and thus left the easiest road to brigandage. The fact that this decision of the legislative council was obeyed without opposition on the part of any person; that it remained in force during the entire existence of the provisional government subsequent to its promulgation; that it was much less infringed than the present legislation regarding gambling, if one takes into consideration that now a burro table is merely a pretext for a monte game, and that at that time the authorities had greater facilities for prosecuting with energy, as they did, all card games, prompt me to suggest that the act of the legislative council of the island of Negros be adopted by the Civil Commission.

If this should not be possible, and considering that the dismal influence of the burro and panguingue game is fully proved, as it does not only affect the relations in the family but also the conduct of the laboring classes, and as the municipal councils have been authorized to create taxes on billiard tables, I would warmly

recommend that the councils be authorized to restrict those games and derive therefrom the greatest possible benefit by establishing a tax on panguingue and burro tables.

CARABAO THIEVES.

The work of the spies has resulted in the discovery of the hiding place of the carabao thieves, who maintained relations with certain persons in several pueblos in order to achieve their criminal ends. During the last weeks of the year the constabulary commenced an active campaign against the carabao thieves which promises to have satisfactory results. Several important captures of persons who have robbed many carabaos, and of dealers in animals thus stolen, have already been made, and several planters have now recovered a number of the animals which they lost a long time ago.

AGRICULTURE.

As I said in my report for last year, to speak of the agriculture of Occidental Negros is to speak of the financial life of the province. The depredations of the babaylanes in the previous years, the great mortality among the carabaos which followed and caused such damage in the year 1902, and, in the same year, the persistent rains during the first four months, and the plague of rats, frogs, and insects which destroyed a great portion of the crop of sugar cane and rice—all this, in addition to the lack of capital, the despotic reign of usury, of malaria and of cholera, have led agriculture up to its present state of prostration, from which it will be difficult to recover unless the decided assistance of the government be given. Two-thirds of the land destined for agricultural purposes is now uncultivated, and the planters, who find it impossible to obtain credit, are compelled to remain inactive, as they are powerless in view of the calamities which have befallen them. It almost seems as if all the elements had been conjured by some implacable malediction to parody in a horrible manner the plagues of the Exodus. The natural consequences of all this is that the crop for 1901-2 is estimated as follows:

Crop.	Normal.			1901-2.		
	Piculs.	Cavanes.	Quintals.	Piculs.	Cavanes.	Quintals.
Sugar .....	950,000			610,000		
Rice .....		500,000			180,000	
Maize .....		25,000			45,000	
Tobacco .....			8,000			3,500
Hemp .....				1,500		

The maize and hemp crops are not included in the enormous decrease of the general harvest—the maize crop because the farmers have planted that cereal more extensively on account of the present crisis, and the hemp crop because this plant has not been affected by the calamities which have befallen the province. The planters are now looking upon the hemp as a remote remedy for their present situation, and all those who had the necessary means have planted hemp on the land owned by them suitable for hemp raising.

A radical action to prevent the imminent ruin of the country is therefore of urgent necessity, and this action is not within the power of the planters, extenuated by their struggle against all the elements. The remedy of the present situation of agriculture is with the government, and to it they look for the only means of salvation, which is of urgent and indispensable necessity, namely, the establishment of agricultural banks which would loan capital at a reasonable rate of interest. With exception of this all the other measures only prolong the agony of the state of affairs.

ASIATIC CHOLERA.

Four months and a half had passed since the cholera had first appeared in Manila; the province of Cebu had already been invaded by this epidemic, and in the neighboring province of Iloilo suspicious cases had been reported, while in Occidental Negros the provincial board of health had by means of sanitary measures been successful in preventing the introduction of cholera, to the great surprise of all the persons who had seen the rapid spreading of the cholera in previous periods. It then occurred that a boat, a "paraw," with a crew of eight, bound for the port of Iloilo from the pueblo of Dumanjug, in the province of Iloilo, stopped at the pueblo of Saravia, in this province, to find shelter against a storm which had surprised them. The storm

being over, the vessel continued on its voyage, and twenty-four hours afterwards, on the 18th of August, an inhabitant of the place where the boat had stopped for shelter was attacked by cholera.

From the pueblo of Saravia the cholera spread throughout the province. It did not appear at all the pueblos simultaneously, but in one after the other, in the manner that while the epidemic was ravaging the pueblos of the south or of the extreme north, the pueblos which had first been invaded were already in such a condition that they could have been declared free from cholera. Thus it continued, gradually decreasing in force.

The board of health of the province and the municipal boards of health took suitable measures for the sanitation of the towns, temporary hospitals were constructed, medicine was distributed free of charge, and the physicians and sanitary inspectors displayed great activity and wisdom, assisted by the provincial board and by the municipal governments, who rigidly enforced the ordinances relative to public and private hygiene. Finally, after four months, the epidemic ceased, having caused 21,043 cases, with 11,574 deaths.

The belief that it was due to poisoning has, during this epidemic, been of fatal consequences among the laboring classes. Patients belonging to these classes often refused to take the medicine given to them, and it often occurred that the people concealed cases of cholera in their families, as they were convinced that drugs were inefficient to cure the disease, which they ascribed to tragic causes. Cases of poisoning were quoted as having occurred in Iloilo and in this province, and the authorities were even remitted well water which was claimed to be poisoned, or powder which was taken for poison, and which had been found in the possession of certain persons who were considered as poisoners. An examination of these substances revealed that they were not of a poisonous nature, and the president of the provincial board of health directed the result of the analysis to be published. The people, however, did not abandon their belief, and, what is worse, attributed the poisoning to the Americans. It has been impossible to ascertain the source of these rumors, which were told in a confidential manner, and spread the more rapidly the more mysteriously they were treated. However, all this would not have passed beyond the limits of an imaginary popular belief had the rumors not taken a more serious and insidious aspect. In October persistent rumors were current to the effect that Messrs. Juan Araneta and Aniceto Lacson, who had played important parts in the insurrection against Spain in 1898, were about to cause a general uprising against the United States, because the Americans were attempting to exterminate the Filipino race by means of poison. Some foreign planter was quoted as having told his people to make preparations for a coming conflict. This rumor on one hand and the denunciations of "Katipunan" conspiracies on the other, notwithstanding the absurdity of both, made the situation intolerable, and in those days a spark would have been sufficient to cause a disastrous conflict in this province. I immediately published a proclamation in the local dialect, setting forth in clear and precise language the great difference between the present and the Spanish government, explaining in detail the advantages and the benefits of the present system, and giving the people to understand that we owe all our improvements to the United States Government, and that for this reason the rumors of an imminent uprising, for which there would be no cause whatever, were absurd. I also published a circular order requiring all the municipal authorities to work as much as possible to the end of dissipating the false rumors which were current. Thanks to them and to the good sense of the educated classes, who endeavored by all their acts to eradicate the preoccupation of the ignorant people, the latter soon became convinced that the alleged hatred of the Americans toward the Filipinos was merely a myth. The result was that they were in doubt about the authority of the poisonings, the belief in which still lingers in their minds.

#### POSTAL AND TELEGRAPH SERVICE.

The municipal mail service is still very deficient, notwithstanding the efforts made by the governor. It is true that this is partly due to the bad condition of the majority of the roads and to the numerous rivers which it is necessary to cross; but the principal reason consists in the lack of uniformity in the organization of the service, and of the failure on part of some municipal presidents to devote the proper care to this service. At the beginning of the year the municipal ordinances were not very explicit as far as the mail service was concerned, and with some exceptions the mail carriers left the pueblos when they saw fit. The governor issued orders for the purpose of systematizing the municipal mail service, fixing hours for the departure of the mail, and taking other measures tending to prevent negligence on the part of the mail carriers and postmasters. However, the regulation of the mail service in the

municipalities is exclusively of the incumbency of the municipal councils, and for this reason all the orders emanating from the governor could not be so direct as to insure the efficiency which was to be expected. The governor was therefore frequently compelled to call the attention of some presidents to the fact that their lack of zeal in this service was deserving of censure. The present legislation is vague so far as the conveyance of correspondence from one pueblo to the other is concerned, and I am of the opinion that in view of the fact that this matter is related with the general interests of the province, as it affects the relations between the several pueblos, it is necessary that an act be passed giving the postmaster of the provincial capital or the provincial governor the direct control of the mail service between the several pueblos. In this manner the present personnel of the municipal governments and the time-table for the arrival and the departure of the mail carriers could be retained, and the mail service between the several municipalities would be greatly improved.

As far as telegraph lines are concerned, there are only two telegraph stations in this province at present (December, 1902), one at Bacolod and the other at La Castellana. There are also three telephone stations, located in the pueblos of Isabela, Himamaylan, and Cabancalan. In view of the long distances between the majority of the pueblos and the capital, and of the bad condition of the roads in certain places, I would earnestly recommend that the telephone stations, at least, be increased to the highest possible number, so that there be one in each pueblo.

#### EDUCATION.

The progress of education in the pueblos could not be more satisfactory. All the municipal schools in the towns proper and in the barrios are well attended by pupils of both sexes. The parents all comprehend the advantages of education, and all send their children to the public schools whenever possible. The poor families prefer the public schools because the children are educated well and gratuitously in the same, and are furnished what they need for their studies. The wealthy and the middle classes send their children to the public schools because they admire the excellent system of education, heretofore not known in this province. All the children, poor and rich, mix without distinction of classes in the schoolrooms, and maintain friendly intercourse, thus being educated in democratic principles since a tender age. They look upon their teachers as upon loving parents, who are ready to guide them on the road of civilization, and show such love for study that I have seen children of 8 or 10 years cry bitterly because their parents would not let them go to school on account of sickness. The competitive examinations which have been held in some of the pueblos have given good results and caused great enthusiasm, not only on the part of the children, but also on the part of the parents, and for both they are a salutary incentive and increase their appreciation of education. The tireless efforts of the teachers and the diligence of the pupils naturally produced the improvements which we can now observe in all the pueblos, and there are a good many children who can understand English, quite a number of them being able to express themselves in that language. As to the adults, they make slow progress in the study of English, because in the majority of cases they have not enough time to attend night school, especially the planters who are living outside of town.

The Filipino teachers are making rapid progress, and all show good qualities. The practice of assembling the native teachers in the capital for the summer course is worthy of commendation in every respect, as it is an incentive to the native teachers to perfect their knowledge and to become better imbued with the new system of education by means of this special experiment in the exercise of their mission, until, in the course of time, they are qualified to replace the American teachers. However, the attendance of the summer course by the native teachers means a great sacrifice on part of nearly all, as they have to come from remote pueblos and live in the provincial capital for one month, which compels them to expend more money than they can earn in several months. I would therefore recommend that a per diem of not less than 1 peso be assigned to the native teachers for the entire time that they shall be absent from their pueblos for the purpose of attending the summer course. This would merely be an act of justice, and would prevent at the same time that many of the teachers, who have no relatives or acquaintances in the provincial capital who could assist them, are compelled to undergo hardships and privations during the summer course, which is little in keeping with the intention of the Government to improve and elevate their class.

Very respectfully,

L. LOCSIN RAMA,  
*Provincial Governor Occidental Negros, P. I.*

Hon. A. W. FERGUSON,  
*Executive Secretary for the Philippine Islands,  
Manila, P. I.*

*Receipts of the province of Occidental Negros.*

MEMORANDUM.—During the period from January 1 to October 31, 1902, accounts were all kept in gold, and even the Mexican currency on hand was given in gold. Since November 1, 1902, separate

accounts have been kept in both kinds of money. In carrying forward the provincial balance (\$25,562.79 gold) and the municipal balance (\$1,635.89 gold) from October 31, 1902, to November 1, 1902, a distinction is made, the balance on hand being given in the different classes of money, to wit: Provincial balance, \$1,912.40 gold and \$58,179.96 Mexican, and the municipal balance, \$4,024.29 Mexican.

## ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF NEGROS ORIENTAL, 1902.

OFFICE PROVINCIAL GOVERNOR OF NEGROS ORIENTAL,  
*Dumaguete, P. I., June 20, 1903.*

SIR: I respectfully submit my annual report for the year of 1902, and would beg your pardon for this delay, which is not due to my own will, but to the large amount of work which had to be performed in this office during the period from January to June of the present year, when I had to travel through almost the entire province on two occasions: First, in connection with the census, and the second time in connection with the revision of the assessment.

The relations of this office with the other departments of the provincial government have been cordial during the year ending last December, and the different departments have been aiding each other as much as necessary to assure a successful administration. The municipal governments have been constantly instructed, for the purpose of perfecting their organization under the provisions of the municipal code, and the presidents and councilors have been instructed in their duties, and have been kept informed of all the legislation affecting the province and the municipalities, a continuous correspondence having been maintained to this effect.

## FINANCIAL CONDITION OF THE PROVINCE.

Notwithstanding the precarious condition of agriculture, which is due to the lack of work cattle, and to the loss of two-thirds of the crops of sugar cane, of rice and corn, the principal food of the inhabitants, the collection of both the provincial and the municipal taxes has been accompanied by satisfactory results. The total amount of receipts of the provincial treasury, from January to December, was \$67,997.63 gold, and several municipalities, after paying all their expenses appertaining to the year of 1902, had a cash balance of several thousand dollars local currency, as the pueblos of Guiljungan, Bais, Dumaguete, Nueva Valencia, and Bacong. The prestige and the confidence which Treasurer Peed has gained for himself have contributed considerably to make the collection of taxes comparatively easy in this province, and to cause the municipal officers to cooperate with pleasure.

## ROADS AND BRIDGES.

Nothing satisfactory can be reported in regard to the bridges and roads, as the system of the late supervisor was not practical, and caused the work to be deficient and costly. To be brief, we have made no progress as far as the ways of communication by land are concerned, excepting several bridges, which have been reconstructed of inferior timber, and four cement culverts.

The supervisor's department has met with such little sympathy on part of the pueblos that the majority desired to have the office of supervisor abolished, for the reason that it was burdensome to the provincial funds.

From January to December, 1902, \$8,201.51 gold were invested in roads and bridges, and \$4,578.65 Mexican in the cutting of timber in the forests of Bayanan. Although it is true that all this timber belonged to the first group, yet the expenses of cutting it, paid by the province, were five times or more what it would have cost any person well acquainted with this province.

## SCHOOLS.

The province has now 69 schools, with 23 American teachers and 120 Filipino assistants. Middle of June, 1902, the secondary school was opened in this province, which is being frequented by the youth anxious to amplify their knowledge. This educational establishment is the first of its kind which has been opened in this province, as the Silman Institute only admits young men, for which reason the girls had to be satisfied with the education given in the public schools.

This institute has now a beautiful and spacious building, the property of its founders. Its organization, under noble and learned professors, has opened a brilliant future to the youth of the province of Negros Oriental and of the other Visayan provinces. Among its pupils there are several young men from Negros Occidental, from Iloilo and Cebu. Its doors are open to the poor and to the rich, who receive the same education and the same treatment, and unity, which was unknown under the Spanish régime, is to be found in it. This school has won such prestige that persons who were the most opposed to education and to the present sovereignty have taken pleasure in sending their sons to it.

The praiseworthy conduct of the American teachers distributed among the public schools of the pueblos has caused the attendance of children of both sexes to be rela-

tively satisfactory in the majority of the schools during the last school year, notwithstanding the obstacles which the teachers encountered; some on account of the apathy and indifference of certain municipal authorities in regard to the schools, and others on account of the fanaticism of parents, who, influenced by certain elements, believe that to send their children to schools where they are not taught to pray is a sin against God. The daily attendance during the last school year was 7,000 children of both sexes, and it is very remarkable how English has progressed, as one can say without fearing to make a mistake that now 100 children know English against one who knows Spanish.

The desire expressed by the pueblos to have more American teachers, and the persistent requests of the pueblos who have no American teachers that such be stationed there, is the most evident proof of the prestige which they enjoy in the province.

#### PUBLIC HEALTH.

The destitute condition and the famine which prevail in the pueblos of this province, and the circumstance that the inhabitants are, as a rule, very averse to sanitary measures, and even opposed to and suspicious of the medicine and the prescriptions furnished by the provincial board of health, thereby causing serious obstacles to the good work of the board, are the joint causes for the persistency with which the cholera has continued in several places in this province. From middle of September, when the first cases appeared, until the 31st of December, 1902, the epidemic caused 1,895 deaths, making the total number of deaths in the entire province from January to December, 1902, 5,237, the majority being caused by the pernicious malarial fevers, which are almost endemic in several places in this province and demand many victims from among the pauper class.

Notwithstanding this, the cholera decreased considerably, thanks to the tireless and active work of the president of the provincial board of health, especially at the places where the American school-teachers acted as agents of the provincial board of health. These teachers are deserving of much praise for the self-denial displayed by them during the epidemic.

#### RINDERPEST.

Although the rinderpest presented itself in some of the northern pueblos in a mild form, it spread at the same time with such rapidity and became so destructive that from Guijulugan, the northernmost pueblo, as far as Siaton, the third pueblo in the south, the beef cattle were almost entirely exterminated, and nine-tenths of the carabaos succumbed to the epidemic. In November the pest appeared in the two southernmost pueblos of the province, but in a milder form, as the mortality caused by it among the beef cattle and the carabaos amounted to only 70 per cent.

The six pueblos situated on the island of Siquijor remained free from the terrible epidemic among the animals, and the wealthy planters therefore purchased a number of carabaos on said island at very high prices. The result was not very satisfactory, though, because the majority of these animals were attacked by the epidemic upon being transferred to this coast, and 50 per cent of them died.

#### AGRICULTURAL WEALTH.

As a natural consequence of the mortality among the beef cattle, and especially among the carabaos, the only work cattle, the maize and rice crops were nil, as the few crops planted by the natives without the use of animals, and those planted by several wealthy farmers, who purchased some cattle by dint of great sacrifices, were mostly destroyed by the locusts.

For the reasons aforementioned, and on account of the fall in the price of sugar and of the increase of the laborers' wages and of the prices of the principal articles of consumption, many of the sugar planters were compelled to suspend their work, and several of them left their crops unharvested. The exportation of this article was therefore considerably lower than usual during the present season.

The cultivation of hemp (abacá) is doubtless what has maintained the province, and the largest part of the money which has been in circulation in Negros Oriental since 1900 was derived from it. The following data demonstrate the development of the cultivation of hemp in this province:

Exported in—	Piculs.
1898.....	37, 000 to 40, 000
1899.....	40, 000 to 50, 000
1900.....	50, 000 to 60, 000
1901.....	70, 000 to 80, 000
1902.....	90, 000 to 100, 000

The long drought of the present year caused great fires in the plantations, due to lack of precaution on part of the owners, the total loss being estimated at 50 per cent of the present crop. Nevertheless, it is expected that the harvest will much exceed last year's.

Such is the enthusiasm for the cultivation of hemp that in the pueblos where it is raised, 90 per cent of the planters have almost abandoned their land on the plains in order to raise hemp in the hills. In 1898 hemp was raised only in 9 pueblos, and now it is being raised in all the pueblos, excepting the four situated on the island of Siquijor. This causes us to predict a greater future for our province, and our hopes would be more easily realized if the Chinese merchants had not almost entirely monopolized the purchase of hemp.

The cultivation of the cocoanut tree is accompanied by satisfactory results in this province, and requires little work; it is therefore the most suited to the natural indolence of our peasants. It prefers land along the beach and the banks of the river, where it grows better than in hilly country. Each cocoanut tree produces about 300 nuts per annum, or a gain of about \$45 Mexican, if it is used for the production of "tuba," a drink much used and very popular among the majority of the natives. The amount of copra exported in 1902 was about 61,000 piculs; it was bought up by the Chinese merchants.

#### TOBACCO.

Tobacco is raised in two pueblos on Siquijor, and in the pueblos of Guijulugan and Jimalalud in the north of this province. The amount raised is more than sufficient for the consumption of the province, 10,000 quintals of tobacco being exported in 1902.

#### POLITICAL SITUATION.

It gives me satisfaction to be able to say that peace and order have remained undisturbed in this province, all the inhabitants of which sincerely and loyally submit to the American sovereignty. In July and August the presence of Papa Isio and his followers in the mountains of the extreme north of this province, where he alarmed the defenseless inhabitants with ridiculous threatening proclamations, compelled me to undertake an expedition for the purpose of protecting those pueblos and in order to have an interview with the chief aforementioned and induce him to surrender. I was confident that he would consent to holding a conference, in view of a letter which that bandit had written to me. I arrived at the pueblo of Jimalalud in the right time, accompanied by a detachment of 15 enlisted men of the Philippines Constabulary, commanded by the very worthy Inspector Marshall, and had the satisfaction of finding the inhabitants prepared and ready to repel with energy any attack of the bandits, who had been encamped for the last three days on the nearby hills and had threatened to attack the pueblo.

Isio's band consisted of 200 men, more or less, who were divided into three columns. They had 14 rifles, and lances and bolos, while the police of the municipality had only 3 poor shotguns, each with 5 or 6 cartridges, loaded with buckshot. They and the inhabitants, who were armed with bolos, clubs, and stones, and divided into groups of from 40 to 50, were guarding all the entrances of the pueblo. In view of this decided attitude of the people of the town the bandits did not dare to make the assault, and this has convinced me again that if a pueblo does not want brigandage, it can never prevail there. The president told me when I arrived that if he had had half a dozen rifles, he would have driven the bandits from his municipality on the first day, when Papa Isio sent his message. As Papa Isio's men could see the town from the hill on which they were encamped, they soon perceived our arrival and broke camp before we had time to start in their pursuit. After a forced march Captain Marshall succeeded in catching up with their rear guard, which protected the retreat of Papa Isio and the main body of his men. After a skirmish of half an hour's duration, he succeeded in dislodging them from the crest of the hill where they were, and in seizing a carabao and some maize left behind by them in their precipitate flight. There were no casualties on our side.

I had the satisfaction of finding the inhabitants of the adjacent pueblos of Taysan, La Libertad, and Guijulugan likewise ready to repel the bandits with energy. All my efforts to induce Isio, the chief of the bandits, to surrender were in vain. He replied to the letter which I wrote him from Jimalalud that he was in no way disposed to accept my propositions, and that he had to fulfill the sacred mission which God had imposed upon him.

The activity displayed by two small columns of constabulary, who marched through the mountains of the northern pueblos in every direction, caused every trace of the bandits of Papa Isio to disappear from the province, several of them being

killed and wounded. On our part we had one private of the constabulary killed in a skirmish in the mountains of Taysan, near the province of Negros Occidental.

The religious question, which is now agitating some provinces, has not affected ours, nor do I believe that it will ever cause a disturbance of the order here, as I am convinced that with the majority of the lower classes the religious sentiments are very superficial.

#### MUNICIPAL GOVERNMENTS.

While in some of the pueblos the municipal governments are being run in a better shape, as they have some practice now, the majority of them are still in a deplorable state of organization. The causes therefor are those which I had the honor to mention in my last report, and the unsatisfactory financial condition of some of them.

I am convinced that the saving which the fusion of the pueblos will bring with it, and a wise selection of municipal officers at the coming election, will produce a favorable change in the present condition of the municipalities of this province.

During the year of 1902 I made two tours of inspection to the pueblos of the south and of Siquijor, and three to the pueblos of the north. On the first I was accompanied by the provincial treasurer and fiscal, in order that the municipal officers be given ample instructions in the performance of their respective duties, and that at the same time all the questions which had arisen in the several municipalities could be solved, and the caciquism, which is such an inveterate custom with the majority of our local authorities, could be checked.

With the exception of a few municipalities, the majority of the municipal councils are useless, some because they are composed of ignorant persons, and others because the members are too much addicted to the president or the secretary, and pass without questioning all the acts which are suitable to the interests of those officers and which they may see fit to propose, however arbitrary and despotic they be.

To be brief, we have made little progress in the organization of the municipal governments during the year of 1902. All the efforts made by the provincial officers to better the condition of the pueblos are generally rendered useless by the ignorance and proverbial negligence of the majority of the municipal officers. The following statement will give an idea of the standard of education of the officers of the pueblos:

Presidents: Seven speak and write Spanish; 9 speak and write Visayan; 8 can only write their names. Municipal treasurers: Thirteen know something about keeping accounts; 3 do not, but can write and read Visayan, and 2 can only write their names. Councilors: Eighteen understand Spanish; 88 write and read Visayan; 94 can only write their names. Justices of the peace: Fourteen understand and write Spanish, and 10 read and write Visayan.

#### COURTS OF JUSTICES OF THE PEACE.

This province lacks persons competent to properly perform the duties of justice of the peace. I do not say that all the young men of this province are incompetent to hold this office; but can affirm, without making a mistake, that the few persons capable of discharging the duties of a justice of the peace are evading it, as they want to attend to their own private interests.

In the majority of the justice courts in this province the honorable citizen does not find protection of his interests in view of the ignorance of the law on part of the persons whose duty it is to administer it, and the majority of the justices of the peace do not seem to make any efforts to study the laws. The honorable judge of first instance of this province had the laudable idea to give at the termination of the sessions of the court in 1902 lessons in the application of the new code of procedure to the justices of the peace. Several months have elapsed since then, and according to the report of the fiscal the justices of the peace have not demonstrated in any way that they understood the lesson explained to them in a theoretical and practical manner.

It is therefore necessary that the courts of justices of the peace be immediately reorganized, as far as my province is concerned. This reform should consist in the consolidation of two or three courts of justices of the peace into one, the justice of the court thus organized to be paid by the municipalities under his jurisdiction in due proportion. If the courts are thus organized, all the fees received by justices of the peace should be paid into the municipal treasuries, and the justices should be held strictly responsible for any misapplication of such funds. To this end they should be required to render a monthly account of all the money received by them, the said account to be attested by the municipal treasurer of each pueblo. Only in this manner will the administration of justice be well attended in the pueblos, and the office of justice of the peace, which is now considered burdensome, would be slightly compensated.

## MUNICIPAL POLICE.

I worked for the organization of this corps with the cooperation of Captain Marshall, the senior inspector of the Philippine Constabulary in this province, and caused the municipalities which dispose over means to increase the salaries of the police, and to furnish them with uniform, at the expense of the municipal treasury. In view of the recommendations made to the presidents in regard to the selection of persons for the police, the condition of the municipal police has greatly improved in most of the pueblos, where they are rendering very good services, without having given cause for complaints regarding their conduct up to the present writing.

## CONVENTIONS OF PRESIDENTS.

Four were held during the year of 1902, in January, April, July, and October, and at nearly all, the majority of the presidents attended. Notwithstanding the little interest which many of them take in the conventions, the same have proved relatively beneficial for the government of the pueblos, in view of the practical instruction which the presidents receive while at the provincial capital.

## PROPOSED AMENDMENTS OF THE MUNICIPAL CODE.

Section 6, subsection (a): The words "cabezas de barangay" should be stricken out, as the majority of these are persons who can neither write nor read, and do not possess property at present.

Section 8, subsection (g): There should be added "and opium-smokers," because persons who are addicted to this terrible vice almost become idiots.

I have the honor to inclose herewith several views of this locality.

Respectfully submitted.

DEMETRIO LARENA, *Provincial Governor.*

The CIVIL GOVERNOR,  
*Manila, P. I.*

## REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF PAMPANGA.

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF PAMPANGA,  
*Bacolor, January 15, 1903.*

SIR: I have the honor to submit to you the accompanying report relative to the state and conditions of the province in compliance with the provisions of section 7 of Act No. 83. This report covers the period comprehended between January 1 and December 31, 1902.

## GENERAL CONDITIONS.

The present condition of the province is more favorable than it has ever been before. The good order which has reigned since the implantation of the civil government in February, 1901, has not been disturbed in the least particular, although in the early part of 1902 there was one Juan Balbuena, a native and resident of the pueblo of Guagua, this province, who later did not consent to become lawabiding after being a participator in the insurrection, but remained hidden in the woods for the purpose of engaging in robbery. This man attempted to organize a band of malefactors among certain peaceable workmen and ignorant persons of the country around Guagua, Floridablanca, and Porac, this province, and who were misled by this Balbuena and his followers. The undersigned, reliably informed of these matters, gave notice of the same to the chief of constabulary in this province, enabling him to adopt the necessary measures for the best manner or plan to take the guilty persons unawares.

As a result, not many days had passed when one night the constabulary succeeded in surprising and dispersing the band, capturing some 30 of the party, but not the leader of the malcontents, Balbuena, who escaped by hiding in the woods. However, after being followed for some days, Balbuena at last fell, pierced by the bullets of the constabulary who were pursuing him, and he was thus slain by them.

The prisoners were placed at the disposal of the judge of the court of first instance of the province for trial in due course and two were found guilty and sentenced as authors of the crime, the others were acquitted and liberated, as it was found they were deceived by the two said criminals. With the exception of the case just mentioned there has been no other similar occurrence during the year.

## FINANCIAL CONDITIONS.

The financial state of the province as can be seen in the current accounts and verified statements of the provincial treasurer for the year 1902, filed in the month of December, 1902, and this province will be found to be in most excellent condition, a balance having been shown of \$34,000 United States currency.

Despite the general prostration and distress which for years followed agriculture in this province, the collections of the land tax have been effected in all the pueblos of the province with great regularity, a small percentage only having failed of collection in this class of imports in the province.

## PUBLIC IMPROVEMENTS.

The fact that the province was unexpectedly left without a supervisor, as well as the frequent changes in the personnel of this office, have been sufficient cause for the failure to complete certain improvements and a larger amount of work such as by law is intrusted to this provincial department. All of the bridges constructed in the province by the military authorities prior to the organization of the civil government have been carefully repaired and recoated with boiled tar for their better preservation.

The road running from Guagua to Floridablanca, the passage of which for any sort of vehicle however light was impossible, has been properly repaired, and the road is at present in much better condition. The road from Guagua to Lubao and that from San Fernando to Arayat have been attended to, while general repairs have been made upon the road from Angeles to Porac. At the present time the road from Bacolor to San Fernando is being entirely rebuilt, utilizing in these operations the crushing machine on the stone brought from Bamban to Tarlac, and gravel brought from Bulacan. Upon undertaking this work on these roads the difficulty has been encountered that a sufficient number of workmen and wagons can not be obtained; especially are the latter scarce, due to the lack of carabaos, and for the same reason larger rollers for smoothing down could not be utilized.

The required repairs on the provincial jail have been made, and it is in perfectly good condition at present. As for the repair and reconstruction of the building at present occupied by the provincial offices of the government, only what has been absolutely necessary has been done, waiting until the title to the said building shall be properly settled by the honorable Philippine Commission.

## PROVINCIAL BOARD OF HEALTH.

This institution, which was organized in the province on February 2, 1902, has since that time afforded valuable assistance to the people. The first cases of the epidemic called cholera appeared in the pueblos of San Simon and San Miguel on April 6 and 10, 1902, and became general throughout the province between April 20 and May 1. The efficient aid of the municipal boards of health, under the provincial board of health, was of great service in arresting the progress of the disease, and gradually combatting it until its complete disappearance and the province was declared clean, all kinds of rigorous sanitary measures being suspended on August 30, 1902.

The natural ignorance of the greater part of the inhabitants of the province, so far as concerns matters of hygiene, contagion, disinfection, etc., has been overcome with true success by the efforts and measures adopted by the sanitary authorities. So we see that during the existence of cholera in the province while there were registered 3,532 cases there occurred but 2,402 deaths in all the pueblos. The work of the presidentes of health, both municipal and provincial, during the cholera is worthy of commendation. A suggestion offered by the presidente of health of Bacolor, Señor Amado Gutierrez, that the presidentes of the municipal boards of the province meet every three months in the office of the provincial board of health, after consideration and approval by the presidente of the provincial board of health, Mr. F. W. Dudley, succeeded in bringing about the beneficial results that were expected, for at the first quarterly meeting, held on January 15, 1902, at Bacolor, under the presidency of the said Mr. F. W. Dudley, instructions were issued for the performance of their duties and the exercise of their faculties and attributes, in accordance with Act No. 308, by the presidentes of municipal boards of health. These instructions were all the more necessary since they had become indispensable for the removal of doubts which frequently arose among those officials and for the avoidance of conflicts with the respective municipal councils with reference to the carrying out of the orders of their boards in matters of the sanitation and hygiene of the pueblo.

These quarterly assemblies also serve to furnish an opportunity for the municipal presidentes of health to make and support, with verbal argument, at the time for the meeting, their suggestions for the improvement of the service, the hygienic conditions of the pueblos, the uniformity in vaccination, and to submit reports as to the hygienic condition of their municipality, etc. There are at present in the province 14 municipalities in which there are organized and in operation municipal boards of health. Of the 23 municipalities which comprise the province there remain but 9 without boards, and this is due to the difficulty encountered in finding persons who can and will efficiently perform these duties for the small remuneration which can be offered and borne by the municipal treasuries of the pueblos. This should undoubtedly be remedied, as it is not just that those pueblos be deprived of the benefits of hygiene and sanitation.

Another matter, which it has been noted should be remedied, is that with reference to the difficulties which often arise between the municipal boards of health and the respective municipal councils of their pueblos, or rather, between the two presidentes, that of health and that of the municipality. Especially is this the case with reference to the adoption and execution of ordinances referring to matters treated in paragraphs (l), (m), (n), (o), (p), (q), (r), and (s) of section 39 of the Municipal Code; for despite the provisions of section 5 of Act No. 308, describing the attributes of the municipal board of health in prosecuting at law the infractors of health ordinances, and since, according to section 6 of the said law, the municipal presidente of health is the highest executive of the same, it frequently happens that, for reasons often ill-advised, the municipal council or the municipal presidente not only refuses to pass the ordinances proposed touching the matters of sanitation and the measures contained in the paragraphs and sections named of the Municipal Code, but even shows manifest opposition to the acts of the municipal board of health in the pursuance of their duties.

A case has been found, moreover, in the municipality of Arayat where the municipal council and the presidente, for private reasons and for differences with the municipal presidente of health in the said pueblo, went so far as to order the removal, in every sense unjustifiable and improper, of the said municipal presidente of health.

To overcome all of these inconveniences we suggest an amendment or an addition to Act No. 308 of the Municipal Code, prescribing in what manner or to what extent it is obligatory upon the municipal councils to pass sanitary measures and to execute them, as well as to furnish their aid and complete cooperation in the acts of the municipal boards of health in so far as the same are confined to the attributes and jurisdiction of the latter.

Before concluding this part of the report I should like to make special mention of the great services furnished at the present time by the head of the provincial board of health, Dr. F. W. Dudley. The quarterly report submitted by this official, together with the humanitarian sentiments which he has shown that he possesses by attending and treating gratis hundreds of the poor who apply to him, cause me to be convinced that the work of Dr. F. W. Dudley is in every respect commendable.

#### PUBLIC INSTRUCTION.

Attention is called to the necessity of utilizing such means as will endow the public schools with a higher standard of efficiency and attractiveness for the children who are called upon to attend them.

In practice the law compelling attendance upon schools has been loosely applied, for what force the law gains by coercion on the one hand is lost on the other by mistrust upon the part of many parents because of having noted the slow progress in school of many children. One of the greatest difficulties which have been observed is the lack of a truly uniform and expeditious method for teaching the English language, which is the principal basis of present public instruction. The ignorance upon the part of the teacher of the Spanish language, and his entire ignorance of the local dialect, raises between him and the pupil an impassable barrier against mutual communication and expression of those ideas so necessary in the diffusion of that culture possessed by the teachers and lacking in the pupils.

It has been noted that with the means usually employed by school teachers the children know by heart the names in English of many objects which they have seen in the schools, but they have no idea whatever of the meaning included in each definite phrase, and they meet with difficulty in expressing their ideas, even by means of the common phrases which are familiar and well known to them.

To diffuse knowledge is the most expeditious manner of making it common. As long as the American teachers remain in ignorance of the Spanish language, as well as the respective local dialect, and the Filipino teachers who assist them are not possessed of the necessary qualifications of aptitude with a knowledge of the English

tongue, it will not be possible to make attendance upon schools fruitful, and therefore attractive, to the parent and eagerly sought by him for his children.

It is necessary, therefore, to maintain a true relationship between the native and American teachers; to establish a standard of salaries to be paid the former which will make it easy for those persons to accept positions as teachers who are truly worthy of filling them on account of their preparation and ability, and are properly paid so that they may be required to furnish more and better services.

#### THE MUNICIPAL CODE.

In view of the large number of illegal resolutions and ordinances passed by the various municipal councils, an alteration of the law is suggested whereby it be provided that all ordinances by the said councils be first approved by the provincial boards, or at least that they be furnished certified copies of the said ordinances before their execution is ordered. This is one method to secure a strict observance of the law and of the limitation set by the Municipal Code upon the municipal councils.

It has frequently been noted that certain ordinances passed by the municipal councils are manifestly repugnant to the law and unjust to the inhabitants of the respective municipality. There should be some way to prevent those cases where the people have to suffer as a consequence of such ordinances without being allowed to present their complaints before the provincial board, which could adopt, at the opportune time, measures suitable to the case.

A change in the present manner of collecting taxes, both municipal and provincial, as recommended by the provincial treasurer, would certainly redound in many ways to the benefit of both the province and the municipalities. It consists in the provincial treasurer's having a permanent deputy in each pueblo, instead of the present manner, in which the law requires the deputy to remain in each pueblo or municipality only two days. It is trusted, should the measure proposed be adopted, that the increase of the imposts which could be collected would be greater, notwithstanding the consequent increase in expense occasioned by the creation of these permanent deputyships in each municipality. The municipal treasurers do not lend the provincial treasurer the proper assistance, and that which should be furnished according to the law; and in consequence of this state the province and the municipalities lose many imposts which remain uncollected. It would be possible to pay the land tax in all the municipalities of the province in one certain, fixed month, making this portion of the collections much more satisfactory and obtainable, both for the taxpayers and for the provincial government and the municipality. This official, or permanent deputy, could at the same time be the collector and disbursing officer of the municipality, combining thus in one person the collections and disbursements.

In some of the municipalities it is not possible to find competent municipal treasurers. With the plan proposed competent persons could be selected, who, appointed by the provincial treasurer and paid by the provincial government, would be entirely independent of the municipalities and free from the influences which at the present time, to a greater or less degree, have their weight upon the actions of the municipal treasurers.

#### THE SYSTEM OF WEIGHTS AND MEASURES—SUGGESTIONS FOR UNIFORMITY IN ALL THE MUNICIPALITIES OF THE PROVINCE.

Much disturbance has been noted in transactions, which in their majority have given rise to improprieties and, it may be, even crimes, because of the lack of uniformity in the system of weights and measures used in each of the municipalities of this province.

It is known that the present system of weights and measures has consisted, since the time of the Spaniards, of the "cavan," "ganta," and "chupa" for dry measure. In the transactions which take place in the markets and trading places this is the system most used, owing to the fact that the greater part of the articles sold are rice, and sugar in small quantities, unhusked rice, etc., which are sold by this kind of measures.

The Municipal Code provides, in section 39 (cc), that "the municipal council shall provide for inspection of weights and measures by vendors, but without the power to exact fees for such inspection."

Complying with this provision of the law, the municipalities establish their measures and impose them upon the tradespeople of their respective municipality. But this naturally gives rise to a difference in measures from a nearby or contiguous municipality, where, though similar in name, they vary, nevertheless, in size and

capacity. This fact is unsettling to the relations between the residents of both municipalities in their trading.

To avoid this inconvenience and to secure proper uniformity in the weights and measures used, necessity arises for the enactment of a law providing that there shall be retained a set of standard measures to be identified by a special mark or sign, as stipulated in the said law.

These may be similar to the standard fixed by the Spanish Government. There were six measures, to-wit:

1. Cavan, cubic in form, each side 422 millimeters; capacity exactly 75 liters (1 bushel, 9 gallons, and 32 thousandths).
  2. Half cavan, cubic in form, each side 335 millimeters.
  3. Ganta, cubic in form, each side 144 millimeters; capacity, 3 liters (681 thousandths).
  4. Half ganta, cubic in form, each side 114 millimeters.
  5. Chupa, cubic in form, each side 72 millimeters; capacity, 375 milliliters.
  6. Half chupa, cubic in form, each side 57 millimeters.
- One cavan equals 25 gantas; 1 ganta equals 8 chupas.

#### JUSTICES OF THE PEACE—SUGGESTIONS AND RECOMMENDATIONS.

The following changes are suggested:

First. Reorganization of the justice of the peace courts. Payment of salaries to the justices of the peace.

*Reasons.*—One of the most important branches of the administration of justice, on account of its popularity and more intimate and direct contact with the people, is the institution of the justice of the peace. In the provinces the justices of the peace of the municipalities exercise, in addition, the functions and attributes even of a municipal judge. The extent of their jurisdiction is therefore greater and more important.

The experience acquired since the organization of justice of the peace courts has demonstrated the extreme necessity of improving this institution in so far as the selection of persons for appointment as justices of the peace is concerned. And while this selection becomes necessary, there is the difficulty of securing for these offices persons of the requisite honesty and ability, for, the office being without salary, or honorary, and the holding of it is of no material advantage, but scarcely a compensation for the work and responsibility which accompany the position, though rarely to the extent of any considerable difficulty, a worthy person capable of performing these duties and who will accept the appointment is difficult to find, for there is no incentive to such acceptance.

This provincial government has always made an effort to select suitable persons for the offices of justices of the peace in the municipalities of the province; but it has always met, meets to-day, and fears it will ever meet, with the difficulty mentioned. This is the reason why certain municipalities still lack a justice of the peace, and most of them are without auxiliaries.

Thus arises the necessity that the office of justice of the peace be invested with the prestige necessary to make its importance evident, and at the same time to make it more desirable by designating for the position a remuneration sufficient and worthy for any person intrusted with the sacred mission of administering justice—of applying the law.

This new expense might be suitably met by reorganizing the justice of the peace courts to conform in the matter of fees with the economic organization of the courts of first instance.

A district or section should be created for each of the justices of the peace according to the necessities of the respective districts, and there should be fixed, pro rata among the funds of the respective municipalities, the salary or remuneration that the respective justices of the peace shall receive, and the time or period of the sessions in each municipality.

I suggest, then, the necessity for enacting a new law creating these districts or sections for every two or more municipalities of the provinces, and naming or appointing for each district a justice of the peace, who shall be paid a monthly salary not to exceed the sum of the salaries of the presidentes of the municipalities so combined.

However, an exception should be made with respect to the justice of the peace of the provincial capital or of the municipality where the provincial jail is located, and this district should have under its jurisdiction only one pueblo or one municipality, that of the residence of the justice of the peace, because by Act No. 590 he has delegated jurisdiction in all of the pueblos or any of the municipalities of his respective province in the cases determined by the law already cited and in conformity with the provisions of the same.

Second. Concerning absences of the justices of the peace.

*Specifications.*—There is no existing law regulating these absences. The procedure up to the present time has been that of requesting leave of absence for a justice of the peace from the civil governor of the islands, through the provincial governor. These requests are nearly always urgent in character, and most of the time leave of absence for a few days or weeks, at the outside, is asked for; but, due to the necessary steps to be taken, the granting of the leave of absence applied for is often delayed greatly, and this frequently causes the applying justice of the peace to be forced to abandon the duties of his office, to the prejudice of the proper course of justice, because of the necessity he has of absenting himself or because of his illness.

Upon this particular I recommend an addition to the text of section 5 of Act No. 136, organizing the courts of justice in the Philippine Islands, by granting to the provincial governors authority or the faculty to grant leaves of absence to the justices of the peace of the province upon their applications for such leave when it be for a period of less than thirty days, but for a period exceeding thirty days application should be made to the civil governor through the respective provincial governor.

Third. Concerning the substitute for the justice of the peace in criminal cases.

*Details.*—It is frequently the case that the larger part of the municipalities are without auxiliary justices of the peace, and, in the absence of the regular justice of the peace, there is no provision of law as to who shall substitute these officials in matters pertaining to criminal cases for crimes and offenses which are within the jurisdiction of the justice of the peace for his cognizance and determination.

Act No. 194 only authorizes the respective municipal presidentes to substitute in cases where there is no regular justice of the peace or auxiliary within the municipality in first or preliminary investigations which are held in those cases within the jurisdiction of the courts of first instance in the province for their cognizance and decision.

I suggest an amendment either to Act No. 136 or to Act No. 194 granting to the municipal presidentes power to substitute the regular justice of the peace or his auxiliary in his respective municipality, in cases of urgency, disability, sickness, etc., to take cognizance of and decide in criminal actions for crimes and offenses, with similar jurisdiction to that of the justice of the peace whom he substitutes.

#### FINAL RECOMMENDATION CONCERNING THE CONVENIENCE OF CONSOLIDATING CERTAIN OF THE MUNICIPALITIES.

After a careful study of the situation and of the remedy, the provincial government has reached the conclusion that certain of the municipalities of the province should be consolidated. It has been found that the pueblos of Betis, Minalin, Santa Rita, Santa Ana, and Santo Tomas, with difficulty and with very uncertain success up to the present time, support their officials and cover their expenses. Their financial condition is becoming more precarious, to such a degree that after a few years more they would find it impossible with their revenues to cover their most necessary expenses.

Another unfavorable circumstance is that, at least for the present and until the lapse of a number of years, the municipalities named will find difficulty in furnishing men who are worthy and capable of filling the various municipal offices, the council and municipal presidency, municipal officials, justices of the peace, municipal board of health, etc., because of the fact that owing to the small number of the respective inhabitants and the scarcity of those among them who have the ability to perform these duties, it would be necessary to retain certain persons in these offices for a long time and without any considerable interruption, or to allow some of the offices of the municipality to be filled by persons not residents of the same, which would be an absurdity.

The provincial government believes that if some of the municipalities which are mentioned were fused with others, forming one of each two or annexing some of them to others not mentioned, great advantages would be secured and the inconveniences mentioned would be avoided. Without doubt this fusion would be at the instance of the municipalities themselves interested and the provincial government expects to suggest this idea to them. I mention this matter at this time to secure for it the approval of the Honorable Philippine Commission and the civil government of the Philippine Islands.

The CIVIL GOVERNOR, *Manila, P. I.*

ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF PANGASINAN, 1902.

PROVINCIAL GOVERNMENT OF PANGASINAN,  
OFFICE OF THE GOVERNOR,  
*Lingayen, P. I., January 2, 1903.*

The EXECUTIVE SECRETARY, *Manila, P. I.,*

SIR: I have the honor to submit the following report for the year 1902:

On the 3d of March I took charge of the office of governor of this province, after the approval by the civil governor of my election, which was held in accordance with the provisions of the act numbered 336 by the convention of the vice-presidents and councilors of all the properly organized municipalities of this province.

At that time there were 35 municipalities, but since then the municipalities of Mapandan and Natividad have been organized—in April and May, 1902, respectively—and the province has now 37 municipalities.

There are 53 schools of primary instruction, with 14 American male teachers, 8 American female teachers, 83 native male teachers, and 48 native female teachers; they are frequented by about 8,000 children of both sexes. In September a provincial secondary school was opened at the provincial capital, which is provided with 4 American professors (male), 1 American professor (female), and 1 native professor (male), and is attended by 175 pupils of both sexes. The desire of the government to propagate education in these islands is gradually being realized in this province, thanks to the tireless and constant efforts of the superintendent of the division, Mr. S. C. Newsom, who should be congratulated upon the visible advancement of the schools. To his zeal it is due that the municipality of Dagupan appropriated \$27,000 local currency out of the municipal funds for the construction of a school building in the pueblo, the work on which is well advanced, and which will probably be finished in the month of June, 1903, when the beautiful building which is to serve as normal school for all the native teachers of both sexes will be inaugurated.

The only obstacle to the progress of education is the lack of good school buildings in nearly all the municipalities, which is due to the scarcity of funds of the pueblos in general and to the scant number of American teachers. It would require the sending of about 20 more American teachers to this province to fill the needs of education.

In February the provincial board of health was organized at the capital of the province, and municipal boards of health were successively organized in the several municipalities, excepting the pueblos of Santo Tomás, Mapandan, and Natividad. The members of both organizations enforced all the measures adopted by the commissioner of public health of the islands during the epidemic of Asiatic cholera, which commenced in this province in April and ceased in November, 1902. Among the measures taken to prevent the cholera from spreading, the most burdensome to the people were the rigorous isolation of the patients and of the persons who had come in contact with them, the burning of the infected houses, and the quarantine prohibiting the communication between infected pueblos, barrios, and zones. We will not discuss the advantage and necessity of these measures, but would say that the ignorant people, who did not understand the precautions and remedies recommended by science, looked upon them with great fear and despair to the extent that in order to hide cholera cases they buried their dead on their lots or threw them into the river, to the end that the sanitary inspectors might not find them. There were 10,000 cases, with 7,000 deaths. The province expended nearly \$50,000 money of the United States for medicine, disinfectants, and salaries of the inspectors and the quarantine guards distributed throughout the municipalities of the province, and for the payment of indemnities for houses which had been burnt.

The rinderpest left only 50 per cent of the already depleted number of work cattle.

The locust plague also invaded the province. Experiments were made to exterminate them by means of the "fungus" furnished by the insular board of health, but the result was not satisfactory. The provincial board therefore directed that the

locusts caught be burnt, and that the land where they had deposited their eggs be plowed and the eggs burnt. The provincial board also authorized the payment of 50 cents Mexican for every cavan of locusts caught, to the end of exterminating them. All this contributed to the extirpation of this plague in several sections of this province.

Notwithstanding these calamities, the rice harvest, which has begun in November, 1902, promises to be satisfactory, and perhaps more abundant than that of last year; and if the entire crop is harvested this year, although a considerable quantity be exported, the inhabitants of this province will probably not suffer from famine. Nevertheless, in order to prevent a famine it was earnestly recommended, upon distributing to the municipalities copies of the act numbered 517, entitled "An act to provide against the danger of famine in the provinces of the Philippine Archipelago," that the presidents and the municipal councils strictly comply with the measures prescribed in the said law relative to the planting of cereals, tubers, and vegetables.

During this year the province has exported about 100,000 cavares of rice and paddy, 100,000 gantas of nipa wine, 300,000 cocoanuts, 50,000 cavares of salt, 500 pots of liquid indigo, and 10,000 cavares of mangoes.

The decadence of agriculture in this province is due to the circumstance that there are many fields which are not cultivated on account of the lack of carabaos, which could be soon remedied by importing carabaos which have been rendered immune.

The bridges and roads are fairly passable, although their condition is not all that could be desired, for the reason that the work was hampered in the first place by the cholera, and in the second place by the financial crisis caused in this province by the heavy expenditures in connection with the cholera.

The municipality of Umingan suffered in the month of April, 1902, a terrible fire, caused by an accident, in which the municipal building, the schoolhouse, over 100 private dwellings, and the army barracks were burnt. The total loss was calculated at over \$100,000 Mexican. The provincial board invited all the other municipalities to contribute \$150 Mexican each for the relief of the sufferers, and the forestry bureau was asked to grant the victims of the fire gratuitous licenses for the cutting of timber in the public forests of Umingan, to be used for the reconstruction of their houses.

The province enjoys perfect tranquillity. Chief Manalang, who commanded the bands of ladrones in Zambales, and Protacio Flores, his assistant, took refuge in the barrios of the pueblos of Salasa, San Isidro, and Sual, where the inhabitants furnished them some food, influenced by fear. The barrio of Sioasio, of the municipality of Sual, was one of the places of refuge of Manalang, and Captain Rickards, of the constabulary, discovered a deposit of rice which the ladrones had there. The councilor of that barrio, Jacobo Sevilla, was removed from office. Manalang was killed by the constabulary in Zambales, and his assistant, Protacio Flores, was captured and sentenced to twenty years of imprisonment, which he is now serving in Bilibid prison.

The municipal police is of little or no use to quell in cases of emergency disturbances of the public order for lack of appropriate arms and as they are entirely untrained. The municipal policemen are now armed, besides with revolvers, with shotguns that are almost useless. It would therefore be advisable to furnish the municipal police with good rifles and instruct them in the manual of arms and in the necessary tactics under the direction of the constabulary officers of the province.

Photographs illustrating the commercial and industrial resources of this province and views of general interest have been ordered taken, and will be sent to your office as soon as they are finished.

Very respectfully,

M. FÁVILA, *Provincial Governor.*

#### ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF PARAGUA.

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF PARAGUA,  
*Cuyo, June 24, 1903.*

The CIVIL GOVERNOR, PHILIPPINE ISLANDS, *Manila, P. I.*

SIR: In compliance with section 7, Act 422, I have the honor to make the following annual report of the conditions existing December 31, 1902:

The province of Paragua was organized under Act 422, taking effect June 23, 1902. I was detailed to report to the civil governor of the Philippine Islands for duty as governor of the Province of Paragua by General Orders, No. 144, Headquarters Division of the Philippines, dated June 29, 1902. I remained in Coron, Calamianes,

until July 19, 1902, when I established the capital in Cuyo. In a short time all United States troops were removed from the province, except a small detachment casually at Cuyo awaiting transportation.

The constabulary was organized and a detachment was placed at Cuyo, Coron, Taytay, and Areceli. The municipal police were armed, and by the end of October all municipalities were thoroughly organized and working successfully, both politically and financially, under Acts 387 and 422.

There has been entire absence of any disturbances of the public peace, of lawless violence or seditious conspiracy, and also of ladronism. There are no convicts serving sentence in the province, and only one prisoner held in the provincial jail awaiting trial for crime.

All of the municipalities are self-supporting and have no debts, and have a fair balance in the treasury.

The provincial government is not as yet entirely self-supporting, though the expenses have been reduced to the lowest limit possible. There was nothing on hand to purchase the necessary office furniture, and consequently the expenses so far have been greater than the receipts. Lieut. E. Y. Miller, Twenty-ninth Infantry, is acting supervisor in addition to his duties of secretary-treasurer of the province. Capt. W. R. Davis, assistant surgeon, U. S. Volunteers, is acting as president of the provincial board of health. There is no fiscal. We have only one deputy and two clerks, so the expense of the province is not very large, yet the industries of the province are at so low a state that the collections allowed by law are not yet sufficient to support the provincial government.

The province is large and the population is scattering, and considering the fact that almost all of the land of the province is public land, mostly timber, the insular government will be obliged to assist in the support of the provincial government until some development comes, when it ought to be one of the richest provinces. The revenue from timber alone will support the government if some capital can be induced to start in the timber business.

By a strict quarantine of all boats of every class, and by the rigid enforcement of sanitary measures, the province has been kept free from cholera, except at Areceli, where there were about 200 deaths from cholera. The cholera was brought to Areceli by the steamship *Fannie*, from Manila, in August, 1902. She entered Areceli without being cleared for there, in violation of custom-house regulations, and put off freight and passengers, in violation of quarantine regulations. With prompt assistance from the insular board of health the cholera was limited to Areceli and prevented from spreading, and by the end of October it had entirely disappeared.

The schools of the province receive the support of the people. The trouble is to find teachers who can teach English. Cuyo, Coron, and Areceli have American teachers. The schools of Cuyo are in a very flourishing condition, and a large number of the children can speak English fairly well.

The wild tribes have been very peaceful and quiet, and have shown a disposition to settle down and form barrios. In the Calamianes almost all of the Tagbanouas have paid their cedula, and one barrio is formed almost entirely of them.

Since almost the entire province is public land I believe it would be well to have it surveyed and opened for homestead settlement.

I have no measures to recommend, either executive or legislative, as I believe the laws and measures at present in force will result in complete success.

Very respectfully,

WILLIAM A. PHILLIPS,  
*Captain, Tenth U. S. Infantry, Governor of Paragua.*

#### ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF RIZAL.

[Translation.]

OFFICE OF THE PROVINCIAL GOVERNOR, PROVINCE OF RIZAL,  
*Pasig, January 10, 1903.*

The CIVIL GOVERNOR, *Manila.*

SIR: Within a few days after you placed me in charge of this government (November 7, 1902), I had realized the importance of communicating personally with the local authorities and the leading residents of the different pueblos which constitute this province in order to revive the spirits of the disheartened people who were prostrated by the frequent and continuous incursions of the bandits, in which there were sacrificed not only their lives but their property as well.

The mountains or these pueblos, secure refuge and hiding place for the bandits, besides affording them protection and shelter, place them in frequent and continuous communication with the residents of the towns, and the latter—some through fear of persecution and others through sympathy with them—are in the habit of providing the bandits with food and information concerning the movements of the bodies of police. But later, after organizing my system of espionage, and thanks to the policy of repression which I adopted, I succeeded in inducing them all—absolutely every one—to take my side. Thus I was able to make important captures of both men and arms employed in the diabolic schemes of the bandits. In this manner was that important region along the river on the opposite side from the pueblo of Mariquina cleaned up of bandits.

After my system of espionage was inaugurated the bandits changed their tactics, that is, during the day they disguise themselves as honest, hard-working men, renewing their evil practices during the night and their nocturnal forays. These are the men who usually carry rice and other provisions to the mountains from the towns.

After learning this secret I placed myself on watch, and indeed surprised several persons, some of which to-day are groaning for their sins in the prison of this capital, and the others have passed on to a better life.

Later I also learned the use made by the bandits of the cockpits of Kalookan and San Juan del Monte, and I thereupon transferred my spies to those towns, and in this manner I was enabled by imprisoning the justice of the peace of Kalookan and the municipal presidente of San Juan del Monte to inspire with fear and terror all the subrenters of the cockpits, where, upon pretext of fighting cocks, they also at the same time play monte, chabdiqui-solong-liampo, and other such games, in the profits of which the bandits had a large share.

Having cut off and closed all the sources by which the bandits provided themselves with food, clothing, and ammunition, I proceeded immediately to the general disarmament of the local police of the pueblos, for I found that far from providing security and protection to the peaceful residents, they contributed with their cowardice and lack of zeal to the reenforcement of the bandits, delivering over to the latter their arms by reason of fear or friendship. All of these measures, of course, have produced a certain natural excitation, while contrary to the designs of the bandits; and from this, on the one hand, there arose among themselves doubts and discords, there originated, upon the other hand, a deadly hatred against me. There were certain of them who suspected their most intimate friends and companions in villainy of being the governor's spies, and dissensions thus arose which resulted later in partial surrenders. At last, and in their death throes, the outlaws made their recent attempt to surprise Pasig, entering the town at about 7 o'clock at night, December 24, 1902. To their sorrow, they doubtless forgot that I was on guard watching over everybody; and two hours beforehand I knew their plans and intentions. It cost them dearly, and persons who took part in the assault and were captured later, declare that upon that night they suffered 11 killed and more than 17 wounded, losing several guns, revolvers, ammunition, and other implements of battle.

One week after the aforementioned engagement the bandits sent me certain of their friends proposing various plans of surrender. I replied to them that I could accept but one—the unconditional surrender of all their arms. More recently several residents of Pasig have surrendered to me with their arms and munitions.

Such, sir, is the present condition of political matters in this province. Nevertheless, I have not ceased to impress upon these people, in theory and in practice, that North America loves them, that they are her sons, and the Americans are their brothers; a policy of attraction, governmental action, rapid in its execution, equal justice to all, honesty and purity in everything. Such results have these produced that, to say nothing of my orders, my desires even are carried out with eagerness and exactitude. I have never yet had to use my cane of office, a system which has given good results. Except in my official capacity, I have always mixed with the people, a people so poorly understood by some, so vilified by others, and so exploited by many.

#### AGRICULTURE.

Some days after my arrival in this province I was impressed with the idea and with the deep conviction that, in a country of such wonderful fertility as this, the development of agriculture should be the chief source, the basis of all wealth, and in this conviction I went from town to town inspiring in the people this same thought. But, unfortunately, for the towns of Montalvan, San Mateo, and Mariquina, within the borders of which arise the springs of water used for the daily consumption of the residents of Manila, for sanitary reasons, the use of the river was

absolutely and definitely prohibited, to the great injury of the sacred rights of those towns, the taxpayers of which are not deserving of such treatment. My intentions have been of no avail.

With this closing of the river Montalvan, with its lumber trade, San Mateo, with its rice and corn and sugar, Mariquina, with its rice and vegetables which were furnished daily to the Manila markets—all have suffered irreparable injury and the loss of their products. Many of their articles are to-day relegated to a corner of oblivion and subjected to considerable loss.

This closing of the river will cause Montalvan, San Mateo, and Mariquina to forego every thought of raising sugar the coming year, for it is well known to everyone that the cane used for making sugar is the same used for planting, and for these ends to sprout it is necessary to place them to soak in the river for the required number of days. Some might say that this method is improper and slow, besides being antiquated, but so difficult is it to make these hard-working farmers change their methods that the complete abandonment of this thankless work is to be feared.

However, to ward off famine, great quantities of tubers, corn, and articles considered of prime necessity are being planted, and dry-land rice in great quantities is also being planted in some pueblos which contain irrigation ditches. It is advisable to recommend to the government to send some hundreds of carabaos of those coming from China, because, owing to rinderpest, the number of work animals has been considerably reduced.

Locusts have completely devastated the fields, and there are pueblos in which, while formerly thousands of thousands of cavanese of rice were raised, they feel thankful if they have raised enough the present year for seed.

#### PUBLIC IMPROVEMENTS.

One of the various methods which the government could and should adopt to provide against the evils of famine, the spread of vagrancy and outlawry, is to undertake public works. Especially is this true by reason of the fact that all the roads of this province are in the very worst possible condition, and the wages which would be paid by the public works would serve to provide many of the necessities of life for the needy people and at the same time awaken in them the custom of working, thus attracting them away from vagrancy and idleness.

#### PUBLIC INSTRUCTION.

During the past year there have been matriculated in the various schools of the province 108 pupils, with an average attendance of 88.3. The 7th day of January is set for the reopening of the schools after the Christmas holidays, and it is expected that the number enrolled will be greatly increased, judging from the fact that during the months of October, November, and December the average attendance increased in the remarkable ratio from 30 to 66 to 88.

The application and assiduity of the pupils in their attendance upon their classes have been highly satisfactory and gratifying to their teachers.

There are but few children who do not speak some English. Therefore we hope during the present year, and after we shall have made some repairs and improvements in the schools, they will be very numerously attended day and night.

It is a great consolation and satisfaction to the soul to see how these children of tender years mix and mingle together with each other and with their teachers, now talking and discussing with them concerning some topic of their daily lesson, now reciting some small exercise in English; eager in their task to learn and know something, they differ in every sense from those who desire in idleness, with the aid of their murderous dagger and traitorous bolo, to accomplish their designs.

#### PUBLIC ORDER.

This is in better condition at present than is believed or than was expected, thanks to the measures which I have adopted, happily seconded by the chief inspector, Mr. Ira Keithley, of the constabulary of this province.

The morning of the 5th instant the so-called minister of state of the new Katipunan, lieutenant-general, chief of operations in this province and New Ecija, Cenon Nigdao, surrendered himself to me in person. When questioned as to the reasons for his surrender, he stated that it was no longer possible for them to remain out, owing to the measures which I have adopted, for wherever they went they were harassed by hunger and the people either displayed a threatening attitude toward them or with tears in their eyes besought them to give up. This would and does disarm the bravest, to use a phrase of Nigdao himself.

This man is disposed to work for the early surrender of his men, and he stated to me that he would place at my disposition 27 guns which he had confided to the care of one Dionicio, alias Captain Doné, a resident of Baliuag.

I sent him to Major Allen by Inspector Keithley.

Surrenders of men with their arms are becoming common. A number of those who took part in the engagement at Pasig have already surrendered to me, and I expect the surrender of many, including Faustino Guillermo with his men and arms.

The aspect of affairs here is improved greatly, due to these surrenders.

Several municipal presidentes have congratulated me, and I understand that great feasts are being prepared to solemnize the early tranquilization of the province.

I fear, however, that some roving band will find security in Manila or in the mountains of Bulacan.

It would be well to keep the officials of Manila and the governor of Bulacan posted, in order that they may second my efforts in this movement.

Owing to the short time which I have been at the head of this province, there is nothing further that I can add at this time, for it is very well known that all of my short time I have dedicated, as I shall continue to dedicate my time, to pacification, which is the very foundation for all enterprises and reforms that it is desired to introduce hereafter, working for the early and rapid development of the interests of this province.

So, in conclusion, it remains but for me to crave your complete indulgence for my lack of capacity, and I shall console myself with the satisfaction of duty done, if not with great ability, most assuredly with no lack of the best intentions.

Respectfully,

A. DANCEL, *Provincial Governor.*

---

#### ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF ROMBLON.

OFFICE OF THE PROVINCIAL GOVERNOR, PROVINCE OF ROMBLON,  
*Romblon, February 9, 1903.*

SIR: During the past year of 1902 the province of Romblon has improved its production through the efforts of the municipalities. In all the pueblos the inhabitants have increased the cultivation of the cocoanut, hemp, tobacco, rice, and corn, and there is sufficient seed for the present year, and large stores of rice in the island of Tablas.

The tranquillity of this province has not been disturbed, excepting the attack on the island of Maestre de Campo by pirates from other provinces.

In all the towns municipal boards of health have been organized, and each of them has adopted its sanitary regulations against the ravages of Asiatic cholera.

The number of houses of strong materials in each pueblo has been augmented, and even in the barrios the streets are kept clean.

Personal labor in lieu of a road tax has contributed much to the general advancement of the pueblos, and, besides repairing its roads and constructing new bridges, each town has built its schoolhouse of strong materials without burdening the municipal treasury, but considering solely the welfare of all.

In the town of Romblon, the capital of the province of the same name, a road, entirely of stone, has been constructed by means of the personal labor tax. This road is 2 meters wide, 2.50 meters high, and 800 meters long. It redeems a large tract of the coast along that part of the port which is the nearest to the town, impassable at high tide, and establishes communication with some of the barrios of the northern part of the island, making it possible for the people to haul their products from their fields or plantations to the town, where it is easy to find a market for them.

Another road which has also been constructed starts at a place called Cogon, on the east coast, and traverses the central part of the island, having a length of 3 leagues and leading through mountains and places which were formerly difficult of access. This road establishes communication between the pueblo and one of its most populous and undisputably the richest of its barrios. Throughout its entire length the width of this road is not less than 3 meters.

Constabulary posts have been established in the towns of Santa Fe, Looc, and San Fernando, besides the posts that existed in Odiongan and Cajidiocan.

The towns of Odiongan and Magallanes deserve to be made open ports, for the reason that they are constantly visited by vessels with first-class licenses, which is due to the products of the first named, tobacco, hemp, and copra; and of the latter, timber of the best kind.

Public instruction has made some progress since last year, and the schools and pupils in the towns and barrios have increased in number during the year 1902.

The public calamities which have occurred in this province are only the destruction of 2 bridges and of the plantations of 3 barrios of Cajidiocan, Sibuyan Island, by a typhoon in the month of July, and the appearance of rinderpest in the pueblo of Santa Fe, Tablas Island, the mortality, however, being inconsiderable, because from September to the end of December the number of animals which died did not reach 50, thanks to the American veterinary surgeon who came from Manila to fight the pest and to the precautions taken by the people of the pueblo. The disease is now confined to a barrio where there is little stock, and cases occur very seldom.

Asiatic cholera has appeared only on the islands of Banton and Maestre de Campo, and has caused but 200 cases and 60 deaths. This infection was due to communication with transports from infected ports, which took water at those islands without the knowledge of the provincial sanitary authorities.

The port of the provincial capital needs harbor lights, which should be placed on the bars at its entrance, and which would facilitate the entry of ships at night and during typhoons and storms, when it is necessary for them to anchor.

On the island of Romblon there is an immense amount of marble suitable for sculpture, and these quarries if exploited would be a source of wealth for the inhabitants. On the islands of Sibuyan and Banton there are considerable quantities of mastic gum and gypsum, which are still unexploited, and would also be sources of wealth.

It would be a very suitable measure if a licensed veterinary surgeon and a teacher of agriculture were stationed in this province.

We are also very much in need of a launch of about 200 tons for the service of the government and of the pueblos, as this province is composed of seven separate islands, which makes the inspection of and communication with the pueblos very difficult; also for protection in cases of emergency.

It would also be very convenient if a high school were established in the town of Romblon, for the education of studious young men who have not the means of obtaining their education in Manila.

I have the honor to set forth the above particulars in compliance with section 7 of Act 83.

Very respectfully,

FRANCISCO SANZ,  
Governor.

The CIVIL GOVERNOR, *Manila, P. I.*

#### ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF SAMAR.

OFFICE OF THE PROVINCIAL GOVERNOR, PROVINCE OF SAMAR,  
*Catbalogan, January 15, 1903.*

SIR: In compliance with the provisions of section 7 of the general act for the organization of provincial governments in the Philippine Islands, I have the honor to submit the following report of the conditions of the province of Samar since the implantation in the same of the civil régime until the last day of December, 1902, and suggesting those measures, executive or legislative in character, which I deem most adequate for the betterment of the conditions in the said province.

Upon the implantation here of the civil government, which took place upon June 17, 1902, the province was just emerging from a cruel and bloody war. Of the 40 pueblos which existed in the province during the Spanish times, 23 were reduced completely to ashes, and 4 partly destroyed. The last mentioned were Catbalogan, Capul, Catarman, and Basey. Only the following pueblos were respected: Tarangnan, Santo Niño, Calbayog, Bobon, Laoang, Palapag, Mercedes, Guiuan, Santa Rita, Villa Real, Calbiga, Jaibong, and Zumarraga, a total of 13 pueblos. The barrios or settlements of the province, it may be said, were all, or for the most part, burned in the war.

The pueblos destroyed are being rebuilt little by little. Their inhabitants have returned and have begun to build houses of a temporary character, of bamboo and nipa. In nearly all these pueblos there are already municipal buildings and school-houses, constructed, of course, of light materials. Oquendo, Weyler, San Julian, and Quinapundan have not as yet anything more than municipal buildings. The pueblos of Gandara, Palapag, Borongan, Hernani, Pinabacdao, San Sebastian, and Paranas have not as yet public buildings of any kind, though Borongan has commenced the construction of a spacious public school for children of both sexes.

Among the pueblos not destroyed in whole or in part, there are some which have no public buildings, such as Catbalogan, the capital of the province, and Santo Nino. The pueblo of Tarangnan has two public school buildings, one for boys and one for girls; but the municipal building is so dismantled, as a consequence of the war, that the municipality does not use it. The municipal government is temporarily making use of the parish convent. The pueblos which have buildings (municipal and schoolhouses) are the following: Calbayog, Bobon, Catarman, Laoang, Mercedes, Guiuan, Basey, Jiabong, and Zumarraga. The first named, Calbayog, possesses, in addition to the municipal buildings and schools for boys and girls, a public building, which in former times, during the Spanish government, was used for quarters of the civil guard. It is to be noted that all of the public buildings of these pueblos are of strong materials, for the most part. Finally, the pueblos of Capul, Santa Rita, Villa Real, and Calbiga have only municipal buildings. The two last mentioned use the parish convents for schools, and the two first named, Capul and Santa Rita, hold their schools in rented houses.

When civil government was implanted in this province the pueblos were organized under the provisions of Orders No. 43. It was necessary, therefore, to organize them under the municipal code. Having been appointed chairman in this work of reorganization, I attempted to carry it out immediately, but I was prevented by the difficulty of communications and the lack of a steam launch, for it is well known that Samar is wanting in roads, and it is necessary to use a steam launch in order to go from one place to another.

Up to the present time the following pueblos have been organized: Almagro, Balangiga, Basey, Bobon, Borongan, Calbayog, Calbiga, Capul, Catbalogan, Catarman, Catubig, Guiuan, Hernani, Jiabong, Lanang, Lavezares, La Granja, Mercedes, Mondragon, Motiong, Oquendo, Oras, Paranas, Pinabacdao, Paric, Quinapundan, San Julian, Santa Margarita, Sulat, Tubig, Weyler, Villa Real, and Zumarraga. There remain still to be organized the municipalities of Tarangnan, Gandary, Pambujan, Laoang, Palapag, and Salcedo. The lack of means of transportation, the presence of cholera, and later the work of the census have been the causes that they are not yet duly organized.

The pueblos of Almagro, Motiong, and San Antonio are not included in the official guide of 1898. I organized them because I found them already constituted under Military Orders, No. 43.

Before proceeding further, it becomes necessary to state that in order that the pueblos be rebuilt as soon as possible and the respective municipal governments be enabled to provide themselves with proper public buildings it is needful to facilitate the granting of the timber cutting by the pueblos. At present the procedure in this matter is long. The pueblos have to repair to Manila to obtain license for cutting the timber necessary to construct or restore their buildings, and to have to go so far discourages them, so instead of asking for the proper license for cutting timber they simply construct or repair their buildings with bamboo and nipa. I believe that the provincial board, which is informed of the needs of the province, should be given authority for granting these timber licenses, in favor of the pueblos and the poor residents, with the restrictions imposed by the forestry regulations. Under such a system I believe that very soon the pueblos of this province of Samar, so castigated by the war, would be restored to their former state; because they appear daily before the provincial board setting forth their needs, though they are backward when they have to apply to offices so far away, which do not maintain constant relations with them, as does the provincial board.

#### PUBLIC INSTRUCTION.

In the matter of public instruction, the following pueblos have a native primary male teacher and a female teacher: Tarangnan, Capul, La Granja, Bobon, Catarman, Mondragon, Pambujan, Tubig, San Julian, Lanang, Mercedes, Balangiga, and Basey. Borongan, Paric, and Motiong have two male and two female teachers; and Villa Real two male teachers. The pueblos of Catbalogan, Catubig, Oras, Sulat, Salcedo, Calbiga, and San Antonio have but one primary male teacher; and Gandara, Santa Margarita, Santo Nino, Oquendo, Weyler, Palapag, Hernani, Quinapundan, Pinabacdao, San Sebastian, Paranas, Zumarraga, Santa Rita, Jiabong, and Almagro, have no teachers whatever.

As for instruction in the English language, Laoang has two American teachers and two Filipino assistants; Guiuan and Basey also have two American teachers, and Borongan and Calbayog, one American teacher. In the last-named town there is an American female teacher in addition.

I should also note that in Calbayog and Laoang, there is not one native primary teacher.

The hour has arrived when some attention should be given to the branch of education in this province. Seven months of civil life have already passed and it is necessary that the pueblos, at any rate the more important ones, should have an English teacher. It is not perfectly well understood why Catbalogan, the capital of the province, has not as yet a male and a female teacher of English, while under full military régime there was an American teacher of English. This is urgent, moreover, when it is remembered that within a short while English will be current as the official tongue. As for teachers supported by the pueblos, the pueblos complain that they are lacking in resources, that the municipal code does not provide them with sufficient funds to cover all their needs. In truth, many taxes, or more accurately speaking, the greater number of the taxes authorized by the said code, are absolutely nonproductive in many of the pueblos. The insular government, or the provincial, should lend them money or undertake themselves the construction of schoolhouses and the support of the primary teachers in those municipalities which, owing to their unfortunate situation, are unable to comply with this duty. True, youths may be taken from these municipalities to be educated in other places; but I believe it to be very necessary to have schools with the proper teachers for the general education of the people in every municipality, both large and small. If it were practicable, there should be schools even in the forests. The mass of the people of this province are so densely ignorant that they are superstitious and easily influenced by any one pretending to be endowed with miraculous attributes or with invulnerability, through the possession of an "anting-anting," or amulet. This mass should be educated at any sacrifice, and without stopping to consider the cost, and without delay, for these people are the ones who form the nucleus of those disturbers of public order known as "polajan" or "Dios-Dios," and who compose the criminal element. The problem of public order is to be solved here by educating the general mass of the people of the province.

#### JUSTICES OF THE PEACE.

Passing on to another point: In nearly all the municipalities of the province of Samar, there have already been named justices of the peace and auxiliary justices of the peace, for the administration of justice. The following are the only pueblos which are not provided with the said officials: Gandara, Laoang, Palapag, Pam-bujan, Salcedo, and Tarangnan, which are the six pueblos not yet organized. I trust that within a short time these pueblos will enjoy the benefits of the said institution.

Anent this matter of the justices of the peace, it occurs to me to suggest that the justices of the peace be provided, at the expense of the insular treasury, with copies of the codes and laws now in force. In Samar the justices of the peace have absolutely none of these, and it is impossible for them to administer justice. Only the justice of the peace of the provincial capital, and he on account of his proximity to the court of first instance and the government offices, is in a position to obtain all the orders of which he has need in the performance of his duties.

#### PUBLIC ORDER.

With regard to public order, I believe that I am able to give assurance that peace and tranquillity reign in the province of Samar, except for certain bands of outlaws who live in the forests. These bands have no firearms and are engaged in robbery and pillage. They usually attack barrios which are entirely undefended. It must be remembered that during the war all the arms of every kind that were in the possession of private persons were taken up, so that when the civil régime was established here some of the pueblos obtained from me authority to manufacture bolos for use in work in the fields. At present there are pueblos in the province which have but a few arms, and the municipal police and volunteers are armed with wooden spears and with sharpened canes. It is not surprising that three or four ladrones, armed with daggers or bolos, come in and take possession of a barrio which has not a single firearm, nor even of any other kind, for use in its defense.

The existence of ladrones in this province is explainable. After the war there very many people left who were unaccustomed to work and who had to seek their means of living through robbery. On the other hand the great extent of this province, covered with woods and forests, makes it very suitable as a hiding place for ladrones. The municipalities here are large in area and without means of communicating with other places. In the province of Cebu there are 57 municipalities, and Cebu has about one-third or one-fourth the area of Samar, while in this province of so great area there are but 43 pueblos. So it is explained how the ladrones of every other place, not excepting Luzon, when they find themselves threatened with

capture and persecuted, seek and find refuge in the interior of Samar. It can be stated with certainty that the chiefs of the "polajan" or "Dios-Dios," in their majority, are natives of other provinces, and the most daring and those of the most cruel instincts, are usually outsiders, not natives of the province of Samar. One of the best attributes of the inhabitants of this province is their peaceableness; and on this account a great many persons are amazed because the war was continued for so long a time here. It is believed that ignorance, and ignorance alone, is what has made it possible for the people of Samar, naturally so pacific, to continue for so long a time the past state of disorder. I am firm in my belief that with the diffusion of knowledge ladronism will be eliminated from all that misguided mass of people who follow after a "papa-dios," or unconsciously aid and assist him.

Confiding in the peaceable character of the natives of this province, I make bold to say that in spite of its wilds and great area, if everything that is absolutely essential is done, very soon will tranquillity reign even in the remote recesses of the mountains and forests. I note, furthermore, another very favorable trait among the inhabitants of this province, and this is their respect for the authorities. I feel honored in stating that the people of Samar comply religiously with the orders of the government; and that the majority of them, not to say all, take their stand with the government in the effort to stamp out ladronism. There are pueblos, such as Calbayog, which present themselves in a body to go to the woods to combat ladrones. And Pinabacdao, with its police and volunteers, armed solely with sharpened canes, is capturing majors and colonels of the bandits, delivering them later to the constabulary. This is a pueblo of heroes. It now asks to be furnished with shotguns, and I believe it but right that they be given them.

As for the number of ladrones in the province, from the investigations made, both of a governmental and of a judicial nature, it seems that it might have been placed at 400 or 500 men at the time of the implantation of the civil régime in the province; but to-day, thanks to the efforts expended in every direction for the suppression of ladronism, and with the efficient aid of the pueblos, which, as I stated before, ally themselves wholly with the government, it may be said of a truth that there remain but a few, and these are fleeing and dispersed, constantly changing their location in order not to fall into the hands of the government forces. The second in command of these forces of ladrones was seen not long ago in the island of Parasan, completely alone, and the "papa," Pablo de la Cruz, goes from one place to another, accompanied by but a few men, and followed closely by the constabulary.

For the maintenance of public order all the pueblos of the province of Samar have municipal police, and many of them—the majority, in fact—have, in addition, an organized band of volunteers. As a general rule both forces are armed with bolos, spears, and sharpened canes. The municipal police of Calbayog, Paranas, Calbiga, Catbalogan, Villa Real, and Zumarraga alone have shotguns. The pueblo of Santa Rita has been issued five revolvers with ammunition. It is necessary to issue arms to some other municipalities, above all to those pueblos which formerly had a military post, because they have no troops now nor any detachment of constabulary near them; and also to those which, on account of their location, are more exposed to an attack of the ladrones.

The statement should be made here that up to the present time the municipal police has not lost a single gun of those which have been given them, and I am of the opinion that guns may be given them without danger if issued upon the responsibility of the presidente, or of him and all the municipal councilors.

Of the insular forces detachments of constabulary are stationed at the following points: One of 26 men under 1 officer, at Calbiga; another of 42 men and 2 officers, at Tarangnan; another of 53 men with 2 officers, at Erenas, a barrio of Gandara; another of 60 men with 1 officer, at Tubig, and another of 34 men and 1 officer, at San Julian. Probably by this time there is another detachment of constabulary, consisting of 30 men and 1 officer, in the pueblo of Laoang, to the north of the island.

The army forces are distributed as follows: One company of scouts at Catbalogan; four companies of American soldiers at Laoang; one of scouts at Borongan; another at Gandara, and the body of the forces, seven or eight companies, at Calbayog.

Another detachment or two of constabulary must be stationed in the north and also others in the south of the province. I see no necessity for establishing a post at Laoang, since there are four companies of American soldiers at that place already. It would be better to station them at Catarman.

As can be seen, there are enough troops in Samar to cope with any difficulty in public order which may arise. If to this it is added that the scouts are permitted to engage in the persecution of bandits in the mountains, it may be affirmed that there are more forces than are necessary; and economy may be secured in yet another direction. I refer to the organization of a good secret service. It may be said that

until the present time the province has had no service of this kind. Its necessity is clearly apparent. Apart from the importance which exists for this service in order to discover all kinds of crimes connected with outlawry in Samar, what is necessary is that the chiefs who are in command of the bands be captured. The masses which follow them, so ignorant as to make them almost irresponsible, disperse as soon as the leaders fall. While the leaders live they find proselytes to follow them, who are convinced more than ever that the fact of their leader not having been killed or captured is proof of his invulnerability or of the miraculous powers with which he is endowed. And because of the great extent of Samar, the broken nature of the ground, and the impenetrable forests, the aid which the bandits receive in some of the barrios and settlements which protect them (in the majority of cases through fear), the protection afforded them by more or less influential persons who give them assistance from the pueblos for their own private purposes—for all of these reasons it is but little less than impossible to reach these leaders without the aid of a well-organized secret service.

According to law the constabulary should have an office of secret information. It may be that in those provinces which have been longer in civil life and in which peace is well established the constabulary has an efficient secret service. In Samar the constabulary has had no time to engage in this. Until now the main occupation has been to recruit men for the service, to distribute these men to the points believed to be the most strategic, and to persecute constantly the bandits in the fields. The senior inspector has not rested, but has gone from place to place as the exigencies of the service demanded.

Because of the lack of this service dire evil results may follow. The constabulary has not always the best information. It is guided, for the most part, by the information furnished by officious friends who make any statements they may see fit, or by information furnished by persons who see in every inhabitant of Samar a traitor of Balangiga, and this is very injurious. In this manner all the natives of the province are considered traitors and are treated according to this prejudice. This is far from the truth; there intervenes an abyss between those times, blinded by political passions, and the present time, when the people truly desire peace.

It is my opinion that, in certain exceptional circumstances, the provincial governor should be granted, since he is responsible for the condition of the province, the power to create two or three positions in the secret service, and, with the approval of the civil governor of the islands, at the expense of the province, to fix such salaries as he may see fit. With this, and such other means as the provincial governor has at his disposal, he would be enabled to accomplish much for the pacification of the province. Otherwise the governor is made responsible without being furnished the means necessary for the performance of his mission. Now, since the creation of this service is the result of exceptional circumstances, it should cease when these circumstances no longer exist or the Philippine constabulary is sufficiently organized. Attention is called to the fact that the provincial board of Samar passed a resolution providing for the creation of these positions, with the salaries which they saw best to designate. A copy of this resolution was transmitted to the insular treasurer for his approval. Doubtless because this service is in charge of the Philippine constabulary, approval has not yet been granted. But the fact remains that there is no well-organized secret service here. As far as I know the constabulary of Samar has but one secret agent, and he was furnished by the office of the governor.

#### MEANS OF COMMUNICATION.

As far as means of communication are concerned, the province of Samar could not well be in a worse condition. There are no interior cartways nor roads—there are only paths. It is said that during the time of the Spaniards there were roads along the north and east coasts, which joined the coast pueblos to each other. Since the war, due to the lack of facilities for the repair and conservation of the roads, they have been converted into mere wilds. The same is true of the bridges—the majority are either destroyed or are about to tumble down. And yet there are bridges of importance, the most of them in the inhabited portions of the municipalities. In Catbalogan there is a bridge in the very town which, if it is not repaired soon, will fall to the ground. I believe that the provincial boards should be authorized to appropriate funds for this purpose when the municipalities have not the means necessary for repairing their bridges, and the sums so appropriated should be repaid by the municipalities themselves. Of course this should be done only in case no law is passed providing a tax for roads, for if this should be done the pueblos will need no aid from the provincial treasury to repair their roads and bridges; the tax will suffice for every need. So great is this lack of means of communication in this province, and so great is the need therefor, that the pueblos gathered in assembly unanimously

voted for the road tax. It is hoped that the honorable Commission will enact a suitable law creating this tax, which will prove to be of so great benefit to the province of Samar.

Because of the lack of land communication all intercourse is carried on by sea. Wherefore the urgent necessity is seen for steam launches for the proper performance of their duties in the various pueblos of the province by the provincial officers, for gathering up the prisoners to be brought to the provincial jail, and, at times, the witnesses, if it is desired that the administration of justice shall not suffer detriment.

It is my belief that a coast-guard cutter should be permanently stationed here, in addition to a small steam launch. During the time of the Spanish Government Samar had a launch, the *Peña Plata*, the expenses of which were defrayed by the provincial treasury. The coast-guard cutter is necessary in the north and on the other side, the Pacific coast; and the small launch is suitable for going along this coast and up the navigable rivers, such as Gandara and Calbiga. The provincial board of Samar should be authorized to procure at the expense of the province one of these small steam launches, or to have placed at its disposal a military launch, the cost of coal and operation being borne by the province.

Another of the necessities most felt is the lack of telegraphic communication between the provincial capital and the different pueblos of the province. At the very earliest moment possible there should be constructed a telegraph line to unite Catbalogan with Catarman, Laoang, Borongan, and Guiuan. The pueblos ask for the installation of a complete system of telephones to connect the pueblos with each other, promising to pay both the cost of installation and the cost of apparatus. It is not necessary to say that this would be a convenience, for it would shorten distances and the provincial capital would be in close communication with the pueblos of the province.

#### EXTENSION OF POSTAL SERVICE.

Another service, until now disregarded, claims the attention of the authorities, and this is the interior service of the posts of the province. The undersigned believes that he contributed in Cebu, while governor of that province, to the organization of such a service there. He has desired to do likewise here, but the difficulty of personnel is encountered, the employees here not being able to attend to all the work that they have already been assigned. Therefore the office of the governor could not attend to the correspondence which would be received regularly for the different pueblos, as was done in Cebu, where there was a clerk who attended exclusively to this service. On the other hand, this being an insular service, the post-office department desires to organize the same. I believe that it is right in this. The department itself should operate the interior post-offices; should take charge of this service and carry on the business directly with the pueblos. The fact is, however, that up to the present time we have had no post-office service here. If, as seems likely, the post-office department is going to take this matter up in Samar, the provincial government is ready to contribute in every manner possible to have this service organized as soon as possible, for no one is as interested in this question as greatly as the government itself, which desires always to be in touch with the various municipalities of the province. At present the government is at the expense of sending special dispatches when it desires to communicate with the pueblos, or has to wait for a steamer for the place, or to avail itself of the opportunity of the return of some man, in order to carry the correspondence which is for his pueblo and for the municipal authorities near at hand.

#### PUBLIC HEALTH.

The situation of the province of Samar in so far as relates to public health could not be better. Samar is one of the most healthful provinces of the archipelago. Like other provinces it has also been attacked by the cholera; but the terrible disease did not cause the devastation here that it did in other places. In but one pueblo did the cholera become really virulent—at Paranas, where even the municipality was left unorganized owing to the death of nearly all the municipal officials and nearly all the members of the municipal police. Comparatively few pueblos were attacked, and of these we may mention Calbayog, Laoang, Borongan, and Guiuan, which are the most important of the island; but I believe that in all of them the disease was of quite a mild type. I think that the amount the provincial government was obliged to pay as indemnity for the houses burnt to prevent the spread of the cholera did not reach the sum of a thousand pesos Mexican. However, the smallpox and beriberi have been more destructive here, but it is because there have not been any neat cattle, nor are there any here now, so that the people have only rice and fish to eat. In Catbalogan when there is meat, which is very rarely the case, it costs a peso and a peso and a half per pound, a price which surely does not place it within the reach of the poor. Smallpox has been general throughout the

province. Beriberi has attacked only a few of the pueblos; but even more general than the smallpox has been the influenza, from which, I believe, not a person in Samar has escaped, and which has not failed to cause even deaths.

For lack of personnel no municipal boards of health have been organized, but the pueblos themselves have taken such precautionary hygienic measures as have been possible. In my visit to the more important pueblos of the island I was agreeably surprised to note the cleanliness which I found in them, their streets, squares, yards, and the dwelling houses of the residents.

It may be stated that to-day the cholera has completely disappeared, as well as the influenza. Smallpox exists, but is decreasing. Leprosy, which ravages certain of the provinces, exists here only in one pueblo, Basey, where there seem to be some 50 stricken.

#### AGRICULTURE.

Agriculture in this province is dead. The people have begun to work their fields and to sow rice upon the public lands in accordance with a late law for the prevention of famine, but they lack every kind of necessities. There is a scarcity of carabaos, which are the principal requisite of cultivation, owing to their decimation by war and rinderpest, while war has converted many fields into wilds, and the people are without a single bolo for cutting plants. It is of no avail to furnish them plants for sowing if they are without implements with which to plant. The idea of importing into the provinces which are lacking in work animals, through the insular purchasing agent, carabaos, which will be sold to the natives or residents of those pueblos, of course without gain upon the part of the government, has been received by the pueblos of this province with enthusiasm and a sincere display of gratitude.

This province is naturally rich. It produces the best and highest-priced articles, such as hemp, and cocoanut, from which copra is made. Samar exports hemp and copra in great quantities. There are also raised rice, tobacco, and cocoa, though these last in small quantities. As for articles of prime necessity, in addition to rice, Samar produces potatoes, tubers, and corn. With these articles, and the much or little rice that there is on hand in the province, it may be assured that there will be no real famine in Samar; and with the prices which hemp has commanded, everyone has more or less money, not only enough for living, but even enough to waste. Thus is explained how it is impossible to find here anyone to work; why laborers can not be found except at exorbitant prices. The wage fluctuates between a peso and a half and 2 pesos per day, and the reason is that they earn much money by working in abacá (hemp). It is calculated that one man will work 2 "arrobas" (50 pounds) per day; and as one-half belongs to the workman, and an arroba is ordinarily worth \$4 Mexican, the result is that one workman earns \$4 Mexican per day. So it is that everybody wants to work abacá, and no one wants to hire as a servant or as a day laborer. If a person who is willing to work as a servant or laborer can be found, it is only at high prices.

Abacá and copra constitute the chief articles of commerce in this province. Below I give an estimate of the number of piculs of each article produced in the pueblos in normal seasons per year, according to information furnished by the pueblos themselves:

Pueblo.	Abacá.	Copra.	Pueblo.	Abacá.	Copra.
Almagro.....	8,600	.....	Oquendo.....	6,000	.....
Balangiga.....	500	4,000	Oras.....	8,600	3,600
Basey.....	8,000	10,000	Palapag.....	8,000	.....
Bobon.....	2,500	.....	Pambujan.....	8,000	.....
Borongan.....	1,200	15,000	Paranas.....	8,000	.....
Calbayog.....	10,000	.....	Paric.....	8,000	8,000
Calbiga.....	1,200	.....	Pinabacdao.....	600	.....
Capul.....	2,400	.....	Quinapundan.....	300	.....
Catarman.....	20,000	1,000	Salcedo.....	400	12,000
Catbalogan.....	3,500	.....	San Julian.....	1,000	4,000
Catubig.....	6,000	.....	San Sebastian.....	300	.....
Gandara.....	25,000	.....	San Antonio.....	1,500	.....
Guiuan.....	.....	15,000	Santa Rita.....	6,000	.....
Hernani.....	500	1,500	Santo Nifio.....	2,400	.....
Jiabong.....	2,400	.....	Santa Margarita.....	2,000	.....
La Granja.....	6,000	.....	Sulat.....	700	6,000
Lanang.....	3,000	5,000	Tarangnan.....	2,400	.....
Laoang.....	1,500	.....	Tubig.....	1,500	1,000
Lavezares.....	15,000	.....	Villa Real.....	1,500	.....
Mercedes.....	100	500	Weyler.....	2,000	.....
Mondragon.....	1,500	.....	Zumarraga.....	6,000	.....
Motiong.....	4,800	.....			

All of these products are exported from the ports of Catbalogan, Calbayog, Laoang, Borongan, and Guiuan. It is calculated that 30,000 piculs of abacá per year are exported from Catbalogan, 90,000 piculs from Calbayog, 28,000 piculs from Laoang, 14,500 piculs from Borongan, and 2,000 piculs from Guiuan. Borongan exports some 40,000 piculs of copra, and some 32,000 piculs are exported from Guiuan. On account of the proximity of the pueblos of Basey and Santa Rita to Leyte they send their abacá to Tacloban.

All the pueblos produce abacá except Guiuan, but copra is produced only in the pueblos above shown. Rice is grown in nearly all the pueblos, but the great producers of this article are Catubig, Gandara, and Catarman. Catubig produces from 120,000 to 130,000 cavanese of rice per year in favorable seasons, Catarman some 25,000 cavanese, and Gandara some 15,000 cavanese. Catubig usually exports rice to Manila. By reason of the war the people have been unable to plant abacá or rice, so that this year but little of either article will be produced. Especially will little rice be gathered. According to information which I have from the respective pueblos, in Catubig but 1,000 cavanese of rice will be gathered as the next crop, another 1,000 cavanese in Catarman, and in Gandara some 6,000 cavanese, the last named raising more because they planted immediately after the coming of peace. There will also be less copra, because of the injury done to the cocoanut groves by the recent storm which passed over this province.

As for animals used for food, the war finished with nearly all of them. Cows, pigs, chickens, goats, etc., are imported from other provinces and cost fabulous prices as compared with those formerly charged and which now obtain in other places. A cow costs \$100 Mexican, a pig \$20 Mexican, and a chicken \$2 Mexican. The smallest price for a carabao is \$100 Mexican. This will show how dear life is in Samar, whereas before it was exceedingly cheap. The price of rice is \$8 Mexican per picul.

#### INDUSTRIES.

Industrial work is confined to certain natives who are engaged in the manufacture of "vino" (native wine) from nipa in a primitive manner; to some Chinos who make bread; to many who engage in fishery, and to what has been styled as "family industries." Many families in Basey are engaged in making "petates" (native mats), hats, hampers, baskets, etc., of "ticug," a finer material than "buri." Woven goods of abacá are made at Tubig and Sulat. If anyone engages in hunting, which is so abundant here, it is for pastime.

#### COMMERCE.

The commerce of the province, as in the whole of the archipelago, is delivered into the hands of foreigners. The most important foreign houses of Manila have representatives in this province; such are the firms of the Compañía General de Tabacos de Filipinas, the houses of Smith Bell and Warner Barnes. The first has agents at various points along the coast on the western side, and in nearly all the pueblos of the east coast. The two American houses, the Pacific Oriental Trading Company and the American Commercial, also have representatives here. In addition, the house of Oria Brothers, a Spanish firm, engaged principally in the abacá business, is located at Laoang. There are also representatives here of important Chinese firms, but there are comparatively few Chinese in the province, due to the fact that the natives do not like the Chinese, and the latter do not dare, as yet, to go to many of the pueblos. All of these houses import articles to the value of many thousands of dollars, but this office has no data for furnishing figures, even approximated, of the amount to which the importation of goods into the provinces has ascended.

#### FORESTS.

The forests of this province produce the best lumber that is known; but aside from a small amount that is taken to Tacloban to be used in construction, no one exports lumber from here to any other place. This is due to the lack of transportation, a difficulty which is fully appreciated when the topographical nature of Samar is considered, for it is an exceedingly mountainous country.

#### MINERALS.

And finally, it is claimed that Samar conceals in its bowels rich mines of coal, gold, petroleum, lead, copper, and, in a word, every kind of mineral. It is all very true, but no mine is in operation, nor even known.

## PROVINCIAL GOVERNMENT.

I must not conclude this task without saying a few words concerning the provincial government and the provincial buildings.

All the offices of the government of this province are filled, with the exception of that of the provincial supervisor. Since there is not now any public improvement of importance to be constructed, I am of the opinion that it is not necessary to have a supervisor. Until times improve and large things can be done, I think that it is enough to appoint a clerk, who is a foreman of construction or an expert builder, with a salary of \$50 gold per month, under the charge of the provincial treasurer. This employee, under the supervision also of the provincial board, should take charge of the work that may be approved by the bureau of engineering, which has lately been created.

The work that has been intrusted to the offices of the treasurer and secretary has been enormous during these seven months which cover the existence of the government of Samar. In addition to other papers the number of letters and circulars sent to the various municipal governments of the province has been immense. Work has been done out of hours on all Saturday afternoons and nearly all holidays. Despite the small means at its disposal, the difficulty of communication, and the comparatively small personnel, the office of the treasurer has been able to collect during the last year the sum of \$89,451.36 Mexican and \$170.43 gold, as taxes, there remaining, on December 31, 1902, after paying all the expenses of the province, as a balance in favor of the provincial treasury, the sum of \$33,622.34 Mexican and \$910.89 in money of the United States. With greater facilities it would have been possible to collect 25 per cent more. It must be remembered that, besides this lack of facilities, Samar has an area of 1,382,552 hectares; while Cebu has but 418,800 hectares, and Leyte 800,000 hectares. The provincial board, taking into consideration the enormous disproportion between the amount of work that has been and is being done by the clerical force, which never halts, and the salary of \$150 gold per annum which each of these clerks receives, has passed a resolution increasing their salaries by 20 per cent, that is to say, to \$180 gold each per annum, upon the approval, as is necessary, of the insular treasurer. This resolution refers to the clerks in the offices of the treasurer, the secretary, and the governor.

I consider that I should fail in my duty should I not express to you my belief that the salaries received by the treasurer and also by the secretary of this province are too small, in my estimation. The province of Samar is very large and the work which these officials have done and still do is very great. Three thousand dollars gold annually is the salary received by the treasurer of Leyte and \$1,500 by the secretary. In Samar the treasurer and secretary receive, respectively, but \$1,500 and \$1,200 gold per annum. I believe that these salaries should be increased, taking into consideration the fact that Samar is much larger than the province of Leyte; that the work of these officials is very great; that living is excessively high here, and much money is needed in order to eat, dress, and have a fairly decent house.

As for the provincial buildings, there is only the provincial jail, and this is in good condition, spacious, located within the town itself, and on account of this proximity, it can be more easily cared for. The cells of the jail are large and well ventilated. The necessary expenditures are being made to make the jail more comfortable for the prisoners and to increase its security. The government has no building of its own, but rents a building, which is too small for all the public needs, at \$50 gold per month. It is true that the court of first instance has chambers in the same building, but no other building can be found. War reduced to ashes the best buildings of Catbalogan, and what fairly good houses are to be found are earning a rental of \$75 or \$50 gold per month, and are at present occupied. Such is the scarcity of buildings in this town that the public officials are obliged to live in rented houses, in company with the owner of the house.

With regard to the jail, I take the liberty of making two observations; one with respect to the guarding of the jail, and the other concerning the rations furnished the prisoners. I am of the belief that the provincial governor, being directly responsible for the security of the prisoners, should have the power to correct the carelessness of the guards in the performance of their duties. For instance, a guard goes to sleep, leaving his arms liable to be stolen. The governor should have authority to arrest him or to impose upon him a fine, or both penalties. The loss of his position is no punishment at all in a place where one earns more working by the day, or working abacá, than in the modest position of provincial guard, and while such carelessness is an act which of itself does not constitute crime, it may be the occasion of the escape of an important prisoner, or of something worse. With respect to the rations furnished the prisoners, I consider it unjust to measure all the prisoners by one

standard. The principal food here is fish and rice, so that prisoners in the provincial jail are given nothing else than that. European prisoners can not live on fish and rice, therefore, the provincial board has given orders to allow them bread, and upon certain days of the week, canned meat.

I conclude, sir, referring to the subject of communications. The following are indispensable: Steam launches, postal service, a telegraph joining the capital of the province with the principal pueblos, at any rate those of the north, south, and east coasts of the island, and the opening up of the roads. The Commission has just voted a loan of \$25,000 Mexican in favor of this province for the construction of roads, but this amount is insufficient. The least that is needed is \$50,000 to open up a road from here to the opposite coast, owing to the cost of day labor at the present time and to the mountainous character of the province of Samar. The final recommendation that I shall make is this: Because of the skill of the Filipino in arts and trades, there should be established at the earliest moment in the capital of this province, a school of arts and trades, good communications to place the various pueblos in constant contact with each other, the establishment of many primary schools for the instruction of the great mass of ignorant people, and the establishment of a school of arts and trades; all these will contribute without room for doubt to the consolidation of peace and the prosperity of the province of Samar.

This is all, honorable sir, that I take the liberty of presenting for your consideration.

Respectfully,

JULIO LLORENTE, *Provincial Governor.*

The CIVIL GOVERNOR, *Manila, P. I.*

#### ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF SORSOGON, 1902.

[Translation.]

OFFICE OF THE PROVINCIAL GOVERNOR OF SORSOGON, P. I.,  
*Sorsogon, July 14, 1903.*

The Hon. W. H. TAFT,  
*Civil Governor of the Philippine Islands, Manila.*

SIR: I have the honor to remit you herewith my report covering the period from March to December 31, 1902.

This work has been delayed so much by the large amount and the complicated nature of the work which I have had to perform since I took charge of the government of this province, and I therefore beg your pardon for this delay, it being due to the reasons aforementioned.

Very respectfully,

B. MONREAL,  
*Provincial Governor.*

[Translation.]

SORSOGON, P. I., *July 13, 1903.*

SIR: Pursuant to the provisions of the provincial act, the undersigned governor has the honor to give a brief account of the work of the government of this province in its several departments during the period beginning with March, 1902, and ending with the last day of December of the same year. In making this report I shall successively consider the following subjects: Personnel, Municipalities, Public order, Public health, Public instruction, Public funds, Work performed, General condition, Projects, and Suggestions.

#### PERSONNEL.

The members of the provincial board all conducted themselves perfectly well, with the exception of the provincial supervisor, who, on account of his poor health and of the hard work which his office brought with it in this province, where it is necessary to erect many and important buildings, was forced to tender his resignation in the beginning of July, which was accepted by the government. While this position was vacant the provincial treasurer acted as supervisor, and performed the duties of the said office admirably until the new supervisor took charge. As to the personnel of the treasurer's office, I have the satisfaction to state that the provincial treasurer, Mr. R. J. Fanning, is an officer worthy of all praise, because of his zeal and activity in the discharge of his duties. He has cooperated considerably in work not incumbent upon his office when I asked him for his advice and cooperation. The chief clerk of his office, Mr. Paul B. Weiss, is not less deserving of praise for his blameless conduct.

During the last third of the year the provincial secretary, Mr. Leon Paras, who was perhaps influenced by his friends and favorites, did not conduct himself as he ought to have done. While acting provincial governor, during my absence in Manila, he caused serious trouble by rendering decisions in favor of his friends, thereby injuring many other persons. This conduct gave rise to antipathy against his person, and caused the loss of his moral prestige, wherefore, understanding that he was playing a very poor part in the government, he had to tender his resignation. His position being thus vacated the governor performed his duties, and will do so until the new secretary shall have been appointed.

The provincial fiscal is performing his duties well, although this government could have expected more cooperation on his part, in view of his knowledge of the laws. He might have taken more pains in emitting his opinion in regard to the several requests for information on part of the provincial board and its members, and might have instructed the municipalities by circulars explaining the municipal laws, instead of contenting himself, as he seems to have done, with solving the difficulties and doubts in the interpretation and execution of the laws only when asked to do so. It is my opinion that instructions should be given regarding the execution of the municipal laws, as they have been but recently implanted in this country.

#### MUNICIPALITIES.

This province has 15 municipalities of the third and fourth classes, which are over 10 miles distant from each other, and a number of "visitas" which aspire to be organized into municipalities. It is expected that all will follow the general trend toward progress, although some are very slow in doing so, and others would have progressed more rapidly had it not been for the calamities which have befallen them so successively and under which they are still suffering. The rinderpest has caused heavy and incalculable losses throughout the province of Sorsogon, the fields of which the ruin of agriculture has converted into woods. The death of the animals is doubly felt by the pueblos of Barcelona, Bulusan, Yrocin, and Bulan, where the cultivation of rice is one of the sources of income. Other pueblos, where the cultivation of hemp is the principal source of revenue, although they have no need of work cattle for this purpose, suffered by the disturbances caused successively by De la Cruz, Colache, and Difo. At present, however, the cultivation of hemp is recovering, the province having been pacified, and the inhabitants of the pueblos of Sorsogon are blessing the government for the providential resolution of selling rice of a better quality cheaper than any of the importers of this province.

As a rule, the municipalities are progressing well, but I do not cease to inculcate the spirit of the Municipal Code in order to eradicate certain prejudicial inveterate customs, and have to suppress certain illegal radicalism, all of which is due to failure to understand the law. Matnog, Castilla, Bulusan, Yrocin, Barcelona, and Santa Magdalena are municipalities which require special attention on the part of the provincial government, as it has to keep correcting their errors.

It was found necessary to dismiss the entire municipal council of Bulusan, because the president was an opium smoker, and therefore neglected his official duties, and the councilors were either accomplices of Colache, or were manifestly negligent, and did not inform the authorities in regard to the large number of inhabitants of their districts who took to the field. Other councilors of several municipalities had to be severely reprimanded, because, although they should have been the first to obey the ordinance which they themselves had passed, they infringed the same. Thanks to these measures, the municipalities are working well now, and the presidents and councilors are honestly discharging the duties of their respective offices, some in an excellent manner and others fairly well, as their intellect permits.

Among the presidents who distinguished themselves by their activity the following deserve special mention: Mr. Rufino Gerona, of Bulan, who was chairman of the committee of public order, and who, assisted by his talent and energy, cooperated considerably in the work of pacification in this province, capturing Colache and Francisco de la Cruz; the president of Sorsogon, the provincial capital, by the name of Justino Bautista, who succeeded in capturing Calaw and his companions, bandits who were disturbing the public order and terrorizing the people by their raids; the president of Bacon, who, with his police, succeeded in capturing Crisanto Diw and his companions, a band of outlaws who commenced to organize in March; the president of Gubat, who captured Francisco ('Adag) Estipona and his companions, the remainder of Colache's bands; the president of Casiguran, who, with his volunteers, captured the companions of Colache, 300 pesos, and one revolver; and the president of Juban, who constructed the beautiful municipal building.

## PUBLIC ORDER.

Hardly had the campaign against Francisco de la Cruz been concluded by the capture of this person by Rufino Gerona in March when, on the 15th of the same month, a disturbance originated in the mountains of Bacon; but, thanks to the determined action of the president and the police of that pueblo, it was quelled, Diw being killed by the police while being captured. On the 25th Mr. H. Nevill, the commanding officer of the Philippines Constabulary, informed the provincial government that Antonio Colache, Esteban Diño, Pablo Estipona, alias Adag, and Isaac Gimao, with many followers, were in the mountains of Barcelona, and that it was their intention to imitate the raids of Francisco de la Cruz, whose fanatic beliefs they also professed. Their first step in this direction consisted in the assassination of the sergeant of the municipal police of Bulusan, at the place denominated Capangihan (Bulusan), on the 30th of March.

The government was devoting its attention to this disturbance when, on the same day, the 30th of March, it was preoccupied by an official telegram received from Manila, announcing that Asiatic cholera had made its appearance at that city. The government naturally took the necessary precautionary measures, and on the 1st of April I visited the pueblos of Magallanes, Bulan, Donsol, Pilar, and the island of Malawamawan. I decided to establish the pest house on the latter.

Hardly had I returned from those pueblos when I received the official report of the assassination of three privates of the Philippines Constabulary by Colache's band in the mountains of Bulusan. In view of these occurrences, the provincial board resolved on the 12th of April that the committee of public order be reorganized. The chairman of this committee was the never enough to be praised Rufino Gerona, the members being Messrs. Sabas Camara, Hermogenes Gollaba, Gil Bisco, and Isidoro Genavea, and the secretary Rosendo Gavionsa. A volunteer corps was organized for the purpose of conducting the campaign, the said corps being under the orders of the committee and the control of the commanding officer of the Philippines Constabulary. To this end all the pueblos of this province, except Donsol, Pilar, and Castilla, furnished on the 19th of April volunteers, who immediately mobilized for the purpose of drawing a cordon around the mountains of Bulusan, Barcelona, Gubat, Casiguran, and Irocin, on which the outlaws were encamped.

I take great pleasure in stating that while engaged in this campaign in Bulusan on the 22d of April I was agreeably surprised by the presence of the Hon. Judge A. C. Carson and his secretary, Mr. Manuel V. del Rosario, who offered to me their services as volunteers. I accepted this opportune offer on the part of Judge Carson, who, with his advice, contributed much to the successful issue of the campaign. The campaign having been mapped out, the rebels were captured one after the other; but Colache, Gimao, and Diño succeeded in escaping through the lines, together with their families. In view of the satisfactory result of the operations, and having considered a plan for the capture of the persons who succeeded in escaping through the cordon, the provincial government directed the cordon discontinued and the volunteers dismissed. In issuing this order it was provided that the committee of public order should continue to exercise its functions and hunt down the three leaders of the seditious movement. To this end I remained at Irocin, and the committee worked so successfully that on the 25th of May their efforts were crowned by the capture of Colache and Gimao, who were taken, with their respective families, in the mountains of Santa Magdalena by the active and intelligent R. Gerona and I. Genavea, with 120 volunteers from Bulan.

The south part of this province having been completely pacified by the capture of those two chiefs, the government could no longer disregard the seditious movements which were noticed in the mountains of Pilar. For this reason I went to that pueblo on the 20th of June, accompanied by Major Nevill, to the end of capturing Mariano Guiriba and his companions, who were in the mountains of that pueblo. Fortunately we succeeded in effecting this capture and taking the same Guiriba and his companions to the provincial capital. On the 27th of the same month I went to Gubat for the purpose of bringing to the provincial capital seven persons who used to belong to Colache's band, and who had voluntarily surrendered with a Krag rifle and 37 rounds of ammunition, upon the advice of Rev. Mariano Mercado, the parish priest of that pueblo.

The province enjoyed tranquillity, when, on the 22d of August, another disturbance commenced at Talaofiga, a visita of the pueblo of Santa Magdalena, which was initiated by the murder of three members of the constabulary by Espocia and his companions. The murderers were pursued by the Philippine constabulary, but apparently succeeded in escaping into Samar. Later on, end of September, the 17

men who composed Espocia's band were captured. Espocia died, gangrene having set in upon the amputation of his leg.

It can be said that this band did not interrupt the public tranquillity, which was affirmed by the capture of the only chief of Colache's bands who remained, Esteban Diño, together with Emeterio Furio and the two young women who accompanied them, and who made the propaganda.

Prior to closing this chapter, I must describe and praise the services rendered by the committee of public order, and particularly by its chairman, President Rufino Gerona, of Bulan, who, together with the Philippine constabulary, did not rest until the campaign against the disturbers of the peace had been brought to a successful close, and reestablished within a few days the peace and tranquillity which this province now enjoys.

I must also mention the patriotism of the inhabitants of this province, which is deserving of eulogy. Part of them cheerfully offered their services as volunteers during this campaign, and part contributed money for the subsistence of the volunteers and their families.

Not deeming it just or advisable to have all the expenses paid by voluntary subscription, the provincial government suggested that each municipality appropriate a sufficient sum, in proportion to its means, to defray the expenses of their respective volunteers during the campaign. The municipalities, with a willingness worthy of commendation, appropriated a sufficient amount for these expenses. The provincial board also appropriated, on my motion, the sum of \$3,500 Mexican for the purchase of rice at the provincial capital, the price of this article having gone up to an exorbitant figure at Gubat, Bulasan, and the neighboring pueblos, because Smith, Bell & Co., the only importers in those pueblos, were trying to benefit by the poverty of the people and the reconcentration. To the end of frustrating this scheme and of preventing the occurrence of further trouble I furnished rice to Bulasan and the adjacent pueblos. This action greatly satisfied the inhabitants and taught certain merchants the lesson that it would pay better to be more humane in case of public calamities.

It will be needless to state that Mr. Nevill and his constabulary complied with their duties in a satisfactory manner, and acted so much in harmony with the provincial government that not the slightest complication or disagreement took place during the field operations. The volunteers and the constabulary fraternized and worked hand in hand, as they should have done, bearing the hardships of the country willingly and uncomplainingly.

Before closing, I desire to do justice to the attitude of the clergy of this province, who with their sermons and their advice to the people greatly contributed to the eradication of all the germs of future disturbances, which seems to have been accomplished in the pueblos of this province. The parish priests of Bulasan, Gubat, and Barcelona are deserving of special mention, as they even gave me information of what they knew about the people who participated in the uprising.

#### PUBLIC HEALTH.

During the entire year the public health in the pueblos could not have been better, excepting some cases of dengue, malaria, beriberi, rheumatism, and pulmonary tuberculosis. In December, however, several suspicious cases of diarrhea appeared, which were finally declared to be Asiatic cholera. The ravages caused by this disease in the provincial capital greatly exceeded those which it caused in the other pueblos.

The board of health directed many preventive measures to be adopted which, although unable to eradicate the disease altogether, greatly limited the number of cases. At the beginning the pueblos established quarantine lines on land, but in view of the obstacles which these caused to the securing of food and other means of subsistence the board of health resolved that they be discontinued. The municipalities appropriated the necessary funds for the free distribution of medicine to cholera patients in their pueblos.

Dr. Julio Ruiz, the president of the board of health, has gained for himself the love of everybody, especially of the people of the provincial capital, in view of the activity, self-denial, and zeal which he displayed during this period in fighting the epidemic.

Municipal boards of health have been established in all the pueblos, but in view of the scarcity of physicians they are presided over by persons more or less learned in medical science. They also established hospitals, but these did not give very good results, on account of the lack of trained physicians and nurses.

## PUBLIC INSTRUCTION.

This department leaves much to be desired, because of several circumstances which can be easily explained. In view of the novelty of having an American teacher unacquainted with the native language, the children, unable to understand their teacher, did not care to frequent the public schools, but preferred to go to private schools. Religious intolerance still prevails in all the pueblos of this province, and the parents, who believed that their children would be taught other religious beliefs, were loath to send their children to the public schools. Little or no importance was attached to the study of English. However, all these reasons and objections are fortunately disappearing. The parents see that the children of the wealthiest and best-educated people are going to the schools; that there are some children now that can speak a little English, and nobody is attempting to take their religious beliefs away from them, religion not being taught at the public schools.

On the other hand, the municipalities have issued ordinances making the school attendance compulsory, and some even establish in their ordinances fines for the parents, guardians, or tutors who fail to comply with their sacred duty of giving their children an education. This measure of the municipalities would have been accompanied by better results if the cholera, which still prevails in several pueblos, were not a great obstacle in this respect.

As to the school buildings, none of the pueblos have a good schoolhouse which answers all the requirements, and many pueblos intend to construct them, but the scarcity of draft animals and the lack of architects have prevented them from carrying these plans into execution as soon as is to be desired.

## PUBLIC FUNDS.

The province has cause to be proud so far as the administration of its funds is concerned. The total balance on hand in the several municipalities amounts to \$136,450.34 Mexican, and there are \$20,876.16 Mexican and \$4,020.75 gold on hand in the provincial treasury. This is all that has to be said.

It is true that up to the present writing very little public improvements of importance have been undertaken, but it must be taken into consideration that besides the ordinary expenses we have had to make extraordinary disbursements on account of public calamities. The cholera and the campaign have doubtless cost several thousands of pesos.

## PUBLIC IMPROVEMENTS MADE.

During the period embraced by this report the provincial board has only made the following public improvements and construction: The provincial jail, the Buhatan bridge (Sorsogon), a section of the Sorsogon-Bacon road, a section of the Sorsogon-Gubat road, and the drainage of this provincial capital, the purpose of which is to put the land on which the provincial government building is to be erected in a sanitary condition.

The government could have undertaken other work if the Colache campaign, the cholera, and the rinderpest had not conspired against the plans made, because, like the municipalities, it had to devote its attention to the reestablishment of public order and to the public health.

## GENERAL CONDITION.

As a consequence or recapitulation of the several subjects I have treated, I can affirm that as far as the political and financial condition of the province is concerned it could not be better. The disturbance of the public order caused by Colache in the mountains of Bulasan was offset by the patriotism of the people of the province, worthy of being imitated by other provinces of the archipelago, because, responding to the voice of the government, some of them readily offered their services as volunteers, while others paid the expenses incurred. The municipalities did not hesitate in making special appropriations for the expenses of the campaign and for the purchase of medicine and the erection of hospitals. In spite of all these calamities they still have money in their treasuries.

We can therefore state as an unquestionable truth that during the entire year of 1902 conditions were satisfactory in this province.

The agriculture, of course, is prostrate, not to say ruined, in consequence of such public calamities as the cholera, the disturbances of the public order, and the rinderpest; but, thank God, most of the pueblos of the province, being hemp-producing, support themselves by commerce, and are not in a destitute condition; especially in

view of the circumstance that the insular government has taken the precaution to send rice to the pueblos of this province for sale at a reasonable price.

The civic spirit of the people has improved, and the disturbances caused by Espocia, at Santa Magdalena, and by Diw, at Bacon, did not for this reason spread or gain a firm hold in this province.

Gambling is losing ground. The houses which had been destroyed are being rebuilt, and new, spacious, and even beautiful houses are being constructed.

A great desire for progress is noticeable. More boys and girls than ever before have gone to Manila to obtain a better education.

#### PROJECTS.

In order to cause the provincial government to inspire the respect which its administrative and judicial departments deserve, and in order to deliver the public treasury from the expenditure for the rent of the house which it now occupies, which amounts to \$3,600 per annum, it is necessary that a provincial building be erected as soon as possible. The establishment of real penal establishments is also necessary, in the interest of the health and safe-keeping of the prisoners. A school of secondary instruction should be constructed in order to respond to the requirements of the time, and it is of urgent necessity that the most important roads and bridges be built.

#### SUGGESTIONS.

In view of the topography of this province and its special conditions, the installation of telephone lines connecting the pueblos with each other, and all with the provincial capital, would be of great advantage from every point of view; as far as the government of the province is concerned, its utility would be unquestionable, because any disorder could be speedily quelled, and assistance could soon and in an effective way be brought to pueblos which, on account of their insufficient number of police, are unable to repel attacks by malefactors.

The expenses for the installation and maintenance of these lines and for the salaries of the personnel necessary could be paid for with the time if private subscribers would be accepted against payment, in accordance with a tariff to be established. The merchants would greet this improvement with joy, and it would save us considerable expense. The general public would not be less benefited than the merchants and the public administration.

One of the principal aims of the undersigned governor is to reform the public administration and eradicate all the prejudicial and even illegal usages still in vogue. Unfortunately the existing laws do not give him sufficient coercive power, because the criminal laws, although they provide for such power, do not answer the needs of the moment and conditions. There are infractions of the laws or irregularities which doubtless do not deserve a reprimand that need to be made public, as provided by the procedure established by law. The governor should, for instance, be empowered to impose a fine not exceeding \$500 Mexican in cases of irregularities or infractions of the laws committed by municipal officers without any other proceeding than his conviction that the offense has evidently been committed; but giving the person thus fined the right to appeal to the provincial board or the court of first instance.

To complete the reform in this province, and perhaps in the entire Philippine Archipelago, it is necessary that a change be made with respect of the justices of the peace. There should be a provincial justice, with limited jurisdiction, exceeding that of the justices of the peace. This provincial justice should be an attorney-at-law, be paid a sufficient compensation, and be the immediate superior officer of the justices of the peace. He should have sufficient power to cause the latter to administer justice without the favoritism, caciquism, and partiality, which unfortunately still prevail in the pueblos. The provincial justice could at the same time be examiner of title deeds, and half of his salary could be paid from provincial funds, which would mean a saving for the insular treasury.

In view of the length of the time which the judge of the district is absent from the province, many of the justices of the peace forget their responsibility, and the persons injured finally keep silent about the offenses committed against them, and sacrifice their rights and their tranquillity for fear of reprisals, as they are without protection in the absence of the judge of the district.

The organization of district courts probably gives good results in the United States, because there they have railroads and other means for rapid transportation and communication, which shorten the distances; but in the Philippines the contrary is the case.

If we would, therefore, have a provincial justice of the peace, residing in the capital of the province, with a jurisdiction more limited than that of a judge of first instance,

and with sufficient powers to watch and correct the justices of the peace who, more from malice than from ignorance, commit errors which produce an unfavorable impression on the public and give rise to gossip, which is always prejudicial to society.

In view of the existing laws of procedure it is difficult, not to say impossible, to exact responsibility from the justice of the peace in every case; besides, the persons offended themselves cause the offense to remain unpunished.

It is also to be desired that each two or three municipalities keep a physician, with a compensation sufficient for their needs, because it is to be deplored that persons who are ignorant of medical science are appointed presidents of municipal boards of health.

This, your honor, is a brief account of what has happened in this province during the entire year of 1902, and I beg leave to submit it to the consideration of your honor.

Very respectfully,

The CIVIL GOVERNOR, *Manila, P. I.*

B. MONREAL,  
*Provincial Governor of Sorsogon, P. I.*

#### REPORT OF THE PROVINCIAL GOVERNOR OF THE PROVINCE OF SURIGAO.

OFFICE OF THE PROVINCIAL GOVERNOR,  
PROVINCE OF SURIGAO,  
*Surigao, January 24, 1903.*

SIR: The conditions of this province of Surigao during the last year of 1902, in so far as are concerned the public tranquillity, submission of the natives to the sovereignty of the United States of America, and obedience of the same to the constituted authorities, leave nothing to be desired.

Owing to the small number of carabaos which was left alive by the rinderpest, much of the rice land was not cultivated, and the next crop of this grain is calculated at 60 per cent less than the ordinary crop. Notwithstanding the beneficial effects of the act to provide against the perils of famine, much is to be expected from the abundance of the tubers, which can be used as substitutes for the rice, and can be used consequently to alleviate the necessities of the lower classes.

The terrible plague of cholera has afflicted certain of the pueblos of the province, including the provincial capital, and the dread disease still continues its ravages in the pueblos of Tanganaan, Placer, Bacuag, Gigaquit, Cantilan, and Lanuza, and the mortality is estimated at 980 deaths up to December 31, 1902, showing an average of 48 per cent of those stricken.

All the pueblos of the province have been benefited by the efforts of the municipal boards of health to promote hygienic and sanitary conditions in their respective municipalities; thanks also to the worth and constancy of Señor Antonio Fernando, president of the provincial board of health.

On account of the lack of land communication of all the pueblos with the provincial capital, it is of the highest importance that this government be provided with a steam launch in order to avoid delay in the transaction of official business with the 34 municipalities of the province, nearly all of which pueblos are on rivers. This would prove an economy to the province, as to the traveling expenses of the provincial officials, especially the deputies of the treasurer who are constantly on the road collecting the revenues and taxes of the province; this assiduity being due to the energy, probity, and zeal of the provincial treasurer, Mr. Luther S. Kelly, in the compliance with his official duties.

Many of the pueblos have no buildings for school purposes, and, due to their slender resources, are in no position to build these houses. It would be well to have these buildings constructed at the expense of the insular treasury so that the instruction of the young may be carried on without interruption, and also that the general superintendent of instruction should take steps to provide teachers for those pueblos which are not able to support for themselves the expenses of this public service of such transcendental importance.

I regret my inability to send the photographs alluded to in your circular of November 20 last for lack of a photographer in the province, which, however, has gold mines in operation, coal undeveloped, and timber in abundance.

Respectfully,

The CIVIL GOVERNOR, *Manila, P. I.*

PRUDENCIO GARCÍA, *Provincial Governor.*

## REPORT OF THE PROVINCIAL GOVERNOR OF TARLAC.

[Translation.]

OFFICE OF THE PROVINCIAL GOVERNOR, PROVINCE OF TARLAC,  
*Tarlac, January 10, 1903.*

SIR: In compliance with the provisions of section 7 of the provincial act, I have the honor to hand you the annual report of this province for the year 1902.

Owing to the approach of the taking of the census, and as this will undoubtedly include, in a detailed manner, the true statistical data covering the condition of this province in all the various branches, I shall limit myself in the present report to a brief exposition of certain considerations and general information which may prove interesting at this time.

The province of Tarlac is bounded entirely on the north by Pangasinan; on the south by Pampanga, which is separated from it by the river Parua; on the east by Nueva Ecija, separated by the river Chico; and on the west by Zambales, separated by the mountains of both provinces. This province would therefore be separated from all those which touch it by natural boundaries, if the small pueblo of Bautista, in Pangasinan, on the railroad, should be annexed to Tarlac. In such case the said pueblo would be separated from Pangasinan by the great river Agno.

There are at present in this province 17 municipalities, the names of which, in the order of their importance are as follows: Camiling, Concepción, Victoria, Tarlac (capital), Gerona, Paniqui, Moncada, Capas, Murcia, Bamban, Anao, Pura, La Paz, O'Donnell, San Clemente, Moriones, and Santa Ignacia. The first pueblo is of the second class, the next six of the third class, and the last ten of the fourth class. The estimated population of all the pueblos is 119,526 souls.

This province, one of the newest in Luzon (its organization dates from the sixties in the last century), is formed by the pueblos ceded by the contiguous provinces, and the people still preserve the customs and dialects of those tribes from which they sprang, so that those who belonged to Pampanga speak Pampangan and observe their customs; those of Nueva Ecija, Tagalog, and those of Pangasinan, Pangasinan. There is also a considerable contingent of those who came originally from Zambales and both the Ilocos provinces, and these speak their respective dialects.

In the range of mountains which extend from Bamban, O'Donnell, Moriones, Santa Ignacia to Camiling, there are scattered about in various settlements a goodly number of Aetas, or Negritos, belonging to the non-Christian tribes, the total number of these being placed at 2,000, more or less. Everything possible is being done at present to lead these people to civilization. Various incipient municipalities have already been formed, with their respective chiefs, or municipal captains, and police agents, and to these municipalities, in my opinion, there should be granted certain concessions or privileges, and respect should be shown in some manner for their customs, usages, and religious beliefs, and, above all, they should be attracted and guided with persuasion and prudence, and they will thus in time become capable of maintaining a civil government.

For these reasons it is difficult for a reasonably conscientious observer to fix any idea or establish any degree of reform consistent with the liberality and autonomy of existing laws which would be of benefit to each locality and municipality, owing to these differences in character, education, and customs of the people living in pueblos—of Tagalos, Pampangans, Pangasinans, or Ilocanos—these differences further causing distinct interpretations and exercise of their rights and social relations. This difficulty has also its great influence upon the governor of the province, since it is necessary for him to consider and govern himself according to these social variations and the local polyglotism, if it may so be called.

## PUBLIC ORDER.

Notwithstanding this diversity of dialects and the uncultured state of these people, in the year covered by this report there has been no violent nor disturbing interruption of the peace and public order which this province has enjoyed since the implantation of the civil régime, with the exception of some carabao stealing, which is the natural consequence of the lack of these animals; some two or three homicides resulting from personal quarrels and revenge, and certain disturbances of a religious nature between the municipalities and the parish priests of the same, owing to the prevalent religious excitement, and the occasional appearance of fanatical women who delude the ignorant people with their supposed miracles, which acts, however, the court of first instance is undertaking to disclose and punish. This tranquillity is the more noteworthy owing to the fact that the province has been visited by a long series of the worst calamities which are usually productive of political and social disturbances—

rinderpest, affecting domestic and work animals; thick clouds of locusts and grasshoppers, which have consumed 80 per cent of the small crops that have been planted; continuous drought; and, to cap it all, a cyclone, with its accompanying inundations, completed the desperation of the landowners and poor farmers. So true is this that some of the pueblos, such as O'Donnell and Murcia, have gathered scarcely any rice, even for present consumption, according to information which I have received.

The present condition, therefore, of agriculture and cattle raising in this province is so unfavorable and depressed that if relief is not afforded promptly, either by private and united effort or by Government aid, these resources will probably not be revived at all. It causes sadness for one to visit the pueblos and look upon the fields, formerly so flourishing and productive, but now filled with briars and fallen again in an uncultivated state, or covered with beds of sand from the inundations, the locusts, or the drought. Fortunate, indeed, it is that the forests, with the small utilization of their products, are able to afford in a measure efficient aid in the support of these people.

#### PUBLIC INSTRUCTION.

Public instruction in this province is advancing perceptibly, thanks to the zeal and activity of the superintendent of this branch. Of the 17 pueblos, which constitute this province, the 7 most important, which have good and permanent schools, are provided with American teachers, men and women; 7 others, with Filipino teachers, most of them from the normal institute of this capital. Two pueblos, Moriones and Santa Ignacia, have no teachers, both on account of the lack of suitable buildings and because they are small pueblos and unable to support teachers with reasonable salaries. Only one town of importance, Victoria, which has a handsome school-house, has no American teacher, for lack of the person. The pueblos of most importance also have Filipino teachers in some of their barrios, the instruction being similar to that provided in the central municipality.

According to data furnished by the superintendent of public instruction of this province, there have attended the public schools of all the municipalities in the province during the year covered by this report, 2,930 boys and 1,252 girls, including the provincial school of this capital recently established. Besides the leading residents of the town, a large number of municipal and provincial officials and employees attend the night classes of the last-mentioned school.

At the initiative of this provincial board there has been established in this capital a secondary or high school, the pupils of which, after terminating the course of study prescribed, will be prepared to enter any college or higher institution of academic or professional study. This high school is supported from the provincial treasury, and the provincial board has authorized the construction of a larger building, according to plans of the provincial supervisor, and much material has already been prepared and collected.

#### PUBLIC IMPROVEMENTS.

In addition to the building above referred to, there have already been completed, or are in course of construction, at the expense of the province, additions to the provincial government house, in which each office, as well as the court of first instance, will have its own department or special office rooms, with the necessary equipment and space for its purposes.

The principal wagon roads of the province have been repaired and drains and bridges built of strong materials between Capas and Concepción, between Tarlac and Victoria, and between Gerona and Pura. Certain municipalities have themselves undertaken and completed many improvements of a local character, such as the construction of school and municipal buildings at Concepción and Paniqui, and street lighting at the former; the schoolhouses at Victoria, Gerona, Capas, and Murcia; the municipal building at Gerona and street lighting at Mocada, as well as the repair of highways, streets, and the neighboring roads in all the municipalities.

#### ECONOMIC CONDITIONS.

In the light of all these facts it may be deduced, therefore, that this province enjoys complete peace, uninterrupted until the present by either political or social disorders. But so far as the economic, industrial, and agricultural resources are concerned, we are now in the midst of such depression and prostration that great energy and easy, effectual measures for meeting this crisis have become absolutely necessary.

There were formerly three great sources of wealth in this province: Cattle raising, forestry, and agriculture. The herds, flourishing and numerous, composed of carabaos and cattle, were pastured in multitudes upon the fields and plains, and were the principal resource of the people, for they served to cover their small needs. Animals of

this kind were even brought in from Pampanga to this province on account of the abundance of the natural pasturage of the hills and valleys. To-day this source of wealth has disappeared completely on account of the rinderpest, which, beginning in 1888, has raged annually until the present time, when not even a sufficient number of animals for working the fields remains. Forestry, most abundant in this province, was also a perennial source of income to these people before the regulations were issued which provide for the utilization of forest products; but at present, owing to these regulations and the appropriation of the timber by the large estates of private individuals, this resource has been reduced to a minimum, and in order to make use of these products various formalities have to be complied with. Agriculture, which was formerly the least depended upon, has recently become the principal and almost sole resource of the people. But calamities, such as wars, rinderpest, cholera, thievery, overflows of rivers and inundations, locusts, etc., threaten also to destroy this interest, the sole remaining one (burdened, too, with duties and taxes), unless Providence and the government intervene.

#### SUGGESTED LEGISLATION.

Therefore the following measures are suggested as necessary to the interests of this province:

1. The establishment of an agricultural bank, to save the owners of rural property from the clutches of usury.
2. The providing of work animals at prices accessible to the farmer and upon easy terms of payment.
3. Permission for landowners to utilize forest products for agricultural purposes, or the concession and confirmation to the pueblos of their respective "community leagues."
4. Canalization and dredging of the large rivers, which in their overflows destroy the crops and cover the extensive, cultivated fields with sand.
5. The revision and equitable valuation of the lands subject to taxation, concerning the assessment of which the owners complain greatly since the larger part of these rural lands are at present very unproductive. And further, that the payment of taxes be allowed in local currency, which is also the opinion of the attorney-general upon this particular.

Another suggestion which I take the liberty of offering for your consideration is one which I have already made in connection with the administration of justice in the court of first instance in this province. Notwithstanding the extreme diligence and activity which it is to be supposed is exercised by the official presiding over these matters, unfortunate delays are always occurring, and these redound to the injury of litigants in civil cases, and of the poor prisoners in criminal cases. There have been cases in which, after confinement in prison for months awaiting trial, the prisoner has been sentenced to three months' imprisonment.

It is not my intention to blame anyone, nor still less to question the integrity, the great zeal and activity of the honorable judge at present presiding in this province, for he has sufficiently demonstrated and continues to demonstrate these qualities, by determining numerous cases and processes at every session; but these sessions are not continuous, but alternate with those held in other provinces which go to make up this district, with an interval of several months between, consequently the cases accumulate to such an extent that it is virtually an impossibility to dispose of all of them in one session. In my humble opinion, three provinces are too many for one judge alone, considered from the standpoint of efficient administration of justice. As for the economy of the measure, in provinces like this in which the judge has not his fixed residence, the province is obliged to pay his expenses of travel and stay, as long as the sessions last. Both of these problems would be solved and the public and the provincial treasury benefited should the following suggestion be adopted: A district judge, such as the one in this district which comprises three provinces, receives \$4,500 gold per annum; by giving each province a judge with a salary of \$1,500, which is the same as the salary received by the provincial governors, we would find that the administration of justice in each of them would be carried out with greater promptitude, and the expenses of travel and lodging would be avoided. These amount, in time, to a respectable sum.

Let it not be said that there is a lack of suitable persons from whom to select, for this would be unjust to the respectable class of lawyers in the exercise of their profession; nor that the salary would be too small, because each one would have his work in one province only; nor that they would soon find themselves with their arms crossed for lack of business to which to attend. The effect would be rather that the public would be well served, judicial matters promptly dispatched, and useless expense to the provincial treasury saved.

## PUBLIC HEALTH.

Now free from the terrors of cholera, with its accompanying quarantines and sanitary precautions—and though it has not been considered particularly violent here, it has, nevertheless, caused the death of 1,552 victims—this province has been restored to its natural state of healthfulness, attacked only by malaria, now common in the places where evaporation from vegetable detritus in the large and dense forests inundated during the rainy season, and aided by the strong prevailing north winds, causes a great deal of these fevers at the present time.

Vaccination has been practiced in all the pueblos of the province, as a result of the interest of the president of the provincial board of health and the activity of the municipal presidents of boards of health.

Respectfully,

ALFONSO RAMOS,  
Provincial Governor.

The CIVIL GOVERNOR, *Manila, P. I.*

---

REPORT OF THE PROVINCIAL GOVERNOR OF TAYABAS.

PROVINCIAL GOVERNMENT OF TAYABAS,  
OFFICE OF THE GOVERNOR,  
*Lucena, Tayabas, P. I., January 15, 1903.*

SIR: Complying with the requirements of section 7, act No. 83, I have the honor to submit the following report upon the province of Tayabas for the year ending December 31, 1902:

Upon assuming the office of provincial governor on March 3, 1902, I found this province seriously handicapped by having the reputation of being "pacified," which it never really was until Malvar's forces had all been captured or surrendered. While not questioning the sincerity of views to the contrary, in my opinion, a state of insurrection existed and always had existed throughout the province since the first American occupation, insurrecto activity being more or less marked at different times and in different localities, and being especially serious in and about the towns of Tiaon, Candelaria, Dolores, Sariaya, and Mauban, and to a less extent in the vicinity of the towns of Pagbilao, Tayabas, Lucban, Sampaloc, Lucena, Guinayangan, and others.

On the above date there existed a thorough military reconcentration of the towns of Tiaon, Candelaria, Dolores, and Sariaya, and a less complete one in the towns of Tayabas and Lucban. The towns of Candelaria and Tiaon had up to this time been practically under a dual government, recognizing both the United States Government and the insurrecto government under Malvar, a disproportionate share of the taxes, however, going to the latter.

Gen. J. Franklin Bell carried on such an energetic campaign in the section referred to that the insurgents were all either captured or compelled to surrender, among the leaders being Marquez, Mayo, Masangcay, Cabuñag, Cadiz, and others. After March 3, 1902, there were captured by, or surrendered to, the military in this province, 202 guns and 47 revolvers, and a very large number of prisoners.

Upon the termination of this campaign the military posts in the province were gradually abandoned, all the troops in General Bell's brigade being withdrawn, and the only garrisons in the province at the present time are two companies of the Twenty-sixth Infantry at Atimonan, and Lieutenant Wray's company of Native Scouts at Lopez, both on the Pacific coast. However, a new post for four troops of cavalry is now undergoing construction at Lucena, the capital.

In order to punish them for their deception, and upon my recommendation, the Civil Commission annexed, as barrios, the town of Dolores to Tiaon, and Candelaria to Sariaya.

The termination of military operations in Tayabas Province did not, however, bring in all the native forces that had been permanently in the field, and there have since been either captured by, or surrendered to, the constabulary or police, about 150 guns, 35 revolvers, and over 500 prisoners, among the more important not elsewhere mentioned being, Encarnacion at Guinayangan, Florido and Verdadero at Lopez, Encallada at Mauban, Jalbuena at Pagbilao, and Silvala at Macalelon. A band under an able leader named Destajo for a long time infested the neighborhood of Mauban, levying contributions, but not committing any serious crimes.

Owing to the efficient and energetic work of Constabulary Insp. Mariano Castillo, a former colonel of the insurgent army, a large number of Destajo's men were captured, and he himself with the remnant of his band were induced to surrender.

In July, 1902, there was discovered an extensive organization which, for nearly a year, had existed in the neck of country between Atimonan and Gumaca on the Pacific coast, and Laguimanoc, Unisan, and Pitogo on the southern coast, under the leadership of a certain Ruperto Rios. This man Rios, originally bellowsman to the blacksmith at Atimonan, had been a major of bolomen under Lieut. Col. Emilio Zurbano of the insurrecto forces of this province, and had surrendered with him in July, 1901, at the town of Tayabas, immediately afterwards violating his oath of allegiance and taking to the mountains, as he feared punishment for the various crimes he had committed. In the beginning, representing himself to be an inspired prophet, he worked upon the superstition of the poor barrio people to such an extent that he succeeded in organizing, by the time stated, what he called "exterior municipal governments," with a very elaborate equipment of officials.

Inspired by his successes, he promoted his followers and himself in rapid succession, until finally he had with him one captain-general, one lieutenant-general, 25 majors-general, and 50 brigadiers-general, without counting the numerous colonels and officers of lower grades; had elevated himself to the rank of generalissimo; declared himself viceroy and son of God, and stated that he proposed to enter Atimonan on the 8th of August to be crowned king of the Philippines. Before that date, however, I had personally visited Atimonan and effected the arrest of about 80 of his high-ranking officials, and the coronation was postponed indefinitely.

As a "son of God," he received confessions and granted absolutions considerably below market price, and which he claimed were much more efficacious than those dispensed by an ordinary padre.

On one occasion he built a fire under a tree, and, by means of a rope, descended through the smoke announcing that he had just arrived from heaven. He is also understood to have done a thriving "anting-anting" (charm) business, which, however, did not prevent many of his followers permanently retiring from business, owing to being perforated by constabulary bullets.

For some time he carried with him a box, on the cover of which was painted the word "Independence," and which was guarded by three picked virgins. He stated to the ignorant barrio people that the Filipinos had for a long time been struggling for independence which he now had in his possession, and that as soon as he was convinced that his followers deserved it, he would remove the lid from the box, "Independence" would jump out, they could catch her and be ever afterwards happy.

Another idea which these people had of independence was that, once acquired, it would mean a go-as-you-please life; no taxes, no jails, and that each man could help himself to whatever he desired—his neighbor's pony, carabao, or other property.

Rios frequently concealed himself at night and would appear in the morning announcing to his followers that he had spent the evening in conversation with the Emperors of Russia and Germany and the President of France, and that these potentates would soon send over large fleets which would distribute 10,000 arms with necessary ammunition on the shores of Tayabas Province.

This organization of Rios was really an offshoot of the Colorum sect which had a "New Jerusalem" on Mount San Cristobal, near the dividing line of the provinces of Tayabas, Batangas, and La Laguna.

Deciding that the only way to combat such an organization was through the more intelligent natives themselves, I notified the presidentes and councilors of all the towns that I would hold them responsible for bands existing within their respective jurisdictions. If brigandage was known to exist within the limits of a town for a week, I should assume it was because they were aided by some of the people of that town; that it was my recommendation that immediate measures be taken to prevent the spread of ladronism in their towns, and that they should promptly clean out the affected barrios by ordering them within limits of observation and control. The town councils, where necessary, all passed acts ordering the infected barrios into such locations where they could be watched by the constabulary and municipal police.

At the same time in each of the towns of the disturbed district, and in fact all over the province, I organized companies of volunteers, composed of the higher class of natives, and armed them with guns, kindly loaned by the constabulary, with whom they cooperated so successfully that this pernicious organization has been completely destroyed and a large majority of its members captured or killed.

The volunteers of Unisan, cooperating with the constabulary under the efficient command of Constabulary Inspector Julio Herrera, another former insurgent officer, succeeded in killing the so-called "lieutenant-general," Felipe Verastigui, and capturing all of his followers, as they were about to escape to the island of Marinduque.

Ladronism from time immemorial has existed in parts of this province, and some of the people have looked upon it as an occupation. We are doing everything in our

power to render this occupation unpopular, and have succeeded beyond our original expectations. It will be necessary, however, to watch unceasingly, as certain classes of the people on the slightest provocation or opportunity will adopt the easy life of the ladron.

The localities in which brigandage is liable to exist in this province is the one described, and on the western Batangas and Laguna border. In the latter place it is so easy for malefactors to slip from one province to another that this section has always offered special inducements to ladrones. While small migratory bands formerly passed to and from the province of Ambos Camarines on our eastern border, owing to its sparsely inhabited condition, they never located in that section. I have seen reports indicating that bands belonging in eastern Tayabas sometimes crossed over and committed depredations among our neighbors, but no such bands have existed since the capture of Encarnación, and he never left the province.

Owing to the unfortunate reputation of this province, which was usually sarcastically alluded to as the "pacified province," she has naturally been obliged to bear many unjust burdens, and nothing was deemed too improbable to emanate from Tayabas. In August, about 150 of the followers of Rios, mostly generals and colonels, with one low-down sergeant, and nearly all barefoot and conspicuously uniformed in shirt tails, entered Unisan, whipped the municipal officials, and walked off with the five police; every one of whom was shortly afterwards recaptured. This occurrence was published by some of the newspapers at the time, but having again been mentioned by somebody in December, it was immediately assumed to be a natural repetition of the deed, and again published and included in the bulletin. On a subsequent occasion because the senior inspector of another province bore the same name as the senior inspector of this province, and had reported that ladrones had been mutilating prisoners, it was immediately published as "atrocities in Tayabas," or words to that effect.

I not only do not believe the people here to be worse than in other provinces, but also do not believe that better people can be found in the Archipelago. In the beginning of my term of office our methods were more rigorous than the people had been accustomed to, and they considered us harsh, holding themselves very much aloof; but they now appreciate that harsh measures were then necessary, and give every indication of hearty and loyal support. To-day I consider the state of feeling in this province to be most kindly toward American sovereignty, and judge from conduct instead of from oral professions.

This province, with an area of about 10,000 square miles, making it equal to the States of Vermont or New Hampshire, is now one of the largest provinces in the Philippines. Since I assumed control this area has been practically tripled, and its population, now over 200,000, has been doubled. I feel justified in stating that the province as a whole will compare most favorably with any equal portion of any country as to either morality or number of crimes committed.

We Americans have been too impatient, have expected to accomplish too much at once, and have ignored the fact that we are struggling against the accumulated customs and superstitions of three centuries of tyranny. In this province I feel that an astonishing amount has already been accomplished, and that our future prospects are of the brightest. Although there have been, and probably will continue to be, occasional misunderstandings between some of them and myself, I consider the people of Tayabas Province, as a class, to be all right.

#### THE GARDENER BOARD OF INVESTIGATION.

From about the middle of April until the fore part of June there was in session at Lucena a board of officers, consisting of Brig. Gen. T. J. Wint, U. S. Army; Lieut. Col. J. W. Duncan, Thirteenth U. S. Infantry, and Capt. W. T. Johnston, Fifteenth U. S. Cavalry, to investigate the charges preferred by Maj. Cornelius Gardener, Thirteenth U. S. Infantry, my predecessor, in general terms against the officers who had conducted military operations in this province.

I do not consider it proper for me to comment on this subject further than to state that in the beginning the arrival of this board appeared to me to have a bad influence on the natives in this immediate section, and I was given to understand that it was their opinion that the board was sent here to receive complaints of whatever class, and that many of them understood that Major Gardener was to be punished for being friendly to them. This illusion was soon dispelled, and I did what was possible, by example and otherwise, to keep the erroneous impressions from spreading; for a time acting as counsel for Major Gardener and always furnishing the board and himself with whatever information was in my possession. A month after the departure of the board its existence was evidently forgotten, and now it is never alluded to.

Personally and officially my relations with my brother officers in this province have always been of the most satisfactory and pleasant character. They have been unfailingly courteous and have aided me in every way within their power; nor have I any abuses to report.

#### CHOLERA.

On July 3 the first recognized case of cholera appeared in Lucena, although Lucban had previously reported a case, and the disease spread afterwards to the neighboring towns, being especially virulent in Pagbilao and Pitogo and in the two towns of Gasan and Boac, Marinduque, which did not then belong to this province. Sporadic cases appeared in other towns, but it was fought so bitterly as to be kept within limits.

In Lucena it was stamped out at an early date, owing to the cooperation and magnificent work of Capt. W. W. Quinton, assistant surgeon, U. S. Army, and Capt. A. H. Eber, assistant surgeon, U. S. Volunteers, on duty at that time with troops in the town referred to.

#### ANNEXATION OF ADDITIONAL TERRITORY.

On June 12, 1902, the district of Infanta and Principe and the island of Polillo, containing the four towns of Kasiguran, Baler, Infanta, and Polillo, were annexed to Tayabas Province. This territory, while extensive, contains comparatively few inhabitants and is undeveloped. The people, as a rule, are well behaved, well disposed, and are rapidly perfecting their organization.

On November 10 the province of Marinduque, with its five towns of Boac, Santa Cruz, Gasan, Mogpog, and Torrijos, was likewise annexed to this province, which thereby received a very material increase in population and riches, although but small additional territory.

The island of Marinduque contains some over 50,000 inhabitants, and its western portion is exceedingly rich and fertile. The people, as regards intelligence and education, are very superior to the ordinary run of natives, are the most hospitable I have yet seen, and are industrious and very kindly disposed. They had, up to the time of annexation, been unable to derive many advantages from civil government, as the island was too small to be properly classified as a province with the attendant expenses. Its union to this province will be a great and lasting benefit to both Tayabas and Marinduque.

Señor Ricardo Paras, ex governor of the former province of Marinduque, has been continued as lieutenant-governor for the island since its annexation. Señor Paras has the confidence and respect of the Marinduqueños, is a gentleman of culture and education, and has demonstrated in every way his fitness for both his former and present position.

#### PRODUCTS.

The main product of Tayabas Province, in which I believe it leads the Archipelago, is copra, and this is cultivated throughout the province, although especially in the regions of Sariaya, Lucena, Tayabas, Pagbilao, Atimonan, Gumaca, Lopez, Boac and Gasan. Rice is grown throughout the province, but to a small extent except in the vicinity of Tiaon.

Hemp is also to be found, but in large quantities only near Mauban and Marinduque, which undoubtedly produces the finest hemp in the world.

The forestry products are especially rich in the districts of Principe and Infanta, about the towns of Calaoag, Guinayangan, Macalelon, and Pitogo, and on the island of Polillo and Alabat. In the small town of Sampaloc many of the "Harigues" in the houses are of ebony or camagon, which is used because of the expense of transportation from such a high altitude.

In the town of Lucban, located about 1,500 feet above the sea level, on the slope of Mount Banahao, there is found a most energetic race of artisans and mechanics. The "Lucban" hat, made from the "buntal" palm and justly celebrated throughout the Archipelago, is made in this town, and the demand is far in excess of the supply. The carpenters, painters, image-makers, embroiderers, silversmiths, tailors, masons, carabao-horn workers, and bolo and kris makers of Lucban are all of exceptional ability, and recognized as such throughout this portion of the island.

Formerly a most superior grade of piña was made in large quantities at Atimonan, but the output has fallen off to nearly nothing.

A fine quality and large quantity of "Sinamay," or hemp cloth, is made in all the towns of the island of Marinduque, and to a less extent in the towns of Pitogo, Catanauan, and Mulanay.

Fine petates, or sleeping mats, are made in Lucban, Mauban, Baler, and Kasiguran, and of a distinctive type in each town.

"Buri," a species of palm, is used in all parts for making hats, petates, and sacks, and bids fair to be a most important product.

Coal exists on the islands of Polillo and Alabat, and also on both coasts of the main island, although very little is known as to the quantity or quality of the deposits.

Near Buenavista, on the island of Marinduque, there is a magnificent sulphur spring, and also a hot spring, offering a fine location for a sanitarium.

#### CROPS.

Tayabas Province, like the rest of the Archipelago, has suffered from lack of crops and will be obliged to import large quantities of food stuffs.

Over 90 per cent of the carabaos and ponies were either killed during the war or carried off by the rinderpest or surra, nearly ruining agriculture and seriously crippling transportation.

Owing to the small harvest prices have risen, which works great hardship, especially on the poor people. In some of the more distant towns rice sold as high as 12 pesos per picul of 137½ pounds. The provincial board, however, immediately ordered 10,000 piculs of the supply purchased by the insular government, and this caused the price to drop throughout the province, so that it was in no place above 8 pesos per picul. The rice was not ordered with the intention of interfering with tradesmen, but to prevent exorbitant prices and the attendant suffering. In this respect it has been very successful.

In order to rehabilitate the crops I strongly recommend the importation of carabaos from other countries, if obtainable.

#### LABORERS.

There is a complaint from all sides of the scarcity of hands, and it has been difficult to do road work on account of the impossibility of finding laborers. In years past 20 cents Mexican was sufficient for the ordinary laborer who to-day asks 50 cents and subsistence. Good carpenters are getting as high as \$2 or more per diem, and other laborers in proportion. For provincial work we have used convict labor and also imported some laborers from neighboring provinces.

#### SCHOOLS.

There are 26 organized schools in the towns of Tayabas and about 15 others under native teachers, with a total enrollment of about 9,000 pupils, which the division superintendent estimates to be an increase of at least 50 per cent over the previous year. The increase, however, in the town of Tayabas has been over 200 per cent, and this town has an enrollment of 1,074, which is believed to be the largest enrollment for any single school in the islands.

The town of Santa Cruz, Marinduque, also of this province, is a close second, with about 1,000 enrolled. We have two high schools recently organized, one at Lucena and one at Boac, both of which are doing excellent work and give every promise of a brilliant success. The principal of each is thoroughly in earnest and excellently equipped for his duties.

This province has suffered much from a lack of teachers, at present there being but 12 American teachers—at one time 14. There was an average attendance of 298 pupils for each teacher.

During the year ending December 31, 1902, the collections for school purposes amounted to \$37,585.46 local currency, which sum is not sufficient to build the new houses required or to repair many of the old ones. New schools have been constructed at Tayabas, Santa Cruz, Pitogo, Pagbilao, Lopez, and Gumaca, and are about to be constructed at Atimonan, Lucena, Sariaya, Sampaloc and Guinayangan.

The people in all the towns are enthusiastic over American teachers, and it is believed that in proportion to the number of pupils in actual attendance at schools, Tayabas Province has far below its proper quota.

The work of Mr. J. C. Muerman, division superintendent of schools, has been excellent in every respect. He has shown himself to be a thorough organizer, a conscientious worker, and a most competent manager. All the teachers under him, with a single exception, have cooperated with both him and the provincial authorities in every way possible, and have done a vast and lasting amount of good by their instruction and example. As a corps it is my desire to extend my heartfelt and sincere thanks to the teachers of Tayabas Province for the assistance I have always found them ready to extend to myself or to the other provincial officials.

## CHURCHES.

Up to the present writing there has as yet been no extension of the Aglipay movement into this province, and I am unable to state as to how many of the churches would enter his fold. There is, however, an intense hostility to the friars. My relations with all of the local priests have been excellent in every respect, and they have never failed to aid me at every opportunity, but have shown themselves to be enlightened and law-abiding citizens.

## CONSTABULARY.

Early during the year the constabulary practically replaced the military in this province. The different senior inspectors have invariably treated me with respect and promptly followed all of my recommendations and requests. The work of the constabulary in this province has been excellent, and, as the organization is perfected, I believe they will be able to handle any situation that may arise, at least as I see conditions here. In this province they have practically committed no abuses.

It might not be out of place here to refer to Capt. J. B. Murphy, senior inspector of constabulary, who in a short time has succeeded in practically reconstructing the constabulary in this province and placed it upon an excellent working basis. Captain Murphy has shown himself to be a thorough disciplinarian, an excellent organizer, and a gentleman especially equipped for the position he holds and fills.

## COURT OF FIRST INSTANCE.

On November 10 Tayabas Province, including Marinduque, and the province of Batangas were incorporated into the seventh judicial district, under Judge Paul W. Linebarger, with courts in this province at Tayabas and Boac.

Early this month Judge Linebarger opened an extraordinary session of the court at Tayabas, and by his prompt work and awarding of sentences proportionate to the gravity of the crime committed has done a great deal toward discouraging ladronism in this province, and it is believed that his court will be the most efficient auxiliary of the constabulary and police in stamping out this evil and in making the occupation even of day laborer more popular than that of highwayman.

## PROVINCIAL JAIL.

The law places provincial jails practically under the governor. In this province the jail is in the town of Tayabas, about 7 miles from Lucena, the capital. It has been impossible for me, without neglecting my other duties, to give the jail the supervision which, in my opinion, it should receive, and I believe that provincial governors in other provinces are to a more or less extent similarly handicapped.

I would therefore recommend that in this province, if not in others, the provincial jail be either placed directly under the provincial sheriff, who should receive a salary for his duties, or that it be placed in charge of the constabulary.

In order to accomplish road work, the provincial board has placed the prisoners at work upon the roads under the provincial supervisor, and, so far, with excellent results.

## ROADS.

During the past year work has been done on the roads from Lucena to Lucban, Tayabas to Candelaria, Lucena to Pagbilao, and Lucena to Sariaya, and a new trail constructed from Unisan to Gumaca. The revenues for this purpose are insufficient to build new roads or to keep old roads in proper repair. For the two purposes stated, \$8,236.29, United States currency, were expended during the year.

I have previously recommended that an insular road be constructed from Pagbilao to Atimonan, crossing the island of Luzon and opening up the rich Pacific coast. I have also recommended that an insular road be constructed from Lucena to Santa Cruz, Laguna, and both of these roads have been promised by the insular authorities. Their necessity, importance, and advantages can not be adequately described.

## MUNICIPALITIES.

Except in the cases of those newly annexed, the finances of all the towns in this province are in excellent condition. It has been necessary during the past year to suspend some presidentes and other officials for neglect of duty and incompetency, and to accept the resignation of many others. Everything considered, however, the

municipal governments are in a most healthy condition and give every encouragement for future progress. The presidentes and municipal officials, as a class, are a very intelligent and efficient body of men, and have shown their loyalty and interest in the welfare and progress of the province by their long-continued and determined efforts to stamp out the curse of ladronism. I owe them a debt of gratitude for their energetic and sincere cooperation, which has enabled us to practically eradicate this evil.

Lucena, the capital, has an urban population of about 5,000, and has been an incorporated town for only twenty years. Although there are numerous small ports on the southern coast, Lucena is the commercial center and principal port for all this section and exports an immense quantity of copra. With 14 steamers stopping here at intervals, 7 of them with regularity and at least weekly, the means of communication with Manila are excellent. Lucena is at present one of the most flourishing towns in the Archipelago, and with its rapid growth bids fair to soon become a large city.

The other large towns, ranged according to their estimated population, are: Santa Cruz, Tayabas, Boac, Atimonan, Lucban, Mauban, Sariaya, Tiaon, Infanta, and Gazan.

Atimonan and Mauban are important and prosperous seaports on the Pacific coast; and Boac, Santa Cruz, and Gazan are the principal towns and ports on the island of Marinduque, exporting large quantities of the beautiful Marinduque hemp and also considerable copra.

## FINANCES.

The following is a statement of revenues received and disbursements made from January 1, 1902, to December 31, 1902:

## RECEIPTS.

	U. S. currency.
Brought forward from December 31, 1901:	
Provincial funds .....	\$11,424.27
Municipal funds .....	1,272.905
Tax collections from January 1 to March 31 .....	15,963.225
Refunds and gains on warrants .....	588.855
Elimination of fractions .....	.045
Tax collections from April 1 to June 30 .....	13,381.60
Refunds and gains on warrants .....	64.99
On accountable warrant from insular government—forestry .....	16,412.26
Tax collections from July 1 to October 31 .....	59,368.04
Miscellaneous revenue, July 1 to October 31 .....	598.44
Tax collections from November 1 to December 31 .....	6,337.44
Refunds and gains on warrants .....	41.11
On accountable warrant from insular government—insular revenue....	577.02
Total receipts .....	<u>126,030.20</u>

## DISBURSEMENTS.

For salaries .....	14,363.04
General expense .....	7,688.345
Improvement of roads .....	8,236.29
Supplies .....	8,751.025
Refund to insular government—forestry .....	569.41
Refund to municipalities municipal share of taxes .....	63,734.93
Loss on local currency .....	2,571.89
Error in gain on warrants .....	9.99
Total disbursements .....	<u>106,024.92</u>
Balance on hand December 31, 1902 .....	20,005.28
Total .....	<u>126,030.20</u>

Balance consists of \$21,395.07 local currency and \$11,766.41 United States currency, of which \$6,552.33 local and \$76.16 United States currency belongs to municipalities; \$14,579.89 local and \$11,706.92 United States currency belongs to the province, and \$362.85 local and \$10 United States currency belongs to the insular government for forestry collections during December, 1902.

## PROVINCIAL OFFICIALS.

The provincial treasurer, Mr. C. C. McLain, has been on duty in this province throughout the past year. His work has been simply excellent. He has a thorough knowledge of his duties, of the conditions to be encountered, and of the province.

The provincial supervisor, Mr. S. K. Fitzhugh, has worked arduously during the past year, but has tendered his resignation to take effect on February 1, 1903.

The provincial secretary, Señor Gervasio Unson, is exceptionally able and well qualified for the duties of his position, has rendered most valuable services to the province, and to me, most loyal support.

The provincial fiscal, Señor Sofio Alandy, has at all times been thoroughly devoted to the interests of the province, and to his duties, and is well equipped and qualified for the position he holds.

The president of the provincial board of health, Capt. A. H. Eber, assistant surgeon, U. S. Volunteers, although but a short time on duty in that capacity, has been, off and on, for nearly three years, on duty in this province, has endeared himself to the people, and has shown himself to be everything to be desired in both professional and other capacities.

All of the officials have rendered me the most hearty and sincere cooperation.

Very respectfully,

H. H. BANDHOLTZ,

*Captain Second U. S. Infantry, Governor of Tayabas.*

The EXECUTIVE SECRETARY, Manila, P. I.

## REPORT OF THE GOVERNOR OF THE PROVINCE OF ZAMBALES.

OFFICE OF THE PROVINCIAL GOVERNOR, PROVINCE OF ZAMBALES,

*Iba, May 26, 1903.*

SIR: The economic life of this province was profoundly affected by the crises through which it passed during the preceding term. Rinderpest began by destroying the cattle in the year 1901, and the fatal and merciless disease continued during the following year, 1902, reducing the number of cattle in Zambales to so small a number that there is now a great scarcity, not only for purposes of public slaughter, but even for the cultivation of the cultivable lands of the province. The cholera came upon us in the year 1902, and its effect was disastrous both to agriculture and to commerce, not only because of the fatal effect of the dread disease upon the number of laborers who fell its victims, but also, and it may be, more particularly, because of the sanitary quarantines and other indispensable measures adopted for combating the prevalent malady by the department of health, and at the same time the terror which inspired the people and which was a natural consequence of contemplating the propinquity of death, and which tended greatly to impede the work in the fields and industries, which, while not completely abandoned, were still unable to recover from the depression in time to secure for their labors a successful result. Finally the locusts came, spreading over every portion of the province and causing such havoc to the fields that not a farmer was able to gather even one third of his ordinary, regular crops, by countervailing the ravages of the frightful plague.

Moreover, the pacific and honest residents of this province suffered, in addition to the terrible calamities mentioned, an almost continuous perturbation and disquietude, not a few offenses, indignities, and outrages of every kind, at the hands of those evil doers who had taken part in the insurrection through selfishness alone, and who afterwards persisted in outlawry, influenced by their innate and savage love for idleness and crime. The honorable civil governor surely has not been blind to the efforts expended in compliance with his duties by the official who now has the honor to write this, in the extermination of ladronism and the restoration of the lost tranquillity of these peaceful inhabitants, with the efficient and valorous assistance of the Philippine Constabulary in this province.

It is necessary then, though a matter of regret, to confess that the conditions in this province during the past year, particularly in their economical aspect, were in truth unfavorable. The conviction that such a state was absolutely foreign to any act of the administration of the province, or to the officials charged with this administration, consoles the spirit and satisfies the most honorable and righteous conscience, for they were due solely to accidents which were not possible to be avoided nor much less prevented.

Titanic efforts, which may or may not prove superior to my feeble capacity, are needful for the betterment and perfection of the conditions of the province; but there is no question that with the lapse of time, with constancy and good will, the happy regeneration, so longed for by all, will be reached.

I stated in my former annual report, and I must now repeat, that the pueblos of the province form a very long and narrow mountain range, situated in one line, one after the other, and of such shape that the two pueblos which form the two opposite ends of the province are unable to communicate with each other without traversing the whole province, passing through the other pueblos which constitute the intermediary points along the mountain range mentioned, with the exception of the pueblos of San Antonio, Balincaguin, Alos, Alaminos, Anda, and Agno, which are separated from the said mountain range.

This irregular topography of the province at least hinders that communication, and of course prevents the easy, prompt, and rapid communication which is possible in those provinces which do not have to contend with a similar irregularity of topographical arrangement. This of course interrupts every kind of business transactions between these pueblos, which on account of this impediment would be of problematic success in most cases.

The means of communication render difficult these transactions, because the roads pass over sandy ground and the bridges have been constructed, for the most part, of a provisional character, thus failing to provide expeditious and free passage for travelers. The sea route affords little or no safety, for it can not be used except by some of the small vessels which navigate along this coast and are the only means of carrying on the trade with the interior. River navigation is unknown here, with the exception of the river Agno, which can be used by the inhabitants of Agno, Balincaguin, and also of San Isidro to communicate with one another, though they do not take advantage of it.

The economic resources of the province are truly depressed, so that at the present time it is not possible to adopt any measures that will tend to alleviate this critical situation unless it be the completion of the wagon roads and bridges, the repair and preservation of which will facilitate in a measure this public service.

But this temporary or palliative remedy is merely a beginning. It is necessary to adopt measures whose success will be certain, radical, and permanent, by securing the substitution of the ordinary means of transportation now employed in the province whose slowness and discomfort increase appreciably the distances, by other special means, whose rapidity, beauty, and comfort lessen the distances and render travel agreeable. This will cause, as if by enchantment, the disappearance of that injurious and distasteful irregularity from which Zambales is to-day suffering.

I am not blind to the fact that large enterprises, such as the one just indicated, can not be undertaken without one having at his disposal and utilizing great resources, but neither do I fail to appreciate the condition of economic prostration in which my province is enveloped. But while there are at present no great unemployed fortunes here, happily it is not because natural resources are lacking, for these are almost fabulous, but it is because of the lack of enterprise.

For example, the natives are engaged in no other occupations except agriculture and cattle raising, and these, in truth, they operate in an antiquated, primitive, and defective manner.

As far as is known no one here engaged in cattle raising has made any attempt to improve his stock nor to provide good and abundant pasturage for his cattle. So it is that the great profits which should be derived naturally from so lucrative and prolific a business have not yet been realized. The present conditions exist despite the great returns that should be realized by reason of the extensive and excellent pastures which exist in the province and which are not now being utilized in any practical manner, though they could with little and easy preparation be made to feed thousands upon thousands of cattle.

It must be added that of all the well-known kinds of large cattle, horses, neat cattle, and carabaos alone are raised. Sheep and swine, and small cattle, are raised in small numbers only.

In agriculture rice is the only product cultivated extensively, and very few planters as yet avail themselves of artificial irrigation by means of irrigation ditches in cultivating their fields of this grain. So it produces or fails, according to the accidents of season and of Providence. But even thus, the crops are ordinarily so abundant that there is enough and more produced to provide the necessary food for the support of the farmers and their respective families. What would be the productivity of this soil, then, and what might the residents of Zambales not expect, with the complete development of agriculture as should be sought in this province?

Still more might be expected if they should take advantage, by cultivating sugar

cane, of the many and extensive uncultivated lands, which are very suitable for the sowing of this plant which has so great and so profitable a demand upon the world's markets.

Of no less mercantile importance is the planting of the cocoanut, for whose cultivation equally extensive and numerous lands in this province are available, which are not utilized at present by any one nor even by their own owners.

That coffee, which is not cultivated, might be made to satisfy the most exacting wishes of the agriculturist, by planting it, if not in every part of the province, at least in certain humid localities, has been demonstrated practically by attempts made here to cultivate this so rich and nutritious a product. As for various other agricultural products, while they are very favorable, they are not in the interest nor the favor of the people.

Such a condition of depression, I should be unable to explain if I were ignorant of its historic origin, which, happily for the Philippine Archipelago, has now ceased to exist. There remains only its fateful and sanguinary history, and there may exist for a time its odious and sorrowful memories. In its stead, thanks to the protection and initiative of the United States Government of this Archipelago, as just as it is wise, we have now entered upon an era of instruction, of love and interest for work, a free and regenerating influence. For this reason the Zambales people, who have in times past almost always tried to quench their legitimate aspirations for enlightenment and aggrandizement, now cherish the most fervent desire to work out their happy and brilliant future; they are encouraged and propose to accomplish this by every means that is reasonable, efficacious, and honorable; they are convinced, in short, that material welfare is an indispensable requisite, among other no less necessary factors, for arriving, sooner or later, at the summit of progress and of civilization.

So it is that the people are not now content to utilize solely the wealth that has in times past been turned to profit nor with further developing this wealth; but they also desire to undertake energetically the exploitation of the other sources of wealth—and they are not a few—which still remain untouched, and to make them as profitable as possible.

Among the number of these undeveloped resources of Zambales, the industry of manufacturing cordage and rope is worthy of special mention. Various textiles of great utility in this manufacture are known here, although they are not developed even for the raw material. In the first place, at least for the reason that they are well known, figure maguey, hemp, "coliat," and "balibago," as well as many others which it is not necessary to mention.

The manufacture of every kind of furniture known in the Archipelago, of many and distinct kinds, could be successfully undertaken and without competition; for in this province there are excellent woods, canes, rattan, and, in short, every kind of material useful in this industry.

In a similar condition we find the manufacture of hats; for not only the cane, "nito" and "buri" (fibers) that are used in hatmaking by the weavers of the provinces of Tayabas, Bulacan, and Pangasinan, are abundant in this province, but other various fibers no less useful in this industry are also found.

The cloth that could be manufactured here would be of a class superior to that of Europe so far as strength and durability are concerned. This industry is not carried on here except by a few women in some of the pueblos, and then not for market, but solely for the supply of their own families exclusively.

The "esteras" (a sort of floor mat) of the pueblo of Bolinao, known in the country as "petates," are unrivaled in their class. It is a great pity that there are so few produced, and this not even as an industry, but merely as a pastime for those who make them, and who, ordinarily, belong to the fair sex. This industry would surely produce a marvelous profit.

The forestry resources of the province are great and excellent, but they are not utilized except in the pueblos of Olongapo and Subic. The other pueblos as a rule use these forest products only in the construction of their houses and small boats. It is unnecessary to say that the utilization of these products would realize fabulous profits, and that it would increase considerably the resources of the province and of the municipalities of Zambales, for the woods that are raised in the forests of this province are superior for their quality and abundance to those of other provinces.

The mountains infold in their bosoms some minerals. This has been discovered in times past, and even recently, by certain prospectors. They say, though I am unable to confirm their statements, that deposits of gold, iron, quicksilver, copper, and coal have been found. But there is no question that there are clay and other substances that produce the distinct colors of paints. Since I am absolutely ignorant in such matters, I leave them to the consideration of persons who are competent to

appreciate the utility and importance of the development of these mines. I am confident, however, that in any event this development would be favorable to the people of this province.

Commerce, so important to man—an institution peculiar and inherent in his nature—is almost monopolized by the Chinos; the natives being deprived of so honorable a profession, one so vital and so profitable, because they are unable to compete with these Chinos, owing to their manner of living, which is not economical but penurious, and still less able to compete with the Chinos in their absolute tolerance of trickery, and above all their practice of the art of deceiving. It may well be said, then, that this source of wealth is at least comparatively little utilized. It is of course true that commercial activity is necessarily very limited in a province which, like Zambales, has little developed its agriculture and industries, for the life of commerce is in direct ratio to the development of agriculture and industry, since the people have no other resource than these alone.

Nevertheless, the people of Zambales hope to outwit the Chinos, with a little ability, union, and perseverance, in this honorable, peaceful, and legitimate strife for existence, especially since some of the pueblos, though few in number, have already taken the first step and set a good example by making it impossible for any Chino to engage in trade, because no resident traded at the Chino's store when he bought his goods. This example, so effective and at the same time so practicable, naturally encourages the other pueblos who are still tributaries of the Chinos to adopt similar measures.

The public administration of affairs was worthily maintained. But in the judicial branch there occurred something of transcendental significance, viz., the resignation from their offices of quite a number of justices of the peace and auxiliary justices of the peace, alleging ill-health as the motive. But I believe they took this step for another reason, which was that they received no salary. With so great a number of resignations the administration of justice will begin to suffer, sooner or later, by being unable in all probability to fill the vacancies with persons who are capable of performing these duties.

For reasons easily comprehended, there are many who would like to have the money-order system installed here.

In the foregoing report, sir, I believe that I have outlined, though merely in a general manner, the conditions of this province during the past year, and I shall conclude by proposing to the honorable civil governor of the Philippine Islands the following

#### EXECUTIVE MEASURES:

First. That the carabaos asked for be ordered sent here to the province in order that they may be used in the coming season of planting, as far as may be, to alleviate the urgent needs of the farmers, who form the larger part of the residents of Zambales.

Second. That cattle of other kinds than those now known in the province be introduced, that they may supply the lack of carabaos and provide against the fatal consequences of the public calamities now being suffered by the farmers and which may be repeated in the future.

Third. That seeds of agricultural products such as, for example, the "lumbang" (a fertilizing tree), and others which might favor or improve the agriculture of Zambales, be furnished the province.

#### LEGISLATIVE MEASURES.

Fourth. That provision be made for the establishment in the proper department of a postal money-order system which shall have connections in Manila and in the other provinces.

Fifth. That Act No. 590 of the United States Philippine Commission be amended so as to state which municipality shall pay the fees to be received by the justices of the peace of the provincial capitals in the preliminary investigations in cases of offenses or crimes committed in other pueblos.

I improve this opportunity to reiterate myself,

Respectfully,

POTENCIANO LESACA,  
*Provincial Governor.*

The CIVIL GOVERNOR,  
*Manila, P. I.*

## APPENDIX J.

## ANTIQUÉ.

SAN JOSÉ DE BUENAVISTA, *October 1, 1903.*EXECUTIVE SECRETARY, *Manila:*

Impossible to make complete report as requested by your telegram of September 28. Rice has been distributed to nearly every town in province, but reports from persons in charge are not yet in, so can not state how much relief fund rice has been used.

SALAZAR, *Acting Governor.*

## BATANGAS.

BATANGAS, *October 1, 1903.*

FERGUSON,

*Executive Secretary, Manila:*

Report road and bridge Congressional relief fund. September 1 to September 30, inclusive (work commenced September 1):

*Ibaan-Taysan road.*—Repair, 6 miles cleared and 2 culverts; 74 laborers; 97½ piculs.

*Balayan, Tuy-Nasugbu road.*—Repairs, 1 ford, and 3 miles opened; 87 laborers; 86½ piculs.

*Lemery-Calaca road.*—Two miles reconstructed, 2 culverts; 149 laborers; 126 piculs.

*Rosario-Tiaong road.*—Four miles graded; 42 laborers; 49 piculs.

*Lipa-Alaminos road.*—Two miles graded; 65 laborers; 59½ piculs.

*Batangas-Talahib road.*—One ford, 1½ miles new road; 80 laborers; 59¼ piculs.

*Batangas-San José road.*—Repairs, 1 culvert; 31 laborers; 33½ piculs.

Road and culvert material purchased, 26 piculs.

Transportation of rice to different pueblos, 45 carretons, 63 piculs.

Total, 600½ piculs.

Rice received, 4,000 piculs; rice on hand, 3,400 piculs.

Owing to harvesting of rice and corn during September and October, labor, in exchange for rice, is more difficult to obtain than will be two weeks hence.

Luz, *Governor.*

## BENGUET.

BAGUIO, *September 30, 1903.*

Hon. A. W. FERGUSON,

*Executive Secretary, Manila, P. I.*

SIR: In compliance with your telegraphic order September 28, I have the honor to report that I have expended from the executive fund in my hands, namely, ₱2,000, ₱290.72 to polistas for transporting rice to Baguio, leaving a balance in my hands of ₱1,709.28. While some work has been done by native sawyers here at Baguio, to whom I have furnished rice for subsistence, I can not properly report the same, owing to the fact that Mr. Rowell, superintendent of constructions, is not on the ground to give vouchers for the rice thus furnished. I mean that I have furnished this rice on my own responsibility. Of course, as soon as he returns the vouchers will be furnished, the check made, and report will be made to you on the first of the month following. For the money already expended I sent vouchers this date to Mr. Lampman, disbursing officer of the executive bureau.

Very respectfully,

WILLIAM F. PACK, *Provincial Governor.*

## BULACAN.

MALOLOS, *October 1, 1903.*

The EXECUTIVE SECRETARY,

*Manila, P. I.:*

Replying your wire of September 28, relating works made on roads and bridges for rice, state as follows:

*Malolos-Hagonoy.*—One mile good road and 16 bridge approaches constructed; 110 piculs.

*Barasoain-Quingua*.—Three and one-half miles of gravel road were put in first-class condition; 53 piculs.

*Malolos-Calanate*.—Three-fourths of a mile of first-class gravel road, new; 33 piculs.

*Pulilan-Baliuag*.—Three miles worn-out gravel road put in first-class condition; 354 piculs.

*Malolos-Santa Isabel*.—Two miles fair gravel road; 51 piculs.

*Malolos-Bulacan-Guiguinto*.—Two bridge approaches, one-half mile Telford road resurfaced; 109 piculs of rice.

Two hundred to 800 men were employed daily.

No trouble was experienced in securing or keeping laborers. Foremen were paid money. Some provincial money was spent in connection with rice, as some materials could not be purchased with rice.

Besides the above, work is under way on the following roads, but no payments have been reported by the municipal officers who have charge of this work. Six hundred to 700 piculs will be paid on these roads.

Baliuag-San Miguel, Bustos-Angat, Polo-Station of Polo, Bocaue-Santa Maria are being done by contract. Contract price of gravel placed on road, eight-twenty-sevenths of 1 picul per cubic meter. No payments were made as yet.

Total rice issued for road work up to date, 710 piculs.

PABLO TECSON, *Governor of Bulacan*.

---

CAGAYAN.

TUGUEGARAO, *October 1, 1903*.

CIVIL GOVERNOR, *Manila*:

In reply to your telegram of the 28th of September, I would state that 3,400 are at present working on the road from Tuguegarao to Iguig. The work on roads and bridges which has been done so far and that which is being done is paid out of provincial funds. The province did not ask for rice or other succor from relief fund for that work, according to report of supervisor.

GONZAGA, *Governor*.

---

CAVITE.

CAVITE, *October 1, 1903*.

EXECUTIVE SECRETARY, *Manila*:

Road from Naic to Indang, about 14 miles, has been repaired and put in good shape at a cost of about 14,000 pesos. Bridges and a part of the road between Indang and Silang have been repaired at a cost of about 500 pesos; work still continued. Road from Binacayan through Imus toward Dasmariñas is now being repaired. Total rice from relief fund paid out is 298 piculs, which does not include a considerable quantity due for latter half of September. Work on road is now being pressed as much as practicable.

SHANKS, *Governor*.

---

CEBU.

CEBU, *October 1, 1903*.

Hon. Governor TAFT, *Manila*:

Rice arrived August 17; work started August 28; about 4,000 yards of road and two bridges completed; about 27,000 pounds of rice expended. Rice on sale in three interior towns; reports of sales not in yet. When reports are in can give exact figures.

CLIMACO, *Governor*.

---

ILOCOS SUR.

VIGAN, *September 30, 1903*.

EXECUTIVE SECRETARY, *Manila*:

In compliance with your telegram of September 28, amount of money spent on roads and bridges in this province for year ending June 30, 1903, was \$19,232.96

Mexican and \$1,343.62 United States currency. Since July 1, up to September 30, 1903, spent on the same work the sum of \$7,503.09 Mexican. None of money paid out of the relief fund.

CRISOLOGO, *Governor.*

---

ILOILO.

ILOILO, *October 1, 1903.*

FERGUSSON,  
*Executive Secretary, Manila.*

Rice expended for wages of laborers, 2,623 cavanos, 9 gantas, and 6 chupas. Expended for material 11 cavanos and 17 gantas. Length of the roads repaired 12,600 feet. After the low places had been filled in, the road bed was raised 3 feet above its former level and canals were dug on both sides of the road, the depth of which is from 2 to 3 feet, width 30 feet. Length of road where stones were used 1,800 feet.

DELGADO, *Provincial Governor.*

---

ISABELA.

ILAGAN, *September 30, 1903.*

EXECUTIVE SECRETARY, *Manila:*

Referring to telegram of September 28, report of work on roads and bridges for fiscal year, 1903, is given in annual report of supervisor-treasurer made to chief of supervisors August 10. Only \$296.76 have been expended on this work since July 1 and liabilities outstanding at that time, owing to small amount of available cash until collection of land tax in August. No new work has been undertaken since July 1.

Supervisor-treasurer has inspected, examined, and estimated cost of works most urgently needed, and with about \$7,500 Mexican now available will be able to do considerable toward putting roads in good condition. Isabela Province has not received or needed any part of the relief fund in rice or otherwise, and consequently has paid only cash for labor.

DICHOSO, *Provincial Governor.*

---

LA UNION.

SAN FERNANDO, *October 1, 1903.*

EXECUTIVE SECRETARY, *Manila:*

Replying to your telegram of 28th of September, this province has not received any quantity of rice from the relief fund for roads and bridges, though rice was asked opportunely for that purpose.

ORTEGA, *Governor.*

---

LEPANTO-BONTOC.

CERVANTES, *September 30, 1903.*

EXECUTIVE SECRETARY, *Manila:*

Replying your telegram 28th, during fiscal year ending June 30, 1903, there were 71 miles trails repaired and constructed, at a cost of \$11,157.67 local currency, and 2 small bridges completed, at cost \$36.50 local currency, and one large king-truss bridge partially completed, at cost \$550.50 local currency. Appropriation bills Nos. 14 and 490, for six months, July to December, inclusive, 1902, do not specify amount to be expended on roads and bridges annually, January to June, inclusive, 1903. Act 595 provides for salaries and wages and for general provincial expenses, including repairs and construction of trails, roads, and bridges, not to exceed \$5,000 gold. For quarter ending September 30, 1903, no work has been done on roads and bridges. Now that rainy season is closing supervisor expects to start active work in week or ten days. Act 807 appropriates for contingent expenses, including purchase of official furniture and supplies, repairs to public buildings, labor, and material for improvements of bridges, roads, and trails; not to exceed \$2,500 gold.

DINWIDDIE, *Governor.*

## LEYTE.

TACLOBAN, October 1, 1903.

TAFT, Governor, Manila:

In compliance with telegram of September 28 calling for report upon road work I submit the following:

*Tacloban-Palo road.*—Three and eight-tenths miles regraded and surfaced with coral; 7 bridges renewed varying in length from 36 to 37 feet. Side ditches are unclean and filled with growth. Three section men are employed upon this road, which force is insufficient. Roadbed and bridges in excellent condition. Bridge constructed in town of Palo, length 178 feet.

*Palo-Alang-Alang road.*—Road completed, graded without surfacing to barrio of Malirong, 2½ miles; road previously regraded without surfacing to barrio of Antibac, three-fourths mile, but due to the fact that the roadbed was not sufficiently elevated further work will be needed to make it complete. Beyond this point about one-half mile of roadbed is in process of construction. Two bridges 70 feet long, one 43 feet long, and one 33 feet long, and 7 culverts averaging 10 feet long have been constructed.

*Palo-Tanauan road.*—About 1½ miles; roadbed regraded.

*Tanauan-Dagami road.*—Reconstruction of three temporary cocoanut bridges; portions regraded but not complete.

This work has all been paid from "Road and bridge funds," this province; no work has been done and no labor has been paid from "Relief rice fund."

DORSETH, Acting Governor.

## MASBATE.

MASBATE, October 1, 1903.

EXECUTIVE SECRETARY, Manila:

No work on roads and bridges as yet performed. Arrangements made by supervisor to commence the building of bridges in Island of Ticao this month, where same are very necessary. Road work hardly possible on account of continued rains. Rice sold by supervisor to the amount of 162 piculs for purchase of building material for provincial building, plan for same having been drafted by him and submitted to the provincial board which body approved same.

SERRANO, Provincial Governor.

## MINDORO.

CALAPAN, October 1, 1903.

EXECUTIVE SECRETARY, Manila:

Eleven and one-fourth miles telephone line constructed Puerto Galera to Abra de Ilog, at 30 pesos per mile, paid in rice \$337.50 Mexican. Road from sea to Naujan and bridge over river, 175 sacks rice, or \$1,181.25 Mexican. Total, \$1,518.75 Mexican.

OFFLEY, Governor.

## MISAMIS.

CAGAYAN, September 28, 1903.

EXECUTIVE SECRETARY, Manila:

The 3,000 piculs of rice for use on the roads in this province arrived here the 27th and were discharged but yesterday. Work upon the roads will begin the first part of October.

In view of the above, no report can well be made as yet as requested in your telegram of the 28th instant.

CORRALES, Governor.

## NEGROS ORIENTAL.

DUMAGUETE, *October 1, 1903.*TAFT, *Civil Governor, Manila:*

In reply to your telegram of the 28th of September, report that this provincial board having no authority to use the relief-fund rice for the works on roads and bridges, no rice has been invoiced for said purposes. The works accomplished by the supervisor-treasurer have been paid for out of the provincial funds.

LARENA, *Governor.*

## NUEVA ECIJA.

SAN ISIDRO, *October 1, 1903.*TAFT, *Governor, Manila:*

Have up to date not disbursed rice for road and bridge work, there being no rice for this purpose on hand.

ROQUE, *Acting Governor.*

## NUEVA VIZCAYA.

BAYOMBONG, *September 30, 1903.*TAFT, *Civil Governor, Manila:*

I am unable to submit report on road building and rice-relief fund, because time is too short to get information together to-day, and to-morrow the telegraph line is to be abandoned. Will forward by mail.

BENNETT, *Provincial Governor.*

## PAMPANGA.

BACOLOR, *October 1, 1903.*Hon. CIVIL GOVERNOR, *Manila:*

Supervisor reports having expended 91 piculs of rice on road Guagua to Lubao, general repairs; road in Betis, general repairs; road San Fernando to Mexico, general repairs; and bridge between Angeles and Porac, repairs to floor. He estimates that 1,500 piculs have been expended elsewhere in this province, but as pay rolls are not yet completed to date, can not give detailed account now.

JOVEN, *Governor of Pampanga.*

## PANGASINAN.

LINGAYEN, *October 1, 1903.*EXECUTIVE SECRETARY, *Manila:*

Relative to your telegram of September 28, I would state that I shall inform you of the sum spent for road and bridge work as soon as the pay rolls of the supervisor shall be received. No rice of the relief fund has been expended so far. To-day commences shipment of rice to Sual, where there is work, to be used as part of wages of laborers. It is proposed to pay 30 cents Philippine currency and 3 pounds of rice per day to each laborer. The road and bridge work is well distributed throughout the province and paid with provincial funds. There is no real scarcity in any of the pueblos, with exception of Sual, and the board is providing for its needs.

FAVILA, *Governor.*LINGAYEN, *October 1, 1903.*EXECUTIVE SECRETARY, *Manila:*

Supervisors' pay rolls and material used, roads and bridges, month of September, total, \$2,533.41 Philippine currency. All provincial funds.

FAVILA, *Governor.*

## PARAGUA.

Cuyo, October 1, 1903.

EXECUTIVE SECRETARY, *Manila*:

No road or bridge work has been done in the province of Paragua during the past year except repair work done by municipalities. All towns and settlements in the province being on sea coast nearly all communication and transfer of products carried on by water. Foot trails are kept open by contributed labor. There are no wagon roads in the province. No relief-fund rice has been used in the province of Paragua.

MILLER, *Governor*.

## RIZAL.

PASIG, October 1, 1903.

The Hon. WILLIAM H. TAFT,  
*Civil Governor in the Philippines, Manila.*

SIR: In compliance with your telegram dated the 28th ultimo, relative to the directions contained in Executive Order No. 64, of the 31st of July last, I beg leave to state that the board has only yesterday discussed this matter, so far as the repair of roads and bridges of the province is concerned.

Nevertheless, as soon as the estimates for the requisition of rice from the insular purchasing agent and the resolutions regarding the repair of roads and bridges shall have been completed, I shall immediately advise you, as prescribed in the aforesaid order, for your information.

I have the honor to be, sir, your most obedient servant,

A. DANCEL, *Provincial Governor*.

## ROMBLON.

ROMBLON, September 29, 1903.

EXECUTIVE SECRETARY, *Manila, P. I.*:

Roads in province have been repaired from time to time as required. No improved roads in province. Bridges all in fair condition. Contracts recently let for repair three bridges on Sibuyan Island. No relief-fund rice received by province. Construction of improved roads in this province would cost about \$1,000 United States currency per mile, and would not be of any great commercial value, as Romblon is only protected port in the province.

SANZ, *Governor*.

## SAMAR.

CATBALOGAN, October 1, 1903.

Governor TAFT, *Manila*:

No rice has been expended for road and bridge work in this province, none having been requested by the municipalities who are, by order of this provincial government, repairing same in their districts as well as they can.

SINGSON, *Governor*.

## SORSOGON.

SORSOGON, September 30, 1903.

The honorable the CIVIL GOVERNOR, *Manila*:

Although still weak on account of my illness, I commenced to work to-day, in order not to neglect administration of government. Report in full of road and bridge work done in which rice was expended will be remitted by mail. Provincial supervisor in charge of management of rice is away from provincial capital.

MONREAL, *Governor*.

## SURIGAO.

SURIGAO, *October 1, 1903.*EXECUTIVE SECRETARY, *Manila, P. I.:*

From July 1, 1901, to July 14, 1903, about one-half mile of road has been built and two small bridges and 1 mile of road repaired under supervision of provincial supervisor. From July 14, 1903, to September 30, 1903, two small bridges have been built and provincial grounds improved. No relief-fund rice expended.

RAFAEL ELIOT, *Acting Governor.*

## TAYABAS.

LUCENA, *October 1, 1903.*EXECUTIVE SECRETARY, *Manila:*

Road work done during September: Lucena-Tayabas road, filling ditches, brushing and grading, 2 miles. Sariaya-Candelaria road, brushing and grading, 4 miles. Candelaria-Tiaong road, brushing, filling ditches and grading, 1 mile. Total, 7 miles of road work. Rice expended, 400 piculs.

PARAS, *Governor.*

## ZAMBALES.

IBA, *October 1, 1903.*Mr. FERGUSON, *Executive Secretary, Manila, P. I.:*

Have to-day received your telegram of September 28 last, relative to report upon roads and bridges. I reply that steamship *Masbate* brought rice to Iba on September 15, to Santa Cruz on the 16th, to Bolinao on the 17th. From these points it was immediately distributed to the pueblos of the province, the amount of this rice being 1,989 piculs. Work on roads and bridges could not be commenced in all the towns until the 28th of September, and as there has been no time for receiving data from the municipalities, it is not possible for me to inform you now of the amount of work done and of the amount of the relief fund expended. However, I shall do so as soon as possible.

LESACA, *Governor.*

## EXHIBIT Y.

### EXECUTIVE ORDERS AND PROCLAMATIONS, OCTOBER 1, 1902, TO SEPTEMBER 30, 1903.

EXECUTIVE ORDER }

No. 104.

OFFICE OF THE CIVIL GOVERNOR  
OF THE PHILIPPINE ISLANDS,  
*Manila, P. I., October 7, 1902.*

No collecting, disbursing, or other officer or employee of the insular government, or of the various provincial and municipal governments, upon being discharged, transferred, or otherwise vacating his office, will remove therefrom any retained paper or other official record. This prohibition applies particularly to retained copies of accounts-current and property returns, together with their vouchers, official correspondence, files of acts of the Philippine Commission, executive orders, department and bureau circulars and orders, all of which must be preserved in good order.

The attention of all collectors, inspectors, and disbursing officers of customs, collectors and disbursing officers of internal revenue, postmasters, provincial treasurers, and supervisors is especially called to the foregoing instructions.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER }

No. 105.

OFFICE OF THE CIVIL GOVERNOR  
OF THE PHILIPPINE ISLANDS,  
*Manila, P. I., October 17, 1902.*

To insure prompt action and render possible systematic control in the matter of the execution and cancellation of fidelity bonds required by law of certain officials and employees, the following rules are published for the guidance of all chiefs of bureaus and offices of the insular and provincial governments and of the government of the city of Manila. In so far as the latter is concerned the secretary of the municipal board will perform the duties hereinafter prescribed for the chief of bureau or office:

1. A list of officials and employees pertaining to the bureau or office, who are required to furnish bonds, will be at once prepared and forwarded direct to the treasurer of the Philippine Archipelago, who will verify the records of his office thereby and without delay take proper steps to secure the cancellation of bonds still in force in behalf of officials or employees out of service and the execution of bonds for their successors and any others who have not qualified in that respect. This list will set forth the name and official designation of each individual, his salary or other compensation, the amount of bond as fixed by competent authority, date of appointment to present position on account of which bond is required, and name of predecessor, if any.

2. When a bonded position is created and appointment made thereto, or a bond required in a position theretofore existing, or appointment made of a successor to a bonded official or employee discharged or otherwise relieved, the chief of the bureau or office to which the position pertains will at once forward to the treasurer of the Philippine Archipelago a statement setting forth the designation of the position, financial or property responsibility thereof, salary attached thereto, the name of the appointee, date of his appointment to the position in question, and such further information in the premises as may be required by the treasurer. Upon receipt of the report above required the treasurer will promptly furnish the chief of bureau or office in interest the required blank forms of application for fidelity bond, to be filled in and signed with the least delay practicable by the person in whose behalf the surety is required, and the complete application will be forwarded promptly to the treasurer for submission to the surety company for consideration. The acceptance or rejection of the risk by the company will be promptly communicated by the treasurer to the chief of the bureau or office concerned.

3. Whenever a bonded official or employee is discharged or otherwise relieved and a successor not immediately appointed, the treasurer of the Philippine Archipelago will be at once advised by the chief of bureau or office in which the change has occurred.

WM. H. TAFT, *Civil Governor.*

The chief of the bureau of public lands is designated to act as administrator of the estate of the San Lazaro Hospital, and to perform all the duties connected with such position formerly imposed upon the insular treasurer, who is relieved from such duty upon the termination of an accounting which the chief of the bureau of public lands shall proceed immediately to have with the insular treasurer.

All authority previously vested in the insular treasurer by virtue of the provisions of Executive Order No. 7 shall hereafter be vested in the chief of the bureau of public lands.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER }  
No. 112.

OFFICE OF THE CIVIL GOVERNOR  
OF THE PHILIPPINE ISLANDS,  
*Manila, December 1, 1902.*

The following regulations shall govern the matter of leaves of absence granted under the provisions of Act Numbered Eighty to all officials, including heads of offices or bureaus, and to all employees filling appointive offices and positions of trust and employment under the government of the Philippine Islands, and are hereby published for the information and guidance of all concerned in order that a uniform practice may obtain throughout the service. All orders heretofore issued from the office of the military governor and from this office relating thereto are hereby revoked:

I. Heads of offices or bureaus are directed to keep a systematic record, on a form provided for that purpose, of leaves of absence of all officers and employees connected with their offices or bureaus respectively, and to enter daily upon this record all absences from duty showing whether with leave, without leave, or on sick leave, and to forward to the civil service board at the beginning of each month, on form three furnished by said board, a statement of the absences of all officers and employees from any cause whatever during the preceding month.

II. In submitting statements of leaves of absence, preliminary to granting leave to officers and employees under the provisions of sections two and three of Act Numbered Eighty, all heads of offices or bureaus will forward a prompt and clear report through the civil service board on a form prescribed by said board showing all absences from duty, including therein the period or periods of leave, if any, previously enjoyed, and whether with leave, without leave, or on sick leave.

III. (a) Applications for accrued leave for a period of more than two days must be made in writing one week in advance, wherever possible, of the date on which the leave is desired to become effective, upon Form Numbered Thirty-nine, Philippine civil service board, to the head of the office or bureau for recommendation and transmission through said board to the proper executive officer authorized to exercise executive control as contemplated in act numbered two hundred and twenty-two.

(b) Accrued leave of absence of an employee in the insular civil service shall be computed pro rata in accordance with the schedule contained in section two of act numbered eighty. The leave of an employee accruing while he was connected with the Army or Navy shall be computed from the date of detail to civil duty; in the case of an officer, on the basis of the pay and allowance last received by him during his detail; and in the case of an enlisted man, on the basis of the annual salary first received by him after discharge from the Army or Navy: *Provided*, That no time intervened between the time of such discharge and his appointment in the civil service, in which event no leave will be allowed during the period of his detail while connected with the Army or Navy.

(c) An employee who is separated from the civil service without prejudice (namely, without cause) may be given leave with pay and his name shall remain on the pay roll at the rate he is then receiving for a period equaling in money value the period of accrued leave estimated in accordance with the schedule provided in section two of act numbered eighty.

(d) An employee who is granted leave for vacation purposes shall be given leave with pay at the rate he is then receiving for a period equaling in money value the period of accrued leave estimated in accordance with the schedule provided in section two of act numbered eighty; and he may be granted, if he so desires, such additional leave, without pay, as will give him the aggregate length of time on leave, with and without pay, as provided in the aforesaid schedule.

IV. (a) All applications for leave of absence on account of illness for a period of more than two days must be made on Form Numbered Forty, Philippine civil

service board, and transmitted as in the case of applications for accrued leave: *Provided*, That sick leave shall not be granted in advance.

(b) When it becomes necessary for an officer or an employee to avail himself of the provisions of section three of Act Numbered Eighty, notice must be sent immediately to the head of the office or bureau in which he is employed. Where an officer or an employee contemplates leaving the islands on account of illness he must submit an application on Form Numbered Forty and a medical certificate on Form Numbered Forty-one described in paragraph c of this section. Permission to be absent may thus be obtained and the office record will show "absent with leave" each day until return to duty, which shall not be construed as sick leave unless satisfactory evidence of illness is furnished as required in paragraph c of this section.

(c) Within five days after return to duty from said leave of absence, the officer or employee shall file with the head of the office or bureau a statement in regard to his absence on account of illness (on Form Numbered Forty, if not previously filed), which must be made under oath before an officer in the Philippine Islands duly authorized to administer oaths, accompanied by a certificate made on Form Numbered Forty-one by the attending physician or physicians during the period of his illness. Said certificate or certificates shall give specifically the name, nature, and description of the disease from which the employee was suffering, the exact period or periods, giving dates, during which the physician writing the certificate treated him, the period or periods, if any, during which he was a patient in a hospital, and the length of time such disease incapacitated him from performing the duties of his position. In all cases the certificate of illness must be made by a reputable practicing physician or surgeon. A medical reexamination may be made and a report rendered thereon by a duly authorized medical examiner when so directed by the civil governor or by a secretary of one of the departments. If it shall be shown that the disease named was due to immoral or vicious habits, no allowance for leave on account of illness shall be made, but such leave shall be chargeable against unused accrued leave, and if in excess of accrued leave it shall be without pay, as no such cases will be regarded as meritorious. If the evidence of illness submitted is satisfactory, sick leave will be granted with pay for the time during which such employee was incapacitated on account of such illness, provided that such period shall not exceed sixty days in any one calendar year.

V. Leaves of absence not exceeding two days may be granted in the discretion of the head of an office or bureau, and in case of illness without the certificate of an attending physician, but the applicant must certify that he was ill and unable to perform his official duties.

VI. Temporary and emergency employees are not entitled to the benefits of leaves of absence provided by any existing law or order.

VII. Leave of absence for any reason other than serious illness must be contingent upon the necessities of the service, and although definitely provided by law it is not an inherent right which may be recognized without due regard for the interests of the public service.

VIII. In computing periods of absence from duty, there is no authority of law for considering such absence on Saturday as less than one entire day, Saturday being a short day and not a half holiday.

IX. Officials and employees on leave of absence are required to report to the heads of their respective offices or bureaus at the end of each month by registered mail their post-office addresses for the ensuing month, and shall promptly report in a similar manner and in sufficient detail every unexpected and unavoidable delay which may have occurred during the period contemplated by their leaves of absence.

X. No official or employee holding a classified position in the Philippine civil service shall be dropped from the rolls of his office for unexplained absence in the United States until at least forty days after the expiration of the period of absence contemplated by the leave granted.

XI. All officers and employees who are granted leave of absence for the purpose of visiting the United States and who contemplate returning to duty upon the expiration of such leave of absence shall, before leaving the Archipelago, make application to this office for transportation from San Francisco returning to Manila. In each such application the date of the expiration of leave of absence and the post-office address of the applicant while in the United States will be stated. Subsequent communication regarding return transportation and prompt report of any change occurring in the applicant's post-office address will be directed by him to the Chief of the Bureau of Insular Affairs, War Department, Washington, District of Columbia, and a duplicate copy of each such communication mailed at the same time to the Executive Secretary, Manila.

## EXECUTIVE ORDER }

No. 4.

GOVERNMENT OF THE PHILIPPINE ISLANDS,

EXECUTIVE BUREAU,

*Manila, March 1, 1903.*

Executive Order Numbered One hundred and twelve, dated December 1, 1902, is amended to read as follows:

The following regulations shall govern the matter of leaves of absence granted under the provisions of Act Numbered Eighty to all officials, including heads of offices or bureaus, and to all employees, filling appointive offices and positions of trust and employment under the government of the Philippine Islands, and are hereby published for the information and guidance of all concerned in order that a uniform practice may obtain throughout the service. All orders heretofore issued from the office of the military governor and from this office relating thereto are hereby revoked.

I. Heads of offices or bureaus are directed to keep a systematic record, on a form provided for that purpose, of leaves of absence of all officers and employees connected with their offices or bureaus respectively, and to enter daily upon this record all absences from duty, showing whether with leave, without leave, or on sick leave, and to forward to the civil-service board at the beginning of each month, on Form Three furnished by said board, a statement of the absences of all officers and employees from any cause whatever during the preceding month.

II. In submitting statements of leaves of absence, preliminary to granting leave to officers and employees under the provisions of sections two and three of Act Numbered Eighty, all heads of offices or bureaus will forward a prompt and clear report through the civil-service board on a form prescribed by said board, showing all

absences from duty, including therein the period or periods of leave, if any, previously enjoyed, and whether with leave, without leave, or on sick leave.

III. (a) Applications for accrued leave for a period of more than two days must be made in writing one week in advance, wherever possible, of the date on which the leave is desired to become effective, upon Form Numbered Thirty-nine, Philippine civil-service board, to the head of the office or bureau for recommendation and transmission through said board to the proper executive officer authorized to exercise executive control as contemplated in Act Numbered Two hundred and twenty-two.

(b) Accrued leave of absence of an employee in the insular civil service shall be computed pro rata in accordance with the schedule contained in section two of Act Numbered Eighty. The leave of an employee accruing while he was connected with the Army or Navy shall be computed from the date of detail to civil duty; in the case of an officer, on the basis of the pay and allowance received by him during his detail; and in the case of an enlisted man, on the basis of the annual salary first received by him after discharge from the Army or Navy: *Provided*, That no time intervened between the time of such discharge and his appointment in the civil service, in which event no leave will be allowed during the period of his detail while connected with the Army or Navy.

(c) An employee who is separated from the civil service without prejudice (namely, without cause) may be given leave with pay and his name shall remain on the pay roll at the rate he is then receiving for a period equaling in money value the period of accrued leave estimated in accordance with the schedule provided in section two of Act Numbered Eighty.

(d) An employee who is granted leave for vacation purposes shall be given leave with pay at the rate he is then receiving for a period equaling in money value the period of accrued leave estimated in accordance with the schedule provided in section two of Act Numbered Eighty; and he may be granted, if he so desires, such additional leave, without pay, as will give him the aggregate length of time on leave, with and without pay, as provided in the aforesaid schedule.

IV. (a) All applications for leave of absence on account of illness for a period of more than two days must be made on Form Numbered Forty, Philippine civil-service board, and transmitted as in the case of applications for accrued leave: *Provided*, That sick leave shall not be granted in advance.

(b) When it becomes necessary for an officer or an employee to avail himself of the provisions of section three of Act Numbered Eighty, notice must be sent immediately to the head of the office or bureau in which he is employed. Where an officer or an employee contemplates leaving the islands on account of illness he must submit an application on Form Numbered Forty and a medical certificate on Form Numbered Forty-one described in paragraph c of this section. Permission to be absent may thus be obtained and the office record will show "absent with leave" each day until return to duty, which shall not be construed as sick leave unless satisfactory evidence of illness is furnished, as required in paragraph c of this section.

(c) Within five days after return to duty from said leave of absence, the officer or employee shall file with the head of the office or bureau a statement in regard to his absence on account of illness (on Form Numbered Forty, if not previously filed), which must be made under oath before an officer in the Philippine Islands duly authorized to administer oaths, accompanied by a certificate made on Form Numbered Forty-one by the attending physician or physicians during the period of his illness. Said certificate or certificates shall give fully and specifically the name, nature, etiology, history, and description of each disease or disability from which the employee was suffering, the exact period or periods, giving dates, during which the physician writing the certificate treated him, the period or periods, if any, during which he was a patient in a hospital, and if not in a hospital the exact length of time the employee was actually confined to his house, and the length of time such disease wholly incapacitated him from performing the duties of his position. A duplicate copy of report of laboratory test or examination made in each case must accompany the medical certificate. In all cases the certificate of illness must be made by a reputable practicing physician or surgeon. A medical reexamination may be made and a report rendered thereon by a duly authorized medical examiner when so directed by the civil governor or by a secretary of one of the departments. If it shall be shown that the disease named was due to immoral or vicious habits, no allowance for leave on account of illness shall be made, but such leave shall be chargeable against unused accrued leave, and if in excess of accrued leave it shall be without pay, as no such cases will be regarded as meritorious. The physician must state whether or not there are any indications whatever that the disease named was due to immoral or vicious habits: *Provided*, That the physician, before making a report or expressing an opinion, as required herein, shall state to the applicant that he will not make any report whatever or submit a medical certificate,

if he formally withdraws his application for sick leave for the period of such illness, and substitutes therefor an application for accrued leave. If the evidence of illness submitted is satisfactory, sick leave will be granted with pay for the time during which such employee was incapacitated on account of such illness, provided that such period shall not exceed sixty days in any one calendar year.

V. Leaves of absence not exceeding two days may be granted in the discretion of the head of an office or bureau, and in case of illness without the certificate of an attending physician, but the applicant must certify that he was ill and unable to perform his official duties.

VI. Temporary and emergency employees are not entitled to the benefits of leaves of absence provided by any existing law or order.

VII. Leave of absence for any reason other than serious illness must be contingent upon the necessities of the service, and although definitely provided by law, it is not an inherent right which may be recognized without due regard for the interests of the public service.

VIII. In computing periods of absence from duty, there is no authority of law for considering such absence on Saturday as less than one entire day, Saturday being a short day and not a half holiday.

IX. Officials and employees on leave of absence are required to report to the heads of their respective offices or bureaus at the end of each month by registered mail their post-office addresses for the ensuing month, and shall promptly report in a similar manner and in sufficient detail every unexpected and unavoidable delay which may have occurred during the period contemplated by their leaves of absence.

X. No official or employee holding a classified position in the Philippine civil service shall be dropped from the rolls of his office for unexplained absence in the United States until at least forty days after the expiration of the period of absence contemplated by the leave granted.

XI. All officers and employees who are granted leave of absence for the purpose of visiting the United States and who contemplate returning to duty upon the expiration of such leave of absence shall, before leaving the Archipelago, make application to this office for transportation from San Francisco returning to Manila. In each such application the date of the expiration of leave of absence and the post-office address of the applicant while in the United States will be stated. Subsequent communication regarding return transportation and prompt report of any change occurring in the applicant's post-office address will be directed by him to the Chief of the Bureau of Insular Affairs, War Department, Washington, District of Columbia, and a duplicate copy of each such communication mailed at the same time to the executive secretary, Manila.

No. 5. }

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, March 1, 1903.

Pursuant to the provisions of section five of Act Numbered Three hundred and fifty-five, Philippine Commission, as amended by section one of Act Numbered Six hundred and twenty-five, the captain of the port of Manila is hereby directed to turn over to the collector of customs for the Philippine Archipelago, upon proper receipts therefor, all public records and property held by him as said captain of the port. Upon receipt from the captain of the port of Manila of such public records and property, the collector of customs for the Philippine Archipelago shall assume all the duties of the said office of the captain of the port of Manila.

The following employees of the office of the captain of the port of Manila will be transferred to the office of the collector of customs for the Philippine Archipelago:

One harbormaster, at two thousand five hundred dollars per annum.

One inspector of boilers, at two thousand two hundred and fifty dollars per annum.

One inspector of hulls, at two thousand dollars per annum.

One clerk, at one thousand two hundred dollars per annum.

Three patrolmen, at three hundred dollars per annum.

The disbursing officer of the captain of the port of Manila shall deposit with the insular treasurer, to the credit of his appropriation, all his unexpended balances. Such funds shall then be available for the payment of salaries of officers and employees transferred by this order to the office of the collector of customs for the Philippine Archipelago, to the extent to which they may be needed, and for the necessary expenses of discharging the functions hereby transferred to said collector of customs.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER }

No. 9.

GOVERNMENT OF THE PHILIPPINE ISLANDS,

EXECUTIVE BUREAU,

Manila, March 25, 1903.

Pursuant to the provisions of section twenty-four of Act Numbered One hundred and seventy-five, Philippine Commission, as amended by Act Numbered Six hundred and ten, and as amended and substituted by act numbered six hundred and fifty-two, empowering the Civil Governor, by executive order, to issue regulations as to the form of written authority to be issued for purchasing or receiving firearms and to provide for the exaction of a bond, upon terms to be fixed by him, which shall be for the safe-keeping of the weapon or weapons authorized to be purchased or held under the provisions of said act, the following regulations are hereby issued for said purpose:

1. When it shall be decided by any competent authority, under the provisions of said section twenty-four, act numbered one hundred and seventy-five, Philippine Commission, as amended, that a license shall be issued to any resident to purchase and hold arms for his reasonable protection, or for use in hunting or other lawful purposes, such license shall not issue until the person making application therefor shall execute and deliver to the officer issuing such license a good and sufficient bond in the penal sum of two hundred dollars, conditioned that the principal in such bond shall safely keep the said arms authorized to be purchased or held and will deliver the same to the government of the Philippine Islands on demand.

2. When it shall be decided by competent authority, under the provisions of section one, act numbered six hundred and ten, Philippine Commission, to deliver arms and ammunition to any municipality for the purpose of equipping the municipal police, such arms and ammunition shall not be issued to the municipality until the

president and all the municipal councilors of such municipality shall execute and deliver to the provincial governor a good and sufficient bond in the penal sum of one hundred dollars for each gun to be issued and received by the municipality, conditioned that the same shall be delivered upon order of the provincial or the civil governor to the insular government, and shall not be lost or taken from the municipal police authorized to use them and into whose custody they shall be delivered.

3. The form of application for a license to possess firearms under the provisions of said section twenty-four, Act Numbered One hundred and seventy-five, as amended, shall be substantially as follows:

“APPLICATION TO POSSESS FIREARMS.

“[Under the provisions of section 24, Act No. 175, Philippine Commission, as amended by Act No. 652, Philippine Commission.]

“I, \_\_\_\_\_, age \_\_\_\_\_ years, born in \_\_\_\_\_, a citizen of \_\_\_\_\_, by occupation \_\_\_\_\_, residing \_\_\_\_\_, and whose mail address is \_\_\_\_\_, request authority to have in my possession or purchase the following-described arms and ammunition:

Arms.				Ammunition.		
Kind.	Make.	Caliber.	Number.	Caliber.	Make.	Quantity.
.....	.....	.....	.....	.....	.....	.....
.....	.....	.....	.....	.....	.....	.....
.....	.....	.....	.....	.....	.....	.....
.....	.....	.....	.....	.....	.....	.....
.....	.....	.....	.....	.....	.....	.....

“And to use the same for the purpose of \_\_\_\_\_

“\_\_\_\_\_

“(Signature of applicant.)”

4. The form of the bond to be executed by the applicant upon receiving a license to possess or purchase firearms under the above-mentioned provisions of law and these regulations shall be substantially as follows:

“BOND.

“*Know all men by these presents*, That we, \_\_\_\_\_, residing in the town of \_\_\_\_\_, province of \_\_\_\_\_, Philippine Islands, as principal, and \_\_\_\_\_, residing in the town of \_\_\_\_\_, province of \_\_\_\_\_, Philippine Islands, and \_\_\_\_\_, residing in the town of \_\_\_\_\_, province of \_\_\_\_\_, Philippine Islands, as sureties, are held and firmly bound unto the government of the Philippine Islands in the penal sum of \_\_\_\_\_ dollars (two hundred dollars for each firearm) United States currency, to the payment of which sum well and truly to be made we bind ourselves, our heirs, executors, and administrators, jointly and severally, firmly by these presents.

“*The condition of this obligation* is such that whereas \_\_\_\_\_ has on this \_\_\_\_\_ day of \_\_\_\_\_, 190—, issued to the above bounden \_\_\_\_\_ a license to purchase and keep the following firearms, viz: \_\_\_\_\_, and the above bounden \_\_\_\_\_ has covenanted and agreed, and does hereby covenant and agree, that he will safely keep the said arms, and each of them, and will deliver the same to the government of the Philippine Islands on demand:

8. The bonds hereinbefore referred to shall be approved by the officer receiving same and all such bonds shall be deposited with the chief of the Philippines Constabulary for safe-keeping, with the record of all persons to whom written authority shall be issued for keeping an arm or arms.

9. When application for a license to possess and hold firearms is made to the governor of a province, or to the chief of police within the city of Manila, as provided in said section twenty-four, Act Numbered One hundred and seventy-five, as amended, the consent and approval of the civil governor shall be necessary before the license shall issue.

10. When application for a license to possess and carry firearms is made to an inspector of constabulary, the consent and approval of the chief of the Philippines constabulary shall be obtained before the license shall issue.

11. No license issued under the provisions of said section twenty-four, act numbered one hundred and seventy-five, as amended, shall be transferable, and every license or permit shall have plainly written or printed thereon that the same is not transferable.

12. Every license issued under said provisions of law and these regulations shall run for the period of one year from the date of issue, unless sooner revoked by competent authority.

13. For the purpose of securing a new and complete registration under the provisions of section twenty-four, act numbered one hundred and seventy-five, as amended, of all arms now held by private persons resident in the Philippine Islands, the provincial governor in each province is hereby authorized and directed to issue a proclamation calling upon all residents of the province in possession of firearms and ammunition without a license under the provisions of section twenty-four, Act Numbered One hundred and seventy-five, as amended by Act Numbered Six hundred and fifty-two, to deliver all such arms and ammunition to the governor of the province, or to any of his duly authorized agents or deputies, with the assistance of the inspectors of constabulary, in order that such arms and ammunition may be registered, bonds executed, and permits issued, as provided by said law and these regulations. Every private person resident in the Philippine Islands who shall deliver any arms or ammunition to the provincial governor, or to his authorized agent or deputy, shall be furnished a blank application for a permit to possess firearms; and upon signing same and executing the bond prescribed by these regulations, if duly approved by competent authority, such resident may again receive and possess such arm or arms and ammunition, subject to the provisions of existing law and these regulations.

14. The provisions of the foregoing paragraph shall be applicable to the city of Manila, except that the proclamation shall be issued by the chief of police of said city, and the arms and ammunition shall be delivered to him for registration; and upon the execution of the bond required by these regulations and the issuance of the license provided for by law, with the approval of the civil governor, the persons surrendering such arms and ammunition to the chief of police may again receive and possess the same, subject to the provisions of existing law and these regulations.

15. For the purpose of securing a complete registration under the provisions of section one, act numbered six hundred and ten, of all arms now held by municipalities for the purpose of equipping the municipal police, the provincial governor in each province is hereby authorized and directed to communicate with the president of each municipality in his province and direct them to have all arms and ammunition so held by the municipalities delivered to the governor of the province, or to any of his duly authorized agents or deputies, with the assistance of the inspectors of constabulary, in order that such arms and ammunition may be examined and repaired and an accurate description and registration made thereof. Upon the execution of the bond prescribed by these regulations by the president and councilors of a municipality, the provincial governor, with the approval of the civil governor, may make redelivery to the municipality of all such arms and ammunition turned in for examination and registration, as herein prescribed, if suitable for the purpose, such arms and ammunition to be held by the municipality subject to the provisions of section one, act numbered six hundred and ten, and these regulations.

WM. H. TAFT, *Civil Governor.*

No. 10.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
*Manila, April 2, 1903.*

Executive order Numbered Forty-nine, dated January fifteenth, nineteen hundred and two, is amended to read as follows:

"Referring to section three of Act Numbered Two hundred and sixty-eight, which provides that the construction and repair of public buildings shall be made in accordance with plans and specifications presented by the chief of the bureau of architecture under the superintendence of the chief of the bureau of architecture, or of an officer of the bureau appointed for that purpose, it is hereby ordered that all lumber and other building material belonging to the insular government now in the possession of any bureau, except such lumber and other building material as is purchased and held for sale to the municipal or provincial governments by the insular purchasing agent, shall be transferred to the chief of the bureau of architecture, together with all lumber and other building material taken from public buildings in the process of repair or destruction.

Such transfer of property shall be consummated on auditor's Form Seven Hundred and seven. Subsequently, the property shall be taken up by the receiving officer on his quarterly return (auditor's form seven hundred) and in like manner dropped by the invoicing officer. Lumber received by the bureau of architecture through the destruction of public buildings shall be taken up on Form Seven Hundred, under the heading 'Otherwise received, etcetera.'"

EXECUTIVE ORDER, }  
No. 13.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, April 7, 1903.

The following regulations regarding issuance of passports are published for the guidance of all concerned, in accordance with the provisions of Act Numbered Six hundred and eleven, entitled "An act authorizing the civil governor to issue passports to citizens of the Philippine Islands," enacted February second, nineteen hundred and three:

I.

Philippine passports may be issued to all the inhabitants of the Philippine Islands continuing to reside therein who were Spanish subjects on the eleventh day of April, eighteen hundred and ninety-nine, and then resided in said islands, and their children born subsequent thereto, except such as shall have elected to preserve their allegiance to the Crown of Spain in accordance with the provisions of the treaty of peace between the United States and Spain signed at Paris, December tenth, eighteen hundred and ninety-eight.

II.

Those applying for a Philippine passport must present their application, make an affidavit with respect to birth, and state that they were subjects of Spain as defined in Rule I. They must take the oath of allegiance and furnish an identification by a creditable person, in accordance with a form prescribed for such purpose.

III.

A passport expires two years after the date of its issuance and will not be renewed. A new passport may be issued upon a new application in accordance with the provisions of Rule II.

IV.

When a person applies for a new passport before his old passport has expired, the latter, coupled with proof that the person in whose behalf it is presented is the person named therein, may be taken two years from its date as prima facie evidence of the right of the person to obtain a passport under Rule I.

V.

When the applicant for a passport is accompanied by his wife, minor children, or by a servant who is entitled to a passport under Rule I, it will be sufficient to state in the passport the names of such persons and their relationship to, or connection with, him. A separate passport must be issued to each person of full age not the wife or servant of another with whom he or she is traveling.

VI.

An official fee of two dollars, in money of the United States, shall be collected by the disbursing officer, executive bureau, for each passport issued, and the fee shall be deposited by him in the insular treasury.

WM. H. TAFT, Civil Governor.

EXECUTIVE ORDER }  
No. 14.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, April 8, 1903.

Section eleven of Executive Order Numbered Nine, dated March twenty-fifth, nineteen hundred and three, is hereby amended to read as follows:

"11. No license issued under the provisions of said section twenty-four, Act Numbered One hundred and seventy-five, as amended, shall be transferrable, and every license or permit shall have plainly written or printed thereon that same is not transferrable: *Provided*, That importers or other persons in the Philippine Islands possessing a special authorization of the civil governor for landing firearms, gunpowder, ammunition, and so forth, pursuant to part first of section six of Act Numbered Two hundred and thirty of the Philippine Commission, entitled 'An act to revise and amend the tariff laws of the Philippine Archipelago,' shall not be required to obtain a further permit to possess said firearms, gunpowder, or ammunition, but no such firearms, gunpowder, or ammunition, or any portion thereof, shall be sold,

transferred, or otherwise released from the personal custody of said authorized importer or other specially authorized person, except to persons authorized to purchase and hold arms or ammunition for their protection, or for use in hunting or other lawful purposes, in accordance with section one of said Executive Order Numbered Nine of March twenty-fifth, nineteen hundred and three: *Provided further*, That all special authorizations issued by the civil governor to importers or other persons to import firearms, gunpowder, or ammunition shall be first presented to the chief of the Philippine constabulary for registration in accordance with law."

WM. H. TAFT, *Civil Governor*.

EXECUTIVE ORDER

No. 15.

GOVERNMENT OF THE PHILIPPINE ISLANDS,

EXECUTIVE BUREAU,

Manila, April 20, 1903.

Vice-Governor Luke E. Wright, after having rendered distinguished service as acting civil governor of the Philippine Islands for nearly a year during a most critical period, visited the United States in October last for vacation. He was permitted, however, to enjoy very little of his well-earned leisure, because his presence was required in Washington during the entire session of Congress from the first of December to the fourth of March, during which he labored incessantly for legislation of the utmost importance to the welfare of the Filipino people and the business prosperity of these islands. Largely due to his efforts three measures of great benefit were passed by Congress: The currency bill, the constabulary bill, and the three million dollar agricultural relief bill. Governor Wright is now returning to take up again his onerous executive and legislative duties as secretary of commerce and police and as a member of the Commission, and will arrive in Manila on the steamship *Korea* about May first. It is fitting that he should be accorded a cordial public and official reception as a sincere and grateful expression of welcome. To this end, I hereby appoint Honorable James F. Smith, secretary of public instruction; Dr. Trinidad H. Pardo de Tavera, United States Philippine commissioner; Arthur W. Fergusson, esquire, executive secretary; W. Morgan Shuster, esquire, collector of customs for the Philippine Archipelago; Percy G. McDonnell, esquire, member of the municipal board of Manila; and Señor José Alemany, member of the advisory board of Manila, as a committee, of which Secretary Smith will act as chairman, to make the necessary arrangements for a public reception worthy of the guest, including a public meeting at the Ayuntamiento. The committee will confer with Major-General George W. Davis, United States Army, commanding the Division of the Philippines, with a view to securing a suitable military escort from the place of landing to the Ayuntamiento. The committee will further confer with the commercial bodies of Manila and the various political and other organizations of the city desiring to take part in the reception, and by means of joint committees or otherwise secure the cooperation of all the public necessary to a successful result. The committee is given power to act for the civil governor in authorizing the heads of bureaus and departments to allow their subordinates such recess from service during the reception as may enable them to take part therein.

If, as now seems probable, the civil governor, by urgent advice of his physicians and to his deep regret, shall be prevented from traveling to Manila from Benguet to take part in the reception, Secretary Smith will act for him and in his stead.

WM. H. TAFT, *Civil Governor*.

By A. W. FERGUSON, *Executive Secretary*.

No. 20.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, May 15, 1903.

To insure the proper custody and safe-keeping of all prisoners sentenced to long terms of imprisonment, inasmuch as the insecurity of several of the provincial jails has already been demonstrated, all provincial governors are directed to send to the warden of Bilibid Prison all prisoners at present serving sentences of two years or more in the provincial jail, or who may hereafter be received at the provincial jail under sentence of two years or more, with all the necessary papers in the cases of such prisoners transferred. These papers should include the original commitment of the court, or a copy of the same certified to as a true copy by the clerk of the court, with the seal of the court stamped thereon, and, where such prisoners have not been duly committed to the prison mentioned above, a statement from the provincial governor that they are transferred under the provisions of this order. These prisoners should be sent under proper guard by coast-guard steamers where practicable.

By A. W. FERGUSON, *Executive Secretary.*

EXECUTIVE ORDER }

No. 21.

GOVERNMENT OF THE PHILIPPINE ISLANDS,

EXECUTIVE BUREAU,

Manila, May 16, 1903.

Heads of bureaus and offices are expected to exercise a reasonable supervision over the affairs of all cashiers or disbursing officers serving under them, consistent with the responsibility imposed upon such officers and the discretion conferred by law upon each disbursing officer.

For this purpose each head of a bureau or office is directed to cause to be counted and verified the cash with which each cashier or disbursing officer under his jurisdiction is chargeable at least once each month.

In every case where a disbursing officer is disbursing for more than one bureau or office, he shall submit to each head of bureau or office for which he disburses a statement of the whole amount of the balances with which he is accountable on account of the several bureaus for which he disburses, and shall also state the amount on hand in cash and the amount on deposit and the name of the depository.

Every disbursing officer shall state, on every account current rendered by him to the auditor, the kind or kinds of currency comprising the balance shown on the account current, and shall also state the amount on hand in cash and the amount on deposit and the name of the depository.

Each head of a bureau or office who is required to make the examination herein directed shall report to the auditor the amount of cash on hand and on deposit at the date of such investigation.

All outstanding or unpaid checks shall be excluded from the credit allowed to a disbursing officer on account of funds on deposit in any depository.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER }

No. 22.

GOVERNMENT OF THE PHILIPPINE ISLANDS,

EXECUTIVE BUREAU,

Manila, May 16, 1903.

In order that the new Philippines currency may be substituted for local or Mexican currency as rapidly as possible, each and every disbursing officer of the insular government is hereby directed to deposit any local or Mexican currency in his hands which will not be required for disbursement before June thirtieth, nineteen hundred and three.

No payments whatever in local or Mexican currency will be made by any disbursing officer after June thirtieth, nineteen hundred and three, the close of the fiscal year, but every disbursing officer who is unable to complete his payments for the fiscal year nineteen hundred and three on or before June thirtieth will be permitted to hold his accounts open until July fifteenth, including all payments to said date as of June thirtieth.

Immediately upon so closing his accounts for June thirtieth, each and every disbursing officer will deposit at once in the insular treasury all balances due the government as shown by said accounts current, using for this purpose Auditor's Form Number One hundred and twenty-two.

The provisions of Auditor's Circular Number Twenty-three are hereby modified as indicated herein.

Every disbursing officer concerned will acknowledge to the insular auditor by wire or mail the receipt of this executive order.

Manila, June 5, 1903.

Pursuant to the provisions of Act Numbered Six hundred and forty-eight, Philippine Commission, entitled "An act authorizing the civil governor to reserve for civil public purposes, and from sale or settlement, any part of the public domain not appropriated by law for special public purposes, until otherwise directed by law, and extending the provisions of Act Numbered Six hundred and twenty-seven so that public lands desired to be reserved by the insular government for public uses, or

private lands desired to be purchased by the insular government for such uses may be brought under the operation of the land-registration act," I hereby reserve and withdraw from sale, settlement, or private mining claims, for the purpose of governmental coal mining, all the public domain within the following description: All that part of the island of Batan west of the shortest straight line drawn from the center of the mouth of the creek which empties into the head of Caracaran Bay, on the south side of the island, to the waters of Gaba Bay, on the north side of said island.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER }  
No. 49.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, July 7, 1903.

In order that the authority of the officer having control of an appropriation—that is, the chief or head of a bureau or office—and the responsibility of the disbursing officer may be more fully defined, the following order is published for the information and guidance of all concerned:

Every disbursing officer is responsible to the government, under his bond, for payments made by him, whether such payments are made by direction of his superior officer or not, and the fact of such direction will not relieve him from responsibility.

Provision is made by law (Act Numbered One hundred and forty-five, section one) that "A disbursing officer or the head of any department, bureau, or office may apply for, and the auditor shall render his decision upon any question involving a payment to be made by them or under them, which decision, when rendered, shall govern the auditor in passing upon the account containing the said disbursement," and in all cases of doubt such action should be taken. Pending such decision, the disbursing officer may properly refuse to make payment in any case wherein he believes the payment ordered is not warranted by law.

No disbursing officer shall make any payment or payments in excess of the amount appropriated for a given purpose (subhead) without the authority of the Philippine

Commission, and no chief of bureau shall contract any indebtedness in excess of the appropriation from which it should be paid without authority therefor. Intentional violation of the foregoing will be considered a serious offense, and will justify the proper authority in imposing the penalty of summary dismissal.

All payrolls must be examined by the head of each bureau or office, and approved by him before payment, especially in respect of labor paid from a general appropriation therefor.

A disbursing officer, in determining the legality of expenditures, must act independently of the head of his bureau or office, and at his own peril.

In Manila, the chief supply officer, Philippines Constabulary, and in the provinces, the senior inspectors of constabulary, will conform to the instructions outlined above for the chief or head of a bureau or office.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER

No. 50.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
*Manila, July 7, 1903.*

No chief of bureau or office shall, directly or indirectly, invite, solicit, or even discuss with an employee, subordinate, or officer of another bureau or office his transfer to the bureau or office of such chief until the consent in writing of the head of the bureau or office in which the desired employee or officer is a subordinate, or of the civil governor, is first had.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER

No. 51.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
*Manila, July 10, 1903.*

In order to secure a basis for comparison of the mortuary statistics collected in the recent census, each provincial governor will distribute to the municipal secretaries of his province a supply of census schedules numbered four, and instruct them to enter thereon the deaths occurring in their respective municipalities during the present year ending December thirty-first, nineteen hundred and three.

These schedules should be placed in the hands of the municipal secretaries immediately upon receipt thereof, with instructions to enter at once the data for the past months of the present year, and at the end of each succeeding month to enter the data for that month. The data for the month of December, nineteen hundred and three, should be entered upon the schedules not later than January tenth, nineteen hundred and four, and the schedules immediately returned to the provincial governor by the municipal secretaries. Upon receipt thereof, and not later than January twenty-fifth, nineteen hundred and four, these completed schedules should be forwarded to the executive secretary, who will in turn forward them to the United States Census Office, through the Bureau of Insular Affairs, War Department, Washington, District of Columbia.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER

No. 52.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
*Manila, P. I., July 13, 1903.*

The following instructions are issued for the information and guidance of all concerned:

In view of the fact that the Congress has established as the unit of value in these islands the Philippine peso, of the value of fifty cents in gold or United States currency, and of the further fact that it is the policy of the insular government hereafter to make payment of its obligations in such Philippine pesos, or an equivalent in United States currency, all contracts hereafter made by the various bureaus and offices should provide for payment in the new Philippine currency or the established equivalent in United States currency, at the option of the government, and, where possible, all existing contracts should be so amended.

Likewise all wages of insular employees hereafter properly expressed in Mexican currency should be readjusted and made payable in Philippine currency or the established equivalent in United States currency.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER }  
No. 53.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, July 13, 1903.

Pursuant to the provisions of section three, Act Numbered Seven Hundred and Eighty-one, Philippine Commission, and upon the recommendation of the chief of the Philippines Constabulary, concurred in by the governor of the province of Tarlac, it is hereby ordered that the ordinary method of arrests now in force in said province in respect of the arrest and detention of members of the constabulary shall cease to apply to said province until further orders, and that the method outlined in section four of the act above mentioned shall be applicable thereto.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER }  
No. 54.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, July 14, 1903.

Inasmuch as it is impracticable for the chief of the Philippines Constabulary to comply with the provisions of Executive Order Numbered Twenty-one, current series, in Manila the chief supply officer, and in the provinces the senior inspectors of constabulary, will conform to the instructions contained in the above-mentioned executive order for the chief or head of a bureau or office.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER }  
No. 55.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, July 18, 1903.

Pursuant to the provisions of the act of Congress of July first, nineteen hundred and two, the ratio for the reduction of United States currency and Mexican or Spanish-Filipino currency is hereby fixed at one dollar United States currency for two dollars and thirty-eight cents Mexican or Spanish-Filipino currency; this rate to remain in force for at least ten days, and until further order.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER }  
No. 56.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, July 24, 1903.

The time specified by Executive Order Numbered Thirty-eight, current series, for the completion of the revision of the real-estate tax-assessment list for the province of Iloilo, that is, June thirtieth, nineteen hundred and three, is hereby extended to July thirty-first, nineteen hundred and three; and the date specified by the said executive order as that upon which the payment of taxes under such revised assessment shall become delinquent, that is, October first, nineteen hundred and three, is also extended to November first, nineteen hundred and three.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER }  
No. 57.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, July 27, 1903.

The time specified by Executive Order Numbered Twenty-seven, current series, for the completion of the revision of the real-estate tax-assessment list for the province of Rizal, that is, August first, nineteen hundred and three, is hereby extended to October first, nineteen hundred and three; and the date specified by the said executive order as that upon which the payment of taxes under such revised assessment shall become delinquent, that is, November first, nineteen hundred and three, is also extended to January first, nineteen hundred and four.

WM. H. TAFT, *Civil Governor.*

## EXECUTIVE ORDER }

No. 58.

GOVERNMENT OF THE PHILIPPINE ISLANDS,

EXECUTIVE BUREAU,

Manila, July 27, 1903.

Executive Order Numbered Twenty-one, current series, which requires heads of bureaus and offices to exercise a reasonable supervision over cashiers and disbursing officers, and directs each head of bureau or office to cause to be counted and verified once each month the cash of such disbursing officers or cashiers, is hereby modified to require such heads of bureaus and offices as have jurisdiction over cashiers or disbursing officers located outside of the city of Manila to cause such counting and verification of cash of such cashiers and disbursing officers at least once each quarter, instead of once a month.

For the purpose of executing the requirements of this order the special agents and examiners authorized for the various bureaus and offices should be employed.

Cases in which there are no special agents or examiners available should be brought to the attention of the civil governor for specific direction.

WM. H. TAFT, *Civil Governor.*

## EXECUTIVE ORDER }

Manila, July 28, 1903.

Executive Order Numbered Sixty-six, series nineteen hundred and two, is hereby amended by adding the sheriff of Manila to the list of officials mentioned therein.

WM. H. TAFT, *Civil Governor.*

## EXECUTIVE ORDER }

No. 60.

THE GOVERNMENT OF THE PHILIPPINE ISLANDS,

EXECUTIVE BUREAU,

Manila, July 28, 1903.

Pursuant to the provisions of Act Numbered Six hundred and forty-eight, Philippine Commission, entitled "An act authorizing the civil governor to reserve for civil public purposes, and from sale and settlement any part of the public domain not appropriated by law for special public purposes, until otherwise directed by law, and extending the provisions of Act Numbered Six hundred and twenty-seven, so that public lands desired to be reserved by the insular government for public uses, or private lands desired to be purchased by the insular government for such uses may be brought under the operation of the land registration act," I hereby reserve for light-house purposes and withdraw from sale or settlement the following described parcels of the public domain which have been designated by the Philippine Islands Light-House Establishment as necessary for light-house purposes, to wit:

1. Reservation for Cape Engaño light station, island of Palau, province of Cagayan.

All that part of Palau Island lying north of an east and west line passing through a point one thousand meters south of the present light tower, with right of way to said station from the nearest landing place, and from the harbor of San Vicente, at the south end of Palau Island.

2. Reservation for Linao light station, island of Luzon, province of Cagayan.

A rectangular plot of ground whose longer axis passes through the center of the present light tower, having a frontage of one hundred meters on the highway seaward of the present light station, known as the Linao and Abulug highway, and a depth of one hundred and fifty meters to the southward of the said highway.

3. Reservation for Cape Bojeador light station, island of Luzon, province of Ilocos Norte.

An area of ground surrounding the light-house, bounded by the highway to the northwestward of the light station, generally known as the Bangui road, and by a circumference described about the center of the present light tower with a radius of three hundred and fifty meters.

4. Reservation for San Fernando range lights, island of Luzon, province of Union.

The ground actually occupied by the existing posts or beacons, and for five meters on all sides of same, together with right of way to said structures from the streets of the town.

5. Reservation for San Fernando port light, south point of entrance to San Fernando Bay, island of Luzon, province of Union.

An area of ground surrounding the present structure, bounded by the shore line and by a circumference described about the center of the present light with a radius of two hundred meters, with right of way thereto from the nearest village and public highway.

6. Reservation for Dagupan port light, entrance to river, island of Luzon, province of Pangasinan.

An area of ground surrounding the present light supports, bounded by the shore line of Lingayen Gulf and by a circumference described about the center of the present light with a radius of fifty meters, and a right of way thereto from the nearest public highway.

7. Reservation for Capones Islands light station, island of Capon Grande, province of Zambales, west coast of Luzon.

The entire island of Capon Grande, on which the present light-house stands.

8. Reservation for Grande Island light station, Grande Island, entrance to Subig Bay, province of Zambales.

An area of one hundred meters' radius described around center of present light tower, and right of way thereto from the nearest regular landing place.

9. Reservation for Cabra Island light station, island of Cabra, province of Mindoro.

An area of three hundred meters' radius described around the center of the present light tower, with right of way thereto by roads from the two usual landing places on either side of the island of Cabra, distant, respectively, about one thousand six hundred meters and two thousand eight hundred meters from the light-house.

10. Reservation for Bajo Apo light station (proposed), island of Bajo Apo, province of Mindoro.

The entire island known as Bajo Apo, off the west coast of Mindoro.

11. Reservation for Puerto Princesa port light, island of Paragua, province of Paragua.

An area bounded by the shore line and by a circumference of fifty meters' radius described about the center of the present light, and right of way thereto from the nearest public highway.

12. Reservation for Cape Melville light station, island of Balabac, province of Paragua.

An area of three hundred meters' radius described about the center of the present light tower, and also the service road leading thereto from the landing place in Clarendon Bay.

13. Reservation for Point Santiago light station, island of Luzon, province of Batangas.

An area of land surrounding the light-house and inclosed by metes and bounds as follows: Beginning at a point south eighty-three degrees and twenty-four minutes, east forty meters from the center of the existing light tower; thence north five degrees forty-three minutes, east fifteen meters; thence north fifteen minutes, east fifty-eight meters; thence south sixty-four degrees thirty-six minutes, west one hundred and twenty and five-tenths meters to the shore line; thence southerly and easterly, following said shore line, to the mouth of the canyon or gully southeast of the light station; thence along the axis of said canyon or gully to the point of beginning; all as shown more particularly on a map filed in the office of the light-house engineer, the above bearings being magnetic, in the year eighteen hundred and ninety-three.

14. Reservation for Point Malabrigo light station, island of Luzon, province of Batangas.

An area of one hundred meters' radius described about the center of the present light tower, and the right of way by road from the tower to the landing place and to the nearest public highway.

15. Reservation for proposed light station on Bagatao island, province of Albay.

The entire island of Bagatao, at the entrance to Sorsogon Bay.

16. Reservation for Bugui Point light station, island of Masbate, province of Masbate.

All that part of Masbate Island lying north of an east and west line through a point one thousand meters south of the present light tower, with right of way thereto from the landing places on either shore of Bugui Point and from the nearest public highway.

17. Reservation for Jintotolo Island light station, island of Jintotolo, province of Masbate.

An area of one hundred meters' radius described about the center of the present light tower, and the right of way thereto from the landing place and from the nearest public highway.

18. Reservation for Manigonigo Island light station, province of Capiz.

The entire island of Manigonigo, on which the present light-house structures stand.

19. Reservation for Gigantes Island light station, province of Iloilo.

The entire island of Gigantes Norte, on which the present light-house structures stand.

20. Reservation for Calabazas Islands light station, province of Iloilo.

The entire island of Calabaza Norte, on which the present light-house structures stand.

21. Reservation for Siete Pecados light station, province of Iloilo.

The entire island of the Siete Pecados group on which the present light-house structures stand.

22. Reservation for Iloilo port light, entrance to Iloilo River, island of Panay, province of Iloilo.

An area on the right bank of the Iloilo River at its junction with the sea, surrounding the present light-house structures and inclosed by metes and bound as follows: Beginning at a point on the shore line of Iloilo Strait, thirty-one meters southward from a point on said shore line opposite the center of the present light, thence on a line parallel to the longer side of the light keeper's dwelling thirty-six meters, thence on a line parallel to the shorter side of the light keeper's dwelling forty-six meters, thence due east thirty meters, more or less, to the shore line, thence along said shore line to the point of beginning.

23. Reservation for Point Luzaran light station, island of Guimaras, province of Iloilo.

An area surrounding the present light-house and bounded by the shore line and by a circumference of two hundred and fifty meters described about the center of the present light tower with right of way thereto from the landing place and from the nearest public highway.

24. Reservation for Capitancillo light station, island of Capitancillo, province of Cebu.

The entire islet of Capitancillo, lying off the east coast of Cebu.

25. Reservation for Point Bagacay light station, island of Cebu, province of Cebu.

An area surrounding the present sixth-order light tower and inclosed by metes and bounds as follows: Beginning at a point north forty-seven meters from the center of the present sixth-order light tower; thence north seventy-seven degrees fifty-one minutes west three hundred meters; thence south eighteen degrees thirty minutes west three hundred meters; thence south seventy-seven degrees fifty-one minutes east one hundred and seventy meters to the shore line; thence along said shore line in a northeasterly and northerly direction to a point on the prolongation of the northern boundary of the reservation; thence north seventy-seven degrees fifty-one minutes west twenty-five meters more or less to the point of beginning. The above bearings are magnetic in the year nineteen hundred and three.

26. Reservation for Mactan Island port light, island of Mactan, province of Cebu.

An area surrounding the present light-house structures and inclosed by metes and bounds as follows: Beginning at a point north twenty-five degrees forty-eight minutes west nine meters from the center of the present light; thence north eighty-five degrees fifty-four minutes east sixty-nine and seventy-five hundredths meters; thence south sixteen degrees thirty-five minutes east sixty-one meters; thence south forty-eight degrees two minutes west twenty and four-tenths meters to the southeast corner of the pilot station grounds; thence north thirty-six degrees fifty-eight minutes west forty-two meters to the northeast corner of said pilot station grounds; thence south fifty-three degrees thirty-two minutes west eighty-five and five-tenths meters to the northwest corner of said pilot station grounds; thence north thirty-nine degrees eight minutes west sixty-nine meters; thence north sixty-four degrees twenty-four minutes east seventy-three and twenty-five hundredths meters to the point of beginning and containing an area of six thousand seven hundred and twenty square meters more or less, and right of way to said area from the landing and from the nearest public highway.

27. Reservation for San Bernardino Island light station, province of Sorsogon.

The entire island of San Bernardino occupied by the present light-house structures, situated off the southeast coast of Luzon.

28. Reservation for Capul Island light station, province of Samar.

All that part of Capul Island lying north of an east and west line through a point two hundred meters south of the center of the present light tower and the right of way thereto from the landing on either coast of Capul Island and from the nearest public highway.

29. Reservation for Canauay Island port light, province of Leyte.

The entire island of Canauay, on which the present light-house structures stand, situated on the south side of Janabatas Island and north of the island of Leyte.

30. Reservation for Tacloban port or anchorage light, island of Leyte, province of Leyte.

An area of fifty meters' radius described about the center of the present light structures with right of way thereto from the streets of the town of Tacloban.

31. Reservation for Dapitan port light, island of Mindanao, province of Misamis.

An area on Point Tagolo, entrance to Dapitan Bay, surrounding the present light-house structure bounded by the shore line and by a circumference of fifty meters' radius described about the center of the present light supports and right of way thereto from the landing and from the nearest public highway.

32. Reservation for Davao port light, island of Mindanao, province of Davao.

An area surrounding the present light-house structure bounded by the shore line and by a circumference of fifty meters' radius described about the center of the present light support and right of way thereto from the landing and from the nearest public highway.

33. Reservation for proposed light station on Maniguin Island, province of Antique.

The entire island of Maniguin off the west coast of Panay.

34. Reservation for proposed light station on Tanguingui Island, province of Cebu.

The entire island of Tanguingui, northwest of the northern extremity of Cebu Island.

EXECUTIVE ORDER }  
No. 62.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
*Manila, July 30, 1903.*

In order that the circulation of the new Philippines currency may be promoted and expedited in the provinces, the insular treasurer is hereby authorized and directed to exchange, in his discretion, with any provincial treasurer, pursuant to a resolution of the provincial board, Philippines currency for Mexican and Spanish-Filipino currency, heretofore known as local currency, at the authorized ratio at the time such provincial funds are received at the insular treasury for such exchange.

The cost of transportation of such funds from and to the provincial treasury shall be a proper charge against the insular government and payable by the insular treasurer.

For the further purpose of carrying into effect the act of Congress creating as the unit of value the Philippine peso of the value of fifty cents in United States currency all obligations or contracts for labor or materials hereafter executed shall be made payable only in Philippines currency or the legal equivalent thereof in United States currency, at the option of the government, and all such obligations or contracts now existing which are payable only in Mexican or local currency will be readjusted to the new basis as soon as practicable.

Payments from provincial funds should hereafter be made when practicable in Philippines or United States currency, and all Mexican or Spanish-Filipino currency not absolutely required for current use should be reserved for exchange for Philippines currency as herein provided.

Hereafter all accounts of provincial treasurers as rendered to the auditor which involve United States or Philippines currency will be expressed in the latter currency pursuant to instructions of the auditor, Mexican or local currency being carried as heretofore.

WM. H. TAFT, *Civil Governor.*

EXECUTIVE ORDER }  
No. 63.

GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
*Manila, July 31, 1903.*

Pursuant to the provisions of the act of Congress of July first, nineteen hundred and two, the ratio of value between the new Philippines currency and the Mexican

or Spanish-Filipino currency is hereby fixed at one peso, Philippines currency, for one peso and fifteen centavos, Mexican or Spanish-Filipino currency, and the ratio of value between United States currency and Mexican or Spanish-Filipino currency is hereby fixed at one dollar, United States currency, for two pesos and thirty centavos of Mexican or Spanish-Filipino currency. These rates shall be in force August first, for at least ten days and until further order.

The insular treasurer has been instructed on demand to make exchange at the rate of one dollar, United States currency, for two pesos, new Philippines currency, on presentation of not less than twenty Philippine pesos.

EXECUTIVE ORDER }

No. 64.

GOVERNMENT OF THE PHILIPPINE ISLANDS,

EXECUTIVE BUREAU,

*Manila, July 31, 1903.*

The following regulations will govern the sale and distribution of rice furnished under the appropriation by Congress for the relief of the people of the Philippine Islands:

Before rice is furnished to any province its provincial board will submit to the civil governor an estimate of the quantity of rice which can be used to advantage in a given period and a statement of the conditions in the province which make the distribution of rice desirable.

All rice furnished by the civil government will be consigned to the supervisor or the supervisor-treasurer of the province to which it is shipped. At the time of shipment the insular purchasing agent will forward to the insular auditor a copy of the notice of shipment, together with a statement of the price at which the rice is to be sold, which shall include cost of transportation and handling, but shall exclude duty, if any. The expense of storing and subsequent handling of the rice shall be at the expense of the province, except when the civil governor shall order otherwise.

All rice shall be receipted for to the insular purchasing agent, by the supervisor or supervisor-treasurer to whom consigned, and shall be taken up by the latter officer, who shall be accountable on his official bond for the same, and render accounts therefor to the insular auditor as hereinafter provided.

Where the rice is used for public works, a full report of its issue and distribution shall be made to the civil governor, in addition to the account which is required by the auditor, with a definite statement of the public improvement upon which it has been used, the number of days of labor, and the amount of material secured.

No rice shall be distributed gratuitously except in limited quantities to deserving persons unable to work, and upon the recommendation and order of the provincial board, approved by the civil governor, to whom will be made a statement of the peculiar circumstances calling for such action.

In cases where rice is sold, the proceeds of the sales will be deposited in the provincial treasury. The money so received shall be placed to the credit of a "Congressional relief fund," and thereafter may be disbursed as other funds on the order of the provincial board, for public works, and accounted for in the usual manner to the auditor, full report thereon being made to the civil governor.

The accounts of the supervisor or supervisor-treasurer to the insular auditor will be rendered on a regular property return, Auditor's Form Seven hundred, monthly instead of quarterly, supported as follows:

(a) In the case of direct sales, by proper abstracts, showing date of sale, name of purchaser, quantity sold, with price and total amount received. This abstract should be certified as correct by the person in charge of the sales and by the supervisor, and be accompanied by the receipt of the provincial treasurer for the amount deposited in the provincial treasury.

Sales to commercial firms will not be allowed except upon advance approval of the civil governor.

(b) In the case of the issue of rice in payment of labor performed, the regular labor pay roll, Provincial Form Fifty-seven, will be used, modified so as to show in the columns marked "Rate of pay" and "Amount paid," certain fixed units of measure in rice instead of money. The certificates at the bottom of the roll should also be modified by substituting the words "issue" and "issued," respectively, for "payment" and "paid." The money value of the rice so issued in payment for labor will be computed and stated on the pay roll, and the amount represented by such money value of such pay roll will be taken up by the provincial treasurer in his revenue account as receipts from rice sales and placed to the credit of the aforesaid "Congressional relief fund." Credit will be taken for the same amount as a disbursement for labor on public works, the voucher being the pay rolls received

from the supervisor or supervisor-treasurer. The latter officer will drop the rice so disposed of on his return, supporting the same by the receipt of the provincial treasurer for the amount represented by the pay roll, and taken up by the latter, as in the case of sales made in the regular way.

(c) In case of gratuitous distribution ordered by the provincial board and approved by the civil governor, the same abstract will be used as in the case of sales, modified to show gratuitous distribution instead of sale, certified as correct by the officer making the distribution, which distribution will be witnessed by two disinterested, reputable citizens, whose certificate that they were present and witnessed the issue must appear on the abstract.

In order to facilitate the operation of this order throughout the province, the provincial supervisor or the supervisor-treasurer shall have power to designate in writing any municipal officer as his deputy for the purpose of this issue, who shall serve without additional compensation.

*Manila, August 27, 1903.*

Paragraph Numbered Thirteen of Executive Order Numbered Nine, dated March twenty-fifth, nineteen hundred and three, is hereby amended to read as follows:

"13. For the purpose of securing a new and complete registration under the provisions of section twenty-four, Act Numbered One hundred and seventy-five, as amended, of all arms now held by private persons resident in the Philippine Islands, the provincial governor in each province is hereby authorized and directed to issue a proclamation calling upon all residents of the province in possession of firearms and ammunition without a license under the provisions of section twenty-four, Act Numbered One hundred and seventy-five, as amended by Act Numbered Six hundred and fifty-two, to deliver all such arms and ammunition to the governor of the province, or to any of his duly authorized agents or deputies, with the assistance of the inspectors of constabulary, in order that such arms and ammunition may be registered, bonds executed, and permits issued, as provided by said law and these regulations: *Provided, however,* That the provincial governor, within his discretion, may dispense with the necessity of the arms and ammunition being actually delivered up

for registration as hereinabove provided, in cases where it is not deemed necessary to take away the arms and ammunition altogether, and may require only the registration of such arms and ammunition. Every private person resident in the Philippine Islands who may be required to deliver any arms or ammunition to the provincial governor or to his authorized agent or deputy may be furnished a blank application for a permit to possess firearms, and upon signing same, and executing the bond prescribed by these regulations, if duly approved by competent authority, such resident may again receive and possess such arm or arms and ammunition subject to the provisions of existing law and these regulations.

WM. H. TAFT, *Civil Governor.*

## EXECUTIVE ORDER

No. 72.

## GOVERNMENT OF THE PHILIPPINE ISLANDS,

EXECUTIVE BUREAU,

*Manila, August 27, 1903.*

The question having arisen as to the relation which the provincial governor, the provincial board, the provincial jailer and guards occupy to the senior inspector of constabulary when the latter, under section five of Act Numbered Six hundred and ten, is directed by the civil governor to take custody of the jail, it becomes necessary to issue an executive order defining the powers and duties of the senior inspector of constabulary when lawfully in custody of the jail.

The jail is in charge of the provincial governor, and the ultimate responsibility of the custody of the prisoners therein is necessarily in him. The effect of the order of the civil governor placing the senior inspector of constabulary in charge of the jail is merely to substitute the senior inspector of constabulary and his subordinates for the jailer and guards previously provided. It is the duty of the inspector, in order to perform his duties properly, to keep a true and exact calendar of all prisoners committed to the provincial jail, with all the details provided in section four of Act Numbered Four hundred and thirteen. No one but the provincial governor has any authority to interfere with the custody thus given to the senior inspector in charge. The senior inspector is required to honor and obey only the orders of the provincial governor and of any court of competent jurisdiction. The duty of the provincial board, under the law, is by contract and by regulations to secure the supplying of the proper food and clothing for the prisoners and proper sanitary provision for their health. If the jailer or warden is retained in office after the civil governor shall direct the senior inspector to take custody of the jail, then the function to be performed by him must be limited to the supplying of proper food and clothing and the making of proper accommodation for the health of the prisoners.

The effect of Act Numbered Six hundred and ten, when the senior inspector is given custody of the jail, is to oust the jailer or warden from duties in respect to the custody of prisoners. Should the provincial board conclude to abolish the office of warden or jailer under such circumstances, there is no objection to extending the duties of the senior inspector to include the immediate supervision of the food, clothing, and health of the prisoners. The senior inspector will always promptly comply in respect to the custody of the prisoners, their health, and their discipline, with orders received from the provincial governor and with regulations adopted in accordance with law by the provincial board.

## BY THE CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS—A PROCLAMATION.

Whereas the Philippine Commission did, on the twelfth day of November, nineteen hundred and two, pass the following act:

“AN ACT to provide against the danger of famine in the provinces of the Philippine Archipelago.

“*By authority of the United States, be it enacted by the Philippine Commission, that—*

“SECTION 1. To provide against the danger of famine, due to the short crop for the coming year in rice and other foodstuffs usually produced in the provinces of the Philippine Archipelago, it shall be the duty of all municipal presidents to call meetings of the people of their respective municipalities, to notify them of the impending danger of famine, and to urge them at once to take steps to secure the necessary seed and to plant quick-growing crops of corn, camotes, rice, or other food plants, whichever may furnish the most abundant crop in the particular locality, sufficient in quantity to produce the requisite food for the people of the municipality for the coming year.

“SEC. 2. Any municipal president is authorized to allot to the citizens of his municipality such public land as there may be within the boundaries of the municipality at present unoccupied, for the planting of the seed and the raising of the crops provided for in this act.

“SEC. 3. The crops planted and gathered under this act shall belong to the persons planting and gathering the same, even though they be planted upon the public land, and no rent for the public land thus used shall be chargeable against the persons so using same.

“SEC. 4. In cases where it is impossible in the municipality or province to secure the proper seed, the municipal council shall call upon the provincial board to procure the needed seed through the insular purchasing agent. The provincial board shall purchase the needed seed from the general funds of the province, and shall sell

the same to the presidents of the municipalities whose councils have called for seed. The seed furnished by a provincial board to any municipality shall be receipted for by the municipal president, and paid for out of the municipal funds by order of the municipal council. The seed shall then be sold to the residents of the municipality at the cost price thereof. If any person having land of his own or tilling the public land shall be known to be unable to pay for the seed, the municipal president may furnish him the seed without receiving the price thereof, in which case he shall collect an amount equal to the value of the seed furnished from the new crop, and shall sell the same and reimburse the municipal treasury with the proceeds.

"SEC. 5. Each municipal president shall keep a record of the amount of seed furnished to the inhabitants of his municipality and the number of hectares planted by each inhabitant in accordance with the requirements of this act; and it shall be his further duty to make monthly reports of his proceedings under this act to the provincial governor.

"SEC. 6. It shall be the duty of the provincial governor to see that the municipal presidents discharge their duties under this act, and if they fail to do so to suspend them and bring them before the provincial board to answer to the charges of non-compliance therewith.

"The provincial governor shall make monthly reports of the proceedings of the municipal presidents and his own proceedings under this act to the civil governor.

"SEC. 7. Any municipal president receiving seed from the provincial board under section four of this act who shall appropriate it to his own use or shall fail to distribute it in accordance with the terms of this act, or who shall knowingly permit or connive at the use of the seed for any other purpose than planting a new crop, as in this act provided, shall be held to be guilty of embezzlement, and shall be punished by a fine not exceeding \$1,000 or by imprisonment not exceeding three years, or both, in the discretion of the court.

"SEC. 8. It shall be the duty of the civil governor to issue a proclamation to the governors of the provinces, reciting the terms of this act and directing them to order the municipal presidents in accordance herewith to call the people of their respective municipalities together and secure the action required by this act.

"SEC. 9. The said proclamation of the civil governor shall be printed in English and Spanish and in the principal dialects of the islands, and shall be forwarded to the various provincial governors to be by them distributed among the municipalities of their respective provinces.

"SEC. 10. The public good requiring the speedy enactment of this bill, the passage of the same is hereby expedited in accordance with section two of 'An act prescribing the order of procedure by the Commission in the enactment of laws,' passed September twenty-sixth, nineteen hundred.

"SEC. 11. This act shall take effect on its passage."

Now, therefore, I, William H. Taft, civil governor of the Philippine Islands, do hereby direct all provincial governors to order the municipal presidents to call the people of their respective municipalities together and secure the action required by the provisions of the act just quoted.

In testimony whereof I have hereunto set my hand and caused the seal of the government of the Philippine Islands to be affixed.

Done at the city of Manila this nineteenth day of November, one thousand nine hundred and two.

[SEAL.]

WM. H. TAFT.

By the Civil Governor:

BEEKMAN WINTHROP,  
*Acting Executive Secretary.*

## BY THE CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS—A PROCLAMATION.

Whereas the President of the United States did, on the twenty-ninth day of October, issue the following proclamation:

"THANKSGIVING.

"BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION.

"According to the yearly custom of our people it falls upon the President at this season to appoint a day of festival and thanksgiving to God.

"Over a century and a quarter has passed since this country took its place among the nations of the earth, and during that time we have had on the whole more to be

thankful for than has fallen to the lot of any other people. Generation after generation has grown to manhood and passed away. Each has had to bear its peculiar burdens, each to face its special crises, and each has known years of grim trial when the country was menaced by dangers to be apprehended, domestic or foreign levy, when the hand of the Lord was heavy upon it, in drouth or flood or pestilence, when in bodily distress and anguish of soul it paid the penalty of folly and a froward heart. Nevertheless, decade by decade we have struggled onward and upward. We now abundantly enjoy material well-being and under the favor of the Most High we are striving earnestly to achieve moral and spiritual uplifting. The year that has just closed has been one of peace and of overflowing plenty. Rarely has any people enjoyed greater prosperity than we are now enjoying. For this we render heartfelt and solemn thanks to the Giver of Good and we seek to praise him not by words only but by deeds, by the way in which we do our duty to ourselves and to our fellow men.

"Now, therefore, I, Theodore Roosevelt, President of the United States, do hereby designate as a day of general thanksgiving the twenty-seventh of the coming November and do recommend that throughout the land the people cease from their ordinary occupations, and in their several homes and places of worship render thanks unto Almighty God for the manifold blessings of the past year.

"In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

"Done at the city of Washington, this twenty-ninth day of October, in the year of our Lord one thousand nine hundred and two, and of the independence of the United States the one hundred and twenty-seventh.

[SEAL.]

"THEODORE ROOSEVELT.

"By the President:

"JOHN HAY, *Secretary of State.*"

And whereas, though the year past closing has not been one of overflowing plenty in the Philippine Islands, and the people thereof have suffered much from cholera and pestilence, and the coming year is to be one of grim trial due to agricultural depression, nevertheless the war has ceased and the goal of prosperity, happiness, and peace under well-ordered government is in sight of the people of the Philippines, and will be reached if only they will summon to their aid self-restraint, courage, industry, and intelligent patriotism.

Now, therefore, I, Wm. H. Taft, Civil Governor of the Philippine Islands, do hereby recommend the observance of the foregoing proclamation by the residents of the Philippine Islands.

In testimony whereof I have hereunto set my hand and caused the seal of the Government of the Philippine Islands to be affixed.

Done at the city of Manila this twentieth day of November, in the year of our Lord one thousand nine hundred and two.

WM. H. TAFT.

By the Civil Governor:

BRECKMAN WINTHROP,  
*Acting Executive Secretary.*

---

#### BY THE CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS—A PROCLAMATION.

In accordance with the policy of President McKinley, announced in his instructions of April 7, 1900, the Philippine Commission has extended to the people of the Philippine Islands complete autonomy in the matter of municipal government, and partial autonomy in the matter of provincial government. By actual experience the qualified electors of the Philippine Islands are learning the science of self-government. The policy of the late President McKinley has been sincerely adopted and followed by President Roosevelt, and the aim of the Commission, in accordance with its instructions, gradually to extend self-government to the people of the islands was approved and adopted by the Congress of the United States at its last session in the so-called Philippine act, by which provision was made for the election of a popular Philippine assembly within two years after the taking of a comprehensive census of the Philippine Islands. The taking of the census is indispensable to the calling of a general election for this popular assembly. No other object beyond the collection of

the necessary data for determining the social and industrial condition of the people as the basis of intelligent legislative action is involved in the taking of this census. By the terms of the census law passed by the Philippine Commission it will be seen that the census is to be largely in the hands and under the control of the Filipinos. The taking of the census will therefore form a test of the capacity of the Filipinos to discharge a most important function of government. The information secured by the census will form the basis upon which capital will be invested in the islands and the material prosperity of the people brought about. The census, therefore, is to be taken solely for the benefit of the Filipino people, and if they desire to have a larger voice in their own government within the near future; if they desire to demonstrate to the world a growing capacity for self-government, and if they would aid the investment of capital and the improvement of their material condition they should lend their unanimous support to the successful taking of the census.

Now, therefore, I, William H. Taft, civil governor of the Philippine Islands, in pursuance of the duty imposed on me by section 16 of the act enacted by the Philippine Commission October 6, 1902, do hereby issue this my proclamation, announcing as census day March 2, 1903, on which day the enumeration of the Christian population shall begin in all parts of the Philippine Islands, and continue until completed.

It is the expectation of the government that the enumeration of the Christian population will be carried on by the enumerators of urban districts at the rate of fifty persons per day, and of suburban or rural districts at the rate of thirty-three persons per day. Any reduction in any district in the rate of enumeration thus established will be made the subject of investigation by the supervisor, and unless it shall be found that such reduction in the rate of enumeration was due to causes beyond the control of the enumerator, his (or her) pay for the period beyond which the enumeration should have been completed, at the specified rate, shall be withheld, pending the decision of the director of the census.

In witness whereof I have hereunto set my hand and caused the seal of the government of the Philippine Islands to be affixed.

Done at the city of Manila this twenty-fourth day of December, in the year of our Lord one thousand nine hundred and two.

WM. H. TAFT, *Civil Governor.*

By the civil governor:

BREKMAN WINTHROP,  
*Acting Executive Secretary.*

---

OFFICE OF THE CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS,  
*Manila, January 10, 1903.*

MY DEAR SIR: The schism in the Roman Catholic Church and the establishment and organization of an independent Filipino Catholic Church, because of the zeal and heat which frequently accompanies religious discussion, and especially because of the conflicting claims in respect to church property, may result in attempts at dispossession of those in charge of the churches and consequent disorder and disturbance of the peace. I have thought it necessary, therefore, to write you a letter calling your attention, and through you that of the municipal presidentes, to the functions which it is proper for civil executives to discharge in respect to religious controversies involving disputes over property.

The policy of complete separation of church and state is enjoined upon those who serve under the American sovereignty. This does not mean that officers of the state as individuals may not attend church and may not take an interest in religious controversies, and may not aid the churches of which they are members, but it does mean that no officer of the government has the right to use his official position or the authority which he exercises as an official to further the interests of the church of which he is a member as against the rights and claims of other churches to which he may be opposed in his religious views. In these islands it is difficult for the man to separate himself from the office in the eyes of the people, and I therefore extend a word of caution to you and to the municipal presidentes of your province against making yourselves so prominent in the religious controversies to which I have referred on one side or the other that charges may be made against you that you are using your official influence and exercising your official authority in favor of either the Roman Catholic Church or the Filipino Catholic Church. You should, as far as

possible, as an official pursue a line of conduct absolutely impartial between the two conflicting parties, and you should only intervene as officials whenever the public peace is disturbed and must be restored and conserved. To deal justly with all individual interests should be the pride of every government, and the capacity of a people for self-government may be largely measured by the ability and courage of their elective officers to do justice in the face of clamor or passion or prejudice of some of those who elected them. No controversy so arouses the participants to passion and violence as that which grows out of religious differences, and if peace can be maintained where the people of a country divide under a new schism into two religious bodies without violence, it speaks volumes for the law-abiding character of the people and for the capacity and ability of their self-chosen officers. I urge upon you, therefore, and upon the municipal presidentes over whom you so worthily exercise supervisory and disciplinary authority, to use your every effort now and in the months to come to prevent the religious schism that exists in parts of the islands from resulting in any disturbance of the peace.

Again let me call your attention to one phase of the schism which is most important, and that is, as to the possession of churches and conventos. Executive officers have no function whatever to perform in respect to the determination of the question who owns private property. The questions of ownership of title, and even the right of possession, are questions to be decided by courts which are open to all parties in interest for the purpose of settling just such questions. The only function of the executive is to see to it that the peace is not disturbed by attempts on the part of one not in possession forcibly or by fraud to disturb another in the possession of property and to deprive him of it. Where therefore the priest or other representative of the Roman Catholic Church shall be in possession representing his church, it is not your function to decide that the people of the town who, because they may have assisted in building church believe themselves to be the owners of the church, may oust him and may let the priest of the Independent Filipino Catholic Church into possession. Whatever you may think of the merits of such a question, it is your duty to preserve the possession of the priest or other representative of the Roman Catholic Church by arresting any person who attempts forcibly to dispossess him or actually succeeds in doing so and allow the priest or other person having had peaceable possession to resume it; but beyond this you can not go. Such rights as the people of a town may have either to ownership or possession of the church property may be asserted in the courts. They can not assert such rights by force.

On the other hand, should a priest in possession leave the Roman Catholic communion, and, retaining possession of the church property, allow it to be used for the service and ceremonies of the Filipino Church, it is not for you to decide that this is an unlawful act on his part, and to seek to remedy it by dispossessing him of the church, because the change which is effected is not effected by a disturbance of the peace, and the remedy for the wrong done, if it be a wrong, can only be had in the courts organized to decide such questions. You must respect the person in peaceable possession, and you must protect him against forcible dispossession, no matter how lawful or equitable in your opinion are the claims to the property on the part of the attempted dispossessor. If he has a lawful right he can have it vindicated in court. He can not be permitted to take the law into his own hands. To allow him to do so would be to produce riot and confusion throughout these islands. The question is one of actual possession, not of constructive possession. Indeed, the question, so far as you and the presidentes are concerned, is one really not of possession at all, but of the disturbance of the peace.

Should any priest, or other person in charge of a church or convent, notify a presidente that he has reasonable ground to suspect that an attempt will be made to dispossess him, the presidente should detail policemen to maintain him in his possession and prevent an assault or forcible dispossession. A failure on the part of the presidente with energy to protect peaceable possession of church property will be good cause for dismissal.

If the course which I have attempted to mark out for executive action be followed, the conflicting parties will be remitted to the courts to vindicate their rights, and the peace which is so absolutely essential to the welfare of the country and to the conduct of decent government will be fully preserved. With the confidence that you will observe the rules laid down in this letter, and will see to it that your municipal presidentes do the same thing, I beg to subscribe myself,

Your very obedient servant and well-wisher,

WM. H. TAFT, *Civil Governor.*

The honorable PROVINCIAL GOVERNOR.

## BY THE CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS—A PROCLAMATION.

The following act of the Congress of the United States, having been approved by the President of the United States on the thirtieth day of January, anno Domini nineteen hundred and three, is hereby published for the information and guidance of all concerned:

"AN ACT to promote the efficiency of the Philippine Constabulary, to establish the rank and pay of its commanding officers, and for other purposes.

*"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That officers of the Army of the United States may be detailed for service as chief and assistant chiefs, the said assistant chiefs not to exceed in number four, of the Philippine Constabulary, and that during the continuance of such details the officer serving as chief shall have the rank, pay, and allowances of brigadier-general, and the officers serving as assistant chiefs shall have the rank, pay, and allowances of colonel: *Provided,* That the difference between the pay and allowances of brigadier-general and colonel, as herein provided, and the pay and allowances of the officers so detailed in the grades from which they are detailed shall be paid out of the Philippine treasury.

"SEC. 2. That any companies of Philippine Scouts ordered to assist the Philippine Constabulary in the maintenance of order in the Philippine Islands may be placed under the command of officers serving as chief or assistant chiefs of the Philippine Constabulary, as herein provided: *Provided,* That when the Philippine Scouts shall be ordered to assist the Philippine Constabulary, said scouts shall not at any time be placed under the command of inspectors or other officers of the constabulary below the grade of assistant chief of constabulary.

"Approved, January 30, 1903."

Done at the city of Manila this twenty-seventh day of March, in the year of our Lord nineteen hundred and three.

WM. H. TAFT, *Civil Governor.*

By the civil governor:

A. W. FERGUSON,  
*Executive Secretary.*

## BY THE CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS—A PROCLAMATION.

The following act of Congress of the United States, having been approved by the President of the United States on the ninth day of February, anno Domini nineteen hundred and three, is hereby published for the information and guidance of all concerned:

AN ACT to provide for the removal of persons accused of crime to and from the Philippine Islands for trial.

*"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the provisions of section ten hundred and fourteen of the Revised Statutes, so far as applicable, shall apply throughout the United States for the arrest and removal therefrom to the Philippine Islands of any fugitive from justice charged with the commission of any crime or offense against the United States within the Philippine Islands, and shall apply within the Philippine Islands for the arrest and removal therefrom to the United States of any fugitive from justice charged with the commission of any crime or offense against the United States. Such fugitive may, by any judge or magistrate of the Philippine Islands, and agreeably to the usual mode of process against offenders therein, be arrested and imprisoned, or bailed, as the case may be, pending the issuance of a warrant for his removal to the United States, which warrant it shall be the duty of a judge of the court of first instance seasonably to issue, and of the officer or agent of the United States designated for the purpose to execute. Such officer or agent, when engaged in executing such warrant without the Philippine Islands, shall have all the powers of a marshal of the United States so far as such powers are requisite for the prisoner's safe keeping and the execution of the warrant.

"SEC. 2. That the provisions of sections fifty-two hundred and seventy-eight and fifty-two hundred and seventy-nine of the Revised Statutes, so far as applicable, shall apply to the Philippine Islands, which, for the purposes of said sections, shall be deemed a Territory within the meaning thereof.

"Approved, February 9, 1903."

Done at the city of Manila this twenty-eighth day of March, in the year of our Lord nineteen hundred and three.

WM. H. TAFT, *Civil Governor*.

By the civil governor:

A. W. FERGUSON,  
*Executive Secretary*.

## BY THE CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS—A PROCLAMATION.

The following act of the Congress of the United States, having been approved by the President of the United States on the second day of March, anno Domini nineteen hundred and three, is hereby published for the information and guidance of all concerned:

"AN ACT to establish a standard of value and to provide for a coinage system in the Philippine Islands.

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the unit of value in the Philippine Islands shall be the gold peso consisting of twelve and nine-tenths grains of gold, nine-tenths fine, said gold peso to become the unit of value when the government of the Philippine Islands shall have coined and ready for, or in, circulation not less than five million of the silver pesos hereinafter provided for in this act, and the gold coins of the United States at the rate of one dollar for two pesos hereinafter authorized to be coined shall be legal tender for all debts, public and private, in the Philippine Islands.

"SEC. 2. That in addition to the coinage authorized for use in the Philippine Islands by the act of July first, nineteen hundred and two, entitled 'An act temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes,' the government of the Philippine Islands is authorized to coin to an amount not exceeding seventy-five million pesos, for use in said islands, a silver coin of the denomination of one peso and of the weight of four hundred and sixteen grains, and the standard of said silver coins shall be such that of one thousand parts, by weight, nine hundred shall be of pure metal and one hundred of alloy, and the alloy shall be of copper.

"SEC. 3. That the silver Philippine peso authorized by this act shall be legal tender in the Philippine Islands for all debts, public and private, unless otherwise specifically provided by contract: *Provided*, That debts contracted prior to the thirty-first day of December, nineteen hundred and three, may be paid in the legal tender currency of said islands existing at the time of the making of said contracts, unless otherwise expressly provided by contract.

"SEC. 4. That section seventy-seven of the act of July first, nineteen hundred and two, is hereby amended so that it shall read:

"SEC. 77. That the government of the Philippine Islands is authorized to coin for use in said islands a coin of the denomination of fifty centavos and of the weight of two hundred and eight grains, a coin of the denomination of twenty centavos and of the weight of eighty-three and ten one-hundredths grains, and a coin of the denomination of ten centavos and of the weight of forty-one and fifty-five one-hundredths grains; and the standard of said silver coins shall be such that of one thousand parts, by weight, nine hundred shall be of pure metal and one hundred of alloy, and the alloy shall be of copper."

"SEC. 5. That the Philippine peso herein authorized and the subsidiary silver coins authorized by section seventy-seven of the act of July first, nineteen hundred and two, as amended by the preceding section of this act, shall be coined under the authority of the government of the Philippine Islands in such amounts as it may determine, with the approval of the Secretary of War of the United States, except as limited in section two of this act, from silver bullion purchased by said government, with the approval of the Secretary of War of the United States: *Provided*, That said government may, in its discretion, in lieu of the purchase of bullion, recoin any of the silver coins now in or hereinafter received by the treasury of the government of the Philippine Islands into the coins provided for in this act or in the act of

July first, nineteen hundred and two, as herein amended, at such rate and under such regulations as it may prescribe; and the subsidiary silver coins authorized by this act and by the act of July first, nineteen hundred and two, shall be legal tender in said islands to the amount of ten dollars.

"Sec. 6. That the coinage authorized by this act shall be subject to the conditions and limitations of the provisions of the act of July first, nineteen hundred and two, entitled 'An act temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes,' except as herein otherwise provided; and the government of the Philippine Islands may adopt such measures as it may deem proper, not inconsistent with said act of July first, nineteen hundred and two, to maintain the value of the silver Philippine peso at the rate of one gold peso, and in order to maintain such parity between said silver Philippine pesos and the gold pesos herein provided for, and for no other purpose, may issue temporary certificates of indebtedness, bearing interest at a rate not to exceed four per centum annually, payable at periods of three months or more, but not later than one year from the date of issue, which shall be in the denominations of twenty-five dollars, or fifty pesos, or some multiple of such sum, and shall be redeemable in gold coin of the United States, or in lawful money of said islands, according to the terms of issue prescribed by the government of said islands; but the amount of such certificates outstanding at any one time shall not exceed ten million dollars, or twenty million pesos, and said certificates shall be exempt from the payment of all taxes or duties of the government of the Philippine Islands, or any local authority therein, or of the Government of the United States, as well as from taxation in any form by or under any State, municipal, or local authority in the United States or the Philippine Islands: *Provided*, That all the proceeds of said certificates shall be used exclusively for the maintenance of said parity, as herein provided, and for no other purpose, except that a sum not exceeding three million dollars at any one time may be used as a continuing credit for the purchase of silver bullion in execution of the provisions of this act.

"Sec. 7. That the Mexican silver dollar now in use in the Philippine Islands and the silver coins heretofore issued by the Spanish Government for use in said islands shall be receivable for public dues at a rate to be fixed from time to time by the proclamation of the civil governor of said islands until such date, not earlier than the first day of January, nineteen hundred and four, as may be fixed by public proclamation of said civil governor, when such coins shall cease to be so receivable: *Provided*, That the public offices of the government of said islands shall give a preference for all public dues to the silver pesos and the silver certificates authorized by this act, and may at any time refuse to receive such Mexican dollars and Spanish coins as may appear to be counterfeit or defective.

"Sec. 8. That the treasurer of the Philippine Islands is hereby authorized, in his discretion, to receive deposits of the standard silver coins of one peso authorized by this act to be coined, at the treasury of the government of said islands or any of its branches, in sums of not less than twenty pesos, and to issue silver certificates therefor in denominations of not less than two nor more than ten pesos, and coin so deposited shall be retained in the treasury and held for the payment of such certificates on demand, and used for no other purpose. Such certificates shall be receivable for customs, taxes, and for all public dues in the Philippine Islands, and when so received may be reissued, and when held by any banking association in said islands may be counted as a part of its lawful reserve.

"Sec. 9. That for the purchase of metal for the silver Philippine peso authorized by this act, an appropriation may be made by the government of the Philippine Islands from its current funds, or as hereinbefore authorized, which shall be reimbursed from the coinage under said sections.

"Sec. 10. That the silver Philippine pesos hereinbefore authorized may be coined at the mint of the government of the Philippine Islands at Manila, or arrangements may be made by the said government with the Secretary of the Treasury of the United States for their coinage, or any portion thereof, at any of the mints of the United States, at a charge covering the reasonable cost of the work.

"Sec. 11. That the silver Philippine peso hereinbefore authorized shall bear devices and inscriptions to be prescribed by the government of the Philippine Islands, and such devices and inscriptions shall express the sovereignty of the United States, that it is a coin of the Philippine Islands, the denomination of the coin, and the year of the coinage.

"Sec. 12. That the Secretary of the Treasury is hereby authorized and directed, when requested by the government of the Philippine Islands, to cause to be made and prepared any drawings, designs, and plates, and execute any coinage, engraving, or printing of notes and certificates authorized by this act, and to make a proper

charge for the same, covering as nearly as may be the actual cost, which shall be defrayed from the revenues of said islands.

"Sec. 13. That section seventy-eight of the act of July first, nineteen hundred and two, and all acts and parts of acts inconsistent with the provisions of this act, and all provisions of law in force in the Philippine Islands making any form of money legal tender after December thirty-first, nineteen hundred and three, except as provided in this act, are hereby repealed.

"Approved, March 2, 1903."

Done at the city of Manila this fifteenth day of April, in the year of our Lord nineteen hundred and three.

WM. H. TAFT, *Civil Governor.*

By the civil governor:

A. W. FERGUSON,  
*Executive Secretary.*

---

THE GOVERNMENT OF THE PHILIPPINE ISLANDS,  
EXECUTIVE BUREAU,  
Manila, June 15, 1903.

*To All Notaries Public:*

Numerous complaints are being received by this office that notaries public are failing to comply with the provisions of law in the matter of instruments acknowledged by them. Particular mention is made of the fact that in many instances a rubber stamp is used as a seal; that there is a failure to affix the date of expiration of commission, and that the acknowledgments do not include a reference to the cedula certificates of the parties executing the contract.

The attention of all notaries is invited to the provisions of sections seventy-nine to ninety-one, inclusive, of Act Numbered One hundred and thirty-six, and to section twenty-eight of Act Numbered One hundred and thirty-three; the seal to be procured by notaries, under section eighty-six of Act Numbered One hundred and thirty-six, must be a metal seal.

Documents should neither be signed nor sealed with a rubber stamp.

The date of expiration of commission should be affixed to acknowledgments in every instance, as provided in section ninety of Act Numbered One hundred and thirty-six.

Section twenty-eight of Act Numbered One hundred and thirty-three provides that:

"No contract, deed, or other document acknowledged before a notary public shall be valid or recognized by any court unless the notary shall have certified thereon that the parties thereto have presented their certificates of registration, or are exempt from the tax, and shall have entered in such certification the number, place of issue, and date of each certificate of registration."

Notaries, in acknowledging instruments, must not only require that the parties thereto exhibit their cedula, but must enter in their certificate of acknowledgment the number, place of issue, and date of each such cedula.

A strict compliance with the above instructions is enjoined upon all notaries, and, so far as applicable, upon clerks of court acting as ex-officio notaries public, and all other officials performing notarial functions.

Very respectfully,

A. W. FERGUSON, *Executive Secretary.*

---

BY THE CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS—A PROCLAMATION.

The following act of the Congress of the United States, having been approved by the President of the United States on the third day of March, anno Domini nineteen hundred and three, is hereby published for the information and guidance of all concerned:

"AN ACT to regulate the immigration of aliens into the United States.

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be levied, collected, and paid a duty of two dollars for each and every passenger not a citizen of the United States, or of the Dominion of Canada, the Republic of Cuba, or of the Republic of Mexico, who shall come by steam, sail, or other vessel from any foreign port to any port within the United

States, or by any railway or any other mode of transportation, from foreign contiguous territory to the United States. The said duty shall be paid to the collector of customs of the port or customs district to which said alien passenger shall come, or, if there be no collector at such port or district, then to the collector nearest thereto, by the master, agent, owner, or consignee of every such vessel or transportation line. The money thus collected shall be paid into the United States Treasury and shall constitute a permanent appropriation to be called the 'immigrant fund,' to be used under the direction of the Secretary of the Treasury to defray the expense of regulating the immigration of aliens into the United States under this act, including the cost of reports of decisions of the Federal courts, and digests thereof, for the use of the Commissioner-General of Immigration, and the salaries and expenses of all officers, clerks, and employees appointed for the purpose of enforcing the provisions of this act. The duty imposed by this section shall be a lien upon the vessel which shall bring such aliens to ports of the United States, and shall be a debt in favor of the United States against the owner or owners of such vessels, and the payment of such duty may be enforced by any legal or equitable remedy; the head tax herein provided for shall not be levied upon aliens in transit through the United States nor upon aliens who have once been admitted into the United States and have paid the head tax who later shall go in transit from one part of the United States to another through foreign contiguous territory: *Provided*, That the Commissioner-General of Immigration, under the direction or with the approval of the Secretary of the Treasury, by agreement with transportation lines, as provided in section thirty-two of this act, may arrange in some other manner for the payment of the duty imposed by this section upon aliens seeking admission overland, either as to all or as to any such aliens.

"Sec. 2. That the following classes of aliens shall be excluded from admission into the United States: All idiots, insane persons, epileptics, and persons who have been insane within five years previous; persons who have had two or more attacks of insanity at any time previously; paupers; persons likely to become a public charge; professional beggars; persons afflicted with a loathsome or with a dangerous contagious disease; persons who have been convicted of a felony or other crime or misdemeanor involving moral turpitude; polygamists, anarchists, or persons who believe in or advocate the overthrow by force or violence of the Government of the United States or of all government or of all forms of law, or the assassination of public officials; prostitutes and persons who procure or attempt to bring in prostitutes or women for the purpose of prostitution; those who have been, within one year from the date of the application for admission to the United States, deported as being under offers, solicitations, promises or agreements to perform labor or services of some kind therein; and also any person whose ticket or passage is paid for with the money of another, or who is assisted by others to come, unless it is affirmatively and satisfactorily shown that such person does not belong to one of the foregoing excluded classes; but this section shall not be held to prevent persons living in the United States from sending for a relative or friend who is not of the foregoing excluded classes: *Provided*, That nothing in this act shall exclude persons convicted of an offense purely political, not involving moral turpitude: *And provided further*, That skilled labor may be imported, if labor of like kind unemployed can not be found in this country: *And provided further*, That the provisions of this law applicable to contract labor shall not be held to exclude professional actors, artists, lecturers, singers, ministers of any religious denomination, professors for colleges or seminaries, persons belonging to any recognized learned profession, or persons employed strictly as personal or domestic servants.

"Sec. 3. That the importation into the United States of any woman or girl for the purposes of prostitution is hereby forbidden; and whoever shall import or attempt to import any woman or girl into the United States for the purposes of prostitution, or shall hold or attempt to hold any woman or girl for such purposes in pursuance of such illegal importation, shall be deemed guilty of a felony, and, on conviction thereof, shall be imprisoned not less than one nor more than five years and pay a fine not exceeding five thousand dollars.

"Sec. 4. That it shall be unlawful for any person, company, partnership, or corporation, in any manner whatsoever, to prepay the transportation or in any way to assist or encourage the importation or migration of any alien into the United States, in pursuance of any offer, solicitation, promise, or agreement, parole or special, expressed or implied, made previous to the importation of such alien to perform labor or service of any kind, skilled or unskilled, in the United States.

"Sec. 5. That for every violation of any of the provisions of section four of this act the person, partnership, company, or corporation violating the same, by knowingly assisting, encouraging, or soliciting the migration or importation of any alien to the United States to perform labor or service of any kind by reason of any offer,

solicitation, promise, or agreement, express or implied, parole or special, to or with such alien shall forfeit and pay for every such offense the sum of one thousand dollars, which may be sued for and recovered by the United States, or by any person who shall first bring his action therefor in his own name and for his own benefit, including any such alien thus promised labor or service of any kind as aforesaid, as debts of like amount are now recovered in the courts of the United States; and separate suits may be brought for each alien thus promised labor or service of any kind as aforesaid. And it shall be the duty of the district attorney of the proper district to prosecute every such suit when brought by the United States.

"Sec. 6. That it shall be unlawful and be deemed a violation of section four of this act to assist or encourage the importation or migration of any alien by a promise of employment through advertisements printed and published in any foreign country; and any alien coming to this country in consequence of such an advertisement shall be treated as coming under a promise or agreement as contemplated in section two of this act, and the penalties imposed by section five of this act shall be applicable to such a case: *Provided*, That this section shall not apply to States or Territories, the District of Columbia, or places subject to the jurisdiction of the United States advertising the inducements they offer for immigration thereto, respectively.

"Sec. 7. That no transportation company or owner or owners of vessels or others engaged in transporting aliens into the United States, shall, directly or through agents, either by writing, printing, or oral representations, solicit, invite, or encourage the immigration of any aliens into the United States, except by ordinary commercial letters, circulars, advertisements, or oral representations, stating the sailings of their vessels and terms and facilities of transportation therein; and for a violation of this provision any such transportation company and any such owner or owners of vessels, and all others engaged in transporting aliens to the United States, and the agents by them employed, shall be subjected to the penalties imposed by section five of this act.

"Sec. 8. That any person, including the master, agent, owner, or consignee of any vessel, who shall bring into or land in the United States, by vessel or otherwise, or who shall attempt, by himself or through another, to bring into or land in the United States, by vessel or otherwise, any alien not duly admitted by an immigrant inspector, or not lawfully entitled to enter the United States, shall be deemed guilty of a misdemeanor, and shall, on conviction, be punished by a fine not exceeding one thousand dollars for each and every alien so landed or attempted to be landed, or by imprisonment for a term not less than three months nor more than two years, or by both such fine and imprisonment.

"Sec. 9. That it shall be unlawful for any person, including any transportation company other than railway lines entering the United States from foreign contiguous territory, or the owner, master, agent, or consignee of any vessel to bring to the United States any alien afflicted with a loathsome or with a dangerous contagious disease; and if it shall appear to the satisfaction of the Secretary of the Treasury that any alien so brought to the United States was afflicted with such a disease at the time of foreign embarkation, and that the existence of such disease might have been detected by means of a competent medical examination at such time, such person or transportation company or the master, agent, owner, or consignee of any such vessel shall pay to the collector of customs of the customs district in which the port of arrival is located the sum of one hundred dollars for each and every violation of the provisions of this section; and no vessel shall be granted clearance papers while any such fine imposed upon it remains unpaid, nor shall such fine be remitted.

"Sec. 10. That the decision of the board of special inquiry, hereinafter provided for, based upon the certificate of the examining medical officer, shall be final as to the rejection of aliens afflicted with a loathsome or with a dangerous contagious disease, or with any mental or physical disability which would bring such aliens within any of the classes excluded from admission to the United States under section two of this act.

"Sec. 11. That upon the certificate of a medical officer of the United States Marine-Hospital Service to the effect that a rejected alien is helpless from sickness, physical disability, or infancy, if such alien is accompanied by another alien whose protection or guardianship is required by such rejected alien, the master, agent, owner, or consignee of the vessel in which such alien and accompanying alien are brought shall be required to return said alien and accompanying alien in the same manner as vessels are required to return other rejected aliens.

"Sec. 12. That upon the arrival of any alien by water at any port within the United States it shall be the duty of the master or commanding officer of the steamer, sailing, or other vessel having said alien on board to deliver to the

immigration officers at the port of arrival lists or manifests made at the time and place of embarkation of such alien on board such steamer or vessel, which shall, in answer to questions at the top of said lists, state as to each alien the full name, age, and sex; whether married or single; the calling or occupation; whether able to read or write; the nationality; the race; the last residence; the seaport for landing in the United States; the final destination, if any, beyond the port of landing; whether having a ticket through to such final destination; whether the alien has paid his own passage, or whether it has been paid by any other person or by any corporation, society, municipality, or government, and if so, by whom; whether in possession of fifty dollars, and if less, how much; whether going to join a relative or friend, and if so, what relative or friend and his name and complete address; whether ever before in the United States, and if so, when and where; whether ever in prison or almshouse or an institution or hospital for the care and treatment of the insane or supported by charity; whether a polygamist; whether an anarchist; whether coming by reason of any offer, solicitation, promise, or agreement, expressed or implied, to perform labor in the United States, and what is the alien's condition of health, mental and physical, and whether deformed or crippled; and if so, for how long and from what cause.

"Sec. 13. That all aliens arriving by water at the ports of the United States shall be listed in convenient groups, and no one list or manifest shall contain more than thirty names. To each alien or head of a family shall be given a ticket on which shall be written his name, a number or letter designating the list in which his name, and so forth, is contained, and his number on said list, for convenience of identification on arrival. Each list or manifest shall be verified by the signature and the oath or affirmation of the master or commanding officer or the first or second below him in command, taken before an immigration officer at the port of arrival, to the effect that he has caused the surgeon of said vessel sailing therewith to make a physical and oral examination of each of said aliens, and that from the report of said surgeon and from his own investigation he believes that no one of said aliens is an idiot, or insane person, or a pauper, or is likely to become a public charge, or is suffering from a loathsome or a dangerous contagious disease, or is a person who has been convicted of a felony or other crime or misdemeanor involving moral turpitude, or a polygamist, or an anarchist, or under promise or agreement, express or implied, to perform labor in the United States, or a prostitute, and that also, according to the best of his knowledge and belief, the information in said lists or manifests concerning each of said aliens named therein is correct and true in every respect.

"Sec. 14. That the surgeon of said vessel sailing therewith shall also sign each of said lists or manifests and make oath or affirmation in like manner before an immigration officer at the port of arrival, stating his professional experience and qualifications as a physician and surgeon, and that he has made a personal examination of each of the said aliens named therein, and that the said list or manifest, according to the best of his knowledge and belief, is full, correct, and true in all particulars relative to the mental and physical condition of said aliens. If no surgeon sails with any vessel bringing aliens the mental and physical examinations and the verifications of the lists or manifests shall be made by some competent surgeon employed by the owners of the said vessel.

"Sec. 15. That in the case of the failure of the master or commanding officer of any vessel to deliver to the said immigration officers lists or manifests of all aliens on board thereof as required in sections twelve, thirteen, and fourteen of this act, he shall pay to the collector of customs at the port of arrival the sum of ten dollars for each alien concerning whom the above information is not contained in any list as aforesaid.

"Sec. 16. That upon the receipt by the immigration officers at any port of arrival of the lists or manifests of aliens provided for in sections twelve, thirteen, and fourteen of this act, it shall be the duty of said officers to go or send competent assistants to the vessels to which said lists or manifests refer and there inspect all such aliens, or said immigration officers may order a temporary removal of such aliens for examination at a designated time and place, but such temporary removal shall not be considered a landing, nor shall it relieve the transportation lines, masters, agents, owners, or consignees of the vessel upon which such aliens are brought to any port of the United States from any of the obligations which, in case such aliens remain on board, would, under the provisions of this act, bind the said transportation lines, masters, agents, owners, or consignees: *Provided*, That where a suitable building is used for the detention and examination of aliens the immigration officials shall there take charge of such aliens, and the transportation companies, masters, agents, owners, and consignees of the vessels bringing such aliens shall be relieved of the responsibility for their detention thereafter until the return of such aliens to their care.

"Sec. 17. That the physical and mental examinations of all arriving aliens shall be made by medical officers of the United States Marine-Hospital Service, who shall have had at least two years' experience in the practice of their profession since receiving the degree of doctor of medicine, and who shall certify for the information of the immigration officers and the boards of special inquiry hereinafter provided for, any and all physical and mental defects or diseases observed by said medical officers in any such alien, or, should medical officers of the United States Marine-Hospital Service be not available, civil surgeons of not less than four years' professional experience may be employed in such emergencies for the said service, upon such terms as may be prescribed by the Commissioner-General of Immigration, under the direction or with the approval of the Secretary of the Treasury. The United States Public Health and Marine-Hospital Service shall be reimbursed by the immigration service for all expenditures incurred in carrying out the medical inspection of aliens under regulations of the Secretary of the Treasury.

"Sec. 18. That it shall be the duty of the owners, officers, and agents of any vessel bringing an alien to the United States to adopt due precautions to prevent the landing of any such alien from such vessel at any time or place other than that designated by the immigration officers, and any such owner, officer, agent, or person in charge of such vessel who shall land or permit to land any alien at any time or place other than that designated by the immigration officers, shall be deemed guilty of a misdemeanor, and shall, on conviction, be punished by a fine for each alien so permitted to land of not less than one hundred nor more than one thousand dollars, or by imprisonment for a term not exceeding one year, or by both such fine and imprisonment, and every such alien so landed shall be deemed to be unlawfully in the United States and shall be deported, as provided by law.

"Sec. 19. That all aliens brought into this country in violation of law shall, if practicable, be immediately sent back to the countries whence they respectively came on the vessels bringing them. The cost of their maintenance while on land, as well as the expense of the return of such aliens, shall be borne by the owner or owners of the vessels on which they respectively came; and if any master, person in charge, agent, owner, or consignee of any such vessels shall refuse to receive back on board thereof, or of any other vessel owned by the same interest, such aliens, or shall neglect to detain them thereon, or shall refuse or neglect to return them to the foreign port from which they came, or to pay the cost of their maintenance while on land, such master, person in charge, agent, owner, or consignee shall be deemed guilty of a misdemeanor, and shall, on conviction, be punished by a fine not less than three hundred dollars for each and every such offense; and no such vessel shall have clearance from any port of the United States while any such fine is unpaid: *Provided*, That the Commissioner-General of Immigration, under the direction or with the approval of the Secretary of the Treasury, may suspend, upon conditions to be prescribed by the Commissioner-General, the deportation of any alien found to have come under promise or agreement of labor or service of any kind if, in his judgment, the testimony of such alien is necessary on behalf of the United States Government in the prosecution of offenders against the provisions of sections four and five of this act: *Provided*, That the cost of maintenance of any person so detained resulting from such suspension of deportation shall be paid from the 'immigrant fund,' but no alien certified, as provided in section seventeen of this act, to be suffering with a loathsome or with a dangerous contagious disease other than one of a quarantinable nature, shall be permitted to land for medical treatment thereof in the hospitals of the United States.

"Sec. 20. That any alien who shall come into the United States in violation of law, or who shall be found a public charge therein, from causes existing prior to landing, shall be deported as hereinafter provided to the country whence he came at any time within two years after arrival at the expense, including one-half of the cost of inland transportation to the port of deportation, of the person bringing such alien into the United States, or, if that can not be done, then at the expense of the immigrant fund referred to in section one of this act.

"Sec. 21. That in case the Secretary of the Treasury shall be satisfied that an alien has been found in the United States in violation of this act, he shall cause such alien, within the period of three years after landing or entry therein, to be taken into custody and returned to the country whence he came as provided in section twenty of this act, or, if that can not be so done, at the expense of the immigrant fund provided for in section one of this act; and neglect or refusal on the part of the masters, owners, or consignees of vessels to comply with the order of the Secretary of the Treasury to take on board, guard safely, and return to the country whence he came any alien ordered to be deported under the provisions of this section shall be punished by the imposition of the penalties prescribed in section nineteen of this act.

"Sec. 22. That the Commissioner-General of Immigration, in addition to such other duties as may by law be assigned to him, shall, under the direction of the Secre-

tary of the Treasury, have charge of the administration of all laws relating to the immigration of aliens into the United States, and shall have the control, direction, and supervision of all officers, clerks, and employees appointed thereunder. He shall establish such rules and regulations, prescribe such forms of bonds, reports, entries, and other papers, and shall issue from time to time such instructions, not inconsistent with law, as he shall deem best calculated for carrying out the provisions of this act and for protecting the United States and aliens migrating thereto from fraud and loss, and shall have authority to enter into contracts for the support and relief of such aliens as may fall into distress or need public aid; all under the direction or with the approval of the Secretary of the Treasury. And it shall be the duty of the Commissioner-General of Immigration to detail officers of the immigration service from time to time as may be necessary, in his judgment, to secure information as to the number of aliens detained in the penal, reformatory, and charitable institutions (public and private) of the several States and Territories, the District of Columbia, and other territory of the United States, and to inform the officers of such institutions of the provisions of law in relation to the deportation of aliens who have become public charges: *Provided*, That the Commissioner-General of Immigration may, with the approval of the Secretary of the Treasury, whenever in his judgment such action may be necessary to accomplish the purposes of this act, detail immigration officers for temporary service in foreign countries.

"SEC. 23. That the duties of the commissioners of immigration shall be of an administrative character, to be prescribed in detail by regulations prepared under the direction or with the approval of the Secretary of the Treasury.

"SEC. 24. That immigrant inspectors and other immigration officers, clerks, and employees shall hereafter be appointed and their compensation fixed and raised or decreased from time to time by the Secretary of the Treasury, upon the recommendation of the Commissioner-General of Immigration and in accordance with the provisions of the civil-service act of January sixteenth, eighteen hundred and eighty-three: *Provided*, That nothing herein contained shall be construed to alter the mode of appointing commissioners of immigration at the several ports of the United States as provided by the sundry civil appropriation act approved August eighteenth, eighteen hundred and ninety-four, or the official status of such commissioners heretofore appointed. Immigration officers shall have power to administer oaths and to take and consider testimony touching the right of any alien to enter the United States, and, where such action may be necessary, to make a written record of such testimony, and any person to whom such an oath has been administered under the provisions of this act who shall knowingly or wilfully give false testimony or swear to any false statement in any way affecting or in relation to the right of an alien to admission to the United States shall be deemed guilty of perjury and be punished as provided by section fifty-three hundred and ninety-two, United States Revised Statutes. The decision of any such officer, if favorable to the admission of any alien, shall be subject to challenge by any other immigration officer, and such challenge shall operate to take the alien whose right to land is so challenged before a board of special inquiry for its investigation. Every alien who may not appear to the examining immigrant inspector at the port of arrival to be clearly and beyond a doubt entitled to land shall be detained for examination in relation thereto by a board of special inquiry.

"SEC. 25. That such boards of special inquiry shall be appointed by the commissioners of immigration at the various ports of arrival as may be necessary for the prompt determination of all cases of aliens detained at such ports under the provisions of law. Such boards shall consist of three members, who shall be selected from such of the immigrant officials in the service as the Commissioner-General of Immigration, with the approval of the Secretary of the Treasury, shall from time to time designate as qualified to serve on such boards: *Provided*, That at ports where there are fewer than three immigrant inspectors, the Secretary of the Treasury, upon recommendation of the Commissioner-General of Immigration, may designate other United States officials for service on such boards of special inquiry. Such boards shall have authority to determine whether an alien who has been duly held shall be allowed to land or be deported. All hearings before boards shall be separate and apart from the public, but the said boards shall keep complete permanent records of their proceedings and of all such testimony as may be produced before them; and the decision of any two members of a board shall prevail and be final, but either the alien or any dissenting member of said board may appeal, through the commissioner of immigration at the port of arrival and the Commissioner-General of Immigration, to the Secretary of the Treasury, whose decision shall be final; and the taking of such appeal shall operate to stay any action in regard to the final disposal of the alien whose case is so appealed until the receipt by the commissioner of immigration at the port of arrival of such decision.

"SEC. 26. That no bond or guaranty, written or oral, that an alien shall not become a public charge shall be received from any person, company, corporation, charitable or benevolent society or association unless authority to receive the same shall in each special case be given by the Commissioner-General of Immigration, with the written approval of the Secretary of the Treasury.

"SEC. 27. That no suit or proceeding for a violation of the provisions of this act shall be settled, compromised, or discontinued without the consent of the court in which it is pending, entered of record, with the reasons therefor.

"SEC. 28. That nothing contained in this act shall be construed to affect any prosecution or other proceeding, criminal or civil, begun under any existing act or any acts hereby amended, but such prosecutions or other proceedings, criminal or civil, shall proceed as if this act had not been passed.

"SEC. 29. That the circuit and district courts of the United States are hereby invested with full and concurrent jurisdiction of all causes, civil or criminal, arising under any of the provisions of this act.

"SEC. 30. That after the first day of January, nineteen hundred and three, all exclusive privileges of exchanging money, transporting passengers or baggage, or keeping eating houses, and all other like privileges in connection with any United States immigrant station, shall be disposed of after public competition, subject to such conditions and limitations as the Commissioner-General of Immigration, under the direction or with the approval of the Secretary of the Treasury, may prescribe: *Provided*, That no intoxicating liquors shall be sold in any such immigrant station; that all receipts accruing from the disposal of such exclusive privileges as herein provided shall be paid into the United States Treasury to the credit of the immigration fund provided for in section one of this act.

"SEC. 31. That for the preservation of the peace and in order that arrests may be made for crimes under the laws of the States and Territories of the United States where the various immigrant stations are located, the officers in charge of such stations, as occasion may require, shall admit therein the proper State and municipal officers charged with the enforcement of such laws and for the purposes of this section the jurisdiction of such officers and of the local courts shall extend over such stations.

"SEC. 32. That the Commissioner-General of Immigration, under the direction or with the approval of the Secretary of the Treasury, shall prescribe rules for the entry and inspection of aliens along the borders of Canada and Mexico, so as not to unnecessarily delay, impede, or annoy passengers in ordinary travel between the United States and said countries, and shall have power to enter into contracts with foreign transportation lines for the same purpose.

"SEC. 33. That for the purposes of this act the words 'United States' as used in the title as well as in the various sections of this act shall be construed to mean the United States and any waters, territory, or other place now subject to the jurisdiction thereof.

"SEC. 34. That no intoxicating liquors of any character shall be sold within the limits of the Capitol building of the United States.

"SEC. 35. That the deportation of aliens arrested within the United States after entry and found to be illegally therein, provided for in this act, shall be to the trans-Atlantic or trans-Pacific ports from which said aliens embarked for the United States; or, if such embarkation was for foreign contiguous territory, to the foreign port at which said aliens embarked for such territory.

"SEC. 36. That all acts and parts of acts inconsistent with this act are hereby repealed: *Provided*, That this act shall not be construed to repeal, alter, or amend existing laws relating to the immigration, or exclusion of, Chinese persons or persons of Chinese descent.

"SEC. 37. That whenever an alien shall have taken up his permanent residence in this country, and shall have filed his preliminary declaration to become a citizen, and thereafter shall send for his wife or minor children to join him, if said wife, or either of said children, shall be found to be affected with any contagious disorder, and if it is proved that said disorder was contracted on board the ship in which they came, and is so certified by the examining surgeon at the port of arrival, such wife or children shall be held under such regulations as the Secretary of the Treasury shall prescribe, until it shall be determined whether the disorder will be easily curable, or whether they can be permitted to land without danger to other persons, and they shall not be deported until such facts have been ascertained.

"SEC. 38. That no person who disbelieves in or who is opposed to all organized government, or who is a member of or affiliated with any organization entertaining and teaching such disbelief in or opposition to all organized government, or who advocates or teaches the duty, necessity, or propriety of the unlawful assaulting or

killing of any officer or officers, either of specific individuals or of officers generally, of the Government of the United States or of any other organized government, because of his or their official character, shall be permitted to enter the United States or any Territory or place subject to the jurisdiction thereof. This section shall be enforced by the Secretary of the Treasury under such rules and regulations as he shall prescribe.

"That any person who knowingly aids or assists any such person to enter the United States or any Territory or place subject to the jurisdiction thereof, or who connives or conspires with any person or persons to allow, procure, or permit any such person to enter therein, except pursuant to such rules and regulations made by the Secretary of the Treasury, shall be fined not more than five thousand dollars or imprisoned for not less than one nor more than five years, or both.

"Sec. 39. That no person who disbelieves in or who is opposed to all organized government, or who is a member of or affiliated with any organization entertaining and teaching such belief in or opposition to all organized government, or who advocates or teaches the duty, necessity, or propriety of the unlawful assaulting or killing of any officer or officers, either of specific individuals or of officers generally, of the Government of the United States or of any other organized government, because of his or their official character, or who has violated any of the provisions of this act, shall be naturalized or be made a citizen of the United States. All courts and tribunals and all judges and officers thereof having jurisdiction of naturalization proceedings, or duties to perform in regard thereto, shall, on the final application for naturalization, make careful inquiry into such matters, and before issuing the final order or certificate of naturalization cause to be entered of record the affidavit of the applicant and of his witnesses so far as applicable, reciting and affirming the truth of every material fact requisite for naturalization. All final orders and certificates of naturalization hereafter made shall show on their face specifically that said affidavits were duly made and recorded, and all orders and certificates that fail to show such facts shall be null and void.

"That any person who purposely procures naturalization in violation of the provisions of this section shall be fined not more than five thousand dollars, or shall be imprisoned not less than one nor more than ten years, or both, and the court in which such conviction is had shall thereupon adjudge and declare the order or decree and all certificates admitting such person to citizenship null and void. Jurisdiction is hereby conferred on the courts having jurisdiction of the trial of such offense to make such adjudication.

"That any person who knowingly aids, advises, or encourages any such person to apply for or to secure naturalization or to file the preliminary papers declaring an intent to become a citizen of the United States, or who in any naturalization proceeding knowingly procures or gives false testimony as to any material fact, or who knowingly makes an affidavit false as to any material fact required to be proved in such proceedings, shall be fined not more than five thousand dollars or imprisoned not less than one nor more than ten years, or both.

"The foregoing provisions concerning naturalization shall not be enforced until ninety days after the approval hereof.

"Approved, March 3, 1903."

It has been decided by the legal adviser of the Secretary of War that while this law in its restrictions upon the admission of aliens to the United States applies to the Philippine Islands, the provisions therein made for the enforcement of the law by the Treasury Department of the United States and the Commissioner-General of Immigration do not apply here, and that the new immigration law should be enforced in the same manner in these islands as the previous law on the same subject was enforced—that is, through the collector of customs and his subordinates in office. Until reversed by competent authority, this construction of the new immigration law above set forth will be followed by the collector of customs for the Philippine Archipelago and his subordinates, and will be observed by all people within the jurisdiction of the Philippine Islands.

Done at the city of Manila this twenty-sixth day of June, anno Domini nineteen hundred and three.

WM. H. TAFT, *Civil Governor.*

By the Civil Governor:  
A. W. FERGUSON,  
*Executive Secretary.*
